**PICTORIAL ENIGMA—JEALOUSY.**

## OUR CORNER CUPBOARD!

TROUSERS are like dogs—the smaller they are, the more they annoy you. "So far so good," as the boy said when he had finished the first pot of his mother's jam.

THIS world of ours is like a fair hell with a crack in it: it keeps on clanging, but does not ring.

"I know by a little what a great deal means," as the gander said when he saw the tip of a fox's tail sticking out of a hollow tree.

A FRENCHMAN, anxious to show a fellow-countryman the vigorous style of one of the old poets, translated, "Hail, horrors, hail," as follows—"How do you do, horrors—how do you do?"

A LAZY, over-fed lad returning from dinner to his work was asked by his master "If he had no other motion than that?" "Yes," replied the boy, drawing out each letter, "but it's slower."

"FATHER, it tells here about illuminated MSS. What were they lighted with?" The father hesitated, and when the question was repeated, answered spiritively, "With the light of other days, my son!"

"HERE," said the librarian of a mechanics and apprentices' library, "here's a book which will set you a thinking." "Oh, these you," replied the hard worked mechanic, "I want something that will keep me from thinking!"

"HELP me, Cassius, or I sink!" said the great Cassai, when he was likely to be over head and ears in the libel. Modern upholstery, when it is over head and ears in debt and wants to reach the banks, cries out—"Help me, Cassius, or I sink!"

A JURYMAN received the following written character from a juror in whom it was his duty to compliment her very highly. "This is to certify that the juror served with us during the last half year and found her in every respect Creditable and free of nothing that was in any way wrong."

A JAILOR in a West India State had received strict orders not to keep any prisoners in solitary confinement. One, when he had let two in chains, one escaped, and he was obliged in consequence to lock the other out of doors in order to comply with the regulation.

SOVEREIGN REMEDIES FOR AFFEETING DISTRESS. For the gout, toast and water, hooping-cough specacuanha bile, exercise on a easy shoes blue devils, employment, rheumatism, patience and new flannel toothache, pluck the tooth out, debt, reticence and love matrimony.

AN Irishman was sued by a doctor for the amount of his bill for medicine and attendance, and Paddy being called upon to state why he refused to pay, made the following reply—"What shall I pay for? The medicine—no use to me, sure, and he sent me two emetics, in a town of em could I keep on my stomach?"

NEWSPAPER READERS.—The ill-natured man looks to the list of subscribers, the tradesman, to the price of bread, the stockjobber, to the list of the day, the old maid, to marriages, the poet, to the list of the monopolist, to the list of a wet nurse, the school boy, to everything that relates to Christina Green.

## BEAUTY

A CERTAIN author, without considering how arbitrary the ideal beauty is, has given the following description of its chief requirements in which every one will, of course, make such alterations as his own taste may suggest to him.

- 1 Youth (indispensable)
- 2 Stature—neither too high nor too low.
- 3 Neither too fat nor too lean.
- 4 All parts symmetrical and well proportioned.
- 5 Long dark hair glossy and soft.
- 6 The skin smooth and white, of a lovely white tinted.
- 7 A smooth high forehead.
- 8 The eye-brows dark, and somewhat arched. The eye lashes long and dull.
- 9 The eyes dark, large and languishing.
- 10 The nose neither too long nor too short, and perfectly straight.
- 11 The cheeks rounded with a soft and pleasing plump and dimpled.
- 12 Pouting lips, of the coral hue.
- 13 A small mouth.
- 14 Teeth white and even.
- 15 The chin rather rounded, and ending in a dimple.
- 16 The ears small and close to the head.
- 17 A neck of ivory, long and well turned.
- 18 A white hand, plump and tapering.
- 19 Nails pink and oval.
- 20 A sweet breath.
- 21 A free unaffected air and carriage.
- 22 The shape easy and elegant.

COLONEL Christie, an Irish officer, who served with considerable credit in America, had the misfortune to be severely wounded. As he lay on the ground, an unfortunate soldier, who was near him and was badly wounded made a terrible howling; at which Christie exclaimed—"What do you make such a noise for? do you think nobody is killed but yourself?"

## OUR MEMORANDUM BOOK!

TAKE courage, for so little to do with anger, that there has always the strongest suspicion against it, where this passion is present. The true courage is cool and calm. The bravest of men have the heart of a brutal bully, insolence, and in the very time of danger are found the most stony, pleasant and free. Hagar, we know, can make a coward forget himself and fight. But what is done by fury or anger can never be placed to the account of courage. Were it a woman, woman might claim to be the stoutest sex, for their hatred and anger, no less than their love and kindness, are ever the strongest and most lasting.

Let us be patient! these severe afflictions

Not from the ground arise,

But oftentimes celestial benedictions

Assume this dark disguise.

We see but dimly through the mists and vapours;

Amid these capricious damps,

What seem to us but sad funeral tapers

May be heaven's distant lamps.

PERFECTION.—That writer who aspires to immortality should imitate the sculptor, if he could make the labours of the pen as durable as those of the chisel. Like the sculptor, he should arrive at ultimate perfection, not by what he adds, but by what he takes away, otherwise, all his energy may be hidden in the superabundant mass of his matter, as the finished form of an Apollo, in the unworked solidity of the block. A friend called on Michael Angelo, who was finishing a statue, some time afterwards he called again the sculptor was still at his work. His friend, looking at the figure, exclaimed—"You have been idle since I saw you last." "By no means," replied the sculptor. "I have retouched this part, and polished that. I have smoothed his face and brought out this muscle. I have given more expression to this lip, and more energy to this limb." "Well, well," said his friend, "but all these trifles." "It may be so," replied Angelo, "but it recollect that trifles make perfection, and that perfection is no trifle."

## THE WISDOM OF THE CYMBEL.

## THE SEVEN GIFTS OF THE HOLY SPIRIT.

- 1 The understanding, in the soul, to comprehend.
  - 2 Reason, to methodise.
  - 3 The power to operate.
  - 4 Bibly powers to accomplish.
  - 5 Affection, to love good and to hate evil.
  - 6 Genius, to invent and to study sciences.
  - 7 Conscience, to judge of all goodness and wickedness.
- If in these are derived all knowledge and art, and every joy, comfort, and happiness.
- Thus said the Blue Bard of the Chym.

## THE NINE BEATITUDES OF HEAVEN.

- 1 Day without night, or light without darkness.
- 2 Peace without war, or love without hate.
- 3 Health without ailment, or enjoyment without weariness.
- 4 Joy without sadness, or pleasure without displeasure.
- 5 Wealth without luxury, or possession without sin.
- 6 Understanding without lack of understanding, or knowledge without ignorance.
- 7 Honour without disgrace, or respect without disrespect.
- 8 Liberty without restraint, or free will without error.
- 9 Life without death, or God without enough.

MR BARTLE'S METHOD OF TEACHING THE EXISTENCE OF A DEITY TO HIS SON.—In the corner of a little garden, without informing any person of the circumstance, I wrote in the mould, with my finger, the three initial letters of his name, and sowing garden cresses in the furrows, covered up the seed, and smoothed the ground. Ten days after this he came running to me, and, with astonishment in his countenance, told me that his name was growing in the garden. I laughed at the report, and seemed inclined to disregard it, but he insisted on my going to see what had happened. "Yes," said I, cheerfully, on coming to the place. "I see it is so, but what is there in this worth notice? Is it not mere chance?" and I went away. He followed me, and taking hold of my coat, said, with some earnestness, "It cannot have happened by chance—somebody must have contrived it, so as to produce it." "So you think," said I, "that what appears in the letters of your name cannot be by chance?" "Yes," said he, with firmness, "I think so." "Look at yourself," I replied, "and consider your hands and fingers, and legs and feet, and other limbs, are they not regular in their appearance and useful to you?" He said they were. "Come you then hither," said I, "by chance?" "No," he answered, "that cannot be; something must have made me." "And who is that something?" I asked. He said, "I do not know." I had now gained the point I aimed at, and saw that his reason taught him (though he could not express) that what begins to be must have a cause; and that what is formed with regularity must have an intelligent cause. I therefore told him the name of the Great Being who made him, and all the world; concerning whose adorable nature I gave him such information as I thought he could, in some measure, comprehend. The lesson affected him greatly, and he never forgot either it or the circumstance that introduced it.—*Barth's Life*.

TO THE LADIES.—MRS. PULLAN

44  
 new water-proofed Eau de Cologne, being  
 more tonic and beneficial as a toilet  
 perfume, and far more economical. Its  
 aromatic and medicinal qualities are  
 in all respects perfect. Price  
 Sold by all Perfumers and Chemists, and by  
 30, Gerard Street, So.

London Houghton & Stoughton, 65, Paternoster Row.

[PRICE ONE PENNY.]

"' Edwards your words are all — they are all true — the world is not well enough to contain us both take that, and defend yourself; drawing a pistol from his breast and he directed it to James it glared at cocking another pistol, deadly aim 'I shall count five, and fire, so be quick' — See Chap. xx

## LOVE'S TRIALS; OR, MISTAKEN EVIDENCE.

(Cont. and from page 855)

### CHAPTER IX.

It was Saturday afternoon, and, seated in his neat and commodious study surrounded with those rich stores which the great and good of past ages have left for the benefit of all coming generations the Rev Mr Wharton was just finishing his exercises for the coming Sabbath when there was a tap at the door, and the servant maid announced that Mr Tightbody was below, and would be glad to see Mr Wharton alone.

"Show him up, by all means."

Mr Tightbody has altered in nothing material since we last saw him except, it may be, that his round face is a little rounder, and his coat might be rather more difficult to button. The expression of his countenance was however, of a different cast from any that we have seen it wear before. Something of a serious and alarming nature it must be, for his colour has gone; and, as he bowed and addressed Mr Wharton, there was a tremor in his voice, and the hand which he extended was as cold as an iceberg. He took the seat assigned to him in a long, and, taking from his pocket a paper said—"I have just come from town, sir, and while there, accidentally cast my eye upon an article in this paper. Perhaps, sir you have heard some thing more particular from the family, and can throw some light upon it."

He handed it to Mr Wharton, and, with a trembling hand, pointed to the paragraph. Mr Wharton was of a nervous temperament and the evident excitement under which his visitor laboured, did not fail to produce a corresponding effect upon him. The paragraph was among the news of the day—

"Messrs.—A robbery to a large amount was yesterday ascertained to have been committed upon Messrs. G & A Hunt, ship chandlers, in

street and a young man of the name of Edwards, living with him as clerk was suspected. The circumstances being so strong against him, has been arrested and is now at full committed to prison. The sum taken from Mr Hunt is twelve hundred pounds. It is supposed the young man has surrendered it at the gaming table. Until the time of his arrest, his character was thought to be unexceptionable. It is said that a mother-in-law is dependent upon him for support."

Mr Wharton read it through, and then turning his pale and troubled countenance upon Mr Tightbody who had been watching him with intense interest said "Can this be true?"

"I know not sir. I saw it, as I told you, in town, and not knowing what to do about it have first brought it to you, sir."

"Then you have not shown it to Mrs Edwards?"

"No living soul in the village has seen it sir, but yourself."

"I believe this paper is not taken here?"

"No sir nor any other from the town but the one you take, and that will not be until the first of the week."

"We must move cautiously in this matter, Mr Tightbody, and do nothing to circulate this terrible news. The family must be informed of it in as gentle a manner as possible, and who shall do it?"

"There is no one but Mr Wharton himself that is fitting for such an errand. I would not undertake it myself for a great deal."

"There may be some mistake after all, but if you will leave this paper with me, Mr Tightbody, I will endeavour to do the best I can, and act as circumstances shall dictate. When did it take place—yesterday?"

"The paper is dated yesterday, sir, the sad occurrence must have taken place on Thursday."

"Thursday, that would almost give time for some of the family to receive some tidings to day, perhaps we may be saved the sad necessity of unfolding the intelligence to them. I think Mr Tightbody, that I shall delay the matter until Monday morning, in the mean time, keep it secret."

ADDISON.

JOSEPH ADDISON was born on the 1st of May, 1672 at Milston, of which his father, Lancelot Addison, was then rector, near Amblesbury, in Wiltshire; and, appearing weak and unlikely to live he was christened the same day. After the usual domestic education, which, from the character of his father, may be reasonably supposed to have given him strong impressions of piety, he was committed to the care of a Mr. Rush, at Androsbury, and afterwards, of Mr. Taylor, at Salisbury.

In 1688, in the beginning of his twelfth year his father being made Dean of Lichfield, naturally carried his family to his new residence, and placed him, for some time, under Mr. Shaw, then master of the school at Lichfield. After this, he pursued his juvenile studies under the care of Doctor Ellis, and contracted that intimacy with Sir Richard Steele which their joint labours have so effectually recorded.

In 1687 he was entered into Queen's College, in Oxford where, in 1689 the accidental perusal of some Latin verses gained him the patronage of Dr. Lenesaster, afterwards Provost of Queen's College, by whose recommendation he was elected into Magdalen College. Here, he continued to cultivate poetry and criticism, and first grew eminent by Latin compositions, which are indeed entitled to particular praise.

By the influence of Mr. Montague, concurring according to Tickell with his natural modesty, he was diverted from his original design of entering into holy orders. Montague alleged the corruption of men, who engaged in civil employments without liberal education, and declared that though he was represented as an enemy to the Church, he would never do it any injury but by withholding Addison from it.

Soon after, (in 1693) he wrote a poem to King William with a rhyming introduction, addressed to Lord Somers. King William had no regard to elegance or literature his study was war yet, by a choice of ministers, whose disposition was very different from his own, he procured, without intention, a very liberal patronage to poetry. Addison was caressed both by Somers and Montague.

In 1697 appeared his Latin verses on the *Peace of Ryswick*, which he dedicated to Montague, and which was afterwards called by Smith "the best Latin poem since the *Æneid*." Praise must not be too rigorously examined, but the performance cannot be denied to be vigorous and elegant.

Having yet no public employment, he obtained (in 1699,) a pension of three hundred pounds a year, that he might be enabled to travel. He stayed a year at Blois, and then proceeded on his journey to Italy, which he surveyed with the eyes of a poet.

While he was travelling at leisure, he was far from being idle, for he not only collected his observations on the country, but found time to write his *Discourses on Medals*, and four acts of *Cato*. But, in about two years, he found it necessary to hasten home, being, as Swift informs us, distressed by indigence, and compelled to become the tutor of a travelling squire, because his pension was not remitted.

When he returned to England, (in 1702,) with a meanness of appearance which gave testimony of the difficulties to which he had been reduced, he found his old patrons out of power, and was therefore, for a time, at full leisure for the cultivation of his mind; and a mind so cultivated gives reason to believe that little time was lost.

But he remained not long neglected or useless. The victory at Blenheim (1704) spread triumph and confidence over the nation, and Lord Godolphin,

lamenting to Lord Halifax, that it had not been celebrated in a manner adequate to the subject, desired him to propose it to a better poet. Addison having undertaken the work, was rewarded by succeeding Mr. Locks in the place of Commissioner of Appeals.

In the following year he was at Hanover with Lord Halifax; and the year after he was made under Secretary of State—first to Sir Charles Hedges, and in a few months more to the Earl of Sunderland.

He was in Ireland, when Steele, without any communication of his design, began the publication of the *Tatler*. But he was not long concealed; by inserting a remark on Virgil, which Addison had given him, he discovered himself.

If Steele desired to write in secret, he was not lucky, a single month detected him. His first *Tatler* was published April 22nd, 1709, and Addison's contribution appeared May 26. To the *Tatler*, in about two months, succeeded the *Spectator*, a series of essays of the same kind, but written with less levity, upon a more regular plan, and published daily. Before the *Tatler* and *Spectator*—if the writers for the theatre are excepted—England had no records of common life. No writers had yet undertaken to reform either the savageness of neglect, or the impertinence of civility; to show when to speak, or to be silent, how to refuse, or how to comply. We had many books to teach us our more important duties, and to settle opinions in philosophy or politics, but an *Astley Elegantiarum*, a judge of propriety, was yet wanting, who should survey the track of daily conversation, and free us from thorns and prickles, which tease the passer, though they do not wound him.

The *Tatler* and *Spectator* adjusted the unsettled practice of daily intercourse by propriety and politeness. The personages introduced in these papers were not merely ideal, they were then known, and conspicuous in various stations. Of the *Tatler*, this is told by Steele in his last paper, and of the *Spectator*, by Budgell, in the preface to *Theophrastus*, a book which Addison has recommended, and which he was suspected to have revised, if he did not write it. Of those portraits, which may be supposed to be sometimes embellished and sometimes aggravated, the originals are now partly known, and partly forgotten.

It is recorded by Budgell, that of the characters signed or exhibited in the *Spectator*, the favourite of Addison was Sir Roger de Coverley, of whom he had formed a very delicate and discriminate idea, which he would not suffer to be violated. It may be doubted whether Addison filled up his original delineation. He describes the knight as having his imagination somewhat warped but of this perversion he has made very little use. To Sir Roger—who, as a country gentleman, appears to be a Tory, or, as it is gently expressed, an adherent to the landed interest—is opposed Sir Andrew Freeport a new man, a wealthy merchant, zealous for the monied interest, and a Whig. Of this contrariety of opinions, it is probable more consequences were at first intended, than could be produced when the resolution was taken to exclude party from the paper. Sir Andrew does but little, and that little seems not to have pleased Addison who, when he dismissed him from the club, changed his opinions. Steele had made him, in the true spirit of unfeeling commerce, declare, that he "would not build an hospital for idle people," but at last he buys a land, settles in the country, and builds, not a manufactory, but an hospital for twelve old husbandmen, for men with whom a merchant has little acquaintance, and whom he commonly considers with little kindness.

Of essays thus elegant thus instructive and thus commodiously distributed, it is natural to suppose the approbation general and the circulation extensive.

The next year, (1713) in which *Cato* came upon the stage, was the grand climacteric of Addison's reputation. When it was printed notice was given that the Queen would be pleased if it was dedicated to her "but, as he had designed that compliment elsewhere, he found himself obliged," says Tickell, "by his duty on one hand, and his honour on the other, to send it into the world without any dedication."

Human happiness has always its abatement the brightest sunshine of success is not without a cloud. No sooner was *Cato* offered to the world, than it was attacked by the acute malignity of Dennis, with all the violence of angry criticism. While it was upon the stage, a daily paper, called *The Guardian*, was published by Steele. To this Addison gave great assistance, whether occasionally or by previous engagement is not known.

Not long afterwards, an attempt was made to revive the *Spectator*, at a time, indeed, by no means favourable to literature, when the succession of a new family to the throne filled the nation with anxiety, discord, and confusion, and either the turbulence of the times or the satiety of the readers put a stop to the publication, after an experiment of eighty numbers, which were afterwards collected into an eighth volume, perhaps more valuable than any that went before it. Addison produced more than a fourth part; and the other contributors are by no means unworthy of appearing as his associates. The time that had passed during the suspension of the *Spectator*, though it had not lessened his power of humour, seems to have increased his disposition to seriousness, the proportion of his religious to his comic papers is greater than in the former series.

The *Spectator*, from its re-commencement, was published only three times a week, and no discriminate marks were added to the papers. To Addison, Tickell has ascribed twenty-three.

The *Spectator* had many contributors, and Steele, whose negligence kept him always in a hurry, when it was his turn to furnish a paper, called loudly for the letters, of which Addison, whose materials were more extensive, made little use, having recourse to sketches and hints, the product of his former studies, which he now reviewed and completed. Among these, are named by Tickell, the *Essays on Wit*, those on the *Pleasures of the Imagination*, and the *Crucifixion on Milton*.

When the House of Hanover took possession of the throne, it was reason-

## USE OF THE NATURAL WEAPONS OF ANIMALS.

able to expect that the seal of Addison would be suitably rewarded. Before the arrival of King George, he was made secretary to the regency, and was required by his office to send notice to Hanover that the queen was dead, and that the throne was vacant. To do this would not have been difficult to any man but Addison, who was so overwhelmed with the greatness of the event, and so distracted by choice of expression, that the lords, who could not wait for the niceties of expression, called him Southwell, a clerk in the House, and ordered him to despatch the message. Southwell readily told what was necessary in the common style of business, and valued himself upon having done what was too difficult for Addison.

Addison was better qualified for the *Freeholder*, a paper which he published twice a week, from December 23, 1715, to the middle of the next year. This was undertaken in defence of the established government, sometimes with humour.

In 1716, Addison married the dowager Countess of Warwick, whom he had solicited by a very long and anxious courtship, perhaps with behaviour not very unlike that of Sir Roger to his disdainful widow, and who, it is stated, diverted herself often by playing with his passion. He is said to have first known her by becoming tutor to her son. "He formed," said Tonson, "the design of getting that lady from the time when he was first recommended into the family. The marriage made no addition to his happiness, it neither found them nor made them equal. She always remembered her own rank and thought herself entitled to treat with very little ceremony the tutor of her son."

The year after (1717,) he rose to his highest elevation, being made Secretary of State. For this employment he might justly be supposed qualified by long practice of business, and by his regular ascent through other offices; but expectation is often disappointed, it is universally confessed that he was unequal to the duties of his place. In the House of Commons he could not speak, and therefore was useless to the defence of the government. "In the office," says Pope, "he could not issue an order, without losing his time in quest of fine expressions." What he gained in rank he lost in credit and finding, by experience, his own inability, was forced to solicit his dismissal, with a pension of fifteen hundred pounds a year.

He now returned to his vocation, and began to plan literary occupations for his future life. He purposed a tragedy on the death of Socrates, 'a story of which,' as Tickell remarks, "the basis is narrow, and to which I know not how love could be appended." There would, however, have been no want either of virtue in the sentiments, or elegance in the language.

He engaged in a nobler work, *A Defence of the Christian Religion*, of which part was published after his death, and he designed to have made a new poetical version of the Psalms.

The end of this useful life was now approaching. Addison had for some time been oppressed with shortness of breath, which was now aggravated by a dropsy, and finding his danger pressing, he prepared to die conformably to his own precepts and professions.

During this lingering decay he sent as Pope relates a message by the Earl of Warwick to Mr. Gay, begging to see him. Gay who had not visited him for some time before, obeyed the summons, and found himself received with great kindness. The purpose for which the interview had been solicited was then discovered. Addison told him that he had injured him, but that, if he recovered he would recompense him. What the injury was he did not explain, nor did Gay ever know, but supposed that some preferment designed for him had, by Addison's intervention, been withheld. Lord Warwick was a young man of very irregular life, and perhaps of loose opinions. Addison, for whom the earl did not want respect, had very diligently endeavoured to reclaim him, but arguments and expostulations had no effect. One experiment, however, remained to be tried, when he found his life so near its end, he directed the young lord to be called, and when he desired, with great tenderness, to hear his last injunctions, Addison told him, "I have sent for you, that you may see how a Christian can die."

In Tickell's excellent *Elegy* on his friend, are these lines—

"He taught us how to live and oh! too high  
The price of knowledge taught us how to die—"

in which he alludes, as he told Dr. Young, to this moving interview.

Having given directions to Mr. Tickell for the publication of his works, and dedicated them on his death-bed to his friend Mr. Craggs, he died June 17, 1719, at Holland House, leaving a daughter who survived him to a great age.

Of his virtue it is a sufficient testimony that the resentment of party has transmitted no charge of any crime. He was not one of those who are praised only after death, for his merit was so generally acknowledged, that Swift, having observed that his election passed without a contest, adds, "that if he proposed himself for king he would hardly have been refused."

His zeal for his party did not extinguish his kindness for the merit of his opponents, when he was secretary in Ireland, he refused to interrupt his acquaintance with Swift.

Of his habits or external manners, nothing is so often mentioned as that timorous or sulky taciturnity, which his friends called modesty—by too mild a name. Steele mentions, with great tenderness, "that remarkable bashfulness, which is a cloak that hides and muffles merit," and tells us, "that his abilities were covered only by modesty, which doubles the beauties which are seen, and gives credit and esteem to all that are concealed." Chesterfield affirms, "that Addison was the most timorous and awkward man that he ever saw." And Addison, speaking of his own deficiency in conversation, used to say of himself, that, with respect to intellectual wealth, "he could draw bills for a thousand pounds, though he had not a guinea in his pocket."

His poetry is polished and pure; the product of a mind too judicious to

commit faults, but not sufficiently vigorous to attain excellence. However, one of our earliest examples of correctness.

Mr. Landor, alluding to Addison, says, "Why cannot I see him again in the arm-chair, his right hand upon his heart, under the fawn-coloured waistcoat; his brow erect and clear as his conscience; his wig even and composed as his temper, with measured droll and antiphetical topknot, like his style? The calmest face, the most quiet patrician; dear Addison! drunk, deliberate, moral, sentimental, reasoning over with equity and virtue, with tenderness and friendship, and only the words in one bottle for the wine." Addison, unfortunately, was too much addicted to this vicious habit. "His chief companions were Steele, Budgell, Phillips, Carey, Davenant, and Colonel Brett. With one or other of these he always breakfasted. He studied all the morning, then dined at a tavern, and went afterwards to Batton's. From the coffee-house he went again to a tavern, where he often sat late, and drank too much wine."

We close our brief biography of Addison, with the following well-known lines, remarkable for their elegance and devotional spirit, and which alone would have conferred immortality on their author—

The spacious firmament on high  
With all the blue ethereal sky,  
And spangled heavens, a shining frame,  
Their Great Original proclaim.  
Th' unvaried sun from day to day,  
Does his Creator's power display,  
And publishes to every land,  
The work of an Almighty hand.  
Soon as the evening shades prevail,  
The moon takes up the wondrous tale,  
And nightly to the listening earth,  
Repeats the story of her birth;

Whilst all the stars that round her burn,  
And all the planets in their turn,  
Confirm the tidings as they roll,  
And spread the truth from pole to pole.  
What though in solemn silence all  
Move round their dark celestial ball?  
What though no visible form  
Amid their radiant orbs be found?  
In reason's secret sphere doth lie,  
The great first cause, the fount of life,  
Which breathes its vital soul on man,  
And utter forth a glorious voice,  
For ever singing as they move,  
The hand that made the universe!

## USE OF THE NATURAL WEAPONS OF ANIMALS.

THE *gymnotus*, or electric eel, is a still more (than the torpedo) tremendous assailant, both of the inhabitants of its own element, and even of large quadrupeds and of man himself, if he puts himself in its way. Its force is said to be ten times greater than that of the torpedo. This animal is a native of South America. In the immense plains of the Llanos, in the province of Caracas, is a city called Calabozo, in the vicinity of which these eels abound in small streams, inasmuch, that a road, formerly much frequented, was abandoned on account of them, it being necessary to cross a rivulet in which many mules were annually lost in consequence of their attacks. They are also extremely common in every pond from the equator to the ninth degree of north latitude. Humboldt gives a very spirited account of the manner of taking this animal, which is done by compelling twenty or thirty wild horses and mules to take the water. The Indians surround the basin into which they are driven, armed with long canes or harpoons. Some mount the trees, whose branches hang over the water, all endeavouring, by their cries and instruments, to keep the horses from escaping. For a long time the victory seems doubtful, or to incline to the fishes. The mules, disabled by the frequency and force of the shocks, disappear under the water; and some horses, in spite of the active vigilance of the Indians, gain the banks, and overcome by fatigue, and benumbed by the shocks they have encountered, stretch themselves at their length on the ground. "There could not," says Humboldt, "be a finer subject for a painter. Groups of Indians surrounding the basin, the horses, with their hair on end, endeavouring to escape the tempest that has overtaken them, the eels, yellowish and livid, looking like great aquatic serpents swimming on the surface of the water in pursuit of their enemy. In a few moments, two horses were already drowned, the third more than five feet long gliding under the belly of the horse or mule, making a discharge of its electric battery on the whole extent, attacking at the same instant the heart and the viscera. The animals, stupefied by these repeated shocks, fall into a profound lethargy, and, deprived of all sense, sink under the water, when the other horses and mules, passing over their bodies, they are soon drowned. The *gymnotus*, having thus discharged their accumulation of the electric fluid, now become harmless, and are no longer dreaded, swimming half out of the water, they flee from the horses instead of attacking them, and if they enter it the day after the battle, they are not molested, for these fishes require repose and plenty of food to enable them to accumulate a sufficient supply of their galvanic electricity."—Thompson

ADVICE TO THE YOUNG—Improve every moment to some valuable purpose. Cultivate an intimate acquaintance with the Scriptures. Reverence the name, the laws, and the worship of God. Devote your time, on the Sabbath, to the duties and business of religion. Live in the constant practice of the duty of prayer. Cherish a sense of your accountability to God, and of your need of the renovating influences of his divine Spirit. Forget not the debt of gratitude you owe to your parents. Treat them with kindness and respect. Listen diligently to their counsels and admonitions. Accustom yourselves to look forward to the hour of death and to contemplate the scenes that will follow. Early consecrate your time and your talents to the service of God and your fellow-men. You are now the hope of your parents. From you they expect much. Make them happy by living lives of religion and sobriety, and by preparing to fill their places with dignity, when they shall be sleeping in the dust. Remember that the eyes of God are upon you, and that you are not beings of a day, but are formed and acting for a state of immortality.

## SIR ROGER DE COVERLEY.

## INTRODUCTORY REMARKS BY THE AUTHOR

I have observed, that a reader seldom peruses a book with pleasure, till he knows whether the writer of it be a black or a fair man, of a mild or choleric disposition, married or a bachelor, with other particulars of the like nature, that conduce very much to the right understanding of an author. To gratify this curiosity, which is so natural to a reader, I design this paper, and my next is professedly discourses to my following writings, and shall give some account in them of the several persons that are engaged in this work. As the chief trouble of compiling, digesting, and correcting, will fall to my share, I must do myself the justice to open the work with my own history.

I was born to a small hereditary estate, which according to tradition of the village where it lies, was bounded by the same hedges and ditches in William the Conqueror's time that it is at present, and has been delivered down from father to son, whole and entire, without the loss or acquisition of a single field or meadow, during the space of six hundred years. There runs a story in the family, that when about three months before I was born, my mother dreamed that the child she would usher into the world was a judge. Whether this might proceed from a lawsuit which was then pending in the family, or my father's being a justice of the peace, I cannot determine. For I am not so vain as to think that it presaged any dignity that I should arrive at in my future life, though that was the interpretation which the neighbourhood put upon it. The gravity of my behaviour at my very first appearance in the world, and at the time that I suckled, seemed to favour my mother's dream. For she has often told me, I threw away my milk before I was two months old, and would not make use of my coral until she had taken away the teats from it.

As for the rest of my infancy, there being nothing in it remarkable, I shall pass it over in silence. I find that, during my next year, I had the reputation of a very sullen youth, but was always a favourite of my schoolmaster, who used to say, "that my part were solid and would wear well." I had not been long at the university before I distinguished myself by a most profound silence, for, during the space of eight years, except in the public exercises of the college, I scarce uttered the pronunciation of a hundred words. I do not remember that I ever spoke three sentences together in my whole life. Whilst I was in this learned body, I applied myself with a much higher note to my studies, that there are very few celebrated books either in the learned or the modern tongues which I am not acquainted with.

Upon the death of my father I was resolved to travel into foreign countries, and therefore left the university, with the character of a headstrong and idle fellow, that had a great deal of learning in his head but was without a sensible thirst after knowledge carried me into all the universities of Europe in which there was anything new or strange to be seen. My travels were my curiosity roused, that, having read the criticisms of some of the men concerning the antiquities of Egypt, I went as a sage to Grand Cairo, on purpose to take the measure of a pyramid, and as soon as I had set my right in that particular returned to my native country with great satisfaction.

I have passed my latter years in this city, where I am frequently seen in most public places, though I take no notice of it. I have a dozen of my select friends that know me, of whom my next paper shall give a more particular account. There is no place of general resort where I do not often make my appearance, sometimes I am entrusted with my seat into a band of politicians at Will's and listening with great attention to the news that are made in those little circular assemblies, sometimes I am kept at a child's play and while I remain attentive to nothing but the *Post* as when the conversation of every table in the room. I appear on Sunday nights at St. James's coffee house, and sometimes join the little committee of critics in the inner room as one who comes there to hear and improve. My face is likewise very well known at the Cigar, the Cocoa tree, and in the theatres both of Drury Lane and the Haymarket. I have been often a merchant upon the Exchange for above these ten years, and sometimes pass for a Jew in the assembly of stock jobbers at Jonathan's. In short whenever I see a cluster of people, I always mix with them, though I never open my lips but in my own defence.

Thus I live in the world rather as a Spectator of mankind than as one of the species, by which means I have made myself a speculative statesman, soldier, merchant, and artist without ever being actually engaged in any of them. I am very well versed in all the sciences which are necessary to govern the errors in the economy, I am a divine of others, better than those who are engaged in them, as I am a physician by discovery, which is apt to escape those who are in the quack line, I am a captain of any party with violence, and am resolved to observe an exact neutrality between the Whigs and Tories, unless I shall be forced to declare myself by the votes of either side. In short, I have acted in all the parts of my life as a looker on, which is the character I intend to preserve in this paper.

I have given the reader just so much of my history and character, as to let him see I am not altogether unequal to the business I have undertaken. As for other particulars in my life and adventures, I shall insert them in following papers, as I shall see occasion. In the mean time, I beg I consider how much I have seen, read, and I begin to blame my own

tauturnity; and since I have neither time nor inclination to communicate the fulness of my heart in speech, I am resolved to do it in writing; and to print myself out, if possible, before I die. I have been often told by my friends, that it is a pity so many useful discoveries which I have made should be in the possession of a silent man. For this reason, therefore, I shall publish a sheet-full of thoughts every morning, for the benefit of my contemporaries, and if I can any way contribute to the diversion or improvement of the country in which I live, I shall leave it, when I am summoned out of it, with the secret satisfaction of thinking that I have not lived in vain.

There are three very material points which I have not spoken of in this paper, and which, for several important reasons, I must keep to myself at least for some time. I mean an account of my name, my age, and my lodgings. I must confess, I would gratify my reader in anything that is reasonable, but as for these three particulars, though I am sensible they might tend very much to the embellishment of my paper, I cannot yet come to a resolution of communicating them to the public. They would indeed draw me out of that obscurity which I have enjoyed for many years, and expose me in public places to several salutes and civilities, which have been always very disagreeable for the greatest pain I can suffer, is the being talked to, and being stared at. It is for this reason, likewise, that I keep my complexion and dress as very great secrets, though it is not impossible but I may make discoveries of both in the progress of the work I have undertaken.

After having been thus particular upon myself, I shall in the next paper give an account of these gentlemen who are concerned with me in this work, for, as I have before intimated, a plan of it is laid and concerted (as all other matters of importance are) in a club. However, as my friends have engaged me to stand in the front, those who have a mind to correspond with me may direct their letters to the Spectator, at Mr. Bucklev's in Little Britain for I must further acquaint the reader, that though our club meets only on Tuesdays and Thursdays we have appointed a committee to sit every night for the inspection of all such papers as may contribute to the advancement of the public weal.

## CHAPTER I

## THE CLUB

SATURDAY MORNING, JULY SIXTH 1707

THE first of our society is a gentleman of Worcester-shire, of an ancient decent family, his name Sir Roger de Coverley\*. His great grandfather was the inventor of that famous county dance which is called at this time. All who know that line are very well acquainted with the particulars of Sir Roger. He is a gentleman that is very singular in his behaviour, but his singularity proceeds from his good sense and are contradictions to the manner of the world, only is he thinks the world is in the wrong. However, this humour creates him no enemies, for he does nothing, with a seriousness or obstinacy and his being unconfin'd to modes and forms, and his great reading and more capable to please and oblige all who know him. When he is in town he lives in Soho-square†. It is said he is a great scholar by reason he was once in love by a perverse beautiful widow of the next county to him. Before this disappointment Sir Roger's what you call a fire of wit and wit often supped with my Lord Leicester and Sir George Lister found a duel upon his fire of wit to town and kicked bully Dawson in a public coffee house for calling him a young ter. But being ill used by the above mentioned widow I was very serious for a year and a half and though his temper is naturally jovial—he at last got over it, he grew cruel to himself. I never see him afterwards. He continues to wear a coat and doublet of the same cut that were in fashion at the time of his republic, which, in his private life, he tells us, has been in and out twelve times since he first wore it. It is said Sir Roger grew humble in his desires after he had for a while been so insomuch that it is reported he has frequently been taken with a high looking gypsy, but this is looked upon by his friends as a matter of raillery than truth. He is now in his fifty-sixth year, cheerful, gay, and hearty, keeps a good house, both in town and country, a great lover of mankind, but there is such a unithful cast in his behaviour, that he is rather beloved than esteemed.

His tenants grow rich, his servants look satisfied, all the young women profess love to him, and the young men are glad of his company. When he comes into a house he calls the servants by their names, and talks all the way up stairs to a visit. I must not omit, that Sir Roger is a justice of the quorum, that he fills the chair at a quarter-session with great abilities, and three months ago gained universal applause, by explaining a passage in the Game act.

The gentleman next in esteem and authority among us is another bachelor who is a member of the Inner-temple, a man of great probity, wit, and understanding, but he has chosen the place of his residence rather to obey the direction of an old humorous father, than in pursuit of his own inclinations. He was placed there to study the laws of the land, and is

\* An allusion, no doubt to Mr. John Greaves a mathematician and antiquary, who after visiting Egypt, published a book entitled *Pyramidographia*.

† This coffee house in Little Britain's Church-yard, was the resort of the clergy in Charles Alley.

\* This character is said by Mr. Tylers to have been drawn for Sir John Packington of Worcester-shire a Tory not without good sense, but abounding in absurdities. But this may probably, have been only a vague report. Mr. Tickell seems to have been of opinion, that the account of the Spectator and the club are altogether fictitious.

† Then the most fashionable part of the town.

‡ Dr. Johnson said it appeared to him, "that the story of the widow was intended to have something superinduced upon it, but the superstructure did not come."—*Boswell's Life of Johnson* vol II p. 26, 3d edit.

§ A noted sharper, swaggerer, and debauchee well known in Blackfriars and his two infamous purloins, and to expose whom it has been said the character of Captain Hackum, in Shadwell's comedy, called *The Squire of Alton*, was drawn.

the most learned of any of the house in those of the stage. Aristotle and Longinus are much better understood by him than Littleton or Coke. The father sends up every post, questions relating to marriage-articles, leases, and tenures in the neighbourhood, all which questions he agrees with an attorney to answer and take care of in the lump. He is studying the passions themselves when he should be inquiring into the debates among men which arise from them. He knows the argument of each of the orations of Demosthenes and Tully, but not one case in the reports of our own courts. No one ever took him for a fool, but none except his intimate friends, know he has a great deal of wit. His turn makes him at once both disinterested and agreeable. As few of his thoughts are drawn from business, they are most of them fit for conversation. His taste of books is a little too just for the age he lives in, he has read all, but approves of very few. His familiarity with the customs, manners, actions, and writings of the ancients, makes him a very accurate observer of what occurs to him in the present world. He is an excellent judge, and the time of the play is his hour of business. Exactly at five he passes through New Inn, crosses through Russell court, and takes a look at Will's till the play begins; he has his shoes rubb'd and his ruffe powdered at the barber's as you go into the Rose. It is for the good of the audience when he is at a play, for the actors have an ambition to please him.

The person of next consideration is Sir Andrew Freeport,† a merchant of great eminence in the city of London: a person of indefatigable industry, strong reason, and great experience. His notions of trade are noble and generous, and (as every rich man has usually some sly way of jesting, which would make no great figure were he not a rich man,) he calls the sea the British Common. He is acquainted with commerce in all its puts, and will tell you that it is a stupid and barbarous way to extend dominion by arms, for true power is to be got by arts and industry. He will often argue, that if this part of our trade were well cultivated, we should gain from one nation and if other puts from another. I have heard him prove that diligence in making more lasting acquisitions than valour, and that cloth has ruined more nations than the sword. He abounds in several huge maxims, amongst which the greatest favourite is, "A penny saved is a penny got." A general tender of good sense is pleasant company, than a general scholarship. Sir Andrew has a natural unaffected eloquence, the perspicuity of his discourse gives the same pleasure that wit would in an other man. He has made his fortune himself, and says that I might as well tell of other kingdoms by as plain method as to him. He is richer than other men, though at the same time I can say this of him, that there is not a point in the compass but blows home a ship in which he is an owner.

Next to Sir Andrew in the club room sits Captain Sentry,‡ a gentleman of great courage, good understanding but very ill-natured. It is one of those that deserve very well but are very ill, and at putting them to the test within the observation of such as should take notice of them. He was a mercenary captain, and behaved himself with great gallantry in several engagements, and several sieges, but having a small estate of his own and being next heir to Sir Roger, he has quitted a way of life in which no man can rise suitably to his merit, and is now something of a count, as well as a soldier. I have heard him often lament that in a profession where merit is placed in so conspicuous a view, and where he should be the better for modesty. When he has talked to this purpose, I never heard him make a sound expression, but frankly confess that he left the world, because he was not fit for it. A strict honesty and an even regular behaviour, are in themselves obstacles to him that must press through crowds, who endeavour at the same end with himself, the favour of a commander. He will, however, in his way of talking excuse generals for not disposing according to men's desert, or inquiring into it. For, says he, that great man who has a mind to help me, has many to break through to come at me, as I have to come at him: therefore he will conclude, that the man who would make a figure, especially in a military way, must get over all false modesty, and assist his patron against the importunity of other pretenders, by a proper assurance in his own vindication. He says it is a civil cowardice to be backward in asserting what you ought to expect, as it is a military fear to be slow in attacking when it is your duty. With this candour does the gentleman speak of himself and others. The same frankness runs through all his conversation. The military part of his life has furnished him with many adventures, in the relation of which he is very agreeable to the company. For he is never overbearing, though accustomed to command men in the utmost degree below him, nor ever obsequious, from an habit of obeying men highly above him.

But that our society may not appear a set of humourists, unacquainted with the gallantries and pleasures of the age, we have among us the gallant Will Montgombry,§ a gentleman who, according to his years, should be in the decline of his life, but having ever been very careful of his person, and always had a very easy fortune, time had made but very little impression, either by wrinkles on his forehead, or traces in his brain. His person is well turned, and of a good height. He is very ready at that sort of discourse with which men usually entertain women. He has all his life dressed very well, and remembers habits as others do men. He can smile when one speaks to him, and laughs easily. He knows the history of every mode, and can inform you from which of the French court ladies our wives and daughters had

this manner of curling their hair, that way of placing their hoods, whose frailty was covered by such a sort of petticoat, and whose vanity to show her foot made that part of the dress so short in such a year. In a word, all his conversation and knowledge has been in the female world. As other men of his age will take notice to you what such a minister said upon such and such an occasion, he will tell you, when the Duke of Monmouth danced at court, such a woman was then smitten, another was taken with him at the head of his troops in the Park. In all these important relations, he has ever about the same time received a kind glance, or a blow of a fan from some celebrated beauty, mother of the present Lord Such-a-one. If you speak of a young commoner that said a lively thing in the house, he starts up, "He has good blood in his veins, Tom Mirabel knew that, the rogue cherted me in that affair that young fellow's mother used me more like a dog than any woman I ever made advances to." This way of talking of his very much enlivens the conversation, among us of a more sedate turn, and I find there is not one of the company, but myself, who rarely speak at all, but speaks of him as of that sort of man who is usually called a well-bred fine gentleman. To conclude his character, whose women are not concerned, he is an honest worthy man.

I cannot tell whether I am to account him, whom I am next to speak of, as one of our company, for he visits us but seldom, but when he does, it adds to every man else a new enjoyment of himself. He is a clergyman, a very philosophic man, of general learning, great sanctity of life, and the most exact good breeding. He has the misfortune to be of a very weak constitution, and consequently cannot support such cares and business as preferments in his function would oblige him to; he is therefore among divines, what a chamber-counsellor is among lawyers. The probity of his mind, and the integrity of his life, create him followers, as being eloquent or loud advances others. He seldom introduces the subject he speaks upon, but we are so far gone in years, that he observes when he is among us, an earnestness to have him fall on some divine topic, which he always treats with much authority, as one who has no interest in this world, as one who is hastening to the object of all his wishes, and conceals his hope from his decays and infirmities. These are my ordinary companions.

## CHAPTER II

## SIR ROGER AT HIS COUNTRY HOUSE.

Here to thee shall plenty flow,  
And all her fountains show,  
To raise the labour of the quiet plain"—CHURCH

HAVING often received an invitation from my friend Sir Roger de Coverley to pass a month with him in the country, I last week accompanied him thither, and am settled with him for some time at his country-house, where I intend to finish several of my ensuing speculations. Sir Roger, who is very well acquainted with my humour, lets me rise and go to bed when I please, dine at his own table or in my chamber, as I think fit, sit still and say nothing without bidding me be merry. When the gentlemen of the country come to see him, he only shows me at a distance. As I have been walking in his fields, I have observed them stealing a sight of me over a hedge, and have heard the knight desiring them not to let me see them, for that I had to be staid at.

I am the more at ease in Sir Roger's family, because it consists of sober and pious persons, for as the knight is the best master in the world, he seldom changes his servants, and, as he is beloved by all about him, his servants never care for leaving him, by this means his domestics are all in years and grown old with their master. You would take his *valet de chambre* for his brother, his butler is grey-headed, his groom is one of the greatest men that I have ever seen, and his coachman has the looks of a private counsellor. You see the goodness of the master even in the old household, and in a stable that is kept in the stable with great care and tenderness out of regard to his past services, though he has been useless for several years.

I could not but observe with a great deal of pleasure, the joy that appeared in the countenances of these ancient domestics upon my friend's arrival at his country seat. Some of them could not refrain from tears at the sight of their old master, every one of them pressed forward to do something for him, and seemed discouraged if they were not employed. At the same time, the good old knight, with a mixture of the father and the master of the family, tempered his inquiries after his own affairs with several kind questions relating to themselves. Thus, humanity and good-nature engages everybody to him, so that when he is pleasant upon any of them, all his family are in good humour, and none so much as the person whom he diverts himself with. On the contrary, if he coughs, or betrays any infirmity of old age, it is easy for a stranger by to observe a secret concern in the looks of all his servants.

My worthy friend has put me under the particular care of his butler, who is a very prudent man, and, as well as the rest of his fellow-servants, wonderfully desirous of pleasing me, because they have often heard their master talk of me as of his particular friend.

My chief companion, when Sir Roger is diverting himself in the woods or the fields, is a very venerable man who is ever with Sir Roger, and has lived at his house in the nature of a chaplain above thirty years. This gentleman is a person of good sense and some learning, of a very regular life, and obliging conversation. He heartily loves Sir Roger and knows that he is very much in the old knight's esteem, so that he lives in the family rather as a relation than a dependant.

I have observed in several of my papers that my friend Sir Roger, whilst all his good qualities, is something of a humourist, and that his virtues, as well as imperfections, are, as it were, tinged by a certain extravagance which

\* On the outside of Temple Bar.

† It has been conjectured, and not without an appearance of probability that this character was sketched from Mr. H. Martin a gentleman acknowledged by Steele to have assisted in the *Spectator*, and known to have been principally concerned in *The British Merchant*, 3 vols. 8vo. 1721.

‡ Supposed to have been Capt. Kempenfelt, a native of Sweden, and father of the rear admiral of that name who lost his life in the *Royal George* of 100 guns which sunk at Spithead, Aug. 29, 1782.

§ A Colonel Clarendon is thought to have been alluded to under this character.

"The first of our society is a gentleman of Worcestershire of ancient descent, his name Sir Roger de Coverley. His great grandfather was the inventor of that famous country dance which is called after him. All who know that shire are very well acquainted with the parts and merits of Sir Roger."

makes them particularly his, and distinguishes them from those of other men. This cast of mind, as it is generally very innocent in itself so it renders his conversation highly agreeable, and more delightful than the same degree of sense and virtue would appear in their common and ordinary colours. As I was walking with him last night, he asked me how I liked the good man whom I have just now mentioned and, without staying for my answer, told me, that he was afraid of being insulted with Latin and Greek at his own table, for which reason he desired a particular friend of his, at the university, to find him out a clergyman rather of plain sense than much learning, of a good aspect, a clear voice a sociable temper and, if possible, a man that understood a little of backgammon. My friend says Sir Roger, "found me out this gentleman, who, besides the endowments required of him, is, they tell me, a good scholar though he does not show it I have given him the parsonage of the parish and because I know his value, have settled on him a good annuity for life. If he outlives me he shall find that he was higher in my esteem than perhaps he thinks he is. He has now been with me thirty years and, though he does not know I have taken notice of it, has never in all that time asked anything of me for himself, though he is every day soliciting me for something in behalf of one or other of my tenants, his parishioners. There has not been a law suit in the parish since he has lived among them. If any dispute arises, they apply themselves to him for the decision, if they do not acquiesce in his judgment, which I think never happened above once or twice at most, they appeal to me. At his first settling with me, I made him a present of all the good sermons which have been printed in English and only begged of him that every Sunday he would pronounce one of them in the pulpit. Accordingly he has digested them into such a series, that they follow one another naturally, and make a continued system of practical divinity."

As Sir Roger was going on in his story the gentleman we were talking of came up to us and, upon the knight asking him who preached to-morrow (for it was Saturday night) told us, the bishop of St Asaph in the morning and Dr. South in the afternoon. He then showed us his list of preachers for the whole year, where I saw, with a great deal of pleasure Archbishop Tillotson, Bishop Sanderson, Dr Barrow Dr Calamy, with several living authors who have published discourses of practical divinity. I no sooner saw this venerable man in the pulpit, but I very much approved of my friend's insisting upon the qualifications of a good aspect and a clear voice for I was so charmed with the gracefulness of his figure and delivery, as well as with the discourses he pronounced, that I think I never passed any time more to my satisfaction. A sermon repeated after this manner, is like the composition of a poet in the mouth of a graceful actor.

I could heartily wish that more of our country clergy would follow his example, and, instead of wasting their spirits in laborious compositions of their own, would endeavour after a handsome elocution, and all those other talents that are proper to enforce what has been penned by greater masters. This would not only be more easy to themselves, but more edifying to the people.

## CHAPTER III

### THE HOUSEHOLD OF SIR ROGER DE COVERLEY

The Athenian erects a large statue to his friend and places him though a slave on a high pedestal to show that it was to honour him open indifferently to all.

THE reception manner of attendance, undisturbed freedom and quiet, which I meet with here in the country has confirmed me in the opinion I always had that the general corruption of manners in servants is owing to the conduct of masters. The aspect of every one in the family carries so much satisfaction, that it appears he knows the happy lot which has befallen him in being a member of it. There is one particular which I have seldom seen but at Sir Roger's. It is usual in all other places, that servants fly from the parts of the house through which their master is passing, on the contrary, here they industriously place themselves in his way, and it is on both sides, as it were, understood as a duty, when the servants appear without calling. This proceeds from the humane and equal temper of the man of the house, who also perfectly well knows how to enjoy a great estate with such economy as ever to be much beforehand. This makes his own mind untroubled, and, consequently unapt to vent peevish expressions, or give passionate or inconsistent orders to those about him. Thus respect and love go together, and a certain cheerfulness in performance of their duty is the particular distinction of the lower part of this family. When a servant is called before his master he does not come with an expectation to hear himself rated for some trivial fault threatened to be stripped, or used with any other unbecoming language which mean masters often give to worthy servants; but it is often to know what road he took that he came so readily back according to order whether he passed by such a ground, if the old man who rents it is in good health, or whether he gave Sir Roger's love to him, or the like.

A man who preserves a respect founded on his benevolence to his dependants lives rather like a prince than a master in his family, his orders are received as favours rather than duties, and the distinction of approaching him is part of the reward for executing what is commanded by him.

There is another circumstance in which my friend excels in his management, which is the manner of rewarding his servants. He has ever been of opinion, that giving his cast clothes to be worn by valets, has a very ill effect upon little minds, and creates a silly sense of equality between the parties, in persons affected only with outward things. I have heard him often pleasant on this occasion, and describe a young gentleman abusing his man in that coat, which a month or two before was the most pleasing distinction he was conscious of in himself. He would turn his discourse still more pleasantly upon the bounties of the ladies in this kind; and I have heard him say, he knew a fine woman, who distributed rewards and punishments in giving becoming or unbecoming dresses to her maids.

But my good friend is above these little instances of good-will, in bestowing only trifles on his servants, a good servant to him is sure of having it in his choice very soon of being no servant at all. As I before observed, he is so

good a husband, and knows so thoroughly that the skill of the purse is the cardinal virtue of this life, I say, he knows so well that frugality is the support of generosity, that he can often spare a large fine when a tenement falls, and give that settlement to a good servant who has as much to go into the world, or make a stranger pay the fine to that servant, for his more comfortable maintenance, if he stays in his service.

A man of honour and generosity considers it would be miserable to himself to have no will but that of another, though it were of the best person breathing, and for that reason goes on as fast as he is able to put his servants into independent livelihoods. The greatest part of Sir Roger's estate is tenanted by persons who have served himself or his ancestors. It was to me extremely pleasant to observe the visitants from several parts to welcome his arrival into the country and all the difference that I could take notice of between the late servants who came to see him, and those who stayed in the family, was, that these latter were looked upon as finer gentlemen and better courtiers.

This manumission and placing them in a way of livelihood, I look upon as only what is due to a good servant, which encouragement will make his successor be as diligent, as humble, and as ready as he was. There is something wonderful in the narrowness of those minds, which can be pleased, and be barren of bounty to those who please them.

One night, on this occasion, recount the sense that great persons in all ages have had of the merit of their dependants, and the heroic services which men have done their masters in the extremity of their fortunes, and shown to their undone patrons, that fortune was all the difference between them, but, as I design this my speculation only as a gentle admonition to thankless masters, I shall not go out of the occurrences of common life, but assert it as a general observation, that I never saw, but in Sir Roger's family, and one or two more, good servants treated as they ought to be. Sir Roger's kindness extends to their children's children, and this very morning he sent his coachman's grandson to 'prentice. I shall conclude this paper with an account of a picture in his gallery where there are many which will deserve my future observation.

At the very upper end of this handsome structure I saw the portraiture of two young men standing in a river the one naked, the other in a livery. The person supported seemed half dead, but still so much alive as to show in his face exquisite joy and love towards the other. I thought the funting figure resembled my friend Sir Roger, and looking at the butler who stood by me for an account of it, he informed me that the person in the livery was a servant of Sir Roger's, who stood on the shore while his master was swimming, and observing him taken with some sudden illness, and sunk under water, jumped in and saved him. He told me, Sir Roger took off the dress he was in as soon as he came home, and by a great bounty at that time, followed by his favour ever since, had made him master of that pretty seat which we saw at a distance as we came to this house. I remembered indeed Sir Roger said, there lived a very worthy gentleman to whom he was highly obliged, without mentioning anything further. Upon my looking a little dissatisfied at some part of the picture my attendant informed me that it was against Sir Roger's will, and at the earnest request of the gentleman himself, that he was drawn in the habit in which he had saved his master.

#### CHAPTER IV

##### SIR ROGER DE COVERLEY AS A HOST

Out of breath to no purpose at a very busy about nothing

As I was yesterday morning walking with Sir Roger before his house a country fellow brought him a huge fish which he told him Mr William Wimble had caught that very morning and that he presented it with his service to him, and intended to come and dine with him. At the same time he delivered a letter, which my friend read to me as soon as the messenger left him.

"SIR ROGER—I desire you to accept of a jack, which is the best I have caught this season. I intend to come and stay with you a week, and see how the perch bite in the Black river. I observed with some concern the last time I saw you upon the bowling green, that your whip wanted a little to it, I will bring half a dozen with me that I twisted last week, which I hope will serve you all the time you are in the country. I have not been out of the saddle for six days last past, having been at Eton with Sir John's eldest son. He takes to his learning hugely—I am, sir, your humble servant WILL WIMBLE."

This extraordinary letter, and message that accompanied it, made me very curious to know the character and quality of the gentleman who sent them, which I found to be as follows: "Will Wimble is younger brother to a baronet, and descended of the ancient family of the Wimbles. He is now between forty and fifty, but, being bred to no business, and born to no estate, he generally lives with his elder brother, as superintendent of his game. He hunts a pack of dogs better than any man in the country and is very famous for finding out a hare. He is extremely well versed in all the little handicrafts of an idle man. He makes a May-fly to a miracle, and furnishes the whole country with angle-rods. As he is a good natured officious fellow, and very much esteemed upon account of his family, he is a welcome guest at every house, and keeps up a good correspondence among all the gentlemen about him. He carries a tulip-root in his pocket from one to another, or exchanges a puppy between a couple of friends that live perhaps in the opposite sides of the country. Will is a particular favourite of all the young heirs, whom he frequently obliges with a net that he has woven, or a setting-dog that he has 'made' himself. He now and then

presents a pair of garters of his own knitting to their mothers or sisters, and raises a great deal of mirth among them, by inquiring as often as he meets them "How they wear!" These gentleman-like manufactures and obliging little humours, make Will the darling of the country.

Sir Roger was proceeding in the character of him, when we saw him make up to us with two or three hasty twigs in his hand, that he had cut in Sir Roger's woods, as he came through them, in his way to the house. I was very much pleased to observe on one side the hearty and sincere welcome with which Sir Roger received him, and on the other, the secret joy which his guest discovered at sight of the good old knight. After the first salutes were over, Will desired Sir Roger to lend him one of his servants to carry a set of shuttle-cocks he had with him in a little box, to a lady that lived about a mile off, to whom it seems he had promised such a present for above this half year. Sir Roger's back was no sooner turned but honest Will began to tell me of a large cock pheasant that he had sprung in one of the neighbouring woods, with two or three other adventures of the same nature. Odd and uncommon characters are the game that I look for, and most delight in, for which reason I was as much pleased with the novelty of the person that talked to me, as he could be for his life with the springing of a pheasant, and therefore listened to him with more than ordinary attention.

In the midst of his discourse, the bell rung to dinner, where the gentleman I have been speaking of had the pleasure of seeing the huge jack he had caught, served up for the first dish in a most sumptuous manner. Upon our sitting down to it, he gave us a long account how he had hooked it, played with it, foiled it, and at length drew it out upon the bank, with several other particulars that lasted all the first course. A dish of wild fowl, that came afterwards, furnished conversation for the rest of the dinner, which concluded with a late invention of Will's for improving the quail-pipe.

Upon withdrawing into my room after dinner, I was secretly touched with compassion towards the honest gentleman that had dined with us, and could not but consider with a great deal of concern, how so good a heart and such busy hands were wholly employed in trifles, that so much humanity should be so little beneficial to others, and so much industry so little advantageous to himself. The same temper of mind and application to affairs, might have recommended him to public esteem and have raised his fortune in another station of life. What good to his country or himself might not a trader or merchant have done with such useful though ordinary qualifications!

Will Wimble is the case of many a younger brother of a great family, who had rather see their children starve like gentlemen, than thrive in a trade or profession that is beneath their quality. His humour fills several parts of Europe with pride and beggary. It is the happiness of a trading nation like ours, that the younger sons, though incapable of any liberal art or profession may be placed in such a way of life, as may perhaps enable them to vie with the best of their family. Accordingly, we find several citizens that were launched into the world with narrow fortunes, rising by an honest industry to greater estates than those of their elder brothers. It is not improbable but Will was formerly tried at divinity law, or physic, and that finding his genius did not lie that way, his parents gave him up at length to his own inventions. But, certainly, however improper he might have been for studies of a higher nature he was perfectly well turned for the occupations of trade and commerce. As I think this is a point which cannot be too much inculcated, I shall desire my reader to compare what I have here written with what I have said in my twenty-first speculation.

(To be continued)

#### THE THERMOMETER.

THIS is the literally 'measure of heat.' The idea of determining the intensity of this subtle agent emanated with Sanctorius, an Italian philosopher in the year 1620.

His plan was improved upon by Fahrenheit, a German philosopher, who lived about the year 1720 and who was the inventor of the thermometer now used in this country and America. The form of Fahrenheit's thermometer is too well known to need description. Fahrenheit's thermometer is deficient in this respect, viz, that the inventor laboured under a mistake when he imagined 0 or zero, to be the extreme of cold. Zero is the temperature of equal parts of snow and salt, and Fahrenheit thought that point was destitute of all heat. Repeated experience has proved that the mercury often falls lower even in temperate latitudes. The freezing point of water he marked by plunging his thermometer into water in that state, after having marked the degrees on his scale and found it 32°, the heat of boiling water 212°, while other temperatures, such as summer heat, blood heat, and fever heat, are merely arbitrary marks supposed to be correct on the average. The only positive marks are the freezing point 32°, and the boiling point 212°.

French thermometers are differently marked but equally wrong as the freezing point is placed at the temperature of mingled snow and salt or zero, when in reality water freezes at a much higher temperature. The boiling point in the thermometer in use in France is marked 100°. In Germany and Russia the freezing point of the thermometer is also marked zero and the boiling point 80°.

At 40° below zero, mercury becomes solid, consequently, to mark the degrees of cold sometimes experienced in Russia and the Arctic Regions, spirits of wine is used, which has never been known to freeze from natural causes, although it is said that a Scotch chemist once succeeded in producing such an extreme degree of cold as to freeze even alcohol. If he did so, he never divulged the secret of the chemical agency by which he effected it.

have not been taken with their early training to teach them the advantages they would derive from a more gentle and polished habit. It may be true that forty years ago, "the tradesman was incomparably farther from being on a level with what is highest in society around him than the savage mountaineer." But it is true no longer, not only is the general level much more highly elevated than it was forty years ago, but a much larger portion of society has reached that level. The tradesman treads closely on the heels of the courtier, and "galls his knee." There is as much, and perhaps more vulgarity among the idle rich as among the hardheaded sons of labour. Even Sir Walter Scott, with all his feudal feelings, has paid a noble tribute to the worth and excellence of the labouring classes. "I fear you have some very young ideas in your head," he said to Lockhart, who had put forth some paradox respecting the different classes of society. "are you not too apt to measure things by some reference to literature—to disbelieve that anybody can be worth much care who has no knowledge of that sort of thing, or taste for it? God help us! what a poor world this would be if that were the true doctrine!" I have read books enough, and observed and conversed with enough of eminent and splendidly cultivated minds, too, in my time, but I assure you, I have heard higher sentiments from the lips of men, uneducated men and women when exciting the spirit of severe yet gentle criticism under difficulties and afflictions, or speaking their simple thoughts in to encourage us in the lot of friends and neighbours, than I ever yet met with out of the pages of the Bible. We shall never learn to feel and respect our fellow-creatures and destiny, unless we have taught ourselves to consider everything as commonplace compared with the education of the heart. Another extract from a letter written by Sir Walter Scott to his second son (John) while pursuing his studies, will show us that he, at least, did not attach the idea of superiority to labour. "I cannot too much impress upon your mind that labour is the condition which God has imposed on us in every station of life—there is nothing worth having that can be had without it, from the head of the peasant with the vent of his brow to the pearls which the rich man must get rid of his crown. The only difference between them is that the poor man labours to get a dinner to his appetite, the rich man to get an appetite to his dinner. As for knowledge, it can no more be planted in a human mind without labour, than a field of wheat can be produced without the previous use of the plough. There is, indeed, the greatest difference, that chance or circumstances may so cause it that mother shall reap what the farmer sows, but no man can be deprived whether by accident or misfortune, of the fruits of his own studies. All the liberal and exact positions of knowledge which he makes are for his own use. Let us try to do so, therefore, and improve the time. In youth our spirits are light, our minds are ductile, and knowledge is easily laid in; if we neglect to put in our sum, our sum will be useless, and our harvest will be half and the winter of our old age will be a cold one."

Labour then being the common lot of all men cannot in itself be scornfully regarded, unless we restrict the term to the service of covetousness. It would degrade the word of anything but a respectable means. But it is only in its sense it is commonly attached to the degraded and unimproved man. It is a simple transaction, and the humanity of the Lord does not open to us a more virtuous than vulgar. Now selfishness is ignorance and rudeness of mind, it is not common to all men engaged in manual labour or in trade, my moral and liberal education and exposure of intellect is common to all in now are rich and all. Consequently, vulgarity is no more the badge of the man than gentility is the undoubted mark of the other. It is, in fact, a quality of the mind, this "terrible vulgarity," which is not confined to any sphere or station, which is not inherent to any kind of labour or occupation, and which requires something more than the practice of duelling, or the uncertain "proscription from good society" to get rid of. As long as the Mammon-worship of the day prevails, we shall be certain to find vulgarity or rudeness in high places, and it is proscribed as long as we reverence a human money bag we shall be certain to find vulgarity ascending and descending the ladder of society, from the duke to the peasant. As Sir Walter Scott found the most elevated sentiments among the humblest classes, so we often found the noblest nature among gentlemen with a tone of thought and feeling worthy of the highest rank, among the rude sons of labour. The Mammon-worship is not so rare among them as with those of higher station. There is a cheering hope, where such things are found to prevail in spite of all the sordid accompaniments by which they are surrounded that the purification of proper means the role of the labouring class may be elevated out of the coarseness of manners and real vulgarity of thought which do them so much damage, and place an undesired stigma on labour itself. The extended education of the people is doing much to get rid of their ignorance and narrowness of mind. If the other element of vulgarity, selfishness, is a strong monster not easily subdued, one which can only be conquered by the "education of the heart."

We are all labourers, or ought to be so from the highest to the lowest. How is it that the labourers of the higher class have less of the so-called vulgarity of labour than the lowest? Because they "consume their own smoke." This is one of Carlyle's quaint expressions, full, nevertheless, of the deepest meaning. As the soot and smoke discolour the skin, and give a coarseness and rudeness to the external man, so do the harsh language, the disobliging manners, the want of courtesy towards each other, discolour and defile the inner man, and produce that vulgarity of thought which effectually prevents the elevation of the character, and excludes them from the society of the more refined. In these days, we are seeking to prevent the tall chimneys of labour from vomiting forth their smoke, and defacing the fair front of nature—from annoying their neighbours, and injuring the verdure of the fields and groves—drop, carrying foul smells and pestilential vapours into the dwellings of those surrounding them, and science is seeking the means of converting

this baneful element into useful products, or, at least, in preventing it from becoming injurious—striving, indeed, to make each chimney "consume its own smoke." And what science is endeavouring to effect for this physical inconvenience, the higher class of labourers—the best informed and best educated among them—have effected for the moral inconvenience. They have "consumed their own smoke;" they have discovered that, while it is pernicious to their neighbours, it is worse than useless to themselves—that it covers themselves with its own filth and blackness. They know that the time the polish the keener is the weapon; and hence they seek to avoid all that can dull its brightness, or blunt its edge. They know that it is not the rule, misapplied instrument that does its work most effectually, but that an elegant and graceful tool will most commonly be of more avail. They know that harsh language does not persuade, but calls for harsh reply in return, that disobliging manners are productive of more evil and pain to the person indulging in them than to the party disobliged; that want of courtesy is certain to be met by want of courtesy, and that society would be one continual field of contest without it. They know that all these things are the smoke and smother of life—covering over all its amenities with a foul vulgarity—and therefore they have "consumed their smoke," to the great benefit of themselves and their neighbours. And the sooner all labourers begin to "consume their own smoke," the better it will be for themselves and the world at large. We have met sometimes with tolerably well informed men on many points, who seem to think they could not get on in the world without making a great deal of this "smoke"—who take a pride, as it were, in fuming—and the blacks fly about them in all directions, striking some of those around them, but covering themselves as thick as if they were chimney-sweepers, and then people step to the other side of the street to avoid them, just as they would avoid a root bag. Is it matter of surprise that such a man should be proscribed? And then there are some men who imagine that there is something morally in being coarse and brutal, and look upon all attempts of others to smoothe down their roughness as effeminate and affected, and thus they oppose all endeavours at polish and refinement. All this is not injurious to the progress of the labourer, and increases the cloud of smoke that ought to be consumed. We are well aware of all the difficulties that beset the humble labourer in his attempts to get rid of the "smoke" that has for ages been beginning, not only his vestments, but his very thoughts. Education has done, and is doing, much for him, and if he will apply what he has acquired to the "consuming his own smoke"—as the discoveries of science are being applied to his chimneys—he will soon be elevated into a higher state of being, and, what is more, into a pleasant and happier state of being. However humble may be the occupation of the labourer, there is no reason why his mind should not be stored with high and lofty thoughts, and these would rob labour of much of its pain, and much of the vulgarity, which vulgar minds—and vulgar minds alone—attach to it. What is, in fact, one of the chief causes which prevents the advancement of the humble class of labourers?—The distrust they bear towards each other. They have not "consumed their own smoke!" Their very coarseness and rudeness towards one another repels each other, they cannot, therefore, act so well in combination as those who have "consumed their own smoke." Civility, courtesies, even grace and elegance, are among the minor moulds of life and exercise a vast influence over all who come within their sphere. The man who possesses these to the greatest extent among his fellows, will not only exercise an influence over them, but will find that influence extended to the class immediately above him, because he will have consumed much of the "smoke" which hides and covers many good and valuable qualities in those of his own class.

Let us carry our illustration a little further. We are old enough to remember when the streets of London and other great towns were dimly lighted with dingy oil lamps, that scarcely served to make darkness visible. An act of science proposed to "burn the smoke," and light the towns with a brilliant flame. The wisemen shook their heads at the proposition. We remember seeing the first out-of-door experiment made, and the lights, unprotected by glass, went flickering and quivering about in the wind, as you may at this time see them on a royal brightness, or over the Pit entrance of the Lyceum Theatre. And again the wisemen shook their heads, and predicted that the "burning of smoke" would never be of any use. And now every town in the country is radiant with the light of "burnt smoke." And the deleterious part of the smoke is converted into many useful products. And so would it be if those who labour would zealously set themselves to work to burn their own smoke, there may be a little flickering and wavering of the light at first—it may be blown hither and thither by strange fancies and wild gusts of passion, but in a very short time they will learn how to protect it from disturbing currents, the light will shine with brilliancy, the selfishness, ignorance, and narrowness of mind which constitute vulgarity, will disappear, and they will march steadily on over that well kept, well lighted high-road where "ways are ways of pleasantness, and all her paths are peace!"

**MIND YOUR OWN BUSINESS.**—To tell a man to his face to mind his own business, would be considered about equal to knocking him down. And yet it is one of the simplest rules of right conduct, and the most useful that mankind can adopt in their intercourse with each other. There is a great deal of the Paul Pry spirit in the human heart, or wonderful inquisitiveness in regard to the personal and private affairs of friends and neighbours. This spirit makes more mischief in the community than almost any other cause, and creates more malice, envy, and jealousy, than can be overcome in a century. Let every man mind his own business, and there will not be half the trouble in the world that there is at present.

## ONWARD!

**PROPOSED UNIVERSAL EXHIBITION OF INDUSTRY AT PARIS.**—There is a talk of a universal exhibition of the products of industry, similar to that which took place in London last year, to be held in Paris in the course of the year 1853.

**PROPOSED BREAKWATER ON THE MERSEY.**—A report, submitted to the Liverpool Chamber of Commerce, by Mr. W. M. Ross, contains a project, devised by Mr. George Rennie, for the reclamation from the sea of the vast sand-banks in the estuary of the river Mersey, by means of a breakwater, extending seaward from the Black Rock Point, five miles in length. If carried into execution, it is stated that, besides being the means of averting much loss of life and property, it will materially improve the entrance to the port in a navigable point of view.

**NEW MODE OF OPERATING IN SURGERY.**—In reference to the employment of the heat of electricity in practical surgery (see *Home Companion*, page 348), it appears that in November, 1850, Mr. Marshall employed a platina wire, heated by the galvanic battery, as a means of cauterizing a wound otherwise quite inaccessible to a uniformly heated wire; and as regards the division or section of the soft parts of the human frame by wires thus heated, that he had employed this method of operating in more than one case. The electric cautery has been successfully employed in dental surgery, as a means of instantaneously destroying the exposed and sensitive pulps of the teeth, previously to the operation of filling; and that, as a source of light, the apparatus is now being adapted to accomplish what is occasionally a want in surgical practice—viz., the perfect and convenient illumination of such passages as the ear, the mouth, or the nose.—*Athenæum*.

**LECTURES BY WORKING MEN.**—The foremen in the employ of Messrs. William Cubit & Co., Gray's-Inn-Road, have recently made an arrangement, under the sanction of the principals, for the head of each department to deliver a lecture on the principles and practice of his trade, and the nature of the materials employed, &c., to the sons of the workmen and the juvenile assistants throughout the establishment, in connexion with the school and library which were formed on the premises two years ago. The first of these lectures was delivered lately, in one of the large work-rooms, by Mr. Thomas Robinson, the head clerk and manager. The lecture being introductory, the subject was, of course, general in its character. The advantages of self-culture and mode of proceeding were pointed out in a manner suited to the circumstances of the listeners, at the same time with an earnestness which rivetted the attention of the adult part of the audience.—*Builder*.

**ELECTRIC TELEGRAPH PROGRESS.**—A Boston periodical, called *To-day*, proposes a new scheme for an electro telegraphic circuit round the earth. In place of a submarine one crossing the Atlantic, it proposes one to run from the telegraph station at Quebec northwards, and, crossing Bhering's Strait, to traverse Siberia and Russia in Europe, to all the chief European cities, and, amongst others, to Paris, and by Dover to London. All the chief cities and towns in the new world would thus, at once, be connected with most of those of the old, without more than fifty miles of submarine telegraph. But what of the icebergs which occasionally choke up the Strait of Bhering, plunging up and harrowing the ground even at immense depths, like nature's agricultural implements, or her rock-grinding and soil-preparing machinery for future lands? We fear that a girdle must be first put upon these—a blinding influence of eternal frost, or a dissolving influence of perpetual sunshine.—*Builder*.—The latest development of the electric telegraph system is at once useful and beautiful. It is a plan for distributing and correcting mean Greenwich time, in London and over the country, every day at noon. Every holiday-maker knows the ball which surmounts the Royal Observatory, and has watched with interest its descent as the clock gave the first stroke of noon, thereby telling the sea-going men in the river the exact state of the chronometers which were to become their guides over the pathless waters. Such a ball is to be raised on a pole on the telegraphic office near Charing Cross, and at noon each day is to drop by electric action simultaneously with that at Greenwich—both balls being, in fact, liberated by the same hand—and falling on a cushion at the base of the pole, is to communicate standard time along all the telegraphic wires of the country. At the same instant, the bells will ring out noon at the most distant places—Hull, Holyhead, Aberdeen, Harwich, and Devonport. The great metropolitan clocks—such as the Horse Guards, the Exchange, the New Palace—are to be regulated on the same principle. It is said that all the railway companies have agreed to avail themselves of these means of obtaining an exact uniformity of time.—*Athenæum*.—It has been finally decided that the electric telegraph between England and Ireland is to be laid down from Holyhead to Howth, instead of Kingstown, as originally intended—the harbour of the latter place presenting obstacles. A line of wires will be constructed by the Dublin and Drogheda Railway Company on their extension line to Howth, and when the messages are received in the metropolis, they will be instantly transmitted by the different railway companies—who are making arrangements for the purpose—to the towns of Belfast, Galway, Cork, and Limerick.—*Builder*.—A submarine telegraph between England and Belgium is to be carried out by Messrs. Carmichael and Brett, and a second one between England and France is also on the tapis. The Irish submarine telegraph project is also making active progress. In fact, the contracts, it is said, have been entered into, and the line is to be laid down shortly. "The tariff of charges will be so low as to encourage an almost domestic use of the telegraphic communication." So much the better for all parties.

## POETICAL QUOTATIONS.

## ANCESTRY.

I HAVE no urns, no dusty monuments;  
No broken images of ancestors,  
Wanting an ear, or nose; no forged tables  
Of long descents, to boast false honours from.

*Johnson's Catiline.*

It is, indeed, a blessing, when the virtues  
Of noble races are hereditary;  
And do derive themselves from th' imitation  
Of virtuous ancestors.—*Nabb's Covent Garden.*

He that to ancient wreaths can bring no more  
From his own worth, dies bankrupt on the score.

*John Cleveland.*

They that on glorious ancestors enlarge,  
Produce their debt, instead of their discharge.—*Young.*

He stands for fame on his forefathers' feet,  
By heraldry proved valiant or disreputable.—*Young.*

Whence his name  
And lineage long, it suits me not to say;  
Suffice it that, perchance they were of fame,  
And had been glorious in another day.—*Byron's Child of Harold.*

## ANGELS.

Thus they in heaven, above the starry sphere,  
Their happy hours in joy and hymning spent.

*Milton's Paradise Lost.*

Angels, contented with their fame in heaven,  
Seek not the praise of men.—*Milton's Paradise Lost.*

Are ye for ever to your skies departed?  
Oh! will ye visit this dim world no more?  
Ye whose bright wings a solemn splendour dated  
Through Eden's fresh and flowery shades of yore?

*Mrs. Hemans.*

## ANGER.

My rage is not malicious, like a spark  
Of fire by steel enforced out of a flint,  
It is no sooner kindled, but extinct.

*Goffe's Careless Shepherdess.*

Madness and anger differ but in this,  
This is short madness, that long anger is.

*Charles Alington's Crenay.*

Where there's  
Power to punish, 'tis tyranny to rage;  
Anger is no attribute of justice;  
'Tis true she's painted with a sword, but looks  
As if she held it not; though war be in  
Her hand, yet peace dwells in her face.

*Henry Killigrew's Conspiracy.*

Anger  
Is blood, pour'd and perplex'd into a hoth;  
But malice is the wisdom of our wrath.

*Sir W. Davenant's Just Italian.*

At this the knight grew high in wrath,  
And lifting hands and eyes up both,  
Three times he smote on stomach stout,  
From whence at length these words broke out.

*Butler's Hudibras.*

Anger is like  
A full hot horse, who being allow'd his way,  
Self mettle tires him.—*Shakespeare's Henry VIII.*

Give him no breath, but now  
Make boot of his distraction, never anger  
Made good guard for itself.—*Shakespeare's Antony and Cleopatra.*

Anger's my meat; I sup upon myself,  
And so shall starve with feeding.—*Shakespeare's Coriolanus.*

O that my tongue were in the thunder's mouth!  
Then with a passion would I shake the world.

*Shakespeare's King John.*

Away to heaven, respective lenity,  
And fire-eyed fury be my conduct now.

*Shakespeare's Romeo and Juliet.*

This strained passion doth you wrong, my lord:  
Sweet earl, divorce not wisdom from your honour.

*Shakespeare's Henry IV.*

### ENIGMA.

WEAKER than an iron rod,  
Yet I stronger bind—  
Emblem of the smile of God,  
Or love of human kind.

In every home my simple form  
May be, or should be, found;  
Where baby sleeps, or another weeps  
For souls by Satan bound.

From me few obtain release,  
Till Death its conquest owns;  
Then oft I'm laid where pick and spade  
Upheave the earth and bones,  
Or sometimes worn by those who mourn  
Those who have passed the earthly bourn.

### POLISH GAME.

ONE member of the party is to think of a person, place, or thing; the rest are to guess it by a series of questions to which the person thinking is limited in his replies to Yes or No. A wrong guess excludes the guesser from further competition; this necessitates great skill in the arrangement and character of your questions, the art being in gradually concentrating them, as it were, to a focus, where no possibility of mistake can remain. Take, as a simple and brief example, a Needle: the questions might be somewhat as follows:—

Person? Place? Thing? Animal? Vegetable? Mineral? Natural? Artificial? Metal? Earth? Stone? A natural product of this country? Light or heavy metal? Strong? Malleable? Brittle when wrought? Alloyed or not? Is the article large or small? Implement of husbandry? Cutlery? Used to destroy, or construct? Used alone, or in pairs? Most used by men, or women? &c., &c., until at last it is brought out without a doubt—reduced as it were to a certainty. The game, well played, is intensely interesting to an inquisitive and ingenious mind, very amusing, and highly instructive. Every question should have a definite tendency to narrow the limits of the field for guessing. Persons or places are alike available, and much interesting historical knowledge may thus be gained.—S. M.

### PARADOXES.

1. |

The sum of four figures in value will be,  
Above seven thousand nine hundred and three;  
But when they are halved, you'll find, I believe,  
The sum will be nothing, or else I deceive.

2.

Take one from nineteen, the remainder you'll see  
Is twenty exactly. Pray, how can this be?

### REBUS.

Complete I'm quite hard; beheaded as soft,  
And therefore am called for by doctors so oft;  
Curtailed and behead, I'm so thoroughly in,  
That not now to guess me would be a real sin.

### TRANSFIGURED PLAYING CARDS.

### THE THREE OF CLUBS.

### CHARADE.

When my *first* makes my *second*, he thinks he's my *whole*,  
And claims from his country a mass for his "sowl."

### AN ARITHMETICAL PUZZLE.

How can the number forty-five be divided into four such parts, that if to the first part you add two, from the second part you subtract two, the third part you multiply by two, and the fourth part you divide by two, the sum of the addition, the remainder of the subtraction, the product of the multiplication, and the quotient of the division, shall be all equal?

### CONUNDRUMS.

1. WHAT insect represents the human face divine?
2. Which is the most formal flower?
3. If you were to see the moon surrounded by a colour slightly resembling yellow, what animal would you say it was like?
4. When you have a pain in your ribs what poet do you think of?
5. What rich island may be named by the expression of two letters?
6. Where would you find the value of small-talk?
7. Of what trade was Noah? and what ingenious man did he resemble?
8. If a grandfather's grandnephew were to request his brother to assist him to put his father into a sack, what city in Asia would he mention?
9. Which is the most pious head in the world?
10. What trees are those which when fire is applied to them, are exactly what they were before?
11. Which is the most eatable partition in England?
12. Why are the very strongest parts of a wall as weak as woman's hair?
13. Which of two children is most likely to become a fruitful bough?
14. What trees give the best stakes?

F. A. W.

### ANSWERS TO THE PASTIME OF LAST EVENING,

Page 365.

### PARADOXES.

1. From six you take nine, and from nine take ten,  
And from forty take fifty, then six does remain;  
A cypher and VI, with a D, when right framed,  
Shows the poet's name, OVID, ten ancient times famed.

2.

The bone you mean, if right I hit,  
Has often tried man's sharpest wit;  
Since with woe from man it came,  
Waxes, therefore, in its name.

3. Yesterday's past which once was called to-morrow;  
This some, perhaps, do find unto their sorrow.

### CHARADES.

1. CATASTROPHE—Cat-astrophe.

2. The initials form Lord Palmerston, the female Lord Wellington, and the initials of the 1st, 2nd, 14th, 4th, 13th, and 14th words London. 1st, Liverpool; 2nd, Ohio; 3rd, Rochester; 4th, Dartford; 5th, Finsbury; 6th, Adrianople; 7th, Lonsdale; 8th, Matherhall; 9th, Erol; 10th, Niles; 11th, Spalding; 12th, Tovey; 13th, Oranto; 14th, Northampton.

PICTORIAL ENIGMA—DISHONESTY.

## OUR CORNER CUPBOARD!

MONEY is a useful servant, but a tyrannical master.

AN hour in the morning is worth two in the afternoon.

HOWEVER little we may have to do, let us do that little well.

IT is easier to suppress the first desire, than to satisfy all that follow it.

THE world is a workshop, and none but the wise know how to use the tools.

WOMAN'S silence, though it is less frequent, signifies much more than man's.

THERE is much poverty that is without hope, much antiquity without sacredness.

EVERY one is, at least, in one thing, against his will original;—in his manner of sneezing.

"MISTER, I say, I don't suppose you don't know of nobody what don't, do you?" "Yes, I guess not."

FLATTERY is like a flail, which, if not adroitly used, will box your own ears instead of tickling those of the corn.

LADY WORTLEY, in speaking of the ladies of Panama, says that they breakfast on a cigar, and make head-dresses of apple blossoms.

"PAT, if Mr. Jones comes before my return, tell him that I will meet him at two o'clock." "Ay, ay, sir; but what shall I tell him if he don't come?"

"WHAT occupation does your father pursue for a living?" The son answered with great simplicity—"He is a dreadful accident maker, sir, for the newspapers."

HERE is a recipe to get rid of an old acquaintance, whose society you do not like:—If he is poor, lend him some money; if he is rich, ask him to lend you some. Both means are certain.

A COUNTRYMAN being asked how he knew that a man, of whom he had been complaining, was drunk, indignantly replied—"What could he be else when he asked for the shoehorn to put on his hat with?"

THAT milkmen are philosophers, 'tis true;  
They keep celestial elements in view;  
And, howso'er their fellow-men complain  
Of dismal prospects and incessant rain,  
Their scones transform'd to sky-blue twice a day,—  
They get their living by the milky-way.

"YOUNG man, do you know what relations you sustain in this world?" said a minister of our acquaintance to a young man of his church. "Yes, sir," said the hopeful convert, "two cousins and a grandmother; but I don't mean to sustain them much longer."

AN INSCRIPTION IN THE NINETEENTH CENTURY.—Phor sail hear Boots and Shootz, Winneger, Pork and Beans, caudels, pipes, tin kittels, orsturs, sider, brandy, wood, tobakker, hats, capps, nutmegs, portaters, and other tin wear; besides a lot of other things which aint men-hind hear.

THE MODEL HUSBAND.—Mrs. Smith has company to dinner, and there are not strawberries enough, and she looks at Mr. S. with a sweet smile and offers to help him, (at the same time kicking him gently with her slipper under the table,) he always replies,—“No, I thank you, dear, they don't agree with me.”

"MASSA says you must sartain pay de bill to-day," said a negro to a New Orleans shopkeeper. "Why, he isn't afraid I'm a going to run away, is he?" was the reply. "Not e'zactly dat; but look alse," said the darkey, slyly and mysteriously, "he's gwoin to run away heself, and darfor wants to make a big raise!"

AN AWKWARD DANCE.—Forward two, and hit your partner in the bread-basket; dos-a-dos; turn to the right, and kick your partner on the shins; shassez all; promenade to the left; accidentally knock down two attendants carrying refreshments; and end by overturning a form containing sixteen of the élite of the company.

AN Irishman, having been arraigned and convicted upon full and unmitigable evidence of some flagrant misdemeanour, being asked by the judge if he had anything to say for himself, replied, with the characteristic humour of his country, "Never a single word, yer honour; and it's my raal opinion there's been a great deal too much said as it is."

'Tis not denied that, when we write,  
Our ink is black, our paper white,  
And when we scrawl our paper o'er,  
We blacken what was white before;  
I think this practice only fit  
For dealers in satiric wit.  
But some white-lead ink must get,  
And write on paper black as jet;  
Your interest lies to learn the knack  
Of whitening what before was black.

—Swift's Directions for a Birthday.

A FRIEND was complaining to Colman that he should be obliged to change his tailor, as he found a suit of clothes would not last him above one-half the time it ought to do; and inquired if he could recommend him any place where he could meet with apparel more durable? "Yes," said Colman, "I could recommend you to Chancery, and there you may have a suit that will last you for life."

## OUR MEMORANDUM BOOK!

DR. JOHNSON'S LAST REQUESTS TO HIS FRIENDS.—On his death-bed Dr. Johnson sent a kind message to John Scott, afterwards Lord Eldon, begging him never to do legal work on Sunday. His last words to Sir Joshua Reynolds were to the like effect.

To-morrow you will live, you always cry,  
In what far country does this morrow lie,  
That 'tis so mighty long ere it arrive!

Beyond the Indies does this morrow live?

'Tis so far-fetched, this morrow, that I fear

'Twill be both very old and very dear.

To-morrow I will live, the fool doth say;

To-day itself's too late; the wise lived yesterday. —Martial.

MODERN INVENTIONS.—Horace Mann thus sums up a few of the advantages of modern inventions:—"One boy, with a Fourdrinier machine, will make more paper in a twelvemonth, than all Egypt could have made in a hundred years during the reign of the Ptolemies. One girl, with a power-press, will strike off books faster than a million scribes could copy them before the invention of printing. One man, with an iron foundry, will turn out more utensils than Tubal Cain could have forged, had he worked diligently till this time."

## A SCORE OF PROVERBS.

1. A BURDEN which one chooses is not felt.
2. A good word is as soon said as an ill one.
3. One story is good till another is told.
4. One is not so soon healed as hurt.
5. It is never too late to learn.
6. Well begun is half done.
7. Let every man mend one, and then the work will be soon done.
8. If guile were an art, the world would be full of teachers.
9. All weeds grow apace.
10. Never quit certainty for hope.
11. Lucky men need little counsel, and rash men will take less.
12. Labouring to please a fool is a vain employment.
13. Love thy neighbour, but pull not down thine hedge.
14. Little boats must keep near shore.
15. An honest word is better than a careless oath.
16. The morsel that one eats alone makes no friend.
17. Need make the old wife trot.
18. He that loses his due gets no thanks.
19. Put a stout heart to a steep brae (steep hill).
20. Nothing venture nothing win.

ELECTRICITY AND CONTINUOUS THINKING.—Who has not experienced that peculiar and indescribable sensation which accompanies the process of intense thought, whilst engaged in the study of some abstruse subject? We feel, during the first efforts, that the brain seems, as it were, to be scarcely at all acted upon. By degrees we become sensible of the operation of some new power; or we are conscious of an increase of intensity of the perceptive faculty, until, at length, we are enabled to overcome the difficulty by which we were so long baffled. And, what is worthy of remark, this result comes frequently, perhaps almost invariably, with a startling suddenness, the truth flashing upon the mind with the velocity of light; and we then begin to wonder at the tedious perceptive process which the mental faculties went through before the mind's eye was thus enabled to see more distinctly. The electro-physiological theory affords a satisfactory explanation of this phenomenon. During the first efforts, but a small portion of the electric fluid is transmitted to the brain; gradually the nerves become charged with it, until the accumulation is such, that the brain is then immediately and intensely acted upon; hence the result, as above described, in the increased perceptive power.—Leithhead's *Cosmical Force*.

## MILE OF THE DIFFERENT NATIONS.

**TO THE LADIES.—Mrs. PULLAN**  
succeeds Mrs. WARRIN as EDITRESS of the  
NEEDLE-WORK Department of THE FAMILY  
FRIEND. Beautiful Patterns in every Number.  
London: HOULSTON & STONEMAN.—Price 2d.

**HOOVER'S FAMILY COUGH**  
PILLS.—Composed only of the choicest drugs, and  
from a genuine Medical Prescription, are recommended  
on high medical authority as the safest and best remedy  
for Coughs, Colds, Sore Throat, &c.; and may be obtained  
or through any respectable chemist from the sole agents,  
WILLIAM BURTON & Co., 10, Bow Church-yard, London.

**RIMMEL'S TOILET VINEGAR** is  
now universally preferred to Eau de Cologne, being  
more tonic and beneficial as a lotion, pleasant as a per-  
fume, and far more economical. Its numerous, useful,  
and sanitary properties, render it an indispensable requisite  
in all families. Price 3s. 6d. and 5s.  
Sold by all Perfumers and Chemists, and by E. RIMMEL,  
89, Gerrard Street, Soho.

Dunstable, 1s. to 10s. 6d. Fanny Straws, 3s. 6d. to 18s. 6d.  
**BETHEL WARE**  
Manufacturer, 217, Tottenham Court Road.

**GLENFIELD PATENT STARCH.**—  
NOW USED IN THE ROYAL LAUNDRY.—  
The Ladies are respectfully requested to make a trial of  
the GLENFIELD PATENT DOUBLE REFINED  
POWDER STARCH, which, for Domestic Use, now  
stands UNRIVALLED. Sold by nearly all the Oil and  
Columbian and Chandlers in London, and throughout the  
Kingdom. Agents Wanted: apply to Mr. R. Wother-  
poon, 40, Dunlop Street, Glasgow.  
London Depot: Wotherpoon, Machay & Co., 40, King  
William Street, City.

**THE COURT LIBRARY.**—Miss  
Porter's Best Novel.—Now ready, No. 1. with which  
is presented, Gratis, No. 2, THE RECLUSE OF NOR-  
WAY; By Miss PORTER. Each Number will contain  
16 pages 8vo., beautifully printed on fine paper and good  
type, the whole to be completed in Twelve Penny Numbers.  
Now R. is being, in Penny Numbers, No. 1 being pre-  
sented Gratis with No. 2. NEW HENTON'S stirring  
romance of thrilling and intense interest, THE MYSTE-  
RIES AND MISERIES OF NEW YORK, splendidly  
illustrated.—Office, 2, Rhoe Lane, Fleet Street, and may  
be had of all Booksellers.

**VENTILATING BOOTS AND SHOES.**  
This new and valuable discovery gives instant ease and  
comfort to the wearer, prevents corns from rubbing, the  
feet from swelling or being tender, and keeps them perfectly  
dry. The inventor solicits one trial, feeling assured that,  
having once experienced the comfort which they give, no per-  
son will wear any other. The Boots supplied with the inner  
sole and connecting piece (which contain the invention),  
at the small charge of 18s. per dozen sets, all ready for use,  
so that no maker can make any mistake. Between three  
and four hundred persons have proved their value.  
To be had of the Patentee, C. MARSDEN, near the Bridge,  
Kingsland Road, London.

**HOLLOWAY'S OINTMENT AND**  
PILLS the best REMEDIES for the CURE of  
BAD LEGS.—Mrs. Heppel, of Blyth, near Morpeth, was  
afflicted with a dreadful bad leg, for which she consulted  
the most eminent medical men in that neighbourhood, but  
it would not yield to their treatment; her health suffered  
severely, and the state of her leg was terrible the ulcers  
rapidly increasing in size, and the pain most agonizing.  
In this state, she commenced using Holloway's Ointment  
and Pills, and after continuing them for some time the leg  
was completely cured, and she is now in the enjoyment  
of excellent health. Mr. Wilkinson, Druggist, Blyth,  
vouches for the accuracy of this statement.—Sold by all  
Druggists, and at PROFESSOR HOLLOWAY'S Establishment,  
244, Strand, London.

Now Publishing, price 2d.,

**THE PLAGUE OF BEGGARS;** a  
Dissuasive against Indiscriminate Alms-giving.—This  
Essay was originally published in Fraser's Magazine for  
April 1848, and was reprinted in the Home Companion,  
No. 18, with the permission of the proprietors of Fraser.  
It is now issued in the form of a pamphlet, with some  
additions and corrections by the Author, in the hope that  
benevolent persons, who are conscious of the evils which  
it exposes, will take steps to place it in the hands of those  
who are addicted to the foolish and mischievous practice  
of indiscriminate alms-giving.  
London: KENT & Co. Paternoster Row; W. ELLINGTON,  
22, Goswell Street.

Handel's "Judas Maccabæus"  
Oboe & Piano, with piano accompaniment.

**NOVELLO'S MUSICAL PRESENTS**  
—Octavo Editions of HANDEL'S Israel in Egypt,  
6s. 6d.; Messiah, 6s. 6d.; Samson, 7s. 6d.; Judas Macca-  
bæus, 6s. 6d.; Jephtha, 6s. 6d.; Joshua, 6s. 6d.; Solomon,  
in progress. HAYDN'S Creation, 5s. MENDELSSOHN'S  
St. Paul, 6s. 6d.; Lobgesang, and As the Hart Pants, 5s. 6d.

PUNISHMENT FOR LIFE. THE BIRD TALISMAN—AN  
EASTERN TALE (3 Illustrations). The Tutor's Guide to  
the Professions.—The Clergyman. Appendix.—The  
Tutor and his Pupils.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

THE ONLY MEMENTO OF THE GREAT EXHIBITION  
PRODUCED WITHIN ITS WALLS.

Just published, complete in Two Volumes, price 5s. each,  
elegantly bound in cloth and gold, with a View of the  
Crystal Palace gilt upon the cover.

**THE PARLOUR MAGAZINE**  
OF THE LITERATURE OF ALL NATIONS. Printed in  
the Crystal Palace, Hyde Park, at Machines No. 158, and  
162, Class 6.  
We have no doubt that the two volumes of the PARLOUR  
MAGAZINE will be treasured by many future generations.  
People flocked to the Crystal Palace after its close, and  
eagerly bought up, at enormous prices, articles that had  
been exhibited there, that they might possess some mo-  
ments of the Exhibition. We supply not only a work ex-  
hibited therein, but one actually produced by machinery  
within its crystal halls, and in the view of millions of spec-  
tators. The value of our book will therefore increase with  
the advance of years, until it will be regarded as a curiosity  
and a treasure.—These volumes contain translations of  
Literary Treasures from the

With original ENGLISH Contributions by celebrated  
authors, and choice adaptations from the American. Each  
volume is embellished by a superior Steel Engraving and  
by numerous Woodcuts.

**RE-ISSUE OF THE PARLOUR MAGAZINE.**  
In order to meet the wishes of numerous persons of the  
middle and working classes, who, during the excitement  
of the Exhibition, were unable to obtain this memento of  
that great event, the work will be RE-ISSUED in Weekly  
Numbers, price 3d., and Monthly Parts, price 6d. or 10d.  
Order of any Bookseller.  
London: HOULSTON & STONEMAN, 65, Paternoster Row.

**DO YOU WANT YOUR COAT OF**  
ARMS OR CREST?—A drawing of them, for 2s. 6d.  
Description and answer to queries 1s. An Heraldic Paint-  
ing 4s. Book-plate of Crest 5s.—of Arms 5s. Heraldic  
College consulted; specially with place and County. Apply  
by Letter, enclosing stamps or order to Mr. James Fawcett,  
Heraldic Engraver, 12, Brook Street, Holborn, London.

**HOLLOWAY'S PILLS** for the Cure of  
STOMACH, BILE, AND WEAK AND  
DISORDERED STOMACHS. These wonderful pills  
have been the means of restoring to health many persons  
pronounced incurable by the faculty, both at home and  
abroad. They may be taken with perfect safety, and a  
certainty of effecting a cure, by persons suffering from  
General Debility, Headache, Diseases of the Stomach,  
Bile or Liver Complaints; and those who are predisposed to  
Dropsy cannot use a more effectual remedy than Hollow-  
way's Pills, for acting as they do upon the very mechanism  
of life, no diseases can resist their influence. Their action  
is mild, yet speedy; and as a family medicine they are  
unequalled. Sold by all Druggists and at PROFESSOR  
HOLLOWAY'S Establishment, 244, Strand, London.

Notice.—Persons can be Members of the Land and Building  
Society, or of the Benefit Society, or of both Societies, as  
they think proper.

Great and Important Benefits to the Working Classes.

| Nominas ...                        | from 3 0 0  | to 10 0 0 |
| Loss by Fire ...                   | from 5 0 0  | to 20 0 0 |

INSTITUTED 7TH FEBRUARY, 1843,  
Enrolled in conformity to the Friendly Societies' Act of  
Parliament.

Paid to Members and their Friends since its commence-  
ment, Benefits in Sickness, Superannuation, Loss by Fire,  
and Deaths, the sum of £12,401 18s. 6d.

Secretary—Daniel William Ruffy, residence at the Office.  
Treasurer—John Smith, Brewery, Stamford-hill, Stoke  
Newington.

Bankers—Commercial Bank of London. Branch: 6,  
Henrietta-street, Covent garden.

For further information, Entrance Fees, Payments, &c.,  
refer to the Secretary, enclosing three postage-stamps.  
Agents required to form Branches in all parts of the  
Country. Commission Five per Cent.; reasonable com-  
pensation allowed for extra services.

PRESENT CAPITAL, above £3,500.  
PRESENT NUMBER OF MEMBERS, about 2,500.

Land and House your own; or, Every Man his own  
Landlord.

**BRITISH EMPIRE BUILDING**  
AND LAND SOCIETY.—Enrolled, and empowered  
to extend over the United Kingdom.—Office, 13, Totten-  
ham-court, New-road, St. Pancras, London.

Manager and Secretary—Daniel William Ruffy, resi-  
dence at the Office.

Treasurer—John Smith, Brewery, Stamford-hill, Stoke  
Newington.

Bankers—Commercial Bank of London. Branch: 6,  
Henrietta-street, Covent garden.

INVESTMENT DEPARTMENT.

A Monthly Payment of 10s. 6d. will, at the end of  
15 Years, secure to the Investor the Payment of... £120  
A Monthly Payment of 5s. 3d. in 15 Years will secure 60  
A Monthly Payment of 2s. 6d. in 15 Years will secure 30  
Deposits are received, and interest of Five per Cent.  
allowed on all sums when they amount to 10s. and upwards.

LOAN DEPARTMENT.

For Members to purchase Freehold or Leasehold Property,  
or for Building; Subscriptions payable to the Society in  
the shape of Rent, instead of to a Landlord:—  
£100 advanced for 5 Years. Monthly Repayments £2 4 2  
£100 " for 10 Years. " " 1 4 8  
£100 " for 15 Years. " " 1 0 8

Surveyor, for examination of Property, and Expenses  
of Solicitor, for executing Deed of Mortgage, paid by the  
Society.

EXAMPLE.—If a man can purchase a house for £300,  
supposing, before purchase, he pays a yearly rent of £30,  
he borrows from the Society £300 for ten years, and pays  
yearly £44 8s., or £14 18s. more than he paid for rent, for  
which, in ten years, he purchases the house, and has no  
more rent to pay. Other examples of less payments over  
a longer period of years can be taken (see Table). For  
further information, apply to the Secretary, enclosing three  
postage stamps. Agents required, to form Branches in all  
parts of the Country. Commission, Five per Cent.; rea-  
sonable compensation allowed for extra services.

### Editor's Note-Book.

**A WIFE'S POWER.**—The power of a wife for good or evil, is irresistible. None must be the seat of happiness, or it must be for ever unknown. A good wife is to a man, wisdom, and courage, and

strength, and endurance. A bad one is confusion, weakness, discomfiture, and despair. No condition is happier where the wife possesses firmness, decision, and economy. There is no outward prosperity which can counteract indolence, extravagance, and folly at home. No spirit can long endure bad domestic influence. Man is strong, but his heart is not adamant. He delights in enterprise and action; but to sustain him he needs a tranquil mind, and a whole heart. He needs his moral force in the conflicts of the world. 4 To recover his equanimity and composure, home must be to him a place of repose, of peace, of cheerfulness, of comfort; and his soul renews its strength again, and goes forth with fresh vigour to encounter the labour and troubles of life. But if at home he finds no rest, and is there met with bad temper, sullessness, or gloom, or is assailed by discontent or complaint, hope vanishes, and he sinks into despair.

**ΑΡΧΙΤΕΚΤΟΝ.** S. T.—To whom is this well-known sentence attributed?—Men are but children of a larger growth."—To Dryden.

**TO FILL A DECAYED TOOTH.** Justus.—The following plan has been recommended to us by one who had tested its efficacy:—Procure a small piece of gutta-percha, drop it into boiling water, then, with the thumb and finger, take off as much as you suppose will fill up the tooth nearly level, and while in this soft state press it into the tooth; then hold on that side of the mouth cold water two or three times, which will harden it.

**"SUN ROSA."** S.—What is the meaning of this expression, so often employed by those who are fond of keeping secrets?—The phrase "under the rose," has been said to have originated from the many plots and conspiracies engendered during the wars of York and Lancaster; but it is much more probable that it arose from a custom—now fallen into disuse, but once very general among the nations of the north of Europe—of suspending a rose over the heads of the guests at feasts, to signify that whatever transpired was of a confidential nature.

**GOING TO LAW.** St. Manston.—Although we are averse to giving answers to questions of mere individual interest, yet the particulars forwarded by our correspondent are so clear that we should strongly advise him not to test the uncertainty of the law, especially as the dispute can be compromised. Our friend should remember what Butler has said on this subject:—

"If it with injury is griev'd,  
And goes to law to be relieved,  
Is sillier than a childish rhyme,  
Who, when a thief has robbed his house,  
Applies himself to cunning men,  
To help him to his goods again;  
When all he can expect to gain,  
Is but to squander more in vain."

**EARLY MARRIAGES.** Juvenal.—We have several letters from correspondents asking advice on matrimonial matters, which we have declined answering, being unwilling to occupy our columns with questions and answers of mere individual interest, and too many of the most frivolous nature. The prudent and sensible letter of our young friend, "Juvenal," however, deserves our notice, and in reply to his inquiry whether early marriages are objectionable, we would say that on the contrary they are highly commendable, when the circumstances of the contracting parties present no impediment. A thrifty wife, instead of being a new source of expense, will by wise management effect a positive saving in her husband's expenditure. An old poet has beautifully described the pleasures of a prudent marriage:—

"The treasures of the deep are not so precious  
As are the unnumbered comforts of a man  
Lock'd up in woman's love, I scent the air  
Of blessings, when I come but near the house."

**SUBMARINE RAILWAY.** Paul.—"Is there not some project of a submarine railway between France and England, and where can I get the particulars?"—Our correspondent probably alludes to the proposition of a M. Hovart, an architect of Paris, to lay a railway in the bed of the sea between the two countries. This gentleman suggests that the road should be enclosed in a tube similar to that which crosses the Meuse Strait, and the tube to be fastened down in its bed by huge iron pins at

intervals of a mile throughout the twenty-one miles of its submarine course; the pins to perform the further service of carrying lights on their heads at night, to warn ships against anchoring over the railway.

**TAXES UPON KNOWLEDGE.**—A cry has gone forth that must delight every ardent promoter of the progress of intelligence, and which we heartily desire may end in a shout of triumph, for the speedy abolition of the paper duties—one of those glaring inconsistencies that cannot be reconciled with the enlightened spirit of the age. This tax, which presses so heavily upon all publications of extensive circulation, has greatly impeded the diffusion of good and wholesome literature, and it behoves the legislature to apply at once the remedy, and leave the glorious art of printing to accomplish, free and unshackled, its high destiny. There cannot be a more striking instance of the injurious effects of this obnoxious duty than that presented in the case of the *Penny Cyclopædia*, on which the paper-tax operated as a burthen to the extent of twenty-six thousand five hundred pounds, from the commencement to its completion, and had not the paper-duty been reduced by one-half, at the end of 1836, the publication of that valuable work would have been interrupted. It is, indeed, true, that this tax is a grievous burthen upon all endeavours to diffuse information at that cheap rate, which is produced, honestly and usefully, by the co-operation of large numbers of purchasers. Now that we have for our Chancellor of the Exchequer an author who has experienced the truth of the above remarks in his own writings, and who has publicly proclaimed them, let us hope that we shall soon have

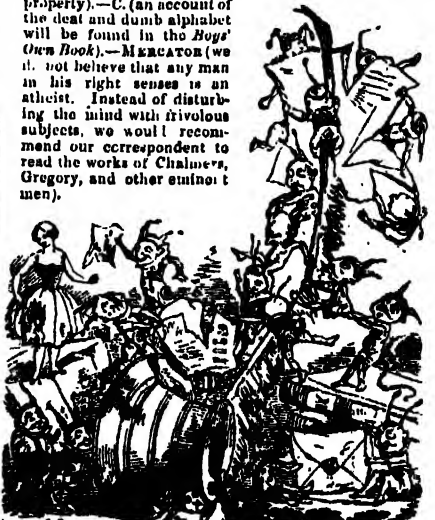

"THE REPEAL OF THE PAPER DUTIES."

**RULES FOR HOUSEKEEPING.** Anne L.—"Mr. Editor, I have just commenced the important duties of 'keeping house,' and I shall feel greatly obliged to you, as a 'Home Companion,' to give me some hints on the subject, &c."—The information thus requested cannot be furnished in a few words. There are a thousand ways and means of conducting a household on comfortable and economical principles, provided there is a will to adopt them. Mrs. Hamilton, in her *Cottagers of Glenburnie*, gives three simple rules for the regulation of domestic affairs, which deserve to be remembered, and which would, if carried into practice, be the means of saving time, labour, and patience, and of making every house a 'well-ordered' one. They are as follows:—1. Do everything in its proper time. 2. Keep everything to its proper use. 3. Put everything in its proper place.

**EDUCATION OF CHILDREN.**—"A Father of a Family" inquires whether a child of eight years, whose intelligence is remarkable, is too young to commence the Latin Grammar. As questions somewhat similar are constantly reaching us from our correspondents, we may state at once our objections to the *forcing* system, too often practised on the young intellect. That unfortunate word, "precocity," has occasioned disquietude and misery to many parents, who, blinded by the praises bestowed upon the over-tasked energies of their children, have not beheld the insidious inroads of disease—the almost inevitable consequence of such folly. We should remember that when a horticulturist, in order to raise vegetables early, or ripen fruit quickly, forces them by artificial means, he knows well that he will lose some of his plants, and destroy a portion of his fruit, looking for compensation to the higher price he will obtain from those that remain. So it is with children. For one pale and sickly exotic that may survive the *forcing* system, hundreds of others perish at an age when the physical powers of youth should be expanding. Some of our brightest men have been dull boys. Let our first care be to give children a good physical education. Let us encourage their merry and innocent diversions, and make the smiling volume of nature the chief book from which they may derive intelligence. By so doing, the seeds of early precocity will take deeper root, and the mind will exult in its healthy tabernacle, instead of wasting away with melancholy and "precocious" learning, which falls upon the hopes and prospects of childhood as a blight.

**COMMUNICATIONS RECEIVED.**—H. A. W. C. (London, within the walls—or boundary—included within the original walls of the city—inclusing almost eight parishes and without the walls, eleven parishes).—**QUARTER** (yes).—**WINDHAM** C. (black sealing-wax is made by mixing an equal quantity of gum-bee, printers' black, and pure turpentine, and melting them over a fire).—**ALORZO** (does our correspondent allude to the Heaton of Denbigh?)—G. (many thanks).—A. J. (Galileo was born in 1564, and died in 1642; Washington was born in 1732, and died in 1799).—**LOUIS** J. (answers arrived too late).—N. B. (the Scotch are entitled to the respect of every Englishman, for many of our greatest writers and bravest warriors come from that country).—**A. LECROIX** (we do not know the address of Dr. Todd; enclose your letter to the postmaster at New York, and request him to forward it).—**HUPHREAS** (shall receive consideration).—H. E. (we have never heard of the work; inquire of a bookseller).—W. H. H. (the directions for transferring would occupy too much space in our Note-book; we must refer our correspondent to No. 33, vol. iii., of the *Family Friend*, price twopenny, which contains full particulars of this art).—S. M. (use almond soap, and wear gloves).—A. CLARK (inquire of a bookseller).—**DELTA** (the Duke of Wellington was educated at Eton, and afterwards studied in the military college of Angers, in France).—**MID**. (the pay of a captain in the navy varies with the rate of the ship, from £61 7s. per month, for a first rate, to £26 17s. for a sixth-rate. Commanders of sloops have £23, and a captain of frigates £14 14s. per month).—W. (the Bishops of London, Durham, and Winchester, rank next to the Archbishops).—**HIGGINS** (every person acting as an auctioneer, is required to take out a license, which must be renewed on the 5th of July, in every year; and for this license the charge of 50s. pounds is annually made).—S. B. S. (the word apothecary is derived from the French *apothecaire*, one who prepares medicines according to a physician's prescription).—A. K. J. (the lines shall be inserted when we have space. Address, 69, Fleet-street).—J. J. BROCKTON (the exercise mentioned cannot but be healthy and invigorating).—T. BORROWLEY (auctions have been in practice from the earliest times, and originated with the Romans).—C. B. C. (apply to a builder; it is better, in the case of smoky chimneys, to eradicate the evil than to patch it up).—C. M. B. (we have not heard of such a Society as that named by our correspondent. The climate of New South Wales is not unhealthy).—T. M. O. (the coin is of small value, and by no means rare).—A. BOUTEN (had better apply to a ship agent, who will give him precise information; the rates of passage vary).—M. D. ISAACS (thanks).—J. CRABDOCK (the lines on the "Sweeping Machine" would, no doubt, be very acceptable to those who are troubled with smoky chimneys, but we have not room).—ROBERT P. (we have no knowledge of the parties offering employment to all. Our correspondent must use his own discretion in the matter).—E. J. WOOD (the poetical "perpetration," as our correspondent calls his composition, is good, but not suited to our pages).—**GRONOX STARR** (the way to win a young lady's goodwill is not by addressing sonnets or songs to her. A straightforward, manly behaviour, with strict attention to the every-day duties of life, will be more likely to succeed).—**ADAMS** B. (with thanks).—S. J. R. (as we steer our own course, we must referring to the pages of contemporary journals, it has happened on one or two occasions that similar tales have appeared in our own and another publication. These articles, however, were taken from an American periodical, in which they first appeared. Our future arrangements will preclude the possibility of such circumstance again occurring, for this department of the *Home Companion* will occupy our most careful attention).—**JUSTUS** (Convent Garden was formerly called Convent Garden, because it belonged to the Abbot and Convent of Westminster. The Duke of Bedford is now the possessor of this rich property).—C. (an account of the dead and dumb alphabet will be found in the *Boys' Own Book*).—**MEACATON** (we do not believe that any man in his right senses is an atheist. Instead of disturbing the mind with frivolous subjects, we would recommend our correspondent to read the works of Chalmers, Gregory, and other eminent men).

# THE HOME COMPANION.

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 25—Vol. I.]

SATURDAY, JUNE 19, 1852.

[PRICE ONE PENNY.]

"He had a long conversation with Gitty, and plainly and fearlessly unfolded to her what he believed to be the character of Rudolph, and entreated her, by all the regard which she professed for those who had performed the part of parents to her, to act upon the warning which he gave."

## LOVE'S TRIALS; OR, MISTAKEN EVIDENCE.

(Continued from page 571.)

As Mr. Augustus Hunt's opinion coincided with that of his brother, old Catchem, one of the chief constables of the town was sent for, and that great terror to evil-doers was soon under their roof, and prepared for his work.

Mr. Augustus Hunt took upon himself the task of explaining matters to this officer, and was careful to mention that his brother would give one hundred pounds for the recovery of the money, with or without the thief.

Old Catchem soon showed that he was a master workman, and convinced Mr. Hunt that the theft must have been committed by some member of his family, or by some person in the habit of frequenting his house.

He summoned the inmates of the kitchen, and would not allow them to stir from his presence. Their niece Sarah was called in, and a messenger despatched to the office for young Edwards. James had no idea of the purpose for which he was required, and appeared to be much surprised when he found himself in the presence of a constable, and heard the account of the lost money; had he been perfectly innocent, he could not have acted more like himself. Some few questions were put to each separately, with special reference to the matter of the key—where it was found, where it belonged, &c. Betty was called upon to tell over all she knew about it. During her recital, the eye of the officer rested a moment on young Edwards; a slight flush passed over his countenance; it was but a flush, and was gone in an instant, but Catchem saw it, and did not forget it; he kept his eye more steadily that way. This very circumstance might have affected James, as he was full of sensibility.

The officer now desired to be led to the apartments occupied by Betty and Jim. Betty started ahead, muttering, as she went, about "going into people's rooms before one had time to make them a bit decent."

"Never mind, old lady, I've seen all kinds of rooms in my day."

"I'm no lady, nor auld, neither; but there's the trunk; you may look as ye like; I wants no money but what my own hands earn—there, look as ye like, and be blest to you!"

Betty's trunk was pretty thoroughly examined, and then Master Jim was obliged to lead the way to his room, which was a small room at another corner of the house; he went directly to his box, and was beginning to throw out the few articles it contained, when Catchem, very unceremoniously, laid hold of his collar, and giving him a jerk, left him standing in the middle of the room, and proceeded to overhaul Jimmie's treasures in a very careful manner. He, manifestly, expected to find some clue to matters here, but was disappointed; not any signs of money, good, bad, or indifferent, could be found, it being an article which the owner of the box contrived to get rid of, without the trouble of hoarding.

"And now, my young gentleman, show me the way to where you keep your choice articles."

Edwards coloured deeply, bowed very formally to him, and with a measured step, proceeded to his room. He was either much displeased with the manner of the constable, or very much exalted by some other cause; so much so that some of the family could not but notice it.

The key was again introduced, and Betty called upon to repeat her story. She invoked all the saints to witness that she spoke nothing but the truth, and that Mr. James would tell them how he had marked it with his own hands. The keen eye of Catchem was fixed upon Edwards during her recital, and when she ceased, he was asked to repeat the circumstances himself.

"I think, sir, you have had already sufficient explanation as to the identity of the key."

"Well, young gentleman, how do you account for this key being found in the door of the vault?"

"I do not feel, sir, that it is my business to account for it," at the same time eyeing his interrogator with a look of scorn.

"Perhaps you may find it your business, before you get through—so don't be so huffy, sir. Who occupies this room with you?"

"No one, sir."

"Do you ever carry that key in your pocket?"

"No, I do not."

"Are you in the habit of locking that door?"

"Occasionally."

"Is the key always kept in it?"

"I believe it is."

"Have you missed the key this day or two?"

"I did miss it."

"Have you made any inquiries in the family for it?"

Edwards coloured deeply again.

"No, I did not; I thought—I supposed it had been taken probably for some other door in the house."

"Now, young man, let me have the key of this trunk."

"That you shall not have, sir. If Mr. Hunt suspects that there is anything in my trunk belonging to him, I will open it, and satisfy him that there is nothing in it but my own property."

"Young man, I order you to hand me the key of that trunk, and let me open and examine its contents; if you do not, it shall be opened by force."

"Touch it, sir, at your peril; I have already offered to satisfy those who have any interest in this matter; let any one else touch it at their peril." As he said this, he stepped up close to the trunk, and with an eye flashing indignation, surveyed the group before him.

"Young man," said the officer, at the same time taking a short iron instrument from his pocket, "you might as well save all this trouble; this trunk shall be opened, with your leave or without it, just as you please." So saying, he stepped deliberately towards it, when Betty, fearing Mr. James was "going for the kill," threw herself between him and the constable, and said—

"For the love of goodness, Mr. James, give him the key, give him the key, and save your young blood and character, too." With that, she wrested the key violently from his hand, and threw it on the floor.

"There, honey, now, let him have it; let him look as he likes; he'll never find anything there but belongs to it. Do, do now, honey!" seeing James making efforts to recover the key, "for the love of goodness, Mr. James, hear to me, and leave him to look!"

James's better sense returned to him; he felt that he was wrong, and Betty in the right. He took a stand at some distance, with the rest, and suffered the examination to proceed, looking on as an indifferent spectator.

Every article in the body of the trunk was thoroughly searched, and replaced. Nothing that could be claimed by any one but Edwards was there.

The little rod was then taken out, which secured the opening into the cover of the trunk; the officer thrust his hand into it, and almost immediately brought out a small packet, and, on opening it, discovered a roll of bank-notes.

"Mr. Hunt, are these the notes which you have lost?"

Mr. Hunt took them, and examined the backs of each carefully.

"These are some of them, sir; I marked them with the letter D, in red ink; you can all examine them."

The identity of the notes was abundantly proved; but only one hundred pounds of the amount could be discovered in the trunk by the most scrutinising search.

It would be in vain to attempt a description of the scene which followed. James had been a great favourite in the family; his amiable disposition, his respectful behaviour, the care he took to give as little trouble as possible, his whole demeanour, so unassuming, yet so engaging, had won the hearts of all. It was a sad, sad fall! Mrs. Hunt sat down, overwhelmed with astonishment. Betty wrung her hands in deep distress.

"Oh, Mr. James, Mr. James! Is it yourself that has done this?"

The Messrs. Hunt were sorely confounded; such a result they had not anticipated. They had been highly pleased with his faithfulness and business talents; always in his place, ever attentive to their interests, critically correct in his accounts, and prompt in every duty committed to him, he had won their entire confidence; the present catastrophe was like a thunder-clap with a bright sun and a cloudless sky.

There was yet another witness of that trying scene. She sat silently in a corner of the room, her face covered, while tears were falling, such as lovely woman sheds when her pure and trusting heart meets the cruel thorn where it had hoped to find a holy resting-place.

Young Edwards had stepped up with the rest to look at the notes; he said nothing, but retiring to a seat, rested his head upon his hand, and seemed overwhelmed by the perilous situation in which he found himself. The officer took the Messrs. Hunt aside, and after some conversation with them, all were requested to leave the room, and the officer and young Edwards were left alone together.

"Now, young man, I don't wish to injure you; this matter can all be stopped where it is; you just show me where the old man's money is, and save all my searching, and yourself a turn in prison, too; hand me the money, and I'll see you clear in less than no time."

Edwards arose from his seat, and fixed his eye calmly and steadily upon the officer. "I regret exceedingly, sir, that I suffered my feelings to get to control me, and that I did not, as I ought to have done, yield at once to your right in making a search for the stolen money."

"Never mind that—that's nothing—I'm used to such things—young blood will show itself—that's neither here nor there; all you have to do now, is just to plunk down the rest, and I'll have you out of harm's way, and no more said about it."

"I have no desire, sir, to get out of harm's way, as you call it; I have no money to give up, nor had I any knowledge of the which you have just found it is as much a mystery to me as to you, and I'll have it come here."

"It's no mystery at all to me; and for you to stand there and say it is only wasting words. Come, come, I'll too see a hand for you at the gallows," raising his voice, and fixing his eye sternly on Edwards; "show me the rest of that money, if you don't want these pretty wristbands on," at the same time taking out of his pocket a pair of handcuffs. "Many a fine fellow has had these on before you; come, come, I can't wait."

Had the spirit of young Edwards been about to take its flight into another world, it could scarcely have left a more bloodless cheek. The sight of those instruments of degradation was enough; he sank into the chair beside him, helpless as a child.

"Come, come, young man, I'm no fool to be tricked in this way; your theatrical pranks won't do with me, I've seen too many of 'em. I'm in earnest with you—it is your last chance; when I snap this lock, you are done for."

A few moments the officer waited, but James answered not; nor did he make the least resistance, but submitting to his fate, was led from the room a manacled culprit.

## CHAPTER XL

On the evening of the eventful day which has been described in the last chapter, everything had settled into quietness in the mansion of Mr. Hunt. James had departed under the care of the officer of the law, and the agonised feelings of the family, if not allayed, were suppressed into silence like that which pervades the house of mourning when the funeral rites are ended, and those who had been weeping around the grave have returned to their desolate home. Each heart is swelled with emotion, and the words spoken are few, and in accents of peculiar tenderness.

In the parlour the lamps had just been lighted; but the cheerful blaze of a coal fire was sufficient to reveal, with distinctness, every object in the room. Immediately before it sat a female, young and beautiful; she was leaning against the back of her chair, her hands lay folded idly upon her lap, and her feet resting against the small and brightly polished fender. Her light brown hair was neatly parted from her fair forehead; her eyes, shaded by long, dark lashes, were fixed upon the sporting, flickering blaze, apparently watching the explosions of the voluminous smoke; her mouth, which seemed formed for a smile, was closely shut, and the upper lip, lightly curling, gave a hint of serious thought which the other features did not betoken. To look upon her now, how unlike the lively, laughing, easy-tempered young lady, whose sprightly step, and cheerful smile, and musical voice, shed such pleasantness and life around this otherwise dull family.

As she sat musing, a knock at the door startled her.

"Oh, dear! I hope there will be no company here this evening."

She then hastily lighted a lamp on the table, left her seat before the fire, removed her chair to a corner, and assuming a becoming attitude, should a stranger enter, was prepared to receive the visitor.

The door opened, and she perceived that it was no stranger.

"Good evening, cousin Rudolph," she did not rise from her seat, nor did she greet him with that pleasant smile which was wont, like sunshine, to illumine and adorn her salutation.

"Good evening, cousin Sarah; are you all alone?"

"I have been alone for a short time; I expect uncle and aunt here soon, however."

Rudolph Hunt, for it was he who had entered, helped himself to a chair, and, as he took his seat, put on a smile of complacency.

"I am very glad, cousin Sarah, that I have come; I think you must be lonesome here."

"It is rather lonesome this evening," returned his cousin, looking steadily at her severing, which she had taken up on his entrance.

"I thought you would all feel rather dull this evening, after what has happened to-day. Poor James! who would have thought it?"

Sarah cast her eye from her work; it glanced from her cousin to the fire, and then settled on her work again. She met his keen, inquiring gaze; it chilled her heart—she made no reply.

"Did you see James when he went off?"

"No, I did not."

"I should not like to have seen him, either. James appears to be a good-hearted fellow, although—"

Sarah looked at her cousin, but his eye turned not towards her. He was gazing steadily at the fire.

"Although what, cousin Rudolph?"

"Oh, nothing. Only I was going to say, he sometimes appears singular; don't you think so? Have you never noticed anything?"

"No, I cannot say that I have."

"Well, I don't know but that I judge wrong; but he does not seem to be open—there is something about him you can't get at."

Sarah made no further reply; in fact, she did not relish the turn which the conversation had taken, it was manifestly unpleasant to her. Rudolph was her cousin, and, like her, dependent upon the kindness of his uncle; he had been very attentive to her, and she had formerly reciprocated his attentions. As long as he made his home at their uncle's, she treated him with the utmost kindness; no sister could have been more obliging, and, although she saw many things in him which she could have wished were otherwise, she passed them over as matters which she could not regulate; never dreaming that Rudolph could ever be anything to her but her attentive friend—her kind cousin. But Sarah was not one with whom a young person in Rudolph's situation could well be on such terms of intimacy, and still be

so able to control his affections, that no interest should be excited for her beyond what a cousin might demand.

There was too much virtuous simplicity, unaffected frankness, and noble, open-hearted generosity; there was too much personal beauty and mental loveliness not to captivate a heart less susceptible than his; and, besides all this, Sarah was the darling of her uncle, the younger Mr. Hunt. She was the orphan child of a beloved sister; he had taken upon himself to educate and support her, and had made no secret of the matter, that "his Sally," as he called her, was to be the heiress of his estate. So beauty and mental worth, a warm heart, and doubtless a handsome fortune, were all united in this frank, laughing, lively, confiding cousin; and he was not to be blamed if he did love her. But Sarah had not the most distant idea of yielding her heart to one in whose moral integrity she could not confide; and when he had ventured to test the nature of her affection for him, by placing himself in the attitude of a suitor, she at once drew a line between herself and him, strong and well-defined.

Rudolph was deeply chagrined at such a result. He was handsome, and he knew it; he had acquired those accomplishments which render youth and a fine person so engaging, and he was a partner in a very flourishing concern, with an almost certain prospect of future wealth; these, he thought, were advantages which few could offer, and which his vanity prompted him to believe few could resist. But to Sarah they offered no inducements; her heart recoiled at any intimacy with one whose integrity she doubted.

Whether James Edwards had been, in the least, the cause of Rudolph's discomfiture, I will not pretend to say; if so, he was the innocent cause. He had never talked of love, nor had he used any arts to gain the heart of Sarah. He did, indeed, enjoy the frequent opportunities afforded him, as a member of the family, of waiting upon her to an evening party, or of conversing with her in the domestic circle. There was a wonderful agreement in all their views; and, of late, a new chord had been struck, whose vibrations awoke sensations of peculiar interest within each heart. They had been religiously educated, and Sarah's mother had, with her dying breath, commended her orphan child to the care of God; and begged, as her last petition, that whatever else might be her lot, she might be encircled in that blessed covenant which she believed to be well ordered in all things. James, we know, was the darling object for whom a widowed mother's prayers daily ascended before the throne of grace; but it was only within a few months that he appeared to feel any particular interest in the subject, as a personal matter.

Whether it was that the gentle words which James had ventured to speak, in reference to his own feelings, had affected her, or whether the same cloud whose mercy-drops sprinkled his youthful spirit had also bedewed and softened hers, I cannot say; but true it was, a congenial feeling possessed them. There was a sameness in their sympathies, of which, perhaps, neither of them was aware, but which was drawing their affections into a close and holy bond.

Sarah had taken her work as Rudolph came in, and, plying her needle diligently, seemed more disposed to attend to that than to converse with her visitor; and, therefore, after a few vain attempts to excite her interest in any of the common topics, he took his leave.

No sooner had he left the house, than she hid aside her work, and resuming her seat before the fire, indulged the all-absorbing thoughts that crowded upon her. She was deeply agitated; clasping her hands before her, and raising her eye to heaven, as the big tears glistened, and then silently fell, she exclaimed—"I will see him! I will know, from his own lips, the whole truth! Oh, my Father! help me to bear this trial, help me to walk fearlessly in the path of duty! Sustain him—". But she could say no more, her overcharged feelings burst forth; she indulged them for a few moments, then rising calmly, walked with a light step from the room, and descended to the kitchen. Betty looked round as she entered, and said—

"Oh! Miss Sarah, and is it you? So glad am I to see you, for I've been wishing some one would just step in a bit, so lonesome it is; for Jim, he's been away, and it's all so still about the house. Ochone, this is the waist day of my life!"

Sarah could not reply. She took her seat by the side of Betty, and listened to the outpouring of her lamentation over the sad doings of the day. The good woman soon worked herself up to a high pitch, until the tears fell upon her clean white apron.

"To think of him, a nice young gentleman, in the hands of that cull snapdragon! If I couldn't have taken the life out of him, Miss Sarah, so rude as he was, and spaking in such a rough and bearish manner; and the dear sowl! niver a word did he answer, only when the cull dog took hold of his arm so, and began to jerk him along, says James, 'I'll go with you, sir, without your help.' But, oh dear! oh dear! that my eyes had never seen such a sight! I steps up to him, and says I, 'Mr. Edwards, keep up a good heart, for I believe you're innocent for all that's passed yet.' 'Do you, Betty?' says he; and believe me, Miss Sarah, the tear came in his eye, and he kind o' smiled, and his lip trembled. 'Yes,' said I, 'and you'll prove it to them yet.'"

Betty saw that she was saying too much for Sarah's comfort.

"Never mind, never mind, my dear young leddy: it's not to hurt you that I spake."

"It does not trouble me, Betty; but I am glad to hear you say that you believe him innocent."

"And that's what I do—but it's sore against him now. And Jim says they've got it down at the wharf that it's gambled he has; but I tell Jim it's a lie. He gambled! oh dear, oh dear! I tell you what, Miss Sarah," putting her head close to the young lady's, "there's them that aint a great

ways off that knows more about the matter than Mr. Edwards does—"

"Well, Betty, would you not like to see James, and talk with him about it?"

"Wouldn't I, Miss Sarah? that's what I would."

"I have made up my mind, Betty, that I must see him, and that, this night, if you will go with me."

Betty put up both hands, and raising her eyes at the same time, and said, "It's not in her right mind that she is. My dear young leddy, are you clean demented? Why, he's in the old town prison, and it takes my heart quake to look at it in the daytime, bairn going into it! But it's no there you'll catch Betty to-night; nor you, my dear young leddy, either."

"Why, Betty, I've been thinking a great deal about it, and I cannot rest to-night without seeing him. You know, Betty, that he has no friends to step forward and aid him; his mother and sisters are away—my master will not go near him; and Rudolph—"

"Ay, ay, catch him there, my darling, he's no' that friend that James thinks for. But, my dear leddy, it's not to the prison that you must go this night. Why, your young heart would tremble to hear your own footsteps in the dreary place, let alone the great bolts and the heavy doors, sounding like thunder through the old bare walls. No, no, Miss Sarah, it's no place for you, and the night is dark."

However, Sarah had made up her mind, and Betty had a sincere regard for her; and when she saw that there was danger of Sarah's attempting it alone, she, with great reluctance, consented to accompany her; but it was with many crossings of herself, and many ejaculations for mercy on them. "For such an errand no poor creatures ever went upon before. Oh, that I was yet to be born! Such a weary world as it is."

But when Betty set about getting ready, she showed clearly that she had her wits about her. She disguised Sarah in some over-garments of her own, and then, stepping into the pantry, gathered up a few choice bits.

"The poor soul might be hungry, and craving a morsel nice to eat."

## CHAPTER XII.

It would be difficult to imagine a situation more lamentable than that of James Edwards, as he paced the gloomy apartment to which he had been consigned—the upper, west-room of the old city prison. The shades of night had fallen, and the light of the lamps, which glittered upon the great thoroughfare of the city, threw their glimmer into his iron-grated window, and shadowed forth upon the ceiling above the token of his degradation; he could hear light footsteps of his happy fellow-beings, hurrying past; and the floor beneath would tremble, as the heavy coach rolled by, bearing its gay inmates to some scene of festive enjoyment, or to some cheerful, happy home. None, among that throng, cared for him; a finger might, indeed, be pointed at his prison-house, as the passer-by told of his crime and its detection; but none cared for the anguish that racked his bosom, nor thought of giving consolation to one who had fallen from his integrity, and forfeited his fair fame; perhaps, had they known the story of his past life, there might have been those who would have stepped forward to the rescue, and not have suffered the iron to enter his soul, at least, before he had been allowed an impartial trial. But, ah! who was there to tell his story? James felt the sad reality of all this; the iron gratings and the heavy bars, that shut him from the world, were to his spirit like the torturing rack, not that he cared, now, to be at liberty; it was not the walls of his prison, so bare and cold, nor the bed of straw, nor the darkness and loneliness of his cell—the prison, in which his soul was shut up, was stronger and gloomier than they. His fair fame was gone, and until the stain that polluted it was washed away, he must be an outcast. To whom, now, can those helpless ones look for their daily bread; they, with him, have fallen, dependants upon the cold charities of the world.

As these thoughts rioted within his troubled breast, the heavy peals from the bell of an adjoining steeple tolled the hour of the evening: he paused to count their number; he heard footsteps approaching; the key was applied to the door of his room, the heavy bolt flew back, and the keeper entered, followed by two females. Placing a small lump upon the dark oaken table, and telling them he would return in a quarter of an hour, he retired, turning the key upon them.

The first thought with James was, that the jailor had thrust in two other unfortunate beings like himself to share his cell. The next moment the eye of the lovely Sarah, beaming with emotion, was fixed upon him. She had thrown off the hood and cloak in which she had been disguised, and as she stood gazing upon him, just as he appeared at home, she seemed like an angel of mercy that had descended to shed some rays of light and hope on his dreary path [See Engraving, p. 328]. James was confounded; his mind had been deeply agitated; he knew not but his reason was departing. He was soon assured, however, that it was no vision, for Betty had unrobed herself, and stepping up, presented to him some of theainties of her pantry.

"You'll be remembering these, Mr. James—they're clane as my own hands can make 'em."

"Why, Betty, have you come here?"

"Indeed, and I have—but it's not me that's to be thanked for this turn; it's my dear young leddy, she would come, whether or no."

Sarah had not considered how she would appear, nor how she would feel when in the immediate presence of Edwards; it was the admittance of her interest in him to an extent which she did not realize, until Betty's plainness and unsophisticated kindness revealed the secret. She blushed, and even felt the rich crimson suffusing her countenance, and her heart, for the first

time, beat with that trembling, suffocating emotion, which accompanies the acknowledgment of reciprocal love. James knew not how to act. His first impulse was to elasp her to his bosom—to tell her that she was dearer to him than life itself; but the thought of his degraded condition, of the humbling scenes he had passed through that day, and which she had witnessed, urged him the next moment to shrink from her sight.

"Oh, Sarah, Sarah!" and he covered his face.

"James," said she, "I suppose I have acted rashly; I have done wrong, but I could not rest. I want to hear, from your own mouth, some accounts of this strange business."

"You have known and seen too much already."

"But before I can believe, James, that you are guilty, I must near the acknowledgment from your own lips."

"It will avail but little if I should deny it, so long as the proofs are so strong against me."

"Will it avail nothing to let me know what so deeply concerns you?"

James looked at her with his keen, bright eye, as though he wished to read the secrets of her soul. She shrank not from his gaze; her eye was softened by a tear, and her whole countenance glowed with emotion.

"Sarah, do you believe me innocent?"

"I do—I firmly believe it."

"And so do I, Mr. James—and may the time come when it will be proved so, and your enemies confounded."

James put out his hand, and taking one of Sarah's, said—"I thank you most truly for this expression of your confidence; it is, indeed, the oil of consolation to my wounded spirit. I know not what awaits me, nor through what scenes of trial I am yet to pass, but this act of yours, Sarah, this expression of your confidence, will make a prison or a dungeon light and pleasant. I am innocent, Sarah; and to Him, who knows my heart, who sees every act I do, and every thought that passes through my mind, do I most solemnly appeal, that what I say is true."

Sarah watched his eye as it rose in solemn reverence towards the dwelling-place of Him whose Omnipotence he invoked.

"I believe you—I believe you," said she, pressing his hand with both of hers; "but can you not tell who has done it? Can you not get out of this dreadful place? Oh, how long must you be here!"

James shook his head.

"Is there no one whom you suspect?"

"Ah! Sarah, suspicion will not do, and it may be unjust. No, I see nothing before me but infamy, degradation, and ruin; I shall be classed with felons, and stigmatised as a hypocrite, yet I could even bear this, if I could but suffer alone. They, too, must go down with me—must be beggars."

He could say no more—his proud spirit laboured under the oppressive load.

Sarah saw the tender chord which had been touched; her mind sympathised in the trouble that was agitating him, and her noble spirit rose above the little forms, so useful in the common scenes of life; she felt that it was no time to hide the honest feelings of a heart that was bound up in this suffering young man.

"James, your mother and sisters shall be mine. I will do for them what you have done; I am abundantly able; they shall never want."

"Sarah, my own dear Sarah!" He clasped her to his bosom. "May God bless you, for ever and ever!"

She shrank not from his embrace, but suffered him to feel that she willingly yielded the token that she was all his own.

The footsteps of the jailer were now heard approaching.

"James, let us have in that Being to whom you have appealed this night; He can do for us what we cannot do for ourselves."

Betty was not an unconcerned spectator of the scene which had just past, but she kept a respectful silence, until she saw Miss Sarah preparing to depart; then stepping up to James and taking his hand, said, "Mr. James, may God bless you." James felt that she was placing something within him; he looked at it; it was a sovereign.

"No, no, Betty, this must not be; you will rob yourself."

"Not a bit, not a bit; kape it, you dear sowl; the like o' them here won't be aiding you without the help of a little of that," and she turned her back, and as the jailer was waiting, James was soon left to ponder alone on the unexpected vision which had just passed.

Sarah retired to rest that night, but she could not sleep; too many conflicting feelings rioted in her troubled breast; one bright spot alone there was, around which her young affections loved to hover; but dark and troublous clouds kept passing over the beautiful vision. That James was innocent she now firmly believed; that they mutually loved, she no longer doubted; and when she thought of that brief moment of bliss, that before unknown delight, that incommunicable joy of mingling spirits, a rapturous dream seemed to have entranced her. But then the sad realities of a prison gloom, the blasted reputation, the dark uncertainty as to the fate of him she loved, all came upon her mind with painful interest—too painful for her peace.

Was there no friend who could lend a helping hand to free young Edwards from his prison, and aid him in detecting the villainy which, if not found out, must rest with all its evil influence on him, and now, alas! on her! But to whom could she apply? Who would believe, as she did, in the bare assertion of one against whom appearances were now so suspicious, yes, worse than suspicious. She might be ridiculed for her credulity, but there was little hope but any could be found who would be willing to act upon such a peradventure. The longer she pondered, the darker, the more hopeless grew the prospect. The agony of her spirit she exclaimed—"Oh, had I but a father's bosom on which to repose, to whom I could go for help—a father! And have I no father? My uncle—yes, he has taken a father's place—he has never denied my claims; I will open my heart to him—I will tell him all."

(Continued on page 391.)

## "THE GOOD OLD TIMES."

WE have before us a copy of *Doddsley's Annual Register* for 1759—a most respectable and useful annual, the publication of which is still continued. Robert Doddsley was a noted London publisher, and like many others of his craft, could wield the pen with grace, when he chose. He wrote several poetical and dramatic pieces, besides a treatise which had the honour to be attributed to Lord Chesterfield. He projected the *Annual Register*, above alluded to, and issued the first number in 1758. Edmund Burke wrote the historical portions, for several years, and it has been said that he suggested the plan of the work to Doddsley.

In looking over the venerable book before us, we have found many curious paragraphs, a few of which we will transcribe, as specimens of the "Annual Registers" of those days.

Here is a brief notice of one of the vegetable wonders of the preceding year:—

"Amongst the variety of the uncommon vegetable productions in the last year, the following seems not the least extraordinary, viz., a turnip which was pulled up at or near Tudenham, in Norfolk, weighing upwards of twenty-nine pounds."

Here is a potato which puts to blush all modern "murphies." We should not like to vouch for the truth of this potato story, but here it is, as we find it in the *Register*:—

"A gentleman who lately came from Chester informs us, that one Tho. Siddal, a gardener in the suburbs of that place, has now in his possession a potato, which he lately dug out of his own garden, that weighs seventeen pounds four ounces avoirdupoise, measures in circumference thirty-eight inches, and in length forty-seven inches and a-half."

Here is an account of a trial for witchcraft, which will amuse the modern reader, in spite of the serious manner in which it is related:—

"One Susanna Hannokes, an elderly woman of Wingrove, near Aylesbury, was accused by a neighbour for bewitching her spinning-wheel, so that she could not make it to go round, and offered to make oath of it before a magistrate, on which the husband, in order to justify his wife, insisted upon her being tried by the church Bible; and that the accuser should be present; accordingly she was conducted to the parish church, where she was weighed against the Bible; when, to the no small mortification of her accuser, she out weighed it, and was honourably acquitted of the charge."

The following item from New England shows how the settlers amused themselves in those days:—

"We have an account from Providence, in America, that no less than 11,588 squirrels had been shot in that country within ten days, and that at producing the heads, 1500 horses were at the tavern. The heads of the said squirrels measured twenty-nine bushels and a-half."

Here is an account of a remarkable escape from the halter, which occurred May 1, 1759. Perhaps it is owing to some few cases of this sort, that the notion is so often entertained among the ignorant that executed criminals are still alive and at large, although a hundred witnesses testify to their stragulation and death:—

"Mr. Armstrong, under-sheriff of the county of Tyrone, in Ireland, was fined 100*l*. and sentenced to two years' imprisonment, for suffering William Barrett, who was ordered for execution for a capital offence, to escape with life; this Barrett hung the usual time, till the sheriff thought he was dead, but by means of a collar, he saved himself and got clear off."

Those who suppose that travelling twenty-five miles an hour was a feat never dreamed of until the introduction of locomotives, will learn from the following that they are labouring under a mistake. The race here spoken of came off on the 26th of June, 1759:—

"Early in the morning Jennison Shaftoe, Esq., started against time, to ride fifty miles in two hours; in the course of which he used ten horses, and did it in two seconds under eleven minutes of the time prescribed by the articles, to the astonishment of all present."

Under the department of Natural History, we find an account of a cat that lived twenty-six months without drinking. The experimenter, Abbé de Fontenu, of Paris, began by retrenching the cat's drink little by little, until at length it was reduced to total abstinence. It was fed on boiled meat, and did not apparently suffer in health, though it is said it "appeared to have an ardent desire to drink." There is also an essay on snout in wheat, which recommends as a remedy the steeping of the seed in a strong brine, composed of dunghill water, salt, and pulverised saltpetre. An account is given, on another page, of the transmutation of a field of oats into rye, which had lately occurred in Sweden. This was said to be the first time this phenomenon had been observed, and the subject had engaged the earnest attention of several naturalists, whose experiments confirmed the story of the Swedish farmer.

**MYSTERIES, OR SCRIPTURAL PLAYS.**—In the church books of Tewkesbury, which have been preserved for a long time back, are the following entries:—"A.D. 1678. Payed for the players' geers, six sheepskins for Christ's garments." And in an inventory, recorded in the same book, 1685, are these words, "—And order eight heads of hair for the Apostles, and ten beards, and a face, or vizor for the devil."—*Actors by Daylight.*

MISS VANDENHOFF.

(THE PORTRAIT FROM A DAGUERR OTYPE BY E. MAYALL, Esq., 13, WEST STRAND.)

THE subject of this memoir is the only daughter of Mr. Vandenhoff the tragedian, who is one of the last representatives of the fine old classical school of acting, which is rapidly disappearing, and is being replaced by another—though we may be excused for doubting whether it be a better—style. Miss Vandenhoff was born in Liverpool, in which town her father was, for several years, established as the leading actor. In early childhood, she found her greatest pleasures in reading and study—"books were dearer than the newest toys"—and, at an age when most young ladies are devoted to their dolls, she was nursing the spring of poetry within her, and weaving her childish fancies into verse. Educated by the most accomplished elocutionist of the day, she early displayed talents as an actress of no mean description; and having accompanied her father on a professional tour in America, the performances of the young girl were received with the greatest applause. On her return from America, she appeared, for the first time in London, at the Theatre Royal, Covent Garden, as *Margaret Elmer* in Lovell's play of *Lore's Sacrifice*. She also appeared as *Julia* in the *Hunchback*, *Pauline* in the *Lady of Lyons*, in which character she obtained great success; and she was the original *Lydia* in Sheridan Knowles's play of the *Love Chase*. Among the Shaksperian characters, her *Juliet* and *Imogen* have had few rivals. She has never, we believe, attempted any of the more grand and terrible heroines of Shakspeare; but, in the display of the gentle, tender, and feminine parts, she has not often been excelled. There is one line of acting, however, in which she has displayed great and original talent—the grave, severe, and statuesque representation of the classical heroines. Her *Virginia*, and, above all, her *Antigone*, stand out by themselves as unapproached by any other actress. The really great sensation she caused in *Antigone*, leads us to enlarge upon her appearance in this character.

At Covent Garden Theatre, on the 2nd of January, 1845, a bold attempt was made to revive the ancient classical drama, by giving a representation of the *Antigone* of Sophocles, accompanied by the music of Mendelssohn. This drama had been produced at Berlin under the auspices of the King of Prussia, with all the appliances that power could give; the first scholars were consulted as to the arrangements and costume, and Mendelssohn wrote the music for the choral odes which form so great and noble a feature in the Greek drama. The success of the drama in Berlin was great. Still it was thought by many that this was more owing to the music of Mendelssohn, and the enthusiasm of the German students, than to the severe classical drama itself. In 1844, it was produced at the Odeon Theatre, in Paris, with great magnificence, and complete success. But it seems to have been reserved for the representation at Covent Garden, to prove that it was not to the accessories of music, costume, and scenery, that this success was owing, but to the capabilities of this noble drama itself to move our utmost terror and pity when ably represented. Here the music was atrociously performed, the singing execrable and most deservedly hissed, the scenery faulty, and the costumes incorrect. It was to the interpretation given by Miss Vandenhoff of the noble character of *Antigone*, her sisterly affection, and devoted heart, that the attempt met with the success it achieved. Brought up under the tuition of her father, who is both a scholar and a gentleman, she entered upon

the study of this character, not merely in the drama of *Antigone* as translated for representation, but as a portion of the noble trilogy which Sophocles conceived on the fate of the house of *Edipus*. Embodying the gentleness and devotion of *Cordelia* with the grand and simple forms of classical beauty, Miss Vandenhoff produced an impression on the audience that has never been forgotten, and aided by the fine acting of her father in *Cressa*, succeeded in making the audience feel a deep interest in the beauty of Sophocles, and the severe graces of the classical drama. And this she effected in spite of the drawbacks occasioned by the imperfect state of the musical department. It was not Mendelssohn who saved the play by his magnificent harmonies, but it was Sophocles, and Miss Vandenhoff as the interpreter of his excellences, who took the audience, as it were, by surprise, and not only gave a deep interest in the classical drama, but led to an improved performance of the music, and a better appreciation of Mendelssohn's genius.

But while pursuing her histrionic career, Miss Vandenhoff did not neglect to cultivate that poetic turn of mind of which her youth gave such promise. About three years ago, a series of poems, called *The Picture Gallery*, appeared in *Hood's Magazine*, where they attracted considerable attention for their originality. It was reserved, however, for the present year, to make her merits as an authoress fully known to the public. On the 14th of February a new play called *Woman's Heart* was produced for the first time, in which Miss Vandenhoff played the principal character. The play was eminently successful. Miss Vandenhoff, and the other principal actors had been called before the curtain to receive the plaudits of the audience on their performance; then the author was called for, and so well had the success been kept, that we believe it was as great a surprise to the other actors as to the audience, when Mr. Vandenhoff led his daughter forward, and announced her as the successful candidate for literary fame. This was a legitimate triumph; there had been no whisperings afloat as to distinguished authorship, no coteries puffing up a preconceived notion of excellence, no band of interested claquers to drown opposition: it was the genuine unaided triumph of an interesting story, well set on the stage, and told in sweet and earnest poetry.

The facts of the tale are simple, almost too simple for dramatic effect, but they are deeply interesting. Angiolo, the son of a peasant, is an artist of high talent, both as painter and sculptor; he is pursuing his avocations in his father's humble home in company with a blind girl, Isolina, who has been left upon his father's bounty: it has been the pleasure of the artist's life to instruct the poor blind girl, "who only knew that she had eyes when tears fell from them," and, from her beauties of face and form, to catch an inspiration for his art. Love grows up between them. But the fame of the artist has reached his prince, who takes him under his patronage, and he becomes wealthy, and famous, and filled with a wild ambition that banishes all softer thoughts. He is courted, too, by the celebrated beauty of the court, the Lady Giulia, and this awakes the enmity of Count Zellamino, who is an aspirant for that lady's fortune. Isolina yearns, in "the mighty hunger of her heart," for a sight of him she loves; she finds him in his gorgeous palace, devoted to ambition and to art, without a thought of love. In a scene, which we have been permitted to extract from the unpublished play, and which will be given in a future number, we have the result of their interview, in the parting of the former lovers. Exhausted with grief, she sinks fainting at the door of the Marquis Albrizzi, who discovers in her the child he has lost when his castle was destroyed, and her mother was supposed to have perished. Two years are supposed to elapse between the second and third acts, when we find Isolina, by the aid of science, restored to sight, and the acknowledged daughter of the marquis; and, though sought in marriage by the prince, still clinging with devoted attachment to her old love. Angiolo is sent by the prince to take her portrait; but her father, who has heard her former story, knowing that she can only recognise her old lover by the voice, obtains from him a promise of silence during her sitting, and enjoins her not to speak. This gives rise to one of the best situations of the play—the unconscious memory calling back the sound of steps in one, and the other struck by the marvellous liking in the high-born lady to the lost Isolina. While pursuing his silent task, the officers of the court arrive to arrest him for treason, through the machinations of Zellamino; he loudly protests his innocence; the spell of silence is broken; and the lovers recognise each other only to be forcibly separated. The remaining two acts are filled by her devoted attempts to gain the liberation of Angiolo; her rejection of the prince's suit; the repentance of Angiolo for his desertion; and the ultimate consent of the haughty parent to her union with the lover of her youth.

It is something in these days to have produced a genuine, original, and successful play. That this will long keep its place on the stage, is our hope; that it will always be a favourite in the study, we are certain. There is a freshness of poetry, and a purity of thought pervading the whole, that is certain to please. The character of Isolina is so pure, and touched with such a delicate, and at the same time so masterly a hand, that it must ever excite our highest interest. And the acting of Miss Vandenhoff, in this—her own creation, brings all the beauties and capabilities of the character before us in their greatest perfection. We hail this first attempt at dramatic composition as bearing much more than the seeds of great promise; and we hope the accomplished authoress will not be long before she permits us to record another triumph in the path she has chosen.

We cannot close this memoir without a glance at the private life of this accomplished and deserving lady. If she be eminent for her talents to the public, she is still more eminent for the virtues that adorn her. Incapable of envy, she is the first to recognise and acknowledge the merits of others—the last to claim admiration for herself; and she has passed the fiery ordeal of her profession without the shadow of a stain once sullied the purity of her name; an ornament to the stage, and a blessing to womankind, and "the poetry and sunshine" of her home.

## SIR ROGER DE COVERLEY.

*(Continued from page 377.)*

## CHAPTER V.

## THE ANCESTORS OF SIR ROGER DE COVERLEY.

*"Of plain good sense, unfitted in the schools."*

I was this morning walking in the gallery, when Sir Roger entered at the end opposite to me, and advancing towards me, said he was glad to meet me among his relations the De Coverleys, and hoped I liked the conversation of so much good company, who were as silent as myself. I knew he alluded to the pictures; and as he is a gentleman who does not a little value himself upon his ancient descent, I expected he would give me some account of them. We were now arrived at the upper end of the gallery, when the knight faced towards one of the pictures; and, as we stood before it, he entered into the matter, after his blunt way of saying things as they occur to his imagination, without regular introduction, or care to preserve the appearance of chain of thought.

"It is," said he, "worth while to consider the force of dress, and how the persons of our age differ from those of another merely by that only. One may observe, also, that the general fashion of one age has been followed by no particular set of people in another, and by them preserved from one generation to another. Thus, the vast jetting coat and small bonnet, which belong to Henry the Seventh's time, was kept on in the yeman of the guard; not without a good and politic view, because they look a foot taller, and a foot and a half broader; besides that, the cap leaves the face expanded, and, consequently, more terrible, and fitter to stand at the entrance of palaces."

"This predecessor of ours, you see, is dressed after this manner, and his cheeks would be no larger than mine, were he in a hat as I am. He was the last man that won a prize in the Tilt-yard (which is now a common street before Whitehall). You see the broken lance that lies there by his right foot. He shivered that lance of his adversary all to pieces; and, rearing himself, look you, sir, in this manner, at the same time he came within the target of the gentleman who rode against him; and, taking him with incredible force before him on the pommel of his saddle, he in thatanner rid the tournament over, with an air that showed he did it rather to reform the rule of the lists, than expose his enemy; however, it appeared to me how to make use of a victory, and with a gentle trot he marched up to a gallery where their mistress sat (for they were rivals), and let him down with laudable courtesy and unpardonable insolence. I do not know, but it might be exactly where the coffee-house\* is now."

"You are to know, this my ancestor was not only of a military genius, but also for the arts of peace, for he played on the bass-viol as well as any gentleman at court; you see where his viol hangs by his basket-hilt sword. The action at the Tilt-yard you may be sure won the fair lady, who was a maid of honour, and the greatest beauty of her time; here she stands, the next picture. You see, sir, my great great grandmother has on the new-fashioned petticoat, except that the modern is gathered at the waist; my grandmother appears as if she stood in a large drum, whereas the ladies now talk as if they were in a go-cart. For all this lady was bred at court, she became an excellent country-wife, she brought ten children, and when I have you the library, you shall see in her own hand (allowing for the difference of the language) the best receipt now in England both for a hasty pudding and a white-pot."

"If you please to fall back a little, because it is necessary to look at the three next pictures at one view; these are three sisters. She on the right and, who is so very beautiful, died a maid; the next to her, still handsomer, and the same fate, against her will; this homely thing in the middle had both their portions added to her own, and was stolen by a neighbouring gentleman, a man of stratagem and resolution, for he poisoned three mastiffs to come at her, and knocked down two deer-stealers in carrying her off. Misfortunes happen in all families. The theft of this rump, and so much money, was no great matter to our estate. But the next heir that possessed it was this soft gentleman, whom you see there. Observe the small buttons, the little boots, the laces, the slashes about his clothes, and above all the posture he is drawn in (which to be sure was his own choosing); you see he sits with one hand on a desk writing, and looking as it were another way, like an easy writer, or a sounseater. He was one of those that had too much wit to know how to live in the world; he was a man of no justice, but great good-manners; he ruined everybody that had anything to do with him, but never said a rude thing in his life; the most indolent person in the world, he would sign a deed that passed away half his estate with his gloves on, but could not put on his hat before a lady if it were to save his country. He is said to be the first that made love by squeezing the hand. He left the estate with ten thousand pounds debt upon it; but, however, by all hands I have seen, informed, that he was every way the finest gentleman in the world. He left lay heavy on our house for one generation; but it was retrieved by a gift from that honest man you see there, a citizen of our name, but nothing at all akin to us. I know Sir Andrew Freeport has said behind my back, that this man was descended from one of the ten children of the said Honour I showed you above; but it was never made out. We winked at his thing, indeed, because money was wanting at that time."

Here I saw my friend's little embarrassed, and turned my face to the next picture.

Sir Roger went on with his account of the gallery in the following manner.

\* The Tilt-yard coffee house is still in being at Whitehall.

"This man," pointing to him I looked at, "I take to be the honour of our house. Sir Humphrey de Coverley; he was in his dealings as punctual as a tradesman, and as generous as a gentleman. He would have thought himself as much undone by breaking his word, as if it were to be followed by bankruptcy. He served his country as knight of this shire to his dying day. He found it no easy matter to maintain an integrity in his words and actions, even in things that regarded his own affairs which were incumbent upon him, in the care of his own affairs and relations of life, and therefore dreaded (though he had great talents) to go into employments of state, where he must be exposed to the snares of ambition. Innocence of life and great ability were the distinguishing parts of his character; the latter, he had often observed, had led to the destruction of the former, and he used frequently to lament that great and good had not the same signification. He was an excellent husbandman, but had resolved not to exceed such a degree of wealth; all above it he bestowed in secret charities many years after the sum he aimed at for his own use was attained. Yet he did not slacken his industry, but to a decent old age saved the life and fortune, which was superfluous to himself, in the service of his friends and neighbours."

Here we were called to dinner, and Sir Roger ended the discourse of this gentleman by telling me, as we followed the servant, that this his ancestor was a brave man, and narrowly escaped being killed in the civil wars; "For," said he, "he was sent out of the field upon a private message, the day before the battle of Marston." The story of narrowly escaping by having been within a day of being shot, with other matters above mentioned, mixed with good sense, left me at a loss whether I was more delighted with my friend's wisdom or simplicity.

## CHAPTER VI.

## COVERLEY HALL HAUNTED.

*"All things are full of horror and affright,  
And dreadful is the silence of the night."*

At a little distance from Sir Roger's house, among the ruins of an old abbey, there is a long walk of aged elms, which are shot up so very high, that when one passes under them, the rooks and crows that rest upon the tops of them seem to be cawing in another region. I am very much delighted with this sort of noise, which I consider as a kind of natural prayer to that Being who supplies the wants of his whole creation, and who, in the beautiful language of the Psalmist, feedeth the young ravens that call upon him. I like this retirement the better, because of an ill report it lies under of being haunted; for which reason (as I have been told in the family) no living creature ever walks in it beside the chaplain. My good friend the butler desired me with a very grave face not to venture myself in it after sunset, for that one of the robins had been almost frightened out of his wits by a spirit that appeared to him in the shape of a black horse without a head; to which he added, that about a month ago one of the maids coming home late that way with a pail of milk upon her head, heard such a rustling among the bushes that she let it fall.

I was taking a walk in this place last night between the hours of nine and ten, and could not but fancy it one of the most proper scenes in the world for a ghost to appear in. The ruins of the abbey are scattered up and down on every side, and half covered with ivy and elder-bushes, the harbours of several solitary birds which seldom make their appearance till the dusk of the evening. The place was formerly a church yard, and has still several marks in it of graves and burying-places. There is such an echo among the old ruins and vaults, that if you stamp but a little louder than ordinary, you hear the sound repeated. At the same time the walk of elms, with the croaking of the ravens which no time to time are heard from the tops of them, looks exceedingly solemn and venerable. These objects mutually raise seriousness and attention; and when night begins to enlighten the wilderness of the place, and pour out her supernumerary horrors upon every thing in it, I do not at all wonder that weak minds fill it with spectres and apparitions.

Mr. Locke, in his chapter of the *Association of Ideas*, has very curious remarks to show how by the prejudice of education one idea often introduces into the mind a whole set that bear no resemblance to one another in the nature of things. Among several examples of this kind, he produces the following instance: "The ideas of goblins and sprites have really no more to do with darkness than with light: yet let but a foolish maid inculcate these often on the mind of a child, and raise them there together, possibly he shall never be able to separate them again so long as he lives; but darkness shall ever afterwards bring with it those frightful ideas, and they shall be so joined, that he can no more bear the one than the other."

As I was walking in this solitude, where the dusk of the evening conspired with so many other occasions of terror, I observed a cow grazing not far from me, which an imagination that was apt to startle might easily have construed into a black horse without a head: and I dare say the poor footman lost his wits upon some such trivial occasion.

My friend Sir Roger has told me with a great deal of mirth, that at his first coming to his estate he found three parts of his house altogether useless; that the best room in it had the reputation of being haunted, and by that means was locked up; that noises had been heard in his long gallery, as that he could not get a servant to enter it after eight o'clock at night; that the door of one of his chambers was nailed up, because there went a story in the family that a butler had formerly hanged himself in it; and that his mother, who lived to a great age, had shut up half the rooms in the house, in which either her husband, a son, or a daughter had died. The knight seeing his habitation reduced to so small a compass, and himself in a

\* Psalm civ. v. 2.

† Essay on Human Understanding, b. ii., ch. 23, sect. 10.

manner shut out of his own house, upon the death of his mother ordered all the apartments to be flung open, and exorcised by his chaplain, who lay in every room one after another, and by that means dissipated the fears which had so long reigned in the family.

I should not thus have been particular upon these ridiculous horrors, did I not find them so very much prevail in all parts of the country. At the same time I think a person who is thus terrified with the imagination of ghosts and spectres much more reasonable than one who is contrary to the reports of all historians sacred and profane, ancient and modern, and to the traditions of all nations, thinks the appearance of spirits real, and groundless. Could not I give myself up to this kind of superstition, I should to the relations of particular persons, and to those whom I cannot distrust in other matters of fact. I might as well distrust not only the historians to whom we may join the poets, but the philosophers of antiquity, have favoured this opinion. Lucræcius, by the source of his philosophy he was obliged to maintain that the soul is separated from the body, makes no doubt of the reality of apparitions, and that men have often appeared after their death. This is a very remarkable; he was so pressed with the matter of fact, which he could not have the confidence to deny, that he was forced to acquiesce for being one of the most absurd unphilosophical notions that was ever uttered. He tells us, that the surfaces of all bodies are perpetually changing, and that the particles of one after another; and that these particles of the earth are included each other whilst they were joined in the body like the corns of an onion, and sometimes seen entire when they are separated from it, by which means we often behold the shapes and shadows of persons who are either dead or absent.

I shall dismiss this paper with a story out of Josephus, and so much for the sake of the story itself as for the moral reflections with which the author concludes it, and which I shall here set down in his own words. "Glaphyra, the daughter of King Antiochus, after the death of her two first husbands (being married to a third who was brother to her first husband, and so passionately in love with her that he turned off his former wife to make room for this marriage) had a very odd kind of dream. She dreamed that she saw her first husband coming towards her, and that she embraced him with great tenderness; when in the midst of the pleasure which she expressed at the sight of him, he reproached her after the following manner: 'Glaphyra,' says he, 'thou hast made good the old saying, That women are not to be trusted. Was not I the husband of thy virginity? Have I not children by thee? How couldst thou forget our loves so far as to enter into a second marriage, and after that into a third; nay, to take for thy husband a man who has so shamelessly crept into the bed of his brother? However, for the sake of our passed loves, I shall free thee from thy present reproach, and make thee mine for ever.' Glaphyra told this dream to several women of her acquaintance, and died soon after. I thought this story might not be impertinent in this place, wherein I speak of those knaves. Besides that the example deserves to be taken notice of as it contains a most certain proof of the immortality of the soul, and of Divine Providence. If any man think these facts incredible, let him enjoy his own opinion to himself, but let him not endeavour to disturb the belief of others, who by instances of this nature are excited to the study of virtue."

## CHAPTER VII.

## SIR ROGER DE COVERLEY AT CHURCH.

"For't, in obedience to thy country's rites,  
Worship th' immortal Gods."

I was always very well pleased with a country Sunday, and think, if keeping holy the seventh day were only a human institution, it would be the best method that could have been thought of for the polishing and civilising of mankind. It is certain, the country people would soon degenerate into a kind of savages and barbarians, were there not such frequent returns of a stated time, in which the old village meet together with their best faces, and in their cleanliest habits, to converse with one another upon indifferent subjects, hear their duties explained to them, and join together in adoration of the Supreme Being. Sunday clears away the rust of the whole week, not only as it refreshes in their minds the notions of religion, but as it puts both the sexes upon appearing in their most agreeable forms, and exerting all such qualities as are apt to give them a figure in the eye of the village. A country fellow distinguishes himself as much in the churchyard, as a citizen does upon the 'Change, the whole parish politics being generally discussed in that place either after sermon or before the bell rings.

My friend Sir Roger, being a good churchman, has beautified the inside of his church with several texts of his own choosing. He has likewise given a handsome pulpit-cloth, and railed in the communion-table at his own expence. He has often told me, that at his coming to his estate he found his parishioners very irregular; and that in order to make them kneel and join in the responses, he gave every one of them a hassock, and a common prayer-book; and at the same time employed an itinerant singing-master, who goes about the country for that purpose, to instruct them rightly in the tunes of the psalms; upon which they now very much value themselves, and indeed cudo most of the country churches that I have ever heard.

As Sir Roger is landlord to the whole congregation, he keeps them in very good order, and will suffer nobody to sleep in it besides himself; for if by chance he has been surprised into a short nap at sermon, upon recovering out of it he stands up and looks about him, and if he sees anybody else nodding, either wakes them himself, or sends his servants to them. Several other of the old knight's particularities break out upon these

\* Jewish Antiquities, book xvii. chap. 15.

occasions. Sometimes he will be lengthening out a verse in the singing psalms, half a minute after the rest of the congregation have done with it; sometimes when he is pleased with the matter of his devotion, he pronounces "Amen" three or four times to the same prayer; and sometimes stands up when everybody else is upon their knees, to count the congregation, or see if any of his tenants are missing.

I was yesterday very much surprised to hear my old friend, in the midst of the service, calling out to one John Matthews to mind what he was about, and not disturb the congregation. This John Matthews it seems is remarkable for being a little fellow, and at that time was kicking his heels for his diversions. The authority of the knight, though exerted in that odd manner which sometimes life, has a very good effect upon the parish, who are not polite enough to see anything ridiculous in his behaviour; besides that the general good sense and worthiness of his character make his tenants observe these little singularities as foils that rather set off than diminish his good qualities.

As soon as the sermon is finished, nobody presumed to stir till Sir Roger is gone out of the church. The knight walks down from his seat in the chancel between a double row of his tenants, that stand bowing to him on each side, and every man and then inquired how every one's wife, or mother, or son, or sister, or whom he does not see at church; which is understood as a secret reprimand to the person that is absent. [See Engraving.]

The chaplain has often told me, that upon a certain day, when Sir Roger has been pleased with a boy that answers well, he has ordered a Bible to be given him next day for his encouragement, and sometimes accompanies it with a fitch of bacon to his mother. Sir Roger has likewise added five pounds a year to the clerk's place; and that he may encourage the young fellows to make themselves perfect in the church service, has promised upon the death of the present incumbent, who is very old, to bestow it according to merit.

The fair understanding between Sir Roger and his chaplain, and their mutual concurrence in doing good, is the more remarkable, because the very next village is famous for the differences and contentions that rise between the parson and the squire, who live in a perpetual state of war. The parson is always preaching at the squire, and the squire, to be revenged on the parson, never comes to church. The squire has made all his tenants hoists and fitch-stealers; while the parson instructs them every Sunday in the dignity of his order, and insinuates to them, in almost every sermon, that he is a better man than his patron. In short, matters are come to such an extremity, that the squire has not said his prayers either in public or private this half year; and that the parson threatens him, if he does not mend his manners, to pray for him in the face of the whole congregation.

Fends of this nature, though too frequent in the country, are very fatal to the ordinary people; who are so used to be dazzled with riches, that they pay as much deference to the understanding of a man of an estate, as of a man of learning; and are very hardly brought to regard any truth, how important soever it may be, that is preached to them, when they know there are several men of five hundred a year who do not believe it.

## CHAPTER VIII.

## SIR ROGER DE COVERLEY AND THE WIDOW.

"Her look, were deep imprinted in his heart."

In my first description of the company in which I pass most of my time, it may be remembered, that I mentioned a great affliction which my friend Sir Roger had met with in his youth; which was no less than a disappointment in love. It happened this evening, that we fell into a very pleasing walk at a distance from his house. As soon as we came into it, "It is," quoth the good old man, looking round him with a smile, "very hard that any part of my land should be settled upon one who has used me so ill as this perverse widow did; and yet I am sure I could not see a sprig of any bough of this whole walk of trees but I should reflect upon her and her severity. She has certainly the finest hand of any woman in the world. You are to know, this was the place wherein I used to mope upon her; and by that custom I can never come into it, but the same tender sentiments revive in my mind, as if I had actually walked with that beautiful creature under these shades. I have been fool enough to carve her name on the bark of several of these trees; so unhappy is the condition of men in love, to attempt the removing of their passions by the methods which serve only to imprint it deeper. She has certainly the finest hand of any woman in the world."

Here followed a profound silence, and I was not displeased to observe my friend falling so naturally into a discourse, which I had ever before taken notice he industriously avoided. After a very long pause, he entered upon an account of this great circumstance in his life, with an air which I thought raised my idea of him above what I had ever had before; and gave me the picture of that cheerful mind of his, before it received that stroke which has ever since affected his words and actions. But he went on as follows:—

"I came to my estate in my twenty-second year, and resolved to follow the steps of the most worthy of my ancestors who have inhabited this spot of earth before me, in all the methods of hospitality and good neighbourhood for the sake of my fame; and in country sports and recreations, for the sake of my health. In my twenty-third year I was obliged to serve as sheriff of the county; and in my servants, officers, and whole equipage, indulged the pleasure of a young man (who did not think ill of his own person) in taking that public occasion of showing my figure and behaviour to advantage. You may easily imagine to yourself what appearance I made, who am pretty tall, rosy well, and was very well dressed, at the head of a whole county, with much before me, a feather in my hat, and my horse well bitted. I can assure you,

"As soon as the sermon is finished, nobody presumes to stir till Sir Roger is gone out of the church. The knight walks down from his seat in the chancel between a double row of his tenants, that stand bowing to him on each side, and every now and then inquires how such an one's wife, or mother, or son, or father do, whom he does not see at church."

I was not a little pleased with the kind looks and glances I had from all the balconies and windows as I rode to the hall where the assizes were held. But when I came there, a beautiful creature in a widow's habit sat in the court to hear the event of a cause concerning her dowry. This commanding creature (who was born for the destruction of all who behold her) put on such a resignation in her countenance, and bore the whispers of all around the court with such a pretty uneasiness, I warrant you, and then recovered herself from one eye to another, until she was perfectly confused by meeting something so wistful in all she encountered, that at last, with a murrain to her, she cast her bewitching eye upon me. I no sooner met it than I bowed like a great surprised booby; and knowing her cause to be the first which came on, I cried, like a captivated calf as I was, 'Make way for the lady!' This sudden partiality made all the county immediately see the sheriff also was become a slave to the fine widow. During the time her cause was upon trial, she behaved herself. I warrant you, with such a deep attention to her business, took opportunities to have little billets handed to her counsel, then would be in such a pretty confusion, occasioned, you must know, by acting before so much company, that not only I, but the whole court was prejudiced in her favour; and all that the next heir to her husband had to urge, was thought so groundless and frivolous, that when it came to her counsel to reply, there was not half so much said as every one besides in the court thought he could have urged to her advantage. You must understand, sir, this perverse woman is one of those unaccountable creatures that secretly rejoice in the admiration of men, but indulge themselves in no farther consequences. Hence it is that she has ever had a train of admirers, and she removes from her slave, in town to those in the country, according to the seasons of the year. She is a reading lady, and far gone in the pleasures of friendship. She is always accompanied by a confidant, who is witness to her daily protestations against our sex, and consequently a bar to her first steps towards love, upon the strength of her own maxims and declarations.

"However, I must needs say, this accomplished mistress of mine has distinguished me above the rest, and has been known to declare Sir Roger de Coverley was the tamest and most humane of all the brutes in the country. I was told she said so, by one who thought he rallied me; but upon the strength of this slender encouragement of being thought least detestable, I made new liveries, new-paired my coach-horses, sent them all to town to be bitted, and taught to throw their legs well, and move all together, before I pretended to cross the country, and wait upon her. As soon as I thought my retinue suitable to the character of my fortune and youth, I set out from hence to make my addresses. The particular skill of this lady has ever been to inflame your wishes, and yet command respect. To make her mistress of this art, she has a greater share of knowledge, wit, and good sense, than is usual even among men of merit. Then she is beautiful beyond the race of women. If you will not let her go on with a certain artifice with her eyes, and the skill of beauty, she will arm herself with her real charms, and strike you with admiration, instead of desire. It is certain, that if you were to

behold the whole woman, there is that dignity in her aspect, that composure in her motion, that complacency in her manner, that if her form makes you hope, her merit makes you fear. But then again, she is such a desperate scholar, that no country-gentleman can approach her, without being a jest. As I was going to tell you, when I came to her house I was admitted to her presence with great civility; at the same time she placed herself to be first seen by me in such an attitude—as I think you call the posture of a picture—that she discovered new charms, and I at last came towards her with such an awe as made me speechless. This she no sooner observed but she made her advantage of it, and began a discourse to me concerning love and honour, as they both are followed by pretenders, and the real votaries to them. When she discussed these points in a discourse, which I verily believe was as learned as the best philosopher in Europe could possibly make, she asked me whether she was so happy as to fall in with my sentiments on these important particulars. Her confidant sat by her; and, upon my being in the last confusion and silence, this malicious aid of hers, turning to her, says, 'I am very glad to observe Sir Roger pauses upon this subject, and seems resolved to deliver all his sentiments upon the matter when he pleases to speak.' They both kept their countenances; and, after I had sat half an hour meditating how to behave before such profound casuists, I rose up and took my leave. Chance has since that time thrown me very often in her way, and she as often has directed a discourse to me which I do not understand. This barbarity has kept me ever at a distance from the most beautiful object my eyes ever beheld. It is thus, also, she deals with all mankind; and you must make love to her as you would conquer the sphinx, by posing her. But were she like other women, and that there were any talking to her, how constant must the pleasure of that man be who could converse with a creature. But, after all, you may be sure her heart is fixed on some one or other; and yet I have been credibly informed—but who can believe half that is said!—after she had done speaking to me, she put her hand to her bosom and adjusted her tucker. Then she cast her eyes a little down upon my beholding her too earnestly. They say she sings excellently: her voice, in her ordinary speech, has something in it inexpressibly sweet. You must know I dined with her at a public table the day after I first saw her, and she helped me to some tansy in the eyes of all the gentlemen in the county. She has certainly the finest hand of any woman in the world. I can assure you, sir, were you to behold her, you would be in the same condition; for, as her speech is music, her form is angelic. But I find I grow irregular while I am talking of her; but, indeed, it would be stupidity to be unconcerned at such perfection. Oh, the excellent creature! she is as inimitable to all women, as she is inaccessible to all men."

I found my friend begin to rave, and insensibly led him towards the house, that we might be joined by some other company; and am convinced that the widow is the secret cause of all that inconsistency which appears in some parts of my friend's discourse; though he has so much command of himself as not directly to mention her, yet, according to that of Martial, which one knows not how to render into English, *Dum tacet haec loquitur*. I shall end

this paper with that whole epigram, which represents with much humour my honest friend's condition:—

"Let Rufus weep, rejoice, stand, sit, or walk,  
Still he can nothing but of *Nævia* talk;  
Let him eat, drink, ask questions, or dispute,  
Still he must speak of *Nævia*, or be mute.  
He writ to his father, ending with this line,  
'I am, my lovely *Nævia*, ever thine.'

## CHAPTER IX.

## SIR ROGER DE COVERLEY AND HIS EXPENDITURE.

"The dread of nothing more  
Than to be thought necessitous and poor."

ECONOMY in our affairs has the same effect upon our fortunes which good-breeding has upon our conversation. There is a pretending behaviour in both cases, which, instead of making men esteemed, renders them both miserable and contemptible. We had yesterday at Sir Roger's a set of country gentlemen who dined with him: and after dinner the glass was taken, by those who pleased, pretty plentifully. Among others I observed a person of a tolerable good aspect, who seemed to be more greedy of liquor than any of the company, and yet methought he did not taste it with delight. As he grew warm, he was suspicious of everything that was said, and as he advanced towards being fuddled his humour grew worse. At the same time his bitterness seemed to be rather an inward dissatisfaction in his own mind, than any dislike he had taken to the company. Upon hearing his name, I knew him to be a gentleman of a considerable fortune in this county, but greatly in debt. What gives the unhappy man this peevishness of spirit is, that his estate is dipped, and is eating out with usury; and yet he has not the heart to sell any part of it. His proud stomach, at the cost of restless nights, constant inquietudes, danger of affronts, and a thousand nameless inconveniences, preserves this canker in his fortune, rather than it shall be said he is a man of fewer hundreds a year than he has been commonly reputed. Thus he endures the torment of poverty, to avoid the name of being less rich. If you go to his house, you see great plenty; but served in a manner that shews it is all unnatural, and that the master's mind is not at home. There is a certain waste and carelessness in the air of everything, and the whole appears but a covered indigence, a magnificent poverty. That neatness and cheerfulness, which attends the table of him who lives within compass, is wanting, and exchanged for a libertine way of service in all about him.

This gentleman's conduct, though a very common way of management, is as ridiculous as that officer's would be, who had but few men under his command, and should take the charge of an extent of country rather than of a small pass. To pay for, personate, and keep in a man's hands, a greater estate than he really has, is of all others the most unpardonable vanity, and must in the end reduce the man who is guilty of it to dishonour. Yet if we look round us in any county of Great Britain, we shall see many in this fatal error; if that may be called by so soft a name, which proceeds from a false shame of appearing what they really are, when the contrary behaviour would in a short time advance them to the condition which they pretend to.

Laertes has fifteen hundred pounds a year, which is mortgaged for six thousand pounds; but it is impossible to convince him, that if he sold as much as would pay off that debt, he would save four shillings in the pound,\* which he gives for the vanity of being the reputed master of it. Yet if Laertes did this, he would perhaps be easier in his own fortune; but then Irus, a fellow of yesterday, who has but twelve hundred a year, would be his equal. Rather than this shall be, Laertes goes on to bring well-born beggars into the world, and every twelvemonth charges his estate with at least one ear's rent more by the birth of a child.

Laertes and Irus are neighbours, whose way of living are an abomination to each other. Irus is moved by the fear of poverty, and Laertes by the shame of it. Though the motive of action is of so near an affinity in both, and may be resolved into this, "that to each of them poverty is the greatest of all evils," yet are their manners widely different. Shame of poverty makes Laertes launch into unnecessary equipage, vain expense, and lavish entertainments. Fear of poverty makes Irus allow himself only plain necessities, appear without a servant, sell his own corn, attend his labourers, and be himself a labourer. Shame of poverty makes Laertes go every day a step nearer to it: and fear of poverty stirs up Irus to make every day some further progress from it.

These different motives produce the excesses which men are guilty of in the negligence of, and provision for, themselves. Usury, stock-jobbing, extortion and oppression, have their seed in the dread of want; and vanity, riot, and prodigality, from the shame of it; but both these excesses are infinitely below the pursuit of a reasonable creature. After we have taken care to commend so much as is necessary for maintaining ourselves in the order of men suitable to our character, the care of superfluities is a vice no less extravagant than the neglect of necessities would have been before.

Certain it is, that they are both out of nature, when she is followed with reason and good sense. It is from this reflection that I always read Mr. Cowley with the greatest pleasure. His magnanimity is as much above that of other considerable men, as his understanding; and it is a true distinguishing spirit in the elegant author who published his works,† to dwell so much upon the temper of his mind and the moderation of his desires. By this means he has rendered his friend as amiable as famous. That state

of life which bears the face of poverty with Mr. Cowley's great vulgar,\* is admirably described; and it is no small satisfaction to those of the same turn of desire, that he produces the authority of the wisest men of the best age of the world, to strengthen his opinion of the ordinary pursuits of mankind.

It would, methinks, be no ill maxim of life, if, according to that ancestor of Sir Roger whom I lately mentioned, every man would point to himself what sum he would resolve not to exceed. He might by this means cheat himself into a tranquillity on this side of that expectation, or convert what he should get above it to nobler uses than his own pleasures or necessities. This temper of mind would exempt a man from an ignorant envy of restless men above him, and a more inexcusable contempt of happy men below him. This would be sailing by some compass, living with some design: but to be eternally bewildered in prospects of future gain, and putting on unnecessary armour against improbable blows of fortune, is a mechanic being which has not good sense for its direction, but is carried on by a sort of acquired instinct towards things below our consideration, and unworthy our esteem. It is possible that the tranquillity I now enjoy at Sir Roger's may have created in me this way of thinking, which is so abstracted from the common relish of the world: but as I am now in a pleasing arbour surrounded with a beautiful landscape, I find no inclination so strong as to continue in these mansions, so remote from the ostentatious scenes of life; and am at this present writing, philosopher enough to conclude with Mr. Cowley:—

"If e'er ambition did my fancy cheat,  
With any wish so mean as to be great,  
Continue, Heaven, still from me to remove  
The humble blessings of that life I love."

(To be continued.)

## THE GREAT PYRAMID OF EGYPT.

THE most ancient structure remaining in Egypt, is the Great Pyramid—one of those mighty works wherein, as Dénon says, men seem to have wished to measure themselves with nature. Quaint old Fuller says, "the Pyramids are in their dotage, and have forgotten their makers' names." Moore, whom we have just now lost, calls the great one, in his exquisite prose poem, *The Epicurean*, "The watch-tower of time, from whose summit, when about to expire, he will take his last look?" Herodotus, who visited Egypt about 450 years B.C. (some say 500), or more than 2,300 years ago, spoke even then with uncertainty of their date. Their erection, however, is usually ascribed to Suphis (considered to be the Cheops of Herodotus), who reigned soon after Menes, and they may be called 4,000 years old: Bunsen says 5,000!

The Pyramid still seems strong enough to set Time at defiance for ages—let us hope that man may not come in to the old Destroyer's aid. According to Herodotus (Euterpe), 100,000 men were employed, who were relieved every three months, in hewing stones in the Arabian mountains, dragging them to the banks of the Nile, and transporting them to the required spot. Ten years were consumed in the labour of forming the road through which the stones were to be drawn. In the whole, according to Pliny, "886,000 men were employed twenty years together." It has been calculated that if it were required again to raise the stones from the quarries, and place them at their present height, the action of the steam-engines of England, which are managed at most by 36,000 men, would be sufficient to produce the same effect in eighteen hours! In this calculation it is supposed that the Pyramid occupied 100,000 men twenty years.

The base of the Great Pyramid was 764 feet square (it is now 740 feet), and may be considered very nearly the size of the area known as Lincoln's Inn-fields. In truth, however, this area, large as it looks, is not so large as that occupied by the Pyramid. Mr. Scoles, the architect, measured the "fields" one fine moonlight night, and found the dimensions between the houses 625 feet 6 inches from north to south, and 831 feet from east to west, giving an area of 12 acres, while the pyramid occupies 13½. The present height is 450 feet 9 inches; measured up the angle, it is 368 feet; it was formerly 611 feet on this line. The Pyramid is constructed externally in steps, as you probably know, varying from 2 feet 2 inches in height to 4 feet 10 inches, up which those who desire to ascend are dragged by the native guides; originally these were eased to present a flat surface. The top is flat, about 82 feet square, and I once met an English lady who, with something like your own desire to see and do everything (that is proper), had danced in a quadrille upon it. The ascent is far from easy, and requires a steady head, as may be imagined, when we remember how much higher it is than St. Paul's. Even more so the descent. The stones employed in the construction vary from 5 feet in length to 30 feet, and from 3 feet to 4 feet in height.—Butler.

SIR FRANCIS CHANTREY.—In going from the parlour to the studio (says a friend) our way lay through a passage, on both sides of which there were shelves covered with his models of busts. In one corner stands a head of Milton's "Satan," uttering, with a scornful expression, his address to the sun. Sir Francis said, "That head was the very first thing that I did after I came to London. I worked at it in a garret, with a paper cap on my head, and as I could then afford only one candle, I stuck that one in my cap, that it might move along with me, and give me light whichever way I turned!"

\* "Hence, ye profane, I hate ye all,  
Both the great vulgar and the small."  
Cowley's Paraphrase of Horace, Book III. Od. 1.

† Land Tax. † Dr. Thomas Sprat Bishop of Rochester.

**IMPORTANT POST-OFFICE ARRANGEMENT.**

—By a recent Post-Office Regulation, SIXTEEN NUMBERS OF THE HOME COMPANION may be posted to any part of the United Kingdom, in one parcel, open at the ends, for SIXPENCE. Persons therefore residing at a distance from a Bookseller's, may obtain from our Office, Nos. 1 to 16 of the HOME COMPANION, (or any other Numbers), by remitting Six Postage Stamps in addition to the price of the Numbers.—PARTS I. to V. are now ready, price 5s. or 6s. each.

Address:—JOHN BENNETT, 60, Fleet Street, London.

**REYNARD IN CHANCERY.**—By arrangement between the Plaintiff and the Defendant, the INJUNCTION against the First Number of AUNT MARY'S STORY BOOKS, containing "The Diverting History and Tragical End of Reynard the Fox," with Engravings of the Stuffed Animals lately in the Crystal Palace, has been SET ASIDE.

Booksellers may therefore sell the said Work.—Price 2d.

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

### PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

#### No. XIX.—"OLD BIRDS ARE NOT CAUGHT WITH CHAFF."

THIS is a very self-laudatory fallacy. "Old birds are not to be caught with chaff," says the old woman, sagaciously laying her finger upon her nose, while her grandson discourses to her on the subject of "flying fish;" but Pharoah's chariot-wheel-hooked up by their anchor in the Red Sea, is swallowed at once as a grain of the purest wheat. There seems to be a general propensity in the world to catch eagerly at "chaff," and neither old nor young birds escape being caught by it. The world understands its value and spreads it abroad in great profusion. We meet with it everywhere—from the senate to the pothouse, from the boudoir of the duchess to the mangle-room of the washerwoman. And everywhere are people caught by it. It is in vain some cunning old bird may turn up his bill from some one or two tempting morsels of this chaff, and pride himself with the notion that he is not to be done, but he is sure to be taken at last by some part that is coloured or flavoured exactly to suit his fancy. During the mania in Franco of Law's Mississippi scheme, when people were biting at chaff in most voracious fashion, we are told by Charles Mackay, in his *Memoirs of Popular Delusions*, the following story:—"Two sober, quiet, and philosophic men of letters, M. de la Motte and the Abbé Terrason, congratulated each other that they, at least, were free from this strange infatuation. A few days afterwards, as the worthy Abbé was coming out of the Hotel de Soissons, where he had gone to buy shares in the Mississippi, whom should he see but his friend La Motte, entering for the same purpose. 'Ha!' said the Abbé, smiling, 'is that you?' 'Yes,' said La Motte, pushing past him as fast as he was able; 'and can that be you?' The next time the two scholars met, they talked of philosophy, of sciences, and of religion, but neither had courage for a long time to breathe one syllable about the Mississippi. At last, when it was mentioned, they agreed that a man ought never to swear against his doing any one thing, and that there was no sort of extravagance of which even a wise man was not capable." Pride ourselves as we may upon our intelligence, our wisdom, our skill, our cunning, we are all of us sure, sooner or later, to be caught by chaff. There are some curious anecdotes told of the eagerness with which "old birds" sought after this Mississippi chaff: some of the feminine eagerness is scarcely repeatable, but the following ludicrous stratagem to gain an interview with the great projector, and an opportunity for nibbling at the chaff, may be told without a blush, except such as arises in disdain at its disgusting avarice. "One lady who had striven in vain during several days, gave up in despair all attempts to see him at his own house; but ordered her coachman to keep a strict watch whenever she was out in her carriage, and if he saw Mr. Law coming, to drive against a post, and upset her. The coachman promised obedience; and for three days the lady was driven incessantly through the town, praying inwardly for the opportunity to be overturned. At last she espied Mr. Law, and, pulling the string, called out to the coachman, 'Upset us now! for goodness' sake, upset us now!' The coachman drove against a post, the lady screamed, the coach was overturned, and Law, who had seen the accident, hastened to the spot to render assistance. The cunning dame was led into the Hotel de Soissons, where she soon thought it advisable to recover from her fright, and, after apologising to Mr. Law, confessed her stratagem. Law smiled, and entered the lady in his books as the purchaser of a quantity of India-stock." The story does not go on to tell us whether the lady sold out before the fearful crash came which blew away all this chaff, and showed that no grains were hidden beneath it; when fifteen persons were squeezed to death in their attempts to get into the Bank to save something out of the wreck of their fortunes.

Our own South Sea Bubble was another of those glorious spreadings of

chaff which caught the old and knowing as well as the young and unwary. When Exchange Alley was blocked up by crowds rushing in to nab at the chaff—

"Then Stars and Garters did appear  
Among the numerous rabble;  
To buy and sell, to see and hear  
The Jews and Gentiles squabble.  
The greatest ladies thither came,  
And plied in chariots daily,  
Or pawned their jewels for a sum  
To venture in the Alley."

Those were prolific days for the chaff-spreaders; and so convinced did they seem to be that the public loved chaff better than grain, that one adventurer actually started "A company for carrying on an undertaking of great advantage, but nobody to know what it is." Of this company Charles Mackay says, "Were not the fact stated by scores of credible witnesses, it would be impossible to believe that any person could have been duped by such a project. The man of genius who essayed this bold and successful inroad upon public credulity, merely stated in his prospectus that the required capital was half a million, in five thousand shares of £100 each, deposit £2 per share. Each subscriber paying his deposit, would be entitled to £100 per annum per share. Now this immense profit was to be obtained, he did not condescend to inform them at that time, but promised that in a month full particulars should be duly announced, and a call made for the remaining £98 of the subscription. Next morning at nine o'clock, this great man opened an office in Cornhill. Crowds of people beset his door, and when he shut up at three o'clock, he found that no less than one thousand shares had been subscribed for, and the deposits paid. He was thus, in five hours, the winner of £2000. He was philosopher enough to be contented with his venture, and set off the same evening for the Continent. He was never heard of again." We could hardly have expected that such palpable chaff as this had ever caught a single bird, even a hundred years ago; but, in Dickens's *Household Words*, a few weeks since, we read an account of an egregious fraud being perfectly successful in these more modern times, when the press has been at work exposing every attempt at chaff-scattering. The writer in the *Household Words* is giving an account of the Post-office money orders, and the use that is made of them by those who do "catch old birds with chaff." He says, "We were shown a circular, which has been very extensively disseminated in the provinces. It explains (with patterns of the article produced) a pretended patent for the manufacture of a fabric in universal demand. It promises to each subscriber for one share, price five shillings (to be sent, of course, per money order), not a paltry return of three or four hundred per cent., but a good round income. 'Subscribers,' we quote the precise words of the printed bait, 'will, for every five shillings they invest, realise from seventy-five to three hundred pounds sterling per annum!'—to be paid, it is politely stated in another part of the prospectus, quarterly. Now, rational people will say that the wild extravagance of such a promise, exceeding all possible gullibility, would be its own defeat. The said rational people, however, will be (as they sometimes are) in error. Credulity has no bounds. It is a fact, that since the issue of that golden circular, the Post-office authorities have paid to its concocter, —not hundreds, but thousands of pounds. Post-office orders have poured in from believers in impossible profit, at such a rate, that three hundred pounds were handed over to the successful schemer in the course of one single week!" It would seem that the more preposterous the scheme the more certain the success. That birds will peck the more freely as the more palpable is the chaff. There is Joseph Ady, for instance, who, in a small way, has caught more old birds with chaff than any man living: for upwards of thirty years has he been baiting his traps with chaff, and, although his name is as well known from John O'Grout's to the Land's End as that of the Duke of Wellington—although he has been continually figuring in the police reports, and the magnificent energies of Sir Peter Laurie have been devoted to putting him down, yet still he continues to catch his birds; not quite so frequently as heretofore, but it required thirty years' exposure of his chaff to destroy his sport. From the days when Greene wrote the *Gull's Hornbook* down to the present time, we continue to be the most gullible of mortals, and seem to have a pleasure in being cheated; all the while fancying ourselves most sage, and knowingly shouting out "Old birds are not caught with chaff!"

If old birds, as well as young, were not caught with chaff, the world takes a great deal of pains for little profit. Old birds may possess all the wisdom of our ancestors, but modern art dresses up the chaff in so many alluring forms, that old birds bite as greedily as trout after a shower. The fallacy of the proverb consists in assuming that all old birds are wise birds; so also in every particular, that no attempt at imposition could by any possibility deceive them. It supposes an amount of wisdom superior to all the weaknesses and all the passions of humanity. But the wisest of us has his weak side, and some sharp purveyor of chaff is certain to find us out—is sure to tickle us somewhere; and, in spite of all our determination to be wary, we fall into his trap. Look, for instance, at the cautious old ladies in the country, who become the victims of "Cheap Jack;" or the knowing old housekeepers, who get done by the "tisketed" sugar, and the well-"puffed" tea. Cheap Jack is about as notorious as Joseph Ady in his way; a fat, oily, unctuous man, with a voice like a cataract, continuous, effervescent, splashing, dashing, crashing; a language that has no parallel under the sun, before which the well-earned fame of Billingsgate sinks into utter nothingness. Who has not seen him standing on his cart in a country fair, roaring away at the top of his lungs praises of his miscellaneous stock, haranguing the gaping hawbucks on every relevant or irrelevant topic; "chaffing" them on their personal appearance, their gait, their manners, their expressions; and

the wondering clowns, overpowered by his eloquence, and delighted at the manner in which he attacked some acquaintance of theirs, purchase his wretched wares with avidity? "I ask no more, and I'll take no less," shouts he—the money is handed up. "Sold again." And the avaricious rustic walks off with his prize, and soon finds that he has been sold, taken in and done for, "caught with chaff." Then there is another sort of "Cheap Jack," of a more silky velvety nature, who goes about from house to house like the Yankee pedlar, with his soft "sawder," "human nature," and "phrenology," and they sprinkle their chaff before the delighted eyes of the matrons and dowagers, and they give it away to them in exchange for old garments and hard cash; and the venerable old ladies are delighted with their bargains. One of these wise old ladies once visited a draper's shop in the country town in which she resided, and after having turned over and examined his stock until the patience of the draper himself, the shopmen, and shopwomen, was thoroughly exhausted, a piece of imitation China-rape attracted her fancy; she liked the colour, she liked the pattern, she thought it would make a very pretty dress: she asked the price; "Five-and-twenty shillings, ma'am," said the draper; "it is a remarkably fine piece of goods, one of the best imitations I ever saw in my life." "I don't like imitations," said the lady, "I prefer the real; I would not mind giving treble the money for a real one. But I never wear imitations." "You would hardly get a real one for six times the money," said the draper. About a week or ten days afterwards the lady again came to the shop, and asked to be allowed to look at the dress she had admired the other day, as she had purchased a real one of exactly the same colour, and nearly the same pattern. "May I ask, ma'am, how much you gave for it?" said the draper. "Oh, I bought it very cheap, much less than you said I should get one for. I only gave four guineas and a half for it. He asked me seven guineas, but I got him to abate some; and four guineas and a half, and an old shawl, was all I gave." "I think, ma'am," said the draper, examining the dress, which she was then wearing, "that you bought this of Cheap Jack?" "Yes," said the lady, "I did: is it not very handsome and very cheap?" "You might have had it cheaper," said the draper. "What! a real, handsome, China-rape like this?" exclaimed the lady, with some indignation. "Ma'am," said the draper, "that is the very dress you refused to give me five-and-twenty shillings for. I sold it to Cheap Jack myself, and he told me he had made a capital profit of it from a lady in the town." The indignation of the lady was intense; she never forgave the shopkeeper for knowing that she had been caught with chaff; but whether she was cured of Cheap Jack, or not, is another affair. China-rape chaff might not again tempt her, but chaff in other shapes and forms, we are afraid, would still be successful. For avarice generally miscalculates, and as generally deceives. And although old birds may become wary, as the burnt child dreads the fire, yet these old birds, when they are tempted with homed words and showy finery, should remember another proverb which says, "Beware of the geese when the fox preaches."

There is not an age or condition—scarcely a state of mind, from utter ignorance to the most philosophical understanding, but is liable at some time or other to be caught with "chaff." From the boarding-school Miss, who raves over the curl of a mousetache, to the venerable dame who bemoans the vanities of the world, and groans in spirit under the excitement of "cant"—that plentiful chaff amongst those who desire to appear religious without having any truly religious feeling—from the rude labourer whose chief pleasure lies in "chaffing" his neighbour, to the illustrious duke who strives to add to his ancestral honours the right of wearing a red or blue ribbon, we are all, more or less, tempted and deceived by some wretched "chaff." It covers all our walls in staling letters and tinted papers; it parades our streets in all manner of forms; sometimes in multitudinous files of melancholy men encased in black-piece and cuirass of fearful boards, recounting the virtues of some universal panacea that cures "every disease incident to humanity, from a corn up to a consumption;" sometimes it glazes upon us from a shop window through which we see regiments of busy men seated at mahogany desks, like so many fire-worshippers, with the ever-burning gas before them, doing nothing from morning to night but wrap up pill boxes in their envelopes, and seal them with their distinctive stamp. Again we meet a troop of horse, covered with gorgeous trappings, not heralding the advent of a company of modistebanks, but directing us to the magnificent mart for cheap clothing, where marquisses may buy their court suits, and their grooms their fusian jackets. We can hardly put our foot on the pavement without defacing some tailor of Battle-bridge, or rubbing into nothingness some "establishment" in Shoreditch. Then we are met by a row of some strange-looking monsters, apparently just arrived from some savage land, where neither broad-cloth or fusian, cheap or dear, were known, but most appropriately clad from head to foot in straw—straw hats, straw coats, straw trousers—all "men of straw," winnowing out the "chaff" of some great straw-bonnet cleaning establishment. And all of them get "old birds" as well as young ones, to feed daintily on chaff.

The time seems now rapidly approaching, when, of all others, the greatest amount of chaff is scattered; and when, more than all other times, we should wish to find the proverb was a truth and not a fallacy. But, alas! we fear it requires too great knowledge of human nature to predict that old birds, and young birds, and birds of every-feather, will be caught with chaff of some kind or other in the coming general election. There are "Cheap Jacks" in politics as well as in trade; both the loud and blustering, and the more silky and sly. The Joseph Addys, too, will be there represented—his "Send me a sovereign, and you will hear something to your advantage," is only another form, and pretty nearly with the same result, of "Give me your vote, and taxes shall be reduced." And as for quack medicines and puffing advertisements, these sink into the shade before the outrageous quackery and puffing that will abound. There will be "chaff" for the Protectionist, and "chaff" for the Free-trader; "chaff" for the Protestant, and "chaff" for the Roman Catholic; "chaff" for the Churchman, and "chaff" for the Dissenter; "chaff" for the Tory, "chaff" for the Whig, and "chaff" for the Radical; "chaff" for every place except poor St. Albans, which has been found guilty of requiring its "chaff" to be truly gilt. There are, indeed, among these some who seek to represent us men of high principle, who in their addresses to the constituency, state boldly, and without reservation or disguise, their political principles—who would stand or fall by those alone. And we have not unfrequently seen such men set aside for some political chaff-seller and adventurer with no fixed principles of any kind, moral or political. If some of our readers had been behind the scenes when such an adventurer sought their "sweet voices," they would be rather astonished at the pains taken to prepare the "chaff" for the liking of all. They would see his address arranged—not for the purpose of expounding his own principles, but that they are regular India-rubber, and will stretch or contract to any dimensions—but one paragraph is inserted to catch one section of the constituency, and another paragraph to catch another; a little bit about progress to catch the Liberals, but carefully guarded so as not to shock the Tories; a sentence expressed to remove all abuses, with the proviso that they be "practical" abuses, the manner of proof being the conscience of the candidate; a sop for the agriculturists, and another for the Free-traders—neither of them too strongly flavoured, but vague and indefinite, with a broad margin on either side to fall back upon. And then comes loud professions of honesty and integrity, and devoted attention to local interests. And the eyes of the electors are frequently blinded with all this dust and chaff, and they are caught and dressed. And then we have the flaring portion of the "chaff"—ribbons and banners, and music, and all the nonsense and trash which even think necessary to the due performance of a grave and serious duty; and then comes the poisonous portion of the "chaff," which men-swill and gossie down until their brains are bewildered, and you might as well expect an honest vote from the swine in their yards, as from such miserable wots. And, finally, we have the gilded "chaff" for which they sell conscience, principle, honour, integrity, and their country, and walk up to the polling-booth with the bribe in their pocket, and the false oath on their lips and in their hearts. No, no! the proverb is not true; it is a grievous fallacy, "Old birds are caught with chaff."

## THE BURIAL OF SCHILLER.\*

BY WILLIAM JONES.

There was a sound of many feet  
In the solemn hour of night,  
And a mourning host through Weimar's  
street,  
Went forth by the torches' light,  
And the hymn for a parted soul arose,  
As they bore the corpse to its last repose.  
(Moony and chill were the skies o'er head,  
Not a star set on its throne; dead,  
And the while swell'd forth a dirge for the  
With a sad and deepening tone:  
As if the brow of Nature fell  
For the gifted son who had lov'd so well!  
On through the silent town they went,  
To the house where the dreamer slept—  
Where trees, with a hundred ages bent,  
Their watch o'er the green turf kept.  
And the hours seem'd, wavering to and  
fro,  
To shield from the storm the graves below.  
Through the churchyard gate the band  
dign'd,  
With many a pray'r and wail,  
When sudden there came on the tempest  
wild,  
The notes of a nightingale!

Sweetly and clear they were borne along,  
'Twas a last farewell to the King of Song!  
The lightning flash'd in the troubled sky,  
And the clouds pour'd forth their flood,  
As they laid the frame of the good and high,  
In its powerful solitude.  
No tongue could speak, for the heart was  
mov'd  
To its deepest chord for the friend below'd.  
Glory to him who hath pass'd away,  
Joy to the ransom'd one!  
Lo! 'midst the tempest the moon's pale ray  
O'er the grave of the poet shone!  
'Twas a moment's gleam, and again the  
cloud  
Hath veil'd the sky from the mourner's  
shroud!  
And the hymn on high triumphant rose,  
The sorrowing wail no more,  
And they said, "Our brother will now  
repose,  
For the trials of earth are o'er!  
We hail the sign in Thy mercy given;  
Thou hast shrin'd the mighty—we thank  
thee, Heaven!"

HOGARTH'S PICTURE OF THE RED SEA.—Hogarth was once applied to by a miserly old nobleman, to paint on his staircase a representation of the destruction of Pharaoh's hosts in the Red Sea. In attempting to fix upon the price, Hogarth became quite dissatisfied. The miser was unwilling to give more than one-half the real value of the picture. At last, Hogarth, out of all patience, agreed to his patron's terms.

Within a day or two the picture was ready. The nobleman was surprised at such expedition, and immediately called to examine it. The canvass was painted all over red.

"Zounds!" said the purchaser, "what have you here? I ordered a scene of the Red Sea."

"The Red Sea you have," said Hogarth, still smarting to have his talents undervalued.

"But where are the Israelites?"

"They are all gone over."

"And where are the Egyptians?"

"They are all drowned."

The miser's confusion could only be equalled by the haste with which he paid his bill. The biter was bit.

\* Schiller was buried in a night of the month of May. His corpse was borne to the grave by young men of the best families in Weimar. The weather was stormy; the nightingale sang full and loud. As the bier was lowered, the wind suddenly scattered the mist, and the moon broke forth, its light streaming upon the grave. When all was over, the skies were again suddenly overcast.

## ONWARD!

**GOING AHEAD.**—At a meeting of the City Commissioners of Sewers, an application was made by a partner in a firm in Cornhill, for permission to lay along the public way a gutta-percha tube, for the purpose of enabling the firm to correspond, by means of electricity, or otherwise, with another of their establishments in the same street. The court being afraid of establishing a precedent which might prove troublesome, referred the subject to a committee for investigation.

**AMALGAMATION OF LITERARY AND SCIENTIFIC INSTITUTIONS.**—The Committee appointed by the Society of Arts to frame a course of action with a view to carrying into effect the proposals of Mr. Chester for an union of all the literary and scientific Institutes, have commenced operations. They have addressed a letter and a set of queries to the secretary of every institution in the country—the latter framed so as to elicit information on the chief points of interest in the projected scheme, but in no way binding the respondents to adhere to any part of their policy.

**CHEAP CABS AND OMNIBUSES.**—We are glad to find that the frequent and fierce newspaper grumblings about cabs and omnibuses are at length condensing into practical measures. A London and Westminster Joint-Stock Cab Company, and a Metropolitan Omnibus Company, are being formed. Better vehicles, cheaper fares, and more civil servants are the advantages promised to the public, with excellent dividends to the proprietors. Cabs at sixpence a mile, and omnibuses at cheap fares, with the Parisian system of correspondences, are improvements most desirable; and they are certain to be remunerative to the companies, if managed with ordinary care and economy.

**BOOTH'S SMOKE-CONSUMING FURNACE.**—A patent has been taken out by Mr. Booth for a smoke-consuming furnace, in which the fuel is supplied from above, and the smoke given out falls forward into a chamber called the "receiver," where the admixture of air takes place. Combustion thus promoted, it is said, enables Mr. Booth to use fuel which otherwise would be rejected, such as "culm" or "slack." A close chamber can be heated up to some thousands of degrees of temperature, and thus this furnace is said to be well adapted for the drying of bricks, and the evaporation of brine in the preparation of salt. In the manufacture of bricks, 20,000 bricks, it is stated, can be dried in twenty-four hours, and the brick-making can go on uninterruptedly all the year round.—*Builder.*

**REGULATIONS FOR STEAMBOATS.**—Notice has been issued by the Board of Trade that the provisions of the amended Steam Navigation Act, 14 and 15 Vict., c. 79, would be strictly enforced on and after the 31st of March. All the river steamers have been surveyed, and some condemned as being unfit for service. From the 31st of March last, all steamers will be required to display in a conspicuous part of the vessel their certificate to run, and the number of passengers they are allowed to carry; each vessel will now be furnished with a safety-valve, free from the control of the engineer. Penalties will be enforced on masters and owners for carrying more than their number, and on passengers for forcing their way on board, or travelling beyond the distance for which they have paid. The Customs officers on and after the above date will not permit any vessels to put to sea, unless they are properly provided with life-boats, fire-engines, signal lights, and the other requirements for the preservation of life at sea.

**PROGRESS OF THE SANITARY MOVEMENT.**—It is pleasing to see the continued interest manifested in this question by persons in influential quarters. The Public Health Act received the royal assent in August, 1848, which is applied to towns on petition, and up to last summer, petitions had been sent from 215 places. To July last, the Act had been accordingly applied to 45 towns by Acts of Parliament, confirming the provisional orders of the General Board, but before the session closed, the number was increased to 72. 115 of these are corporate towns having Local Acts for paving, lighting, &c. The Act has also been applied by Orders in Council to more than 60 other towns and places, and numbers of cases are in progress. The expenses of a preliminary inquiry and report, before the Act is applied, average about £120, whilst to obtain a Local Act giving anything like the same advantages and powers, has, in some cases, involved an expense of several thousand pounds.

**IMPROVEMENT OF THE WORKING CLASSES IN SCOTLAND.**—A meeting of the working classes was recently held at Edinburgh, over which the Duke of Argyll was called to preside, with a view to consider the best means of suppressing the drunkenness for which Scotland is still too notorious, and otherwise to promote the elevation of the working classes. An eloquent and effective speech was made by the noble chairman, full of shrewd sense and good feeling. The meeting was then addressed by Mr. Hugh Miller, the eminent geologist and editor of the *Witness*, who gave some interesting reminiscences of his own early life when engaged in manual labour. Mr. R. Chambers also spoke well, after which several working men addressed the meeting. Among other practical measures, the benefits of which are extending, were mentioned the opening of coffee-houses and reading-rooms—fewer licences being granted to low tipping houses—building societies, affording improved house-accommodation to the poor, and the changing of the operative's pay-night from Saturday to earlier in the week. Mr. Chambers and other employers said they had done this, and also given a half holiday on Saturday for many years, and found it for their own interest, as well as for the good of the workmen and their families.

## POETICAL QUOTATIONS.

## ANGLING.

In genial spring, beneath the quiv'ring shade,  
Where cooling vapours breathe along the mead,  
The patient fisher takes his silent stand,  
Intent, his angle trembling in his hand:  
With looks unmoved, he lures the scaly brood,  
And eyes the dancing cork, and bending reed.

*Pope's Windsor Forest.*

I, in these flowery meads would be;  
These crystal streams should solace me;  
To whose harmonious, bubbling noise  
I with my angle would rejoice.—*Isaac Walton.*

## ANIMALS.

Let cavillers deny  
That brutes have reason; sure 'tis something more,  
'Tis Heaven direct, and stratagems inspire,  
Beyond the short extent of human thought.

*Somerville's Chase.*

The heart is hard in nature, and unfit  
For human fellowship, as being void  
Of sympathy, and therefore dead alike  
To love and friendship both, that is not pleased  
With sight of animals enjoying life,  
Nor feels their happiness augment his own.

*Cowper's Task.*

## ANTIPATHY.

Some men there are, love not a gaping pig;  
Some that are mad, if they behold a cat;  
Masterless passion ways it to the mood,  
Of what it likes or loathes.

*Shakespeare's Merchant of Venice.*

May thorns be planted in the marriage lot,  
And love grow sour'd and blacken into hate!

*Bulwer's Lady of Lyons.*

## ANTIQUARY.

They are the  
Registers, the chronicles of the age  
They were made in, and speak the truth of history,  
Better than a hundred of your printed  
Communication.—*Shakerly's Marryon's Antiquary.*

A copper-plate, with almanacks  
Engrav'd upon't; with other nacks  
Of Booker's, Lilly's, Sarah Jimmer's,  
And blank schemes to discover numbers;  
A moon dial, with Napier's bones,  
And several constellation stones.—*Butler's Hudibras.*

He had a routh o' auld nick-nackets,  
Rusty airm caps, and jingling jackets;  
Would hold the London three in tacketts  
A towmend gude,  
And parritch-pats, and auld saut-backetts,  
Afore the flude.—*Rams.*

Rare are the buttons of a Roman's breeches,  
In antiquarian eyes surpassing riches;  
Rare is each crack'd, black, rotten, earthen dish,  
That held, of ancient Rome, the flesh and fish.

*Dr. Wolcot's Peter Pindar.*

## APPAREL.

Costly thy habit as thy purse can buy,  
But not expressed in fancy; rich, not gaudy;  
For the apparel oft proclaims the man.

*Shakespeare's Hamlet.*

Thy gown? why, ay:—come, tailor, let us see't.  
O mercy, good! what making stuff is here?  
What's this? a sleeve? 'tis like a demi-cannon:  
What! up and down, carv'd like an apple-tart?  
Here's snip and nip, and cut, and slash, and slash,  
Like to a censor in a barber's shop:—  
Why what, a devil's name, tailor, call'st thou this?

*Shakespeare's Taming of a Shrew.*

I am the same, without all difference; when  
You saw me last, I was as rich, as good;  
Have no additions since of name, or blood;  
Only because I wore a threadbare suit,  
I was not worthy of a poor salute.  
A few good clothes put on with small ado,  
Purchase your knowledge and your kindred too.

*Heywood's Royal King.*

### ENIGMA.

I paint without colours, I fly without wings,  
I people the air with most fanciful thing;  
I hear sweetest music where no sound is heard  
And eloquence moves me, nor utters a word.  
The past and the present together I bring,  
The distant and near gather under my wing.  
Far swifter than lightning my wonderful flight,  
Through the sunbeam of day, or the darkness of night;  
And those who would find me, must find me,  
indeed,  
As this picture they scan, and this poem read.

### MENTAL RECREATIONS.

By knowing the last Figure of the Product of two Numbers, to tell the other Figures.

If the number 73 be multiplied by each of the numbers in the following arithmetical progression, 3, 6, 9, 12, 15, 18, 21, 24, 27, the products will terminate with the nine digits, in this order, 9, 8, 7, 6, 5, 4, 3, 2, 1; the numbers themselves being as follows: 219, 438, 657, 876, 1095, 1314, 1533, 1752, and 1971.

Let, therefore, a little bag be provided consisting of two partitions, into one of which put several tickets marked with the number 73, and into the other part, as many tickets numbered 3, 6, 9, 12, 15, 18, 21, 24, and 27.

Then open that part of the bag which contains the number 73, and desire a person to take out one ticket only; after which, dexterously change the opening, and desire another person to take a ticket from the other part.

Let them now multiply their two numbers together, and tell you the last figure of the product, and you will readily determine, from the foregoing series, what the remaining figures must be.

Suppose, for example, the numbers taken out of the bag were 73, and 12; then, as the product of these two numbers, which is 876, has 6 for its last figure, you will readily know that it is the fourth in the series, and that the remaining figures are 87.

### HOW? WHEN? AND WHERE?

One leaves the room; the rest think of some noun that has various meanings—as *plate*. He returns, and asks each, first, *How* he likes it? Answers vary—as *hot, cold, bright, clear, polished, full, &c.* Then each is asked—*When* he likes it? At dinner, when dressing, when I wish to make a present, &c. Then follows—*Where* do you like it? On my door, on my table, in my drawing-room, in a chest, &c. After the three rounds, it is seldom difficult to guess; but some are very puzzling—as *hare, glass, &c.*

### TRANSPOSITIONS.

1. AARLEOCNE—A seaport in the Mediterranean.
2. EESRYDDHILU—A celebrated manufacturing town in Yorkshire.
3. RBAAT—A large tract in Asia.

### TRANSFIGURED PLAYING CARDS.

"Mause says—What does John in the rattle of his cellar?"  
"The Cellar-rats, Alas! in a packing, tell her."

THE TWO OF SPADES.—"THE DEUCE"

### QUERIES.

1. Three market women went to market with eggs; the first had 80 eggs to dispose of, the second 30, and the third 10. All three sold out at the same rate, and each received the same amount of money for her eggs. How were the eggs sold?

2. A man has two children; if to one-third of the sum of their ages 13 be added, the amount will be 17; but if from half the difference of their ages one be subtracted, the remainder will be 2. What is the age of each?

### CONUNDRUMS.

1. Why do the people of Lancashire never require a fresh supply of bacon?
2. What rural occupation is the most dastardly?
3. Why should the Chinese be the most valiant people in the world?
4. At what continental port is a game of cricket likely to endure longest?
5. Why are the people of a Somersetshire town esteemed the most courteous in England?
6. Why is concealed silver like imitative silver?

### BIRDS ENIGMATICALLY EXPRESSED

1. A negro and a covering for the head.
2. A valuable coin and a female bird.
3. Something less than the whole and the upper part of a slope.
4. A brilliant colour and part of yourself.
5. A nutritious grain and a most important part of the head.
6. A monarch, an inhabitant of the sea, and a female beheaded.
7. A tempest and a farm-yard fowl.
8. A showy colour and to move suddenly.
9. An element and a member peculiar to animals.
10. What a negro calls an Englishman and part of the neck.

W. C.

### ANSWERS TO THE PASTIME OF LAST EVENING,

## OUR CORNER CUPBOARD!

NONE have less praise than those who hunt most after it.  
It is easy to wish for heaven, but difficult to get a heavenly mind.  
A QUIET mind, like other blessings, is more easily lost than gained.  
DEATH and the sun have this in common—few can gaze at them steadily.  
STRONG passions work wonders when there is stronger reason to curb them.

NOTHING elevates us so much as the presence of a spirit similar, yet superior to our own.

TRUTH itself is of no value, only as it conduces to an upright, holy, and benevolent practice.

SOME of the Chinese, in California, have silver watches so large that they use the outside case to fry potatoes in.

WHATEVER may be the effect of the "free trade" on the price of corn, it certainly will not prevent the people fit large from kneading bread.

WHY are Indian servants called coolies? Probably, because their principal duty is to fan their masters in the heat of the day.

WHY is a man who does not bet, as good as a man who does? Because he is no better.

THREE ABSORBING WANTS.—Poverty wants some, luxury many, and avarice all things.—Cowley.

"JOHNNY, what kind of folks wear mustaches?" "Hair-brained folks, I 'apose, daddy."

JENNY LIND is outdone at last. There is a man in Myrtle-street who has a canary bird with such a delightful voice, that he sweetens his tea with it!

A HINT TO THE RICH-PARSIMONIOUS.—Dean Swift affirms that "a poor spirit is poorer than a poor purse, as a very few pounds a year would ease a man of the scandal of avarice."

## POSITIVES AND COMPARATIVES.

A GREAT noise is a *din*—but the chief meal of the day is a *dinner*.

Sour fruit is *tart*—an inhabitant of Central Asia is a *Tartar*.

An industrious insect is a *bee*—the preparation from malt and hops is *beer*.

We keep our beer in a *butt*—but spread our bread with *butter*.

To augment a number is to *add*—but a venomous reptile is an *adder*.

A short narrative is a *tale*—the man who makes clothes is a *tailor*.

A cheap clothing establishment is a *mart*—but he who buys anything at it is a *martin*.

If your mother's mother was my mother's sister's aunt, what relation would your great-grandfather's uncle's nephew be to my elder brother's first cousin's son-in-law?

A MAN praising porter, said it was so excellent a beverage, that taken in great quantities it always made him fat. "I have seen the time," said another, "when it made you lean." "When?" asked the eulogist. "Last night—against a wall."

A REGULAR physician, being sent for by a quack doctor, expressed his surprise at being called in on an occasion apparently trifling. "Not so trifling, my good sir," replied the quack, "for, to tell you the truth, I have by mistake taken some of my own pills."

## ON MISS ANNA BREAD.

WHILE belles their lovely graces speak,  
And fops around them flatter,  
I'll be content with Anna Bread;  
And won't have any but her.

## ADVICE TO YOUNG LADIES.

If you have blue eyes you need not languish.  
If black eyes you need not stare,  
If you have pretty feet there is no occasion to wear short petticoats.  
If you are doubtful as to that point, there can be no harm in letting them be long.  
If you have good teeth, do not laugh for the purpose of showing them.  
If you have bad ones, do not laugh less than the occasion may justify.  
If you have pretty hands and arms, there can be no objection to your playing on the harp if you play well.  
If they are disposed to be clumsy, work tapestry.  
If you have a bad voice rather speak in a low tone.  
If you have the finest voice in the world, never speak in a high tone.  
If you dance well, dance but seldom.  
If you dance ill, never dance at all.  
If you sing well, make no previous excuses.  
If you sing indifferently, hesitate not a moment when you are asked, for few people are judges of singing, but everyone is sensible of a desire to please.  
If you would preserve beauty, rise early.  
If you would preserve peace, be gentle.  
If you would obtain power, be descending.  
If you would live happy, endeavor to promote the happiness of others.

## OUR MEMORANDUM BOOK!

MEASUREMENT OF LIGHT.—Such is the acuteness with which investigations into the nature and properties of light have been conducted, that a wave of light can be measured to the ten millionth part of an inch, and the quadrillionth of a second.

Oh, what a world of beauty,  
A loving heart might plan,  
If man but did his duty,  
And helped his brother man!  
Then angel guests would brighten  
The threshold with their wings,  
And bear divine enlighten  
The old forgotten strings.

CONSCIENCE AS A PAIN-KILLER.—Call not that man wretched who, whatever else he suffers, is to pain subjected, pleasure denied, has a child for whom he hopes and in whom he dotes. Poverty may grind him to the dust, obscurity may cast its darkest mantle over him, the sting of the gay may be far from his own dwelling, his face may be unknown to his neighbours, and his voice may be forgotten by those among whom he dwells—even pain may rack his joints, and sleep flee from his pillow; but he has a gem with which he would not part for wealth-defying computation, for fame filling a world's ear, for the luxury of the highest health, or for the sweetest sleep that ever came upon a mortal's eye.—Coleridge.

WALNUTS AN EXCELLENT FAMILY MEDICINE.—"Everybody eats walnuts, everybody knows how to make a pickle of walnuts; few, however, know the medicinal virtue of walnuts. Now the fact is, walnuts, when prepared, *secundum artem*, are an excellent medicine and alterative; and this is the way to prepare them:—Get the green walnuts fit for pickling; put them in a stone jar filled up with moist sugar, at the proportion of half a pound to a score of walnuts; place the jar in a saucepan of boiling water for about three hours, taking care the water does not get in, and keep it simmering during the operation. The sugar, when dissolved, should cover the walnuts; if it does not, add more, cover it close, and in six months it will be fit for use; the older it gets the better it is. One walnut is a dose for a child of six years of age, as a purgative; and it has this great advantage over drugs, that whilst it is an excellent medicine, it is, at the same time, very pleasant to the palate, and will be esteemed by the young folks as a great treat. Who can say as much of salts, jalap, and other doctor's stuff? and in a large family it will abridge the doctor's bill ten pounds a year."

ORIGINS OF SURNAMES.—In the early ages of the world, a simple name was sufficient for each individual; as, Adam, Moses, Job, Luke, Peter, John. In the process of time these single names became so numerous, that it was necessary to use surnames for the sake of distinction. The first approach to this was the addition of the name of the sire; as, *Caleb the son of Naph*. Then followed the use of significant words, expressive of personal feats, looks, or actions, originating, probably, in a manner similar to many of the nicknames of the present day. To this class belong such names as, *Black, White, Gray, Long, Swift, Whitehead, Lightfoot*. Another class of names were derived from occupations; as, *Carpenter, Baker, Mason, Miller, Bishop, Marshal, Porter, Parsons, Page, Smith*. The root of the word *Smith*, which is *smithan*, was originally applied to artificers in wood or stone, as well as those in metal; hence the frequency of the name is easily accounted for. Other names were derived from natural objects; as, *Flower, Rose, Sage, Finch, Jay, Bird, Clay, Stone, Gold, &c.* Some from social relations; as, *Master, Prentice, Bachelor, Cousin, Child*; and many from christian names: from HENRY, *Harris, Harrison, Harrison*; from JOHN, *Johnson, Jones, Jackson, Jennings, Jenkins*; from ADAM, *Addison, Adams*; from DENNIS, *Dennison, Jewison*; from ALEXANDER, *Sanders, Sanderson*. In addition to these, names have been derived from a multitude of sources; as, *Wing, Horn, Frost, Snow, Peck, Plum, Beard, Ball, Bond, Freeman*.

WHAT A MAN CAN LIVE ON.—In the year 1840, some experiments were instituted in the Glasgow prison on the diet of a selected number of the inmates. The persons were fed on the following fare:—For breakfast, each had eight ounces of oatmeal made into a porridge, with a pint of buttermilk; for dinner, three pounds of boiled potatoes with salt; for supper, five ounces of oatmeal porridge, with one half pint of buttermilk. At the end of two months they were all in good health, each person had gained four pounds weight, and they liked the diet, the cost of which, including the cooking, was twopenny three farthings per day. Other ten men were fed for the same time solely on boiled potatoes and salt; each had two pounds for breakfast, three pounds for dinner, and one pound for supper. They gained three and a half pounds each; and they declared that they preferred this fare to the ordinary diet of the prison. Twelve others were fed on the same allowance of porridge and milk for breakfast and supper as the first ten; but for dinner they had soup, containing two pounds of potatoes to each, and a quarter of a pound of meat. At the end of two months they had lost in weight one and a quarter pounds each, and they all disliked this diet; the expense of each, daily, was threepence seven-eighths. Twenty others had the same breakfast and supper, with one pound of potatoes for dinner, and half a pound of meat. They preserved good health, but decreased in weight, and preferred the ordinary diet of the prison. The expense was fourpence seven-eighths each. In these cases, perhaps, the previous habits and tastes of the prisoners had some influence; yet, it appears, that the six pounds of potatoes, daily, was a better diet than the smaller quantities of soup or animal food.

With original **English** Contributions by celebrated authors, and choice adaptations from the **American**. Each volume is embellished by a superior artist, engraving and numerous Wood-cuts.

LONDON: NOULTON & STONEMAN, 65, PATERNOSTER ROW.

### Editor's Note-Book.

**PAY STRICT ATTENTION TO HEALTH IN YOUTH.**—Late hours, irregular habits, and want of attention to diet, are common errors with most young men, and these gradually, but at first imperceptibly,

undermine the health, and lay the foundation for various forms of disease in after life. It is a very difficult thing to make young persons comprehend this. They frequently sit up as late as twelve, one, or two o'clock, without experiencing any ill effects; they go without a meal to-day, and to-morrow eat to repletion, with only temporary inconvenience. One night they will sleep three or four hours, and the next nine or ten; or one night, in their eagerness to get away into some agreeable company, they will take no food at all; and the next, perhaps, will eat a hearty supper, and go to bed upon it. These, with various other irregularities, are common to the majority of young men, and are, as just stated, the cause of much bad health in mature life. Indeed, nearly all the shattered constitutions with which too many are cursed, are the result of a disregard to the plainest precepts of health in early life.

**TO CLEAN FAWTHER AND TIN.**—J. H.—Dish-covers, and pewter articles requiring a polish, should be first rubbed on the outside with a little sweet oil laid on a piece of soft linen cloth; then clean off with pure whiting, on linen cloths.

**PATER-POSTER-ROW AND JAYE-MARIA-LANE.** Delia.—These were so called from the stationers, or text writers, who dwelt there, and who wrote and sold the kind of books then in use, viz., A, B, C, with the Pater-Noster, Ave, Creed, Graces, &c. The turners of beads for catholics also lived there, and were called pater-noster makers.

**BITING THE NAILS.** A Mother.—This is a habit that should be immediately corrected in children, as, if persisted in for any length of time, it permanently deforms the nails. Dipping the "finger-ends in some bitter tincture will generally prevent children from putting them to the mouth; but if this fails, as it sometimes will, each finger-and ought to be encased in a stall, until the propensity is eradicated.

**MAY-POLING.** H. J.—The last May-pole in London stood opposite Somerset House, and was removed in 1717. Its height above ground was originally above one hundred feet. It was afterwards fixed in Wanstead Park, Essex, as the supporter of a very large telescope. It is in allusion to this May-pole that Pope wrote—  
"Amidst the area wide they take their stand,  
Where the tall May-pole once o'erlooked the Strand."

**CHARACTERS TO SERVANTS.** A. G.—"Is a person who gives an untrue character of a servant liable to punishment? and am I compelled, by law, to give a character when I cannot in conscience do so?"—By an act of parliament, passed in the reign of George the Third, an individual giving a false character of a servant is exposed to an action if any ill consequences occur from such conduct. No master or mistress is obliged to give a character to a discharged domestic.

**WEARING OF FLANNEL.** J. S.—"Is there any harm in leaving off flannel garments in summer? and in what way is flannel useful?"—To any persons of delicate frame, flannel worn next the skin is essentially necessary throughout the year. Many diseases have been avoided, and death has been prevented, by this simple precaution. The ordinary effects arising from sudden changes of the weather, may be prevented by a due attention in this respect.

**WATER-CRESSSES.** Beza.—"I have heard that a free use of this vegetable will cure consumption. I should like to know whether this is true, and how I can keep them fresh, as I find it difficult to get them often."—We have heard of some persons in delicate health having derived much advantage from eating this wholesome vegetable, and it is possible that consumptive patients may have obtained relief from the same source. The cresses will keep fresh some days if kept in brine made with common salt and water.

**WATER FOR WASHING.** Delia.—"Perhaps you can tell me what occasions a common skin from the time I am accustomed to feel after washing."—This may probably arise from the water employed being too cold. In this case, besides the unpleasant sensation to the skin, the skin is

rendered rough and hardened, and is exposed to an unequal and injudicious action, both from the hands in washing, and the towel in wiping it. The reaction, too, when the blood, driven from the parts by the cold, returns, is too violent, and an unpleasantly rough condition of the outer skin ensues, causing it to crack, or "chaps," and often laying the foundation of very troublesome sores. Water should be habitually used at such a temperature as to give the sensation of slight coolness to the skin.

**A CHEAP LIVELIHOOD.**—"A good living for five shillings!" Such is the tempting subject of a circular addressed to a correspondent, who has forwarded it for our inspection. The bait took with our friend, much to his annoyance; and the expert angler sent, in return for the douceur, a few receipts how to make French polish, a balsam for weak eyes, an excellent impermeable blacking, and (pitiless was!) how to dye green. We really can feel no sympathy for persons who knowingly fall into a trap, for the peculiar promising nature of such announcements is sufficiently apparent without the aid of any powerful magnifying glass. But, no doubt the consciousness of these precious documents is aware of John Bull's weakness; and reason like the blind fiddler, when, in performing before a large company, was much laughed at on account of his sorry scripping. The boy who led him, perceiving this, said, "Father, let us begone, they do nothing but laugh at us." To which the cautious musician replied, "Hold your peace, boy! By-and-by we shall have their money, and then we shall laugh at them!" But our readers generally, may gather a few practical hints by our remarks at page 394, on the pet fallacy, that "Old birds are not caught with chaff," which will teach them to beware of all delusive advertisements and quackeries, whether relating to low-priced teas, all-healing pills, everlasting clothes, &c., and not to pin their faith to articles on the sound of a tin trumpet, or from the assurance that they may be—

FITTED TO A T

**INTRODUCTION OF STEAM-PRINTING.** Mercurius.—The first person who introduced steam into a printing-office was Mr. Walter, who was the chief proprietor of the Times newspaper. On the 29th of November, 1814, the experiment was made, but not without some difficulty, which is thus explained:—"The night on which this curious machine was brought into use in its new abode, was one of great anxiety, and even alarm. The suspicious pressmen had threatened destruction to any one whose inventions might suspend their employment—destruction to him and his trap. They were to wait for expected news from the Continent. It was about six o'clock in the morning when Mr. Walter went into the press-room, and astonished the occupants by telling them that the Times was already printed by steam—that if they attempted any violence, there was a force ready to suppress it; but if they were peaceable, their wages should be continued until similar employment could be procured for all of them—a promise which, no doubt, he faithfully performed; and having so said, he distributed several copies among them. Thus was this most hazardous enterprise undertaken and successfully carried through, and printing by steam, on an almost gigantic scale, given to the world."

**COMMUNICATIONS RECEIVED.**—ELLIE S. (highly perfumed soaps should be avoided. The perfume is given, except in almond soap, by an essence of oil, and although this may be used in such small quantities as to produce no sensible effect, it is, nevertheless, of an irritating nature).—FANN (the rapidity of the growth of the hair varies much in different persons. It has been calculated that the beard grows at the rate of one line and a-half per-week, or six inches and a-half in a year. On the head, the growth is evidently much more rapid).—THALERT (to keep oysters, lay them, the flat shell upwards, in a rough basket, and sprinkle them with water twice a day, in a cool place. Oysters will keep fresh eight or ten days in this manner).—H. M. (the best medical advice is always the cheapest).—LAWA (a correspondent will send in the Family Friend, a fortnightly publication, an interesting series of papers on the adulteration of articles of consumption).—J. M.

(kump-seed is good for chancres, but in small quantities, as it is apt to irritate the tissue it is applied to liberally. Lettuce and mallow are also conspicuous. A dish of food is wholesome—such as green peas, mallow, and lettuce, even when applied. D. O. (beet, turned, is good for lettuce, and probably does the same in some cases of indigestion, and liver ailments, to this quality).—L. J. (many thanks).—T. M. (a leech may be known to be good by its activity while in the water, and by its plumpness when out).—L. J. (we must task the patience of our correspondent until we obtain the information he desires. Before reproaching us for this delay, he should remember that, considering the numerous letters we receive, many others have equal, if not prior, claims to himself. The cheap postage system has been of inestimable benefit to all, but it has loaded the editorial letter-box to overflowing, for

"Those who now who never wrote before,  
And they who always wrote now write the more."

**ESTHER C.** (beware of Chancre, suit by all means. Sidney Smith once observed that "the Count of Chancery was like a bon confecteur, which swallowed up estates in lute and digested them at leisure").—JANUS (the apocryphal, or rather its principle, was first discovered by Galileo).—S. (marble is best cleaned with a little soap and water, to which some ox-gall may be added).—NUSAN (glass may be mended with the following cement. —a quarter of an ounce of linseed, dissolved in water, by boiling to the consistency of cream, and a table-spoonful of spirits of wine. This mixture should be used warm).—BENEDICT HANER (to setting of any kind we have a decided objection, and therefore decline inserting in the subject).—F. B. E. S. (curcua is an excellent and nutritious beverage. The nibs require from two to three hours' boiling to extract all their goodness. The vessel containing them should be placed near the fire, so as to heat gradually, until the decoction is at the boiling point, at which it must be kept, and not permitted to boil violently).—SAXSON (meat, taking a pound to a pound, and allowing for bone and waste in cooking, contains about half the nourishment of bread).—MARIA (woollen articles should not be washed in hard water, nor in water softened by soda, potash, or anything of that kind, nor should soap be used).—VIRMAX (silence is not always a proof of wisdom. There are times when an opinion is essentially required, and to withhold it, is an evidence of bad taste, or want of reasoning powers. Discretion should influence our speech or our silence. Shakspeare says:—

"There are a sort of men, whose viages  
Do cream and muffs, like a standing pool,  
And do a wilful stillness waterish,  
With purpose to be dressed in an opinion  
Of wisdom."

—M. D. G. ("a little learning is a dangerous thing." This line occurs in Pope's *Art of Criticism*).—CIVIS (Hungerford Suspension Bridge was opened in 1845).—S. W. (the aperture of Lord Rosse's monster telescope is six feet, and it has a focal length of fifty-two feet. The speculum weighs three tons).—MARION (to clean kid gloves, make a strong lather with curd soap and warm water, in which steep a small piece of new flannel. Place the glove on a flat surface, and rub it thoroughly with the flannel, until the dirt disappears).—MARFARIS (warts may be cured by rubbing them with a little dry pipeclay).—HARTIE (for gingerbread-nuts, take two pounds of flour, one pound and a quarter of treacle, half a pound of sugar, two ounces of ginger, three-quarters of a pound of melted butter, and a small quantity of Cayenne pepper. The whole to be mixed together, and rolled out about the thickness of half an inch, or not quite so much, to be cut into cakes, and baked in a moderate oven).—GEORGE (many thanks; but the subject is not suited to our pages).—MAXWELL (we shall receive the papers promised by our correspondent with pleasure).—ESTUS (apply to a medical practitioner).—J. (the band of music at village weddings is now, we believe, almost obsolete. In the reign of Elizabeth, weddings among persons of the lower classes were always public, and the bride and bridegroom were accompanied to church by their friends and neighbours—a band of music playing before them, and other ceremonies).

"He would have spoken but the creature was one of such a frightful appearance that he felt it unable to do so and it was very near to him. Nothing separated them but the little ditch which ran by the side of the road and Mr. Timothy being in the middle of the road, and the object which thus alarmed him, standing by the fence and apparently holding fast to it."

## LOVE'S TRIALS; OR, MISTAKEN EVIDENCE.

(Continued from page 208)

### CHAPTER XIII

MR. AUGUSTUS HUNT never refused to attend the summons of his niece, and at an early hour in the forenoon, she arose to meet her affectionate kinsman, as he entered her own private room, in his plain and neat dress of London brown.

"Well, Sally, dear," preceded a warm kiss, a good shake of the hand and a gentle pat on the head and as he sat down, she took his broad brimmed beaver, and laid it with care on her little table, and as quietly and calmly as she could, took her seat in the corner. The old gentleman occupied his usual place immediately before the fire, he sat very erect, with one hand resting on each knee.

"Well, darling, what's the news this morning?—no more robberies, I hope; uncle Geordie feels pretty sore," leaning over towards her, and smiling archly—"but it's no great loss for him, after all."

"I suppose uncle feels vexed at losing the money, but the loss of the money is not the worst of it—to lose it in such a singular manner."

"Ay, ay, to be sure, that's it, that's it, you're right—singular, to be sure—strange enough, strange enough; there's something about that business, Sally, puzzle me. I don't see into it!" shaking his head.

"You can hardly believe, after all, uncle, that James did it?"

"I tell you what, Sally, the longer I live, the harder it is to find out things; there's a wheel within a wheel about this business, somewhere."

"But, uncle, if James is really not guilty, it is a very serious matter for him to be confined in prison, with his character blasted, which you know is all that he has to depend upon, it is worse than death."

True true, child! that's true—but the money, you know, or some of it, was found in his trunk, and one of uncle Geordie's papers in his coat pocket; and Rudolph tells strange stories about his gambling, and all that—what to make of it all I don't know—it's queer, queer."

Might not James have some enemy who wishes to ruin him, and who knows if his character could be blasted, it would be the most effectual way to destroy him?

"There's no telling, child, what might be, there are strange things done now-a-days—I have often to look twice before I can believe my own eyes."

"Well, uncle, I don't believe that James is guilty, and I have good reasons for my opinion."

Her uncle looked at her with his keen and twinkling eye, as though wishing to pry into her secret thoughts.

"And I believe, uncle, that if you were to see him, you would think so too."

"I wish it may prove so, my dear child, upon my honour, I wish it may, but I am afraid it will go hard with him. Unless he can clearly make it out that some one else did it, there is no help for him."

"Is it not very hard, uncle, if he be innocent, that he should remain in close confinement, with no friend on earth to aid him, and no power to do anything himself?"

Sarah's voice trembled somewhat, as she said this.

"Remember, uncle, that he is an orphan."

"I know it, my child, I know it—and until this unlucky affair, I would have trusted James with thousands."

"Well, my dear uncle, you can safely trust him still, you must trust him for my sake—she drew her chair close to his—"if you know, my dear uncle, what I have suffered, and what James has suffered—if you only realise his destitute condition—with none to help him—"

Sarah's feelings were not equal to the task she had undertaken, and the old gentleman could not bear to see her in trouble.

professions; but their good opinion could avail him nothing in a court of justice, where evidence, and that alone, must guide the decision.

Theodore was untiring in his efforts to prepare for the hour of trial. He saw the difficulties in the case, but the strong friendship he bore to Edwards, and his desire to distinguish himself in this, his first effort at the bar, stimulated him to the utmost. He had taken the responsibility without hope of fee or reward, but he was not without aid through the liberality of Mr. Augustus Hunt he was enabled to command the services of an eminent lawyer. It required, however, assistance of a different kind to ferret out the mystery of iniquity, and he was determined to seek it. At the close of a very busy day, he left his office and sought the upper part of the city, his mind deeply agitated, he passed along the crowded thoroughfare without heeding the multitudes who were urging their way homeward; not far above the hospital he left the throng, turned down a quiet street, and soon came to a plain two story dwelling.

He was introduced into a small back room.

"Good evening, Mr. Catelem, I am fortunate in finding you at home."

The officer arose from his seat before the fire, gave one sharp glance at his visitor, and without saying a word, placed a chair for him near the corner, at the same time removing his own in an opposite direction.

"Sit down, sit down, sir, a raw evening."

"Rather a chilly air, but I have walked fast, for I was very anxious to see you, and was not certain how far over the city I might be obliged to travel before I found you."

"They keep me jogging. I was just about to take a stretch over east of the town; the boys think they have got track of the fellows that set fire to the buildings in Front street last night."

"Were those buildings set on fire?"

"No doubt."

"I wish to say a few words to you, sir, about young Edwards who was arrested a short time since you remember, at Mr. Hunt's."

"Ay, ay, I remember him."

"We have every reason to think that Mr. Edwards is an innocent person and that some one has laid a plan to ruin him—we have no doubt of it."

"Nor I, neither."

"Then you do not believe that he is guilty?"

"Believe I say, I believe he's guilty enough for all that."

"I understood you to say that you had no doubt of there being a design to ruin him."

"So I did, there never was a rogue yet but the old one first helped him to mischief, and then helped him into trouble on account of it. There's no one else, I guess, has any hand in it besides the young man himself."

"But we have good reason to believe him innocent."

"I think there's more reason to believe him guilty. Now you see Mr. —, I forget your name, though I've seen you before."

"Berry."

"Ay, yes, Berry. I suppose now this young chap has come over you with his oaths and his conscience about his being innocent and knowing nothing about it, and all that. Why I've had em, Mister, swear till you'd think heaven and earth was coming together, that they knew nothing about things, that they hadn't seen em, and were as innocent as unborn babies and all that, when, at the same time, I had full evidence to the contrary."

"But you must allow something for a man's previous character."

"I never ask much about a man's previous character, sometimes it is good, and sometimes it isn't. You can't tell about a man until he's found out."

"You would have no objections, however, sir, to lend your aid in endeavouring to clear up this business?"

"I think it's all clear enough already."

"You shall be paid liberally for your services, we are convinced that a deep plot has been laid to ruin Edwards, and we wish to enlist your efforts in unravelling it."

"Does he suspect any one?"

"Yes—no, I ought not to say that he does, but I do."

"Who?"

"Perhaps names had better not be mentioned."

"What can I do, then? I must have some clue to the thing, I must know the whole about it."

Theodore sat in silence for some moments, at length, drawing his chair near to the officer, in a low tone he explained the reason for his suspicions, and on whom they rested. The officer heard him through without interruption and then, shaking his bushy head—

"There's mighty little chance," said he, "if it should be as you say, the thing is so fixed, as I view it, that it would take a Solomon to find it out, but I'll think it over, and may be I should like to see things again in the house."

A time was therefore fixed when Theodore was to accompany the officer to Mr. Hunt's.

Sarah had a trying and difficult part to act. She was the only member of the family, besides Betty, who believed in the innocence of Edwards. Mr. George Hunt and his good wife were sorely grieved for the loss which had been sustained, and would gladly have employed any inquisitorial means to extort from him whom they believed had possession of their property, the large balance which was yet missing. The bailing out, therefore, was a severe annoyance to them.

Rudolph was again a frequent visitor, and his uncle manifested a pleasure in his society, and a confidence in his statements which he never had before. To Sarah he was attentive, as he had ever been, and carefully avoided every topic which he found unpleasant. As she no longer looked upon him as a suitor, and as it was so evident to her that the visits of Rudolph were agree-

able to her relations, she felt that decency, at least, demanded that she should treat him affably. Rudolph had peculiar charms of female character, and those not of the most exalted kind. He believed that external advantages were all-sufficient to win the best among them. Sarah had, indeed, manifested a decided preference for young Edwards; but even here he believed that the preference was made solely for the superior personal appearance and address which James possessed. These, of course, would be nothing now, the stain upon his character would for ever cut off all fear of one who had been a dangerous rival.

Of his own advantages he was sufficiently conscious. On his side were their mutual friends, the protectors of Sarah, and, added to these, he founded a strong hope on the change in her own personal bearing towards him. He began to believe that the prize he had so long struggled for was within his reach, he meant to secure it while he could.

Sarah had been deeply engaged that afternoon in an interview with her kind uncle, Mr. Augustus Hunt. It had been a scene of much trial to her, many unpleasant rumours had reached the ears of her kinsman, and he felt in duty bound to let his niece know everything pertaining to the character of one in whom she was so deeply interested; in fact, he wished to prepare her mind for a catastrophe which he much feared was inevitable—the conviction of Edwards, with strong evidence against him.

Scarcely had she dried the tears to which she had given full vent after the affectionate parting kiss and "God bless you, darling," of her uncle, when Betty came into her room, with a countenance highly flushed, and under great excitement.

"What is it, Betty?"

"The Lord only knows, my young leddy, but I fear there is trouble in the wind for you."

"Tell me, Betty, anything about James?"

Well, indeed, my dear leddy, I fear he has something to do for himself."

"Sit down, Betty, and compose yourself, you seem to have been much disturbed—sit down."

"I can't sit, Miss Sarah, for she has put me into such a rumble, that I am all in a quiver."

"She?—who?—is it my aunt?"

"Oh, no, bless your young heart. I don't mind the like of her—she aye grumbles awhile, and then it's all over—but what do you think, my darling, just as I had cleaned up the dinner things, and had emptied my pail, and was casting my eyes around to see what might be going on in the street I see'd a young woman, nicely and decently dressed stopping just at our door, and looking as though she might be wanting to enter. 'May I know your will, madam?' says I. 'Can you tell me?' says she, 'does Mr. Edwards live here?' 'I aye do, and I can't say but he does—oh he did, not long ago. 'Has he removed from here then?' 'Not exactly moved, said I, 'but he's not here at present. 'When do you expect him again?' said she. 'That's hard to say, ma'am, said I. The more I looked at her, my leddy, the more my thoughts began to trouble me, and so says I, 'may be you'll walk in a bit and rest your yid, and perhaps I'll be after finding out when he may be back, and the like o' that. I thought I'd spake her for. Miss Sarah for there was no telling what might come of it."

"And did she come in, Betty?"

"Faith and she did, and she's waiting down there a bit, for I told her that I might, may be, get word about Mr. Edwards, but oh, Miss Sarah! Ochone, ochone!"

Sarah could not well comprehend the cause of Betty's alarm, but was resolved to see for herself.

"I will go down with you, and I see her, is she in the parlour, Betty?"

"In the parlour, indeed, ma'am. No, no, it's not into the parlour that Betty would be takin' the like of her, the kitchen is too good for her, if my guess is right. Ochone, ochone! what a world it is!"

Sarah immediately descended into Betty's sanctum—no very uncomfortable place either, for it was kept with great neatness. The young woman arose as Sarah entered and made a slight, but respectful obeisance to her. She was, as Betty had said, neatly and decently dressed, although there might have been some few little things rather showy, and in too strong contrast with her principal garments, not more so however, than is frequently witnessed upon those who have not been trained to a nice observance of uniformity. Her countenance was agreeable, and the expression of it, together with her deportment, was modest. Sarah saw nothing that had any appearance of impropriety.

"You will please excuse the liberty, but I am very anxious to see Mr. Edwards, and perhaps you can inform me where he is, and how I could find him."

"I cannot inform you where he is at present."

"Is not this his home?"

Sarah blushed deeply as she answered—

"Yes—or at least it has been his home, but circumstances have called him away just now."

"And you don't know where he has gone?"

"No, not positively. Must you see him yourself, or could we send your message to him?"

"Excuse the liberty, are you his sister?"

"No, I am not; his relatives do not reside in the city."

The young woman was evidently much affected by this uncertain intelligence, and seemed hesitating whether to depart or make some further disclosure. Sarah witnessed her embarrassment.

"Perhaps you would wish to see me alone?"

"Yes, I should, Miss, for a few moments."

HOGARTH

WILLIAM HOGARTH was born in 1698, in the parish of St. Martin in Ludgate London. The outset of his life however was unpromising. He was bound says Mr. Walpole "to a mean engraver of arms on plate." Hogarth probably chose this occupation as it required some skill in drawing, to which his genius was particularly turned, and which he contrived assiduously to cultivate. How long he continued in obscurity we cannot exactly learn, but from the late of the first plate that can be ascertained to be the work of Hogarth, it may be presumed that he began in business, on his own account, in 1720. His first employment seems to have been the engraving of arms and shop bills. There are still many family pictures by Hogarth existing in the style of serious conversation pieces.

It was his custom to sketch out on the spot any remarkable face which particularly struck him, and of which he wished to preserve the remembrance. It has been related of him by a gentleman that being once with him at the Bedford Club house he observed him drawing something with a pencil on his nail. Inquiring what had been his employment, he was shown a whimsical countenance of a person who was then at a small distance.

It happened in the early part of Hogarth's life that a nobleman who was uncommonly ugly and deformed came to sit to him for his picture. It was executed with a skill that did honour to the artist's ability, but the likeness was rigidly observed, without even the necessary attention to compliment or flattery. The peer, disgusted at this counterpart of his dear self never once thought of paying for a reflector that would only insult him with his deformities. Some time was suffered to elapse before the artist applied for his money, but afterwards many applications were made by him (who had then no need of a banker) for payment but without success. The painter however, at last hit upon an expedient which he knew must alarm the nobleman's pride, and by that means answer his purpose. It was couched in the following terms:—"Mr. Hogarth's dutiful respects to Lord — and finding that he does not mean to have the picture which was drawn for him, is informed again of Mr. H's necessity for the money; if, therefore, his lordship does not send for it in three days, it will be disposed of with the addition of a tail and some other little appendages to Mr. Haic, the famous wild-beast man, Mr. H. having given that gentleman a conditional promise of it for an exhibition picture on his lordship's refusal." This intimation had the desired effect. The picture was sent home, and committed to the flames.

In 1730, Hogarth married the only daughter of Sir James Thornhill, by whom he had no child. This union, indeed, was a stolen one and probably without the approbation of Sir James, who, considering the youth of his daughter, then barely eighteen and the slender finances of her husband, as yet an obscure artist, was not easily reconciled to the match. Soon after this period however, he began his *Rake's Progress*, and was advised by Lady Thornhill to have some of the scenes in it placed in the way of his father-in-law. Accordingly, one morning early Mrs. Hogarth undertook to convey several of them into his dining room. When they arose, he inquired whence they came, and being told by whom they were introduced, he cried out, "Very well! the man who can furnish representations like these, can also maintain a wife without a portion." He designed this remark as an excuse for having kept his purse-strings close, but soon after became both reconciled and generous to the young couple.

In 1736 the genius of Hogarth became conspicuously known. One of his excellences consisted in what may be termed the furniture of his pieces, for as in sublime and historical representations the more seldom trivial

circumstances are permitted to divide the spectator's attention from the principal figures, the greater is their force; so in a series copied from familiar life, a proper variety of little domestic images contributes to throw a degree of verisimilitude on the whole. "The rake's levee room," says Mr. Walpole, "the nobleman's dining-room, the apartments of the husband and wife in *Marriage à la Mode*, the alderman's parlour, the bed-chamber, and many others, are the history of the manners of the age."

In 1746 he acquired additional reputation by the six prints of *Marriage à la Mode*, and projected a *Happy Marriage*, by way of counterpart to it.

Soon after the peace of Aix-la-Chapelle, Hogarth went to France, and was taken into custody at Calais, while drawing the gates of that town, a circumstance which he has recorded in his picture, entitled, *Oh! the Roast Beef of Old England!* published March 28, 1749. He was actually carried before the governor as a spy, and, after a very strict examination, committed a prisoner to Gransire his landlord, on his promise that Hogarth should not go out of his house till he was embarked for England.

Soon after this period he purchased a small house at Chiswick, where he usually passed the greater part of the summer season, yet not without occasional visits to his house in Leicester-fields. In 1753 he appeared to the world in the character of an author, and published a volume, entitled *The Analysis of Beauty* written with a view to correct fluctuating ideas of taste.

Hogarth was the most absent of men. At table he would sometimes turn round his chair as if he had finished eating, and as suddenly would return it, and commence his meal again. He once directed a letter to Dr. Hoadley, thus "To the Doctor at Chelsea." This epistle, however, by good luck, did not miscarry, and was preserved by the late Chancellor of Winchester, as a precious memorial of his friend's extraordinary inattention. Another remarkable instance of Hogarth's absence was related by one of his intimate friends. Soon after he set up his carriage, he had occasion to pay a visit to the Lord Mayor, Mr. Beckford. When he went, the weather was fine, but business detained him till a violent shower of rain came on. He was let out of the mansion-house by a distant door from that which he entered; and, seeing the rain, began immediately to call for a hackney-coach. Not one was to be met with on any of the neighbouring stands, and the artist sallied forth to brave the storm, and actually reached Leicester-fields, without overbestowing a thought on his own carriage, till Mrs. Hogarth, surprised to see him so wet and splashed, asked him where he had left it.

A specimen of Hogarth's propensity to merriment on the most trivial occasions is observable in one of his cards requesting the company of Dr. Arnold King to dine with him at the Mitre. Within a circle, to which a knife and fork are the supporters, the written part is contained. In the centre is drawn a pic, with a mitre on the top of it, and the invitation concludes with the following sport on three of the Greek letters—to Eta Beta Pi.

In the *Mutual Feast*, Mr. Hogarth thought proper to pillory Sir Isaac Shird, a gentleman proverbially avaricious. Hearing this, the son of Sir Isaac called at the painter's to see the picture, and asked the attendant

Whether that odd figure was intended for any particular person? On his replying, "That it was thought to be like one Sir Isaac Shird," he immediately drew his sword, and slashed the canvass. Hogarth appeared instantly in great wrath, but Mr. Shird calmly justified what he had done, saying that it was an unwarrantable license, that he was the injured party's son, and was ready to defend a suit at law, which, however, was never instituted.

About 1757 his brother-in-law, Mr. Thornhill, resigned the place of king's sergeant painter in favour of Mr. Hogarth. "The last memorable event in our artist's life," as Mr. Walpole observes, "was his quarrel with Mr. Wilkes. And though he did not commence direct hostilities on the latter, he at least obliquely gave the first offence, by an attack on the friends and party of that gentleman. This conduct was the more surprising, as he had all his life avoided dipping his pencil in political contests, and had early refused a very lucrative offer, that was made to engage him in a set of prints against the head of a court party."

At the time when these hostilities were carrying on in a manner both virulent and disgraceful to all parties, Hogarth was visibly declining in his health. In 1762 he complained of an inward pain, which continuing, brought on a general lethargy that proved incurable. The last year of his life he employed in retouching his plates with the assistance of several engravers, whom he took with him to Chiswick. On the 25th of October, 1764, he was conveyed from thence to Leicester-fields in a very weak condition, yet remarkably cheerful, and receiving an agreeable letter from the American Dr. Franklin, he drew up a rough draft of an answer to it, but going to bed, he was seized with a vomiting, upon which he rang the bell with such violence that he broke it, and expired about two hours afterwards. His disorder was an aneurism. The remains of this truly remarkable man were interred in the church of St. James at Chiswick, where a monument was erected to his memory, with an inscription by his friend Mr. Garrick.

It may be truly observed of Hogarth, that all his powers of delighting were restrained to his pencil. Having rarely been admitted into polite circles, none of his sharp corners had been rubbed off, so that he continued to the last a gross uncultivated man. The slightest contradiction transported him into a rage. To some confidence in himself he was certainly entitled for as a comic painter he could have claimed no honour that would not most readily have been allowed him, but he was at once unprincipled and variable in his political conduct and attachments. He is also said to have beheld the rising eminence and popularity of Sir Joshua Reynolds with a degree of envy, and, if we are not misinformed, frequently spoke with asperity both of him and his performances. Justice, however, obliges us to add, that our artist was liberal, hospitable, and the most punctual of paymasters, so that in spite of the emoluments his works had procured to him, he left but an inconsiderable fortune to his widow.

The journey to the old woman's house, as described by the knight to his friend.

consider the question, whether there are such persons in the world as these we call witches, my mind is divided between the two opposite opinions; or rather (to speak my thoughts freely) I believe in general that there is and has been such a thing as witchcraft; but at the same time I can give no credit to any particular instance of it.

I am engaged in the speculation, by some circumstances that I met with yesterday, which I shall give my reader an account of at large. As I was walking with my friend Sir Roger by the side of one of his roads, an old woman applied herself to me for my charity. Her dress and figure put in my mind of the following description of Otway.

'In a close line as I pursued my way,  
I spy'd a wrinkled hag, with ragged and idle  
Picking dry sticks, and musing to her ill;  
Her eyes with scalding rheum were gild'd in tears,  
Coldly she shak'd her head, and thus she said withal:  
And on her crooked shoulders I did also wait;  
The tattered remnant of an old strapp'd thing;  
Which serv'd to keep her warm from the cold  
As there was nothing for her to be about;  
Her legs were all croak'd and old;  
With different to our large black and white;  
And seem'd to speak variety of witchcraft to all.

As I was musing on this description, and comparing it with the specter before me, the knight told me, that this very old woman had the reputation of a witch all over the country, that her hips were observed to be always in motion, and that there was not a witch about her house which her neighbours did not believe had carried her several hundreds of miles. If she chanced to stumble, they always found sticks or straws that lay in the figure of a cross before her. If she made any mistake at church, and cried Amen in the wrong place, they never failed to conclude that she was saying her prayers backwards. There was not a mud in the parish that would take a pin of her, though she should offer a bag of money with it. She goes by the name of Moll White, and haunts the country ring with several imaginary exploits which are palmed upon her. If the dairy maid does not milk her butter come so soon as she would have it, Moll White is at the bottom of the churn. If a horse sweats in the stable, Moll White has been upon his back. If a hare makes an unexpected escape in the hounds, the huntsman curses Moll White. "Nay," says Sir Roger, "I have known the master of a pack, on such an occasion, send one of his servants to fetch Moll White had been out that morning."

This account raised my curiosity so far, that I begged my friend Sir Roger to go with me into her house, which stood in a solitary corner under the side of the wood. Upon our first entering, Sir Roger winked to me and pointed at something that stood behind the door which upon looking in my way, I found to be an old broom-staff. At the same time he whispered me in the ear to take notice of a tabby cat that sat in the chimney corner which, as the old knight told me, lay under as bad a report as Moll White herself, for, besides that Moll is said often to accompany her in the same shape, the cat is reported to have spoken twice or thrice in her life, and to have played several pranks above the capacity of an ordinary cat.

I was secretly concerned to see human nature in so much wretchedness and distress. But at the same time, could not forbear smiling to hear Sir Roger who was a little puzzled about the old woman, advising her, as a justice of peace, to avoid all communication with the devil, and never to hurt any of her neighbour's cattle. We concluded our visit with a bounty, which was very acceptable.

In our return home, Sir Roger told me that old Moll had been often brought before him for making children spit pins, and giving inside the nightingale, and that the country people would be tossing her into a pond, and trying experiments with her every day, if it was not for him and his chaplain.

I have since found upon inquiry that Sir Roger was several times staggered with the reports that had been brought him concerning this old woman, and that he frequently has bound her over to the county sessions, but not his chaplain with much ado persuaded her over to the country.

I have been the more particular in this account, because I hear there is such a villain in England that is not a Moll White in it. When an old woman begins to dot, and grow chargeable to a parish, she is generally treated as a witch, and fills the whole country with extravagant fancies, imaginary distempers, and terrifying dreams. In the mean time, the poor wretch that is the innocent occasion of so many evils begins to be frightened at herself, and sometimes confesses secret commerce and familiarities that her imagination forms in a delirious old age. This frequently cuts off charity from the poorest objects of compassion, and injures people with a malevolence towards these poor decrepit part of our species, in whom human nature is affected by infirmity and dotage.

## CHAPTER XII

### SIR ROGER DE COVERLY IN LOVE

'The faithful  
Sucks up his side and rangles in his heart. — DRYDEN

THE garden seat is surrounded with so many pleasing walks, which are strung out of a wood, in the midst of which the house stands, that one can hardly ever be weary of rambling from one labyrinth of delight to another. To one used to live in a city, the charms of the country are so exquisite, that the mind is lost in a certain transport which rises us above ordinary life, and yet is not strong enough to be inconsistent with tranquillity. This state of mind was I am ravished with the murmur of waters, the whisper of breezes, the singing of birds, and whether I looked up to the heavens, down on the earth, or turned to the prospects around me, still struck with a new sense of pleasure, when I found by the voice of my friend, who walked by me, that we had insensibly strolled into the grove sacred to the widow. "This woman," says he, "is of all others the most unintelligible, she either designs to marry, or she does not. What is the most perplexing of all is, that she doth not either say to her lovers she has any resolution against that condition of life in general, or that she banishes them, but conscious of her own merits she permits them address, without fear of any ill consequence,

or want of respect, from their rage or despair. She has that in her aspect, against which it is impossible to offend. A man whose thoughts are constantly bent upon so agreeable an object, must be excused if the ordinary occurrences in conversation are below his attention. I call her indeed perverse, but, alas! why do I call her so? because her superior merit is such, that I cannot approach her without awe, that my heart is checked by too much esteem. I am angry that her charms are not more accessible, that I am more inclined to worship than salute her. How often have I wished her unhappy, that I might have an opportunity of serving her! And how often troubled in that very imagination, at giving her the pain of being obliged! Well, I have led a miserable life in secret upon her account: but fancy she would have condescended to have some regard for me, if it had not been for that watchful animal her confidant.

'Of all persons under the sun,' continued he, calling me by name, 'be sure to set a mark upon confidants: they are of all people the most impertinent. What is most pleasant to observe in them is, that they assume to themselves the merit of the persons whom they have in their custody. Orsilla is a great fortune, and in a wonderful degree of surprise, therefore full of suspicions of the least indifferent thing, particularly careful of new acquaintances, and of growing too familiar with the old. Themselves, her favourite woman, is every whit as careful of whom she speaks to, and what she says. Let the waid be a beauty her confidant shall treat you with an air of distance: let her be a fortune, and she assumes the suspicious behaviour of her friend and patroness. Thus it is that very many of our unmarried women of distinction are to all intents and purposes married except the consideration of different sexes. They are directly under the conduct of their whisperer and think they are in a state of freedom, while they can prate with one of these attendants of all men in general and still avoid the man they most like. You do not see one heiress in a hundred whose fate does not turn upon this circumstance of choosing a confidant. Thus it is that the lady is addressed to, presented and flattered, only by proxy, in her woman. In my case, how is it possible this?—' Sir Roger is proceeding in his harangue when we heard the voice of one speaking very importunately, and repeating these words, 'What, not one smile?' We followed the sound till we came to a close thicket, on the other side of which we saw a young woman sitting, as it were in a personated sullenness, just over a transparent fountain. Opposite to her stood Mr. William, Sir Roger's master of the gun. The knight whispered me, 'Hark! these are lovers!' The huntsman looking earnestly at the shadow of the young maiden in the stream, 'Oh! thou dear picture! thou couldst remain there in the absence of that fair creature who now represents in the water, how willingly could I stand here satisfied for ever, without troubling my dear Betty herself with my mention of her unkindness! William, whom she is angry with! But alas! when she pleases to be gone, thou wilt also vanish.' Yet let me talk to thee while thou dost stay. Tell my dearest Betty thou dost not more depend upon her, than does her William: her absence will make away with me as well as thee. If she offers to remove thee, I will jump into the water to lay hold on thee: hers is her own dear person I must never embrace again. Still do you hear me without one smile? It is too much to bear. He had no sooner spoke these words but he made an offer of throwing himself into the water at which his mistress started up and at the next instant he jumped across the fountain and met her in an embrace. She, half recovering from her fright and in the most charming voice imaginable, and with a tone of complaint, 'I thought how well you would drown yourself! No, no you will not drown yourself till you have taken your leave of Susan Holiday. The huntsman with a tenderness that spoke the most passionate love, and with his cheek close to hers whispered the softest vows of fidelity in her ear, and cried, 'Do not, my dear, believe a word Kate Willow says: she is spiteful, and makes stories, because she loves to hear me talk to herself for your sake.' 'Look you there,' quoth Sir Roger, 'do you see there, all mischief comes from confidence! But let us not interrupt them: the maid is honest and the man dire not be otherwise, for he knows I loved her father. I will interpose in this matter, and hasten the wedding. Kate Willow is a witty mischievous wench in the neighbourhood, who was a beauty and makes me hope I shall see the perverse widow in her condition. She was so flippant with her answers to all the honest fellows that came near her, and so very vain of her beauty, that she has valued herself upon her charms till they are ceased. She, therefore, now makes it her business to prevent other young women from being more discreet than she was herself: however, the saucy thing said the other day well enough, 'Sir Roger and I must make a match, for we are both despised by those we loved.' The hussey has a great deal of power wherever she comes, and has her share of cunning.

However, when I reflect upon this woman, I do not know whether in the man I am the worse for having loved her: whenever she is recalled to my imagination my youth returns, and I feel a forgotten warmth in my veins. This affliction in my life has streaked all my conduct with a softness, of which I should otherwise have been incapable. It is owing perhaps, to this dear image in my heart that I am apt to relent, that I easily forgive, and that many desirable things are given into my temper, which I should not have arrived at by better motives than the thought of being one day free. I am pretty well satisfied such a passion as I have had is never well cured, and between you and me, I am often apt to imagine it has had some whimsical effect upon my brain: for I frequently find, that in my most serious discourse I let fall some comical familiarity of speech or odd phrase that makes the company laugh. However, I cannot but allow she is a most excellent woman. When she is in the country I warrant she does not run into dairies, but reads upon the nature of plants, she has a glass bee-hive, and comes into the garden out of books to see them work and

observe the pollies of their commonwealth. She understands everything I would give ten pounds to hear her argue with my friend Sir Andrew Freeport about trade. No, no, for all she looks so innocent as it were, take my word for it she is no fool.'

## CHAPTER XIII

## ETIQUETTE AT COVERLEY HALL

The first and most obvious reflections which arise in a man who changes the city for the country, are upon the different manners of the people whom he meets with in those two different scenes of life. By manners I do not mean morals, but behaviour and good-breeding, as they show themselves in the town and in the country.

And here, in the first place, I must observe a very great revolution that has happened in this article of good-breeding. Several obliging deferences, condescensions and submissions, with many outward forms and ceremonies that accompany them, were first of all brought up among the politer part of mankind who lived in courts and cities, and distinguished themselves from the rustic part of the species (who on all occasions acted bluntly and naturally) by such a mutual complaisance and intercourse of civilities. These forms of conversation by degrees multiplied and grew troublesome, the modish world found too great a constraint in them, and have therefore thrown most of them aside. Conversation, like the Romish religion, was so encumbered with show and ceremony, that it stood in need of a reformation to retrench its superfluities, and restore it to its natural good sense and beauty. At present therefore, in unconstrained carriage, and a certain openness of behaviour, are the height of good breeding. The fashionable world is grown fiercer and crasser, our manners sit more loose upon us. Nothing is so modish as an agreeable negligence. In a word, good-breeding shows itself most, where to an ordinary eye it appears the least.

If it is then we look on the people of mode in the country, we find in them the manners of the last age. They have no sooner fetched themselves up to the fashions of the polite world, but the town has dropped them, and we nearer to the first state of nature than to those refinements which formerly reigned in the court and still prevail in the country. One may now know a man that never conversed in the world, by his excess of good-breeding. A polite country squire shall make you as many bows in half an hour as a well-served courtier for a week. There is infinitely more to do about place and precedence in a meeting of justices' wives than in an assembly of duchesses.

This rural politeness is very troublesome to a man of my temper, who generally takes the chair that is next me, and walks first or last, in the front or in the rear as chance directs. I have known my friend Sir Roger's dinner almost cold before the company could adjust the ceremonial, and be prevailed upon to sit down, and have heartily pitied my old friend, when I have seen him forced to pick and cull his guests, as they sat at the several part of his table that he might drink their healths according to their respective ranks and qualities. Honest Will Wumble, who I should have thought had been altogether unconnected with ceremony, gives me abundance of trouble in this particular. Though he has been fishing all the morning, he will not let himself to dinner until I am served. When we are going out of the hall he runs behind me, and last night, as we were walking in the fields, stopped short at a stile until I came up to it, and upon my making signs to him to get over, told me with a serious smile, that sure I believed they had no manners in the country.

There has happened another revolution in the point of good-breeding which relates to the conversation among men of mode, and which I cannot but look upon as very extraordinary. It was certainly one of the first distinctions of a well-bred man to express everything that had the most remote appearance of being obscene in modest terms and distant phrases, whilst the clown who had no such delicacy of conception and expression clothed his ideas in those plain homely terms that are the most obvious and natural. This kind of good manners was perhaps carried to an excess, so as to make conversation too stiff, formal, and precise, for which reason (as hypocrisy in one age is generally succeeded by atheism in another) conversation is in a great measure relapsed into the first extreme, so that at present, several of our men of the town, and particularly those who have been polished in France make use of the most coarse, uncivilized words in our language, and utter themselves often in such a manner as a clown would blush to say.

This infamous piece of good breeding which reigns among the cocknobs of the town has not yet made its way into the country, and as it is impossible for such an irrational way of conversation to last long among a people that make any profession of religion, or show of modesty if the country gentlemen get into it, they will certainly be left in the lurch. Their good-breeding will come too late to them and they will be thought a parcel of low clowns, while they fancy themselves talking together like men of wit and pleasure.

As the two points of good breeding which I have hitherto insisted upon regard behaviour and conversation, there is a third which turns upon dress. In this, too, the country are very much behind-hand. The rural beauties not yet got out of the fashion that took place at the time of the revolution, but still do about the country in red coats and laced hats, while the women in many parts are still trying to outvie one another in the height of their head dresses.

But a friend of mine, who is now upon the western circuit, having promised to give me an account of the several modes and fashions that prevail in the different parts of the nation through which he passes, I shall defer the enlarging upon this last topic till I have received a letter from him, which I expect every post.

No. XX — "LET WELL ALONE."

WE have never yet had a bishop burnt in a railway carriage, although the combustible Bishop of Exeter had a narrow escape, and until some such catastrophe really takes place, upon the principle of "letting well alone" we shall have no attempts made to ensure the safety and the convenience of travellers. No matter how great may be the danger, or the inconvenience of my practice, if we attempt to take any precautions against it we are certain to be met with "Let well alone, nobody has been hurt, the chimney has never fallen, no one has tumbled into the water, although there are no parapets to the bridge. It is only when accident multiplies, when brimful and perishing little babies in their cradles, or old women use blown over bridges, and go floating down the stream like venerable Ophelia, that people begin to suspect what they before thought 'well' is not well, but something that requires to be made well."

In the *4th* annum, about ten years ago, there was a short but clever paper upon "Proverb against proverb, or Saw and See-saw." From this we borrow an illustration of the saying now under consideration. "Let us begin with 'Out of the frying-pan into the fire,' which originated, we must suppose, with certain foolish eels, who with all their experience of hot situations, were not so used to the pan as to feel themselves comfortable in it, and in their impetuosity to leave it sprang into the burning coil that awaited them. Now this was, of course, an indiscretion in the said eels, not that they forgot the proverb 'Let well alone,' for it was anything, but *well* to be fried alive as they were, not being consenting parties thereto; it is the law of the fish, but let us put the case that these unfortunate fishes had been a clerk, a learned, and unworldly digested sayings, which is men's motto, *let well alone*, namely, that 'when things are at the worst, they mend,' might not they on their descent into fairly justify the fatal leap from the hot pan into the hotter fire, and argue that they took it with them as upon, confidently expecting that when things were at the hottest they might be expected to cool? Then we return to think that men as well as eels have leaped from the frying pan into the fire on the principle that they must be wiser in order to be better for 'when things are at their worst, they mend.' The proverb 'let well alone,' above an idle tidily quota, is itself, to some degree, a source of error, for it is to lay down that nothing is to be 'let alone' but what is 'well.' The enforcement is certainly not a logical one, but it is not the less likely to be drawn out of its due. The truth is, that here is a large class of cases in which 'let all alone' would be *vice versa* saw as 'let well alone.' It is better than *ipse* and always to 'let alone' when it is impossible to move to *alter*. 'Let all alone,' would have met the case of 'the eels to a tune.' To let me they would probably have been fried and eaten all the same, but then they would not have entailed on their race for ever a proverb of reputation for indiscretion.

"There do it, shall I not, please, where I choose, we may say most people, have of anything like improvement (which indeed they call innovation) is most singular. You may demonstrate to them the advantages that would arise from the adoption of this or that plan, but you are certain to be met with "Oh, I dare say it is very right—but we do very well without it; 'twill all alone." And if this is not enough to stop your proceedings they begin to cavil that this is not the time for doing the things, that we must "wait a little longer," and so we are to be tormented with "the good time coming, which, in deed, often proves to be the "to-morrow" of our hopes, and never arrives. And if your plan for improvement involves an alteration in more things than one—for instance, if the chimney-sun has, and it requires to be contracted at the back of the grate, and also to have one of those strange monstrosities fixed on the top, which go whirling about with the wind, or are so constructed as to let the smoke escape from all kinds of queer crevices

and corners which the opposing wind is puzzled to find out, your friends, although fully awake to the inconvenience of the smoky chimney, and who might, perhaps, have consented to one of these two things, either to contract the grate, or have been induced to place the monstrosity on the top, but the two together strike him with grievous dread, and though he does not venture to say, "let well alone," for his senses convince him it is not *well*, yet he is considerably horrified at the extent of the innovation proposed, and he exclaims "No, too fast, not too fast, one thing at a time slow and sure, your *is a most sweeping* measure, let us do it gradually, a moderate change, truly, *carefully* applied, may be of some use, but this is too much". And then, most provably, he runs off to some other subject by way of turning your attention away from the true remedy, and he suggests, why should contracting the grate, and putting a monstrosity on the chimney be necessary? Why not something else? Would not a hole in the door be sufficient, or one of the new ventilating panes of glass? Anything, in short, except the real remedy, from which he strives to turn aside your attention, and divert it to different objects.

There are many things beside smoking chimneys in which men resort to all kinds of excuses and delays in order to "let" what they call "well alone." In private life and in public the same practice prevails, and it is not until too late for remedy that the evil becomes thoroughly apparent. There is a touching instance of this in the life of Sir Walter Scott. The immense success that attended his earlier novels seemed like a never-failing spring of wealth, ten or twelve thousand copies for the early impressions, and a continuous and extensive sale upward in his well-warranted belief in their inexhaustible success, and justify the most extravagant expenditure. But there came a falling off in these, and up on the principle of "letting well alone" the publishers seem to have informed the author of the decrease in the sale, lest it should affect his spirits and mope his imagination. They "let well alone," and the consequence was, the sad man that blight of his after life. Lockhart tells us the story simply and plainly:—"I cannot conclude this chapter without observing, that the publication of *Ivanhoe* marks the most brilliant epoch in Scott's history, as the literary favourite of his contemporaries. With the novel which he next put forth the immediate sale of these works began gradually to decline, and though even when that decline had reached its decided point it still lay above the most ambitious dreams of any other novelist, yet the publishers were afraid the announcement of any such falling off might cast a damp over the spirits of the author. He was allowed to remain for several years under the impression that whatever they had thrown off commanded it once the old triumphant sale of ten or twelve thousand and was afterwards, when included in the collected edition, to be circulated in that shape no less widely as *Waverley* or *Ivanhoe*. In my own opinion it would have been very unwise in the booksellers to give Scott my unfavourable tidings in such a manner for the commencement of the middle which proved fatal to him—first that in his first shock his mind but I find they took a different course, when they hesitated to tell him exactly how the matter stood throughout 1820 and the three or four following years, when his intellect was a victim as it ever had been, and he has it as certain as I can find that he was dying (among other reasons) because the year was mentioned very distinctly once in his life, and for every twelvemonth in which any man shows himself as is evidenced by there to prove him a victim of unwise expenditure it becomes proportionally more difficult for him to pull up when the mistake is found to have detected or recognized. This is one of the mistakes of "letting well alone" or rather just seen it what they call "well" as in the "let" and instead of let it let it be combated with at once."

"I do not see many men who have either the talent or the perseverance to overcome the difficulties caused by 'letting well alone,' which Sir Walter Scott displayed. The bulk of mankind must always learn to distinguish well from ill, except that which is ill and strive to make the 'well' better, or they are likely to find rapidly a thousand ways of improvement. 'None of us have led nations into me as an old farmer, when pressed to adopt one of the improvements of a culture which the experience of others had proved to be valuable. 'Let well alone' is my maxim, I fear is my faith, did, and he made a sight of money here." And the farmer does not understand that his father had only to contend with those who had farm duty in the same manner as himself while he is contending with those who have brought fresh elements to the field of labour, which will most assuredly beat the old fashions. What was "well" in the day of his father, is "ill" now and must be changed, or he will find that "letting well alone" will be an ill day's work for him.

The world we live in is a strange, bustling world, that will be for ever on the move, and we are no more content to be still in the frying-pan than were the fish—we must jump somewhere, and that our jump may be from "well" to "better," we must exert ourselves to acquire true knowledge of all that surrounds us. We are ignorant, made the fools jump into the fire; just as the French people jump into anarchy, and slide thence into the arms of despotism. And if we make the uneducated classes here as easy by stirring up too hot a fire under their frying pan, depend upon it they will jump somewhere, and whether they burn themselves, or knock other people into the flame we seem content to leave to chance. For, notwithstanding all the talk about education, our actions appear to favour too much of "letting well alone." And too many of us, like the man with the smoky chimney, are disinclined to do too much at once, but would, rather than the people should be taught too much, stop short in the present state of ignorance.

An Irish peasant thinks that to have a pig in his parlour, and a reeking dunghheap at his front door, is "well," and he sees penitence and disease decimate the population, without imagining that his notions of what is

## ENIGMA

Wishes my friend a good night  
 More happy than the crew  
 Yet the best story is old  
 An old man's story you tell  
 I'm fit to victim to a thing  
 That flies with the wind and gains my  
 But let my purpose be fulfill  
 And ere my flying way I killed  
 The dead's life I'll tell  
 Though skills I may be the hunt I see  
 My life and strength are only with  
 Man may destroy by sports such  
 But no more I'll my name but old  
 By murder I'll by victory be old  
 Shall conquer on the floor a thing  
 That on his arm and heart is spring

The terror of the station shall spread  
 Where I'll my arm or in my hand  
 I'll fight for in cities in y rank  
 Shall such a place spread around  
 That very soon there will be found  
 A general run upon the banks

## MENIAL RECREATIONS.

A curious Recreation with a Hundred Number, usually called the Magical Century

If the number 11 be multiplied by any one of the nine digits, the two figures of the product will always be alike, as appears from the following example

|    |    |    |    |    |    |    |    |    |    |
|----|----|----|----|----|----|----|----|----|----|
| 11 | 11 | 11 | 11 | 11 | 11 | 11 | 11 | 11 | 11 |
| 1  | 2  | 3  | 4  | 5  | 6  | 7  | 8  | 9  |    |
| 11 | 22 | 33 | 44 | 55 | 66 | 77 | 88 | 99 |    |

Now, if another person and yourself have fifty counters each, and agree never to stake more than ten at a time, you may tell him, that if he will permit you to stake first, you will always undertake to make the even century before him

In order to do this, you must first stake one, and, remembering the order of the above series, constantly add to what he stakes, as many as will make one more than the numbers 11, 22, 33, &c., of which it is composed, till you come to 89, after which, the other party cannot possibly make the even century himself, or prevent you from making it.

If the person who is your opponent has no knowledge of numbers, you may stake any other number first, under 10, provided you afterwards take care to secure one of the last terms, 66, 67, 75, &c., or you may even let him stake first, provided you take care afterwards to secure one of these numbers

This recreation may be performed with other numbers, but, in order to succeed, you must divide the number to be attained by a number which is a unit greater than what you can stake each time, and the remainder will then be the number you must first stake. Suppose, for example, the number to be attained is 52 (making use of a pack of cards instead of counters), and that you are never to add more than 7, then, dividing 52 by 7, the remainder, which is 3, will be the number you must stake first, and whatever the other stakes, you must add as much to it as will make it equal to 7—the number by which you divided, and so on

## TRANSFIGURED PLAYING CARDS.

THE MOST SPARE DIET LEAVES SOMETHING TO SPARE

## THE THREE OF SPADES

## MAGIC MUSIC

One person leaves the room, and an article is hidden. He is to discover it by listening to music played by one who carefully regulates his *forte* and *piano* according to his nearness to, or distance from, the object.

## ENIGMA

I draw my being from the sandy shore, (1)  
 Where foaming waves in wild confusion roar  
 Once I was trampled on by vulgar feet—  
 Without me now no mansion is complete (2)  
 With me the beauty wiles her hours away (3)  
 I make the old carouser lithe and gay, (4)  
 By me are Nature's beauties made more plain—(5)  
 By me, the offspring of the shore and main  
 Weak though I am, and fragile as my frame,  
 On me is rested Joseph Paxton's name (6)  
 I am so good that nothing I conceal—(7)  
 Pray, gentle reader, guess my name reveal—MADGE.

## NUMERICAL PUZZLE

I count four letters, but my last two are the same. My first is twenty times each of these two and my second cannot be made less. My whole is seen on hill top and by river side—M I B

## ANSWERS TO THE PASTIME OF LAST EVENING,

 3 Arabia

## QUERIES

1 The first woman sold 49 eggs at seven for a penny, and received sevenpence, the second sold 28 at the same rate and received fourpence, the third sold seven of hers, and received a penny. In the course of the day the demand greatly increasing, they sold the remainder at threepence each. The first had one egg for which she received threepence—making tenpence with what she had received for the 49 sold before the second had two eggs, for which she received sixpence—making tenpence, with fourpence received for the 28, and the third, having three eggs, sold them for ninepence. Thus, each woman sold her eggs at the same rate, and each received tenpence for her lot.

2 The ages of the children were nine and three

## CONUNDRUMS

- 1 Because they are never without an Old man  
 2 A cow herd's (coward's)  
 3 Because their emperor can make a mandarin (man diving) whenever he likes  
 4 At Boulogne (bowl on)  
 5 Because they belong to the Taunt on fraternity  
 6 Because it is plate hid (plated)

PICTORIAL ENIGMA—IMAGINATION.

## OUR CORNER CUPBOARD!

A QUIET conscience sleeps during thunder.

THE gay soul of dissipation seldom has a thought unselfish.

WHY are good resolutions like fainting ladies? They want carrying out.

THEY are ill discoverers that think there is no land when they can see nothing but sea.

THE boy who undertook to ride a horseradish, is now practising on a saddle of mutton, without stirrups.

WHEN is man, like fiendship, most severely tried? When he stands a loan.

WHEN is a person's mouth like a public park? When it contains several others.

To what branch of grammar do English duties on intoxicating liquors belong? To syntax.

AN Irish paper says, that among those mortally wounded at Waterloo, was Major O'Brien, afterwards Mayor of Dublin.

WE are never more deceived than when we mistake gravity for greatness, solemnity for science, and pomposity for erudition.

DOUGLAS says he marks his hogs differently from other people, and can tell them as far as he can see them. He cuts three pieces off their tails, while others cut but one.

DR. JOHNSON compared the plaintiff and defendant in an action at law to two men ducking their heads in a bucket, and during each other to ten on longest in the water.

A TANKY Irish peasant, on a little ragged pony, was floundering through one of the bogs so common in his country, when the animal, in its efforts to push through, got one of his feet into the snare. "Ah! now," said the rider, "if you are going to get up, it's time for me to get down."

A DUTCHMAN was telling his marvellous escape from drowning, when thirteen of his companions were lost by the upsetting of a boat in which he alone was saved. "And how did you escape then, sir?" asked one of his hearers. "I did not go in the boat," was the Dutchman's laconic reply.

JUST before going to bed take two pig's feet and a third pig. In less than an hour you will see a snake larger than a hawker, devouring eight blue-haired children, who have just escaped from a monster with sore eyes and a red-hot overcoat.

THORPOT HOOK was walking, in the days of William blushing when one of the emissaries of that shining character had written on a wall "Try Warren's B." But had been frightened from his property and fled. "The rest is lacking," said Hook, almost before he saw it.

A MAN, who had by a fall broken one of his ribs, was mentioning the circumstance the other day in a city coffee house, and describing the pain he felt. A surgeon, who was present, asked him if the injury he sustained was near the scapula? "No, sir," replied he, "it was within a yard of the Obelisk, in St. George's Fields."

"Oh, minimal! I asked Miss Brown what is dew. She says it is the moisture hoisted by plants during the nights of the summer months. Now, mamma dear, dew is the condensation of aqueous vapour, and I which has radiated its atomic motion of elation below the atmospheric temperature."

## A PARADOX.

BRIAD is the stuff of life, they say,

And be it also spoken,

It won't support a man a day,

Unless it first be broken.

A CANDID ADMISSION.—An ignorant fellow, who was about to get married, resolved to make himself perfect in the responses of the marriage service, but by mistake he learned the office of Baptism for those "Baptized Years, so, when the clergyman asked him in the church, "Wilt thou have this woman to be thy wedded wife?" the bridegroom answered, in a very solemn tone, "I renounce them all!" The astonished minister said, "I think you are a fool," to which he replied, "All this I solemnly believe."

"I BIRD," said a sharp Quaker, to a man with a drove of hogs—"Hast any hogs in thy drove with large bones?" "Yes," replied the drover, "they all have." "Hast any with long heads and sharp noses?" "Yes, they all have." "Hast any with long ears, like those of the elephant, hanging down over their eyes?" "Yes, all my drove are of that description, and will suit you exactly?" "I rather think they wouldn't suit me, friend, if they are such as thou describest them. Thou mayst drive on."

AT a small town in the Western States, where Jenny Lind and Barnum had stopped to rest, the latter told the folks, that if they would raise 1500 dollars, he would let them hear Jenny sing. The proposition was agreed to, and a large barn was procured. As Jenny was singing the "Bird Song," a tall fellow, who seemed to think he had been "softer," having taken three dollars' worth, exclaimed, on Jenny's repeating the words, "I know not, I know not, why, I am singing,"—"The damnation ye don't!" Well, I can tell ye; ye are singing for 1500 dollars, three dollars a topknot all round; and there's no use of telling folks you don't know why ye are singing. I guess dad's corn will find out."

## OUR MEMORANDUM BOOK!

ROSE.—Professor Agassiz, in a lecture upon the trees of America, stated a remarkable fact in regard to the family of the rose, which includes among its varieties, not only many of the most beautiful flowers which are known, but also the richest fruits, such as the apple, pear, peach, plum, apricot, cherry, strawberry, blackberry, &c.; namely, that no fossils or plants belonging to this family have ever been discovered by geologists! This he regarded as conclusive evidence that the introduction of this family of plants upon the earth was coeval with, or subsequent to, the creation of man, to whose comfort and happiness they seem especially designed by Providence to contribute.

CONTINENTAL CLIMATES.—It is a grand mistake to believe that any of our neighbours are much better than ourselves in this respect. If that be, it is more in the fact that the order of the seasons is more regular, and that the particular character of the time has fewer variations than in England. So much is this the case that we appreciate perfectly the distinction a foreigner made to us—that England has weather, but no climate; meaning that every imaginable change is at all times possible, and that for four weeks of June in our wind, we often are requited with a December that even Naples might envy. It may be set down as certain, that except in a few favoured spots along the shores of the Mediterranean and in Sicily, our winters are milder than those of the Continent. A Paris winter is a vile compound of cold slush, damp, fog, and foul smells. A Brussels one is all the preceding, plus sleet and storm. A German winter is an affair of stoves, double windings, fur mantles, and foot-warmers, frozen fountains, and no small every cold or third day. Italy has a dozen climates. Milan, all rain and wind from both, in a diminished degree. Florence alternates between the Irish Juniper and a West Indian tornado. With the serotico, come fog, mud, and rain, with the frequent no wind even have falling poultry and plaurian. Rome is included with a sun in fever, and Naples is all that sun and wind combined. The sun is roundly in the air, and the less chance of all this in the land. A French spring is only what is in Thomson's Seasons. The continent of Europe is almost unexceptionably good. In mount in distrust there are certain good things, but they rarely last long on our mountain tops. An English invalid has few good reasons for leaving his own shores save such a change of scene and the novelty of travel suggest. Perhaps it is true of some advantages to the weak chested, but then the whole available extent of Italy is the quay along the Arno. As a winter, you encounter entire winds and cold blasts, and all the rigours of a northern winter. There are a few secluded nooks along the Mediterranean, such as the island of Sardinia, which combine the advantage of climate with all the luxuriance of tropical vegetation.

But not experter I fa ri h ot gr  
For the appar: } oft : rot lahms the man. —Hamlet

It is known how difficult it is to find a tailor who thoroughly understands the requirements of each figure and can suit its requirements with a well cut garment. The garment in which one at last finds being especially guarded, the very best of the best is pleased with this graceful and comfortable of the water is secured. Hence it is that so few feel "at home" during the first few days of any new garment and such many are apparently a "mud" appear at the time, however costly, it is never a burden in a light and airy form. It is so many to make it difficult to find the PERFECT FOX, adopts this method of making known that he has practically studied both form and fashion in their most progressive meaning, and in the course of an extensive private collection has clothed very conceivable development during the past thirteen years. Always adapting the garment to their cold waistcoat or trousers to the effect of each of its individual wearers, the purposes it is to end in this industry, which is the most perfect fit that is regarded for comfort in which the letter of the age dictates - F FOX, practical tailor 73 Cornhill, same side of the way as the Royal Exchange.

We strongly recommend to our Subscribers the adoption of the "HOUSE COMPANION PORTFOLIO" for the preservation of the Weekly Numbers of the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold fifty two Numbers, or Twelve Monthly Parts, which comprise one Volume. At the end of each year they may be taken out and bound and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The Price is Two Guineas. The duty will be saved by the preservation of the Numbers which, heretofore, may be difficult to obtain. The Portfolios are beautifully embossed, and illuminated with silver, and a new invention introduced by LINTON, 804 & HODGE. It is an ornament for the drawing-room table—Order of any Bookseller.

THE FAMILY FRIEND, Price 35¢ each. A family bundle of four complete First Series with a new alphabetical contents of the four languages arranged in Russian and valuable references to matters of every interest and utility—Sold by all Booksellers.

*"The two young persons who had left the house last, and for whom all this preparation had been made, came up, walking arm-in-arm to the old gentlemen in the study, and giving them a look of satisfaction and contentment."*

## LOVE'S TRIALS, OR, MISIAKEN EVIDENCE

(Continued from page 401)

SARAH at once led her up the stairs, while Betty, not at all reconciled to the visitor by anything she had heard, clasped her hands together, turned her eyes towards the ceiling, and poured out a string of exclamations which probably had the effect of relieving her mind for she immediately went to work at her household duties.

Sarah led the young woman into her own apartment, and as soon as she was seated, said—

"I fear you will not be able to see Mr. Edwards at present. He is in a great deal of trouble, perhaps you have heard of it."

"I have not, in fact I am not personally acquainted with Mr. Edwards, and it is not on my own account that I have called. But a young friend of mine, Gertrude, or as we call her, Gitty Williams, a niece of Mr. Upjohn's, is in great trouble. Perhaps you have heard Mr. Edwards speak of her?"

"I have often heard him speak of Mr. Upjohn's family, and I think I have heard him mention a niece of theirs of whom they were very fond."

"She is now at our house. She is very unwell, and I fear will not live, and she has a great desire to see Mr. Edwards, and if you can, in any way, direct me to him, you will do a great kindness to a poor, suffering girl."

Sarah was silent a few moments, a multitude of strange thoughts oppressed her. At length she said—

"I cannot, certainly, direct you to Mr. Edwards, nor do I know if he is in the city, but could I do any good by calling myself upon the young woman? I can tell her some things about Mr. Edwards that may be satisfactory to her. I am no relative of his, but we are on terms of great intimacy, he has long been a member of our family. Do you think she would be unwilling to see me?"

"She would not be unwilling to see you, I am sure, and it might be a satisfaction to her if she cannot see him to converse with you."

Sarah took the direction which the young woman gave, and bade her farewell.

It was now evening, and as her uncle and aunt were absent she entered the parlour, and placing a lamp upon the table, laid her work beside her. Before, however, she had time to commence, a knock was heard at the door, and a few minutes afterwards, her cousin Rudolph entered.

"I bring a letter of the work which lay upon her lap, and on which one of her friends had said—"

"Sarah, why cannot we be friendly?"

"I hope we are friends, cousin Rudolph."

"It has not been for some time that cordiality in our intercourse, Sarah, which perhaps there might have been. If I have been in fault, I ask your forgiveness, will you forgive me, Sarah?"

Sarah's tears flowed forth freely.

"I have nothing to forgive, cousin Rudolph, you have, certainly, ever been kind to me."

"I have ever felt kindly, Sarah, and if you knew how many unhappy hours I spend on your account, perhaps you would feel that I have stronger claims to your friendship than you now do."

"I do not wish you or any one to be unhappy on my account, I am sure, cousin Rudolph."

"Is it kind to feel, or to speak thus, Sarah? Must I be forbidden even to sympathize with you?"

"Oh, no, cousin Rudolph, by no means; I did not intend to intimate that."

Sarah gave fresh vent to her tears, and Rudolph saw his advantage; he took her hand.

"Sarah, I must entreat of you to listen to me a moment—I love you most truly, but I do not mean to trouble you on that point. It is not for my

own sake I ask you to listen to me: it concerns your deep interest, your own well-being. I know well why it is that my presence has become distasteful to you; I will not blame you for not loving me, but I ask you to pause. Hate me if you wish; but pause before you plunge into the gulf before you." *[See Engraving, p. 344.]*

Sarah withdrew her hand, and wiping away the tears that had been freely flowing, said—

"What gulf do you mean, cousin Rudolph?"

"You surely cannot mistake my meaning, Sarah, you know that you have allowed James Edwards to feel that he had full command of your heart, I once thought well of James, as you now do, but now I know what you do not, or you would sooner trust the adder that lies coiled at your feet, and take it to your bosom, than you would trust that young man."

Sarah started as though the adder were, indeed, near to her

"Cousin Rudolph, the time has been when your warning might have alarmed me. That time has passed. If James Edwards falls, I fall with him."

"Then fall you must, for his fate is as sure as the setting sun. He is and must be an outcast for ever. Oh, Sarah, listen to me—listen to reason, do not, my dear cousin, persist in clinging to a connexion that can only bring disgrace to you and all connected with you. You are bound by no human or divine tie; and no principles of honour demand from you any adherence to one who has forfeited his rank in society."

Sarah turned upon him her soft bright eye, now sparkling with deep emotion, and said—

"Cousin Rudolph, no human law indeed, binds me to that unfortunate young man, and perhaps no principles of honour may, but you little know my heart when you attempt to move it by such arguments. James Edwards is innocent; yes, Rudolph, he is innocent as you are of the crime alleged against him." Sarah saw the crimson burning his brow as she said this—

"and you know that he is innocent." Rudolph's eyes flashed with indignation. "But he is as guilty as you pretend to believe, I will cling to him with all his errors, with all his disgrace, and die with him."

Rudolph was about to answer, but there was something in the holy emotion that glowed in Sarah's countenance which checked him. A knock at the front door arrested the return of their uncle and aunt, and as soon as he could with propriety, after they entered the room, he retired.

## CHAPTER XVII

The evils which come upon us in this life are in most cases, the result of our own folly or weakness. We take the first rash step, or we allow the evil one to get his insidious hold, and then return is not so easy, nor can the ensnared be driven off, but, it may be, by the prostration of our dearest hopes.

Mr. Upjohn was what many would have called a stern man, and yet, as we have seen, he could not at the proper time and when a vessel might have prevented much evil, say nay to the little Lucretia whom he had adopted as his own.

As her years advanced, the power which he once had to restrain and regulate her actions grew weaker. She had done her own bidding when a child, and it was not to be expected, as she grew to womanhood, that she would easily resign her untamed will.

The intimacy which Rudolph Hunt had formed with the family was not long pleasing to Mr. Upjohn. He was to be sure an engaging companion for an evening entertainment: he was polite in his behaviour and his fund of anecdote that excited many a merry laugh on the part of Gitty and even made the brow of her uncle relax its sober crest. But when the heart is unsound, it is very difficult so to cover it that its corruption shall not at times break forth.

Mr. Upjohn was too shrewd a man not to notice these symptoms, and they filled him with alarm. Again and again during the long evenings when she would be away had he held counsel with his wife and entreated her to use her maternal influence to win their Gitty from the fascination which had been thrown around her. But she, poor crazy soul, had long lost her control and for her to remonstrate was only adding fuel to the fire.

Distracted, at length, with troubled thoughts, the old man resolved to use that power which he fondly believed he yet held over his beloved one for her good.

He had a long conversation with Gitty, and plainly and fearlessly unfolded to her what he believed to be the character of Rudolph and entreated her, by all the regard which she professed for those who had performed the part of parents to her, to act upon the warning which he gave her. *[See Engraving, p. 385.]* Gitty wept bitterly for the earnestness and kindness of her uncle went to her heart; but when he closed his address by telling her that unless she wished to forfeit his good will she must at once relinquish all the attentions of the young man, and that if she ever ventured abroad with him again, the doors of her home should be closed against her for ever, the strong, uncurbed, impetuous will of Gitty rose up and placed within her an impenetrable barrier against the wish of her uncle.

She dried her tears, and without making a reply, retired to her little room. That very evening an appointment had been made, and when Rudolph called she asked no questions, nor did she deign to give her aunt any information as to whether she was going.

Gitty retraced her steps that evening, with the full determination to ask pardon of her friends, and submit herself to their control as she had never done before. Her heart was pure; her love for Rudolph was based upon virtuous principles, she had never seen the dark spots which had been so visible to her uncle. That evening the monster was revealed to her in all

his odiousness, and she turned from him with fear and loathing, but with all her young affections blasted. Her heart and her ears were so warped that feelings, and holding them in sacred keeping for the time when her acknowledgment of love pure and virtuous lover should enable her to pour them forth into his bosom—a priceless treasure, forfeited and indignant, she sought, alone, her uncle's dwelling, the little gate opened to her touch, but the light, which had always twinkled from the window where her uncle sat, was gone. A thrill of terror at once oppressed her, she had not believed that his threat would be executed. She sat down upon the little step, and wept such tears as she had never shed before; and there she remained through the long damp hours of the night, once, indeed, she tried to raise the latch, but the door was fastened, and no one gave any sign that she was heard.

As the night went on, its chills penetrated her frame. She wrapt her light covering about her as she best could but it was a frail protection. The morning at length dawned, the cold had chilled her very heart, and she heaving seemed about to cease. But colder and fainter was the spiritual existence of which that beating organ is but a symbol. Dark, and cold, and desolate, was the dreary waste that spread around her, every spark of that fire which so lately glowed within her young heart was extinguished. As the day was breaking, she arose and, with trembling steps, hurried from the yard. She opened the little gate and looking back, fixed a piercing gaze upon the dear old home. Her past short life was all before her, it was emblazoned on every board, and brick, and shrub. Every day of her remembered existence had been spent there, and all her thoughts and feelings from childhood to this hour, all met her gaze, all said in tones that struck a deadly chill upon her heart than the cold night air had done, Farewell! She felt that it was for ever.

As her friend Lydia was the only one to whom she could think of applying for shelter, she made the best speed she could gather. Lydia had ever loved Gitty, but perhaps a friend with more discretion, and less of that lightness which leads the young to acts of folly, might have been better, might have changed the tenor of her life, and made her what her beautiful person and her lively affections once promised for her. But the past is gone, and all that Gitty could say, as her friend met her with a look of pain and surprise was—

"Lydia, can you let me lie down on a bed? for I fear I am very ill."

And there she lay, with her senses fully awake to the folly of the past, and the misery of her present condition. Pain would she have flown to those dear old friends who had nourished her with so much tenderness, but that was now impossible, and her only desire was, that they might come to her, for she wished to tell them how wrong she had been, and ask their forgiveness before she died. The parents of Lydia were aged and infirm, they were comfortably off, but unable to stir abroad. Lydia had incurred the displeasure of Mr. Upjohn and did not dare to venture on an errand to him. In her extremity, Gitty had thought of James Edwards as one who, of all others, would have influence with her uncle, and for this purpose Lydia had gone to the house of Mr. Hunt, and as we have seen had in interview with Sarah.

When Mr. Upjohn fastened the door of his house that evening, and extinguished the light, and laid him down on his bed to rest, it was with a sadder heart than he had ever experienced before. His feelings, naturally, were of the most tender kind, and it was of that determined character that when once fixed the passions of his soul must bend to it. He had gone resolutely forward in his life's way, and barred his home against the only object beside his faithful wife, who had, for many years, engaged his affections.

If had told Gitty his determination, and come what might, his word should not be broken. Alas! he should have said, while praying that the fitness of punishment should steadily onward to its object, that we never hold up before each other the sad truth, that we are all erring mortals, and that we may in our right onward progress crush beneath our steady steps some beam that flows in the night for a long time have shed forth its fragrant light and but turned a little in our path.

On his untimely bed he lay, and as the clock told each passing hour he grew more and more restless. The consequences of his stern decree began to unfold themselves before him, and when far into the night, and when all expectation of her return was at an end, he would have given what few worldly goods he possessed, only to have heard her gentle step seeking again her home. Once, he almost thought he heard the latch of the door move and long he listened, but heard it not again, and when the morning light broke in upon him, he arose to look forth upon the little world with which he was surrounded, and a cold all was desolate.

It was but two days after these occurrences, which had thus filled all the parties with bitter sorrow, when a young and well-dressed lady called at the house of Mr. Upjohn. There was a dignity and ease of manner which, more than her expressive and beautiful countenance, attracted the notice and respect of the old man, who was a great admirer of the proprieties of life. She introduced herself as Sarah Pearson.

"I have called," she said, "by particular request, and on an errand not strictly my own, since it concerns Mr. and Mrs. Upjohn more particularly than it does myself."

They both looked at her with a manifest desire to know the purport of her errand.

"I believe you are intimately acquainted with James Edwards; I have often heard him speak of your family."

"James has been a frequent visitor here, madam, and we have felt a deep interest for him; but from what we hear, he has done for himself for the world; and grieved, deeply grieved are we, not only for his own sake, but for those that are near and dear to him."

"But he protests his innocence, and those of us who know him intimately have no doubt of it."

Mr. Upjohn shook his head. "I hope it may prove so—I hope it may prove so; but there is little faith to be put in the young new-a-days, Miss, asking your pardon, little are they to be relied upon."

For a moment, Sarah spoke not the few words Mr. Upjohn had said or rather, what he had not said, but only signified, filled her with alarm, such as she had not felt before.

It was, however, but the feeling of the moment, her mind flew back to the hour when James made that solemn assurance of his innocence, and there it rested.

"I came, as I said, sir, not on business of my own and merely mentioned Mr. Edwards's name as a passport to a hearing with you. I came, in his name to plead with you for your niece, who is in the house of Mr. Longworthy, lying on a bed of sickness, from which it is feared she will never rise. She is deeply penitent for the past and wishes to see you that she may ask your forgiveness before she dies. She has asked me to entreat you, if that were necessary—but I am sure it cannot be, for Mr. Edwards has often told me how much you loved her."

"Oh, Miss, it is from those we love the dearest that we suffer most."

Again there was silence except as it was broken by the sobs of the old lady, who had begun to weep at the first mention of Gitty's name.

"I hope, sir, my coming may not be misunderstood, you as officious on my part. I was, providentially, made acquainted with her but an hour ago, and is she had no one by whom she could send the message to you. I offered my services."

And I assure you, Miss, it is far from me to be offended at what you have done. It is a sad trial that we are suffering under, but if the poor child wishes to see us, it is not in our hearts to say no.

The voice of the old man trembled and he paused. "No, it is not in our hearts to say this, God knows."

He wiped the tears that were stealing down his furrowed cheeks. "Come, wife, if Gitty wants to see us the sooner we are there the better."

Sarah had spoken words of kindness to Gitty she had talked to her about the girl if Gitty felt were of more consequence now than all earthly matters, and when she had parted from her the poor sick girl entreated, if it was not too much to ask that she would return once more.

The instance was not great, and soon passed over. It was but a few days since the youthful sufferer was in the bloom of life and beauty. She was beautiful still, but alas! when the heart is sick, and disease has laid its hand upon us changes are speedily made.

Mrs. Upjohn preceded her husband to the bedside she saw the pale and convulsive countenance of her who had been so long their child and throwing herself upon her bosom pursued forth the overflowings of her heart.

Gitty however had a heavy heart to unburthen and she could only do it tell her what ever she could in the days of her childhood and then in the fear of her weeping kinswoman she poured out the whole story of her wrong.

Mrs. Upjohn dried her tears and rising with a smile of joy upon her countenance, said—

"Husband let us pursue our Gitty has been injured but she is still as pure and spotless as when she was a child upon your knee. Oh come to her room."

The old man raised his hands.

"Thank God!" and he bowed his head over his dear Gitty, and looked silently into her eyes, now glistening with unnatural brightness and the tears full fast and free.

"My dear uncle forgive me, oh forgive me!"

"I do, I do," his head rested on her sunken cheek, and her arms clung to him as they had often done in her days of childhood.

## CHAPTER XVIII

ADJOINING the house in which the sick and sorrow-stricken Gitty lay was a small building rather old and rickety in its appearance. At the bottom of the window, which occupied almost the whole front, ran a shelf, covered with a curious variety of old locks, rusty keys, brass door knobs, &c. &c. which were coiled together with an assortment of tools such as files, hammers, spring saws, long steel awls, &c. &c.

Through all hours of the day could be seen by the passer-by, a little man seated before a table, which joined the window-seat at a right angle, and ran back into the room. His position was near enough to the window to enable him with ease to reach any instrument or article which might lay upon it, and yet, with freedom to turn a small lathe connected with his table, upon which he was almost always employed, holding some small piece of iron or steel, and working it into such shape as he no doubt had a clear idea of, but which a looker-on would have been sorely puzzled to make out. There was no sign up to designate the business which was carried on within, but it could not well be mistaken for anything else than what it really was—a place where old keys were mended or altered, and locks not too badly injured, repaired.

It was drawing towards the close of a dull day when a man of robust appearance entered the street not far from the described premises, and walked towards them with a loitering gait, his eye wandering carelessly from person to person, and from thing to thing, now glancing at the loaded cart and its driver, and then at the dwelling by which he happened to be passing. He had rather a stubborn-looking countenance, which he carried in a careless manner,

holding it near its centre, and dropping it upon the pavement in time with his own step. As he came opposite the little shop and key shop, he stopped and fixed his eye for a moment upon its last tenant, who could be dimly seen through the dusky light within. Then stopping down he opened the door without ceremony, and stood watching the operation without saying a word, or receiving any notice or salutation. Presently the wheel stopped buzzing, the old man looked very intently at the work he had been performing, and then laying it carefully by, he threw his spectacles on his forehead, and turned one eye full upon his visitor, while the other seemed to be resting on some object in another part of the room. [See Appendix, p. 253.]

"Well, uncle, you keep the little wheel buzzing, I see. What contrivance is that you've put away so carefully?"

"It's a nothing that concerns you, or any of your sort. It is something I'm fixing for a real honest man."

"Then you acknowledge you do jobs sometimes for folks that may be a little slippery?"

"Why, I did one for you the other day."

"Ha, ha, ha—well done, uncle Bill!"

"But come round, man, and take a seat, I want to chat a little with you about a small matter, and as you are always hunting for game, may be I can put you on a scent."

The visitor turned his eyes round the little room, and taking an old, high-backed stool, placed it at one end of the long table, and resting his back upon his fists which he had piled one above the other upon the table, he looked across at the owner of the shop, who had fixed himself very snug in his usual position.

"Well, Jack," exclaimed the old man, after a short pause, "what will you give me now for a clue to a villain?"

"Alc give,—nothing—I can put my hand on more villains than I can on honest men, any time."

"No doubt of that, for your hands have no business on honest folks; but say what will you give?"

"Pshaw! what is it to me? but tell, if you've got anything worth knowing."

The old man changed his position, turned from the table, and groaning his legs said—

"You know James Upjohn?"

"Yes, what of him?"

"Nothing of him, but his niece is next door here, with old Simon. I ought to say there's been some trouble between her and the old man, you see I learnt it through their daughter Lyddy; she runs into my shop every now and then to have a chat with the old woman. These girls, I tell you what, don't they beat the mischief?"

"I don't know much about the girls. I never had much to do with them; but go on, and let us hear what you're driving at."

"Well, you see the young one of Upjohn took a notion to a dandy-looking fellow named Jack that old Jenny d d d fancy the old man, you know, sent him ahead, he's a fool, you know that."

"Yes, yes, I know him, but get on with your story."

"Well, Upjohn says, and tells his niece that she must shoo him right off—and the old man you know won't be balked, if he can help it—and she knew when he said the thing, that was enough. Well, she wouldn't give him up so she cleared out—and what do you think?"

"How shall I know? for you are telling such a cock and bull story, that a lawyer himself couldn't see the end of it."

"That villain what shall I call him?—that false-hearted fiddlestick of a fellow?—when she got into trouble at all for his sake turns his back upon her and he's a villain! don't you call him a villain?"

"Yes, villain, but I'll tell that in time. But if I should be obliged to look after such kind of fellows I should have work enough; the law won't touch him you old fool if he should break a dozen girls' hearts, is that all you've got to say?"

"Not exactly; you won't wait, and hear me out. You see, a man that will do such a thing as that, isn't too good to do worse—that's my mind. Well, one day not long since, a young fellow came in here to get a job done for him. I know a few things, and I can tell when there's mischief in it; thanks to my long eye I shall keep my eye on you, for all the cut of your rig is so smooth. Well he wanted me to fix him a key, like a pattern he had—and a curious thing it was, I tell you. I've such all kinds of keys, but I never saw such a twisted concern as that and what kind of a pattern do you think I was to make it from?"

"Why, another key?"

"No, it wasn't—no such thing, nothing but a piece of dough; and how the critter contrived to get such a clean cast of it was a mystery to me; he's a cute one, that, depend on it. Well, I took the directions and all about it, and off he goes, and now just see how queer it happened—you see that curtain there up to the door the old woman keeps it down a little, just so she can see through. Well, who should be in the room all the while the young fellow was here? Not Lyddy, and you know these girls are full of curiosity, so Lyddy takes a sly peep into the old shop. 'What do you think,' says she to my old woman—'who do you think it is?' I know, said she."

"Who was it? What's the name?"

"Well, I can't remember names without I put 'em down. But you see she wouldn't tell the name, whether she was afraid there was something wrong going on, or feared that I should tell him that she had been peeping at him, or whether it was for clear mischief I can say, but we couldn't make her tell; only she wanted to know when he was coming again, and I told her."

"Did she see him again?"

"She did, but we couldn't get the name out of her, do our best."  
 "Why didn't you get him to leave his name when he gave the order?"  
 "There now! is that your and don't you know better than that—don't you, now?"

"Why, I suppose if there was any mischief in it, he wouldn't be very likely to give you the right one."

"There you have it! He did give his name, but when I min stammered at his own name—then look out, says I! But I got the right one for all that, I've got his name there in my pocket, and no mistake."

"How do you know?"

"Why, you see it was by pure luck, or may be the old one helped along a little, you know son'tin's he helps rogues the wrong way just hear now. I finished the lock with a stick that it was the thing. What's to pay? says he. So much, says I, and with that, he puts with a handful of change, papers, keys, and every thing from his pocket, at once it was getting dark like, he laid it all down among my rubbish on the counter and after he paid me and picked up his trash, I saw he had left a penknife, a little bit of a concern thinks I! 'Bill keep dark,' he never saw it, and just then old Sandy Ferguson stepped in, and the youngster went off like a shot."

"A name on the knife?"

"Isn't there, my boy? all out in full as pretty as a picture."

Let me see it, Bill.

"What will you give me?"

"Oh, none of your fun, uncle Bill. I am serious now. This is a matter of more consequence than you think."

The old man innocently turned round and unlocking a small desk handed a neat and costly penknife to Mr. Catchem, for now the reader may as well know that he was the other person present, if he has not already guessed it.

A grim smile played upon the features of Catchem as he read the name, engraved on a silver plate.

"It is just as I thought. He is the rogue and they will find it out as I told them."

"Then you know about him?"

"I know enough about him. As much as I want to. He is the very one that hid some of old Geor. he Hunt's money in his trunk, and swore to me that he knew nothing about it and all that, and he is wide some of the one I believe that he is innocent as a lamb. But part of your story, Bill, don't hang together. First you went on to tell a long rumour about a young fellow that jilted that girl of Cyphons, now what has that girl to do with this affair?"

"You are always in such a hurry, Jack, that a man hasn't time to put the ends of his story together. You see, when I yddy first got sight on him came up slyly to my old woman—says she, 'that's Gitty's beau what can he be wanting?' But the old woman didn't know about their beaux—you know these gals have so many of them—and she asked the name, but then she wouldn't tell. But last night we found out all about it, and he's the very one that she saw in here that was the cause of all the trouble that poor girl is in and like as not she won't live—thay say she won't."

"Well well here's this pretty little tell tale you keep it snug till it's called for. You can swear to the chap if you see him again, can't you?"

"Never fear of me. I could pick him out among a thousand—I've marked him."

"That's you. Well I must be jogging. So bad luck to you, old fellow."

## CHAPTER XIX.

Time rolls on his steady round, and the fears and hopes which agitate the breast of man, which have pressed his vision forward into the dark future, must, at length have their truth or falsehood tested. And how many of us are there who live alone on the interests of the present moment who have no to-morrow hastening towards us, whose revelations shall crown us with the wreath of happiness, or sink our heaving bosoms into the gloom of despair!

"To-morrow," said James Edwards, as he paced the little room in lodging house where he had spent the most of his time since his return in the country, and in which hour by hour, he had sat and runnated over the tangled maze in which his fate was enveloped, "to-morrow! it will be over—the worst will be known."

He was aroused from his melancholy thoughts by a tap at the door, and Mr. Augustus Hunt entered with his niece Sarah. The greeting between them was cordial, and Mr. Hunt at once entered upon the business that had brought him there. A chill struck the heart of the maiden as she beheld the saddened countenance of her lover. Her womanly pride, however, soon came to her relief, and her whole frame was quickened by its powerful stimulus. There was no time, however, for the indulgence of emotions comparatively trivial.

"And now, my darling," said Mr. Hunt as he took his seat "we must proceed to business, for there will be no time to lose. I have brought you together, that what I say may be said before you both, and then there can be no misunderstanding. To-morrow is coming on fast, and when it comes there will be no time for any new arrangements, and now to the point. I have had a free and full talk with the counsel, and as I have told you before, my darling, and as I have told James this evening they give me encouragement. Now, when an evil is coming upon us, there is no use in shutting our eyes, or turning away our head, it won't keep off the danger nor fit us to meet it. In this case, the consequences of a defeat are too terrible to think of, I need not tell you what condition James would be in

nor is it worth while to try what condition his family would be in, and there is no prospect now but that a verdict must be given against him. When we cannot face an evil, we must fly from it."

Mr. Hunt paused and cast his eye towards James, who was looking at him, every feature strained with the intensity of his interest.

"How can I shun the order which is before me, sir? Surely you would not ask me to do it by flight?"

"There is no other way."

"And what would be the consequences?"

"The consequences I expect to meet. As your surety, I shall be held responsible for the amount of bail that I will readily pay, and moreover, besides that I have now by me \$500 sufficient to carry you far away from here, and to enable you to establish your self in a new place. There will be but little pains taken to search for you and in a short time the whole matter will be forgotten."

James fixed his eye firmly upon Sarah, it possible to pry into the feelings which were working in her breast. Mr. Hunt noticed his searching glance and is though he could look it to the thoughts of the young man, continued—

"This proposal comes entirely from myself, and it is the first idea of the kind that has escaped my lips to either of you."

James at length rose, his countenance was flushed, for he was highly excited.

"I thank you, sir, most heartily thank you, for the liberality of your present offer and for the noble and generous conduct you have manifested towards me in my sad and friendless condition. You shall be remembered by me with gratitude while my mind retains its consciousness. I know well, sir how terrible will be my conviction should I fall beneath the solemn verdict of a jury which from all that now appears, there is every prospect I must suffer. I have a loving mother whose heart is bleeding in anguish at my helpless state, and I have two angel sisters, who would go to prison and death for me. I love them with the full power of my mind and above all these I hold, as my heart's inclination, that lovely being now sitting by your side. To the effect I am not to say I am ready at any time to sacrifice my life. But, sir, dear as these precious treasures are to me, I hold them all as naught when compared with that integrity of heart which I will cleave unto, even to the depths of degradation. To-morrow I am to be arraigned as a culprit, my friends may leave me, my counsel may desert my cause as I expect, and the world may point to me as a recreant to virtue, but at that tribunal I shall appear if God spare my life alone, unfriended if it must be, and if nothing else, I can at least appeal to Him who knows my heart that I am not guilty of the act alleged against me, if it be His will that I suffer. His will be done—but never, never, never, will I do an act that shall be an acknowledgment of guilt."

Sarah threw herself into her uncle's arms.

"Dear uncle, he is right. James is right. Let the will of God be done."

Mr. Hunt was deeply affected by the grasp of the hand of the young man and exclaimed—

"I'll—I'll stand by you come what will."

James parted from Sarah as he had met her. He felt the deep stigma that rested upon him. His heart yearned in it fulness towards her, but he felt that, until his innocence should be made manifest, he would never clasp her as he once.

At the hour appointed for the opening of the court James entered, accompanied by Mr. Wharton and took his seat. Every eye was at once fixed upon him and few who watched his composed look, and his open, manly countenance could spy those secret sinister marks, which are so often said to look about those lineaments which characterise the man and distinguish the rogue even through all his disguises. A few moments after the prisoner entered the judge took his seat and the preliminaries of opening the court in settling the jurors. He took place then the counsel for the prosecution arose, and stated the grounds upon which the indictment had been made, and which brought the young man before them as a prisoner. He explained the circumstances of the loss which Mr. Hunt had met with and the reasons for believing the prisoner guilty, and concluded by saying,—"I expect to prove to you gentlemen of the jury, the different circumstances just related, in so clear a manner, that I think you will be forced to the conviction that the prisoner is guilty."

He then sat down, and commenced calling the witnesses. Mr. Gerardus Hunt was first sworn and examined. He testified to the fact of his having deposited the money in the chest of his knowing it to be there for some time subsequent, that on the morning of—November 1st, on searching for the same, it was not to be found. Also as to the circumstance of a strange key being found in the door of the room where the chest was kept. "And I wish you gentlemen of the jury, to bear this circumstance in mind, for I shall prove to you, by another witness, that this key belonged to a closet in the room where the prisoner slept."

He then examined him as to the key of the iron chest, where he kept it, the peculiar construction of the key, &c. and then showing it to the jury, said—  
 "There, gentlemen, is a curiosity and I will venture to say, not one of you has ever seen its fellow, or anything like it. The jury examined it with care, put one or two questions to the witness and seemingly, satisfied themselves that it was rather unique, and not likely to have a counterpart in the city. The witness was then turned over to the opposing counsel, who, after some examination, inquired of him whether he had any reason to suspect the prisoner as a person who could be guilty of such an act, previous to the time when the money was found in his trunk?"

"No sir, not the least in the world."

"That is all, sir."

Mrs. Hunt next appeared, and was particularly examined as to the habits

of herself and husband in regard to the keeping of the keys, and many things were elicited before the jury, which satisfied them that although they kept the key of the closet with much safety, still there were other keys in the house which would open it, and that a member of the family, if so disposed, might have access to the closet.

The countenance of Theodore lighted up as this witness retired, as though he could see an opening by which an object might be accomplished favourable to his client.

The niece of Mr. Hunt, Miss Sarah Pearsall, was next called, and as she advanced to the witness box, every eye was drawn towards her with deep interest. Some were attracted by a knowledge of the fact that she was so deeply concerned in the fate of Edwards, and others by the graceful beauty of her countenance.

"May I ask you, Miss, a few questions?" demanded the defendant's counsel.

"Certainly, sir." And as she cast her eye in the direction of her questioner, it met that of her cousin Rudolph who had just entered and taken a seat among the witnesses. He was very pale and evidently did not feel at ease, perhaps an unexpected subpoena he had received to be present was not agreeable. It had not been his design to witness the trial, and he had also understood that he had been subpoenaed by the counsel for Edwards.

"May I ask you, Miss Pearsall, in reference to visitors at the house of your uncle? You have lived many years in his family, I believe?"

"Yes, sir, from my childhood."

"You have frequent visitors doubtless at your uncle's? Are there not some who are very much at home in the family?"

"There are, sir, certainly," and her eye again rested on Rudolph.

"Some of these have access to all parts of the house—are, in fact, almost members of the family?"

"If your lordship pleases—and the opposite counsel, rising in haste, and looking at the judge, "I object to that question."

"Mr. Berry," said the judge, "what do you wish to establish by these questions?"

"May it please your lordship," said Theodore, rising with much animation, and speaking with a confidence that he had not hitherto assumed, "there is a deep mystery about this unhappy transaction, and I wish to expose to your lordship and to these gentlemen some of the secrets of this family. I believe your lordship will instruct these gentlemen that if a reasonable doubt exists in their minds as to the guilt of my client, that doubt shall be removed in his favour. I wish to prove to your lordship and to these gentlemen that there were those who by intimacy with this family might avail themselves of access to all its privacies with even more assurance than my client, and if I can also have a motive—a justifiable motive to be sure—and one which I proved, might induce its object to eternal infamy if I can prove—"

"Have you any proof direct Mr. Perry that would establish the fact as to who it was that perpetrated the crime charged against the prisoner?"

"Not direct, your lordship, but—"

"Then let us hear the other witness called by your lordship."

The counsel for the present took no notice of Betty's remark, but immediately arose, laid aside her book, and came forward with inelastic steps, the broad frill of her decent looking cap flying back as she walked, and her face reddening like a true laughter of fun.

"What is your name, my good woman?"

"Betty, sir, is my name."

"What else? that is not all your name, is it?"

"It is all that's sadful! I'll answer to it, my day."

"But we want the whole of your name, you were not christened Betty, is it?"

"That's more nor I can answer, you must be the one to know."

"My good woman," said the judge, "do you want your name just as it is?"

"Please your lordship, and that's what I never did in my life. I put makes a bit of a cross, and that's the end of it. But sir, my name is Manahan, Elizabeth Manahan, or Betsy Manahan, or Betty, but Betty's good enough, and it's the most convenient to me."

"Well, Betty, how long have you lived in the family of Mr. Hunt?"

"Eight years coming next Christmas, in the truth."

"You have been there all the time that Mr. Edwards was in the family?"

"It's true, sir, I have."

"Did you see much of him?"

"Did I see him? I see him every day, how could I be living there, and not see him?"

"Well, did he go much about the house? Was he not occasionally in different parts of the house?"

"I can't say but he was."

"You mean by that, that he did go into the different rooms—sometimes into the kitchen, and sometimes into the bedrooms or closets just as my member of the family might do?"

"Upon the life of me, if I can just say that I ever saw him, as your honour says, in the bedrooms and the closets, no no, I'll tell you the truth. He would sometimes just as he was passing the kitchen door put his head in and say, 'Good morning, Betty, or 'Good evening, Betty, for I'll say it afore his face and behind his back that a rare gentleman he was, and not afraid to speak to a poor body like this black or white."

"Well, Betty, you remember the circumstance of Mr. Edwards, I say, or the key of his room being found in the door of the vault?"

"I do, sir."

"You are certain it was in the key?"

"Ah, sir!" heaving a sigh "it was even so."

"And how do you account for its being there?"

"That I don't know, sir, it's past my comprehension."

"But you saw the key there, and knew the key to belong to the closet in Mr. Edwards's room?"

"Yes, sir, I know the key well."

"Is this the key, Betty?" handing her a small key. Betty examined it and giving it back, said—

"It's the very same, sir, and there is the very mark he made upon it with his own hand. And then, as requested Betty told the whole story, which she had related in the apprehension of Edwards. The account she gave of the affair seemed to affect the judge and the jury rather unfavourably towards Edwards, and his counsel felt that, if possible, some effort must be made to counteract it for Betty, by her strong sympathy for James manifested in her sighs and ejaculations, left a decided impression of her fears that all was not right, and as soon the counsel signified that he was done with the witness Betty said Theodore, "you would not wish the court to understand that you think Mr. Edwards really did open the vault-door with the key?"

"Oh bless your soul!" lifting up both her hands at the same time, "it's the furthest from my thoughts that it is—no, I'd cut my tongue off first."

"Well, Betty, I did not believe you thought so, only I wished to let these gentlemen know that you did not think so."

"If it's my mind that they're wanting, I'll give it, and fear nobody."

"We don't wish your opinion my good woman," said the judge. "Mr. Berry, if you have no more questions to put to the witness she may stand down."

The testimony for the prosecution now closed, and Mr. Berry arose immediately to open his case.

There was a sudden hush throughout the assembly, and every eye was fixed upon the young man who now stood forth to make his last effort for one whom he had undertaken to serve, not only as a counsellor, but as a friend, the strong emotions which his countenance betrayed, the solemn, measured tones with which his exordium was spoken, plainly told that he felt the responsibility of his situation, and the value of the interest for which he was about to plead. He recapitulated in brief the account which had been given till after just as the testimony had declared it to be. He denied nothing. He then went on with the history of young Edwards, touched with most feeling burning interest on some of the leading points of his life, told them of his filial piety, of his untiring diligence in the discharge of his duties, and his spotless reputation, and continued—

In this city lived a young man of pure and noble mind, he was destitute of that which the world calls wealth, but he was rich in the qualities of a generous heart, and in the possession of mental abilities and those personal attractions, which combine to throw around their possessor charms which make their way to every heart. His days were devoted to the faithful discharge of those duties which he owed to his employers, to whom he felt bound by strong obligations, and his evenings to the cultivation of an active mind. Within the limited circle which he called his home, was one whose attractions of mind and person were the theme of all who knew her. As kindred elements, when brought in contact, blend and mingle according to the harmonies of nature, these spirits blended their beautiful sympathies, and rested happy in each other's love.

Within the same circle was one not devoid of external graces, nor of many collateral advantages. He was in a fair and prosperous business, and before him arose the prospect of almost certain wealth. He had too, a cultivated mind and winning manners, but he wanted an honest heart. The warm affections which fire the soul with its purest ardour, he knew nothing of. Virtue and loveliness had no charms for him.

With the spirit of him who viewed our happy parents in their new and blissful home, and planned their union, he cast an evil eye upon this youthful pair. No outward signs had yet been given that their affections were united, and as to himself, he was unknown. He saw, or thought he saw, the girl, and in every selfish passion was aroused. A lovely being who for her own sake he had never cared for, became to his covetous mind a thing of great value when likely to be wrested from his grasp. His plan was fully laid. No compassion for one who had ever been to him as a friend, could stay for a moment the cursed design. A blotted reputation is a fair substitute for the assassin's dagger, and with all the hellish art of him he served, around this unsuspecting victim he wove a net of cruel cords, and with all the coldness of a icy heart his victim fell a prey. Gentleman, I see you doubt the truth of what I tell you, you doubt that, in this world, a being can be found so wicked and black at heart. But stay your judgment, I have a sequel to relate, no fiction of the brain, no spurious child of an excited imagination—but truth in all its sad reality.

There is now lying on a bed of death, in hourly expectation of the final summons, a lovely female—the wife of an honest and industrious mechanic—trained in principles of strictest virtue, and with a mind spotless as the purity of her sex. She was in the heyday of youth and health and possessed of more than an ordinary share of personal attractions. This monster came across her humble path. He migrated himself into her favour by months and even years of attention. He won her heart and then when in all its honest purity it stood on his honour, he mocked its sacred affections, laughed to scorn its virtue and its truth, and because he could not break through the strong barrier which these had built around her, left her—left her—with her young life in a crushed and shattered state.

As the speaker uttered this last sentence, he had almost shrunk a full up on Rudolph Hunt. Pale as though the life blood had for ever fled, Rudolph started to his feet. A buzz of astonishment swept over the court, followed by the voice of the high constable calling it. Silence in the court.

SIR EDWARD BULWER LYTTON, BART.

No author of the present time occupies a more distinguished position in the annals of the literary world than Sir Edward Bulwer Lytton, one of the most popular and successful of modern writers. His gentleman is the third and youngest son of General Bulwer, of Heydon Hall, Norfolk, by Elizabeth, daughter and sole heiress of Richard Woburn Lytton of Knebworth Park, Hertfordshire. Both these are very ancient families. The Bulwers have possessed lands still held by them in Wood Dilling, Norfolk, since the Conquest, and Knebworth has been the property of the Lyttons since the reign of Henry the Seventh when it passed into the hands of the first Dr. Lytton in Dorsetshire, thence to that king and governor of Boulogne Castle.

Like a great many men of genius Sir Edward was indebted for the first dawn of his talents to his mother, Mrs. Lytton, a lady of superior attainments, who was accustomed to recite to him passages from the poets, which gave him a love for reading and composition at an early age. In one of his dedications he pays a grateful tribute of affection to his parent for her maternal solicitude.

Between the age of thirteen and fifteen, when most youths are seeking amusement and distraction from school studies, Bulwer made his debut in the literary world by the publication, in 1826, of a volume of poems and translations entitled *Weeds and Wildflowers*, for which he had been preparing by attentive reading and steady application to the rules of composition. This was followed in 1827, by *Paul Clifford* and his first prose work and *O'Neill*—both bearing evident marks of genius but with immaturity of style that awoke severe criticism. He was sent, after attending various schools and receiving private tuition to Cambridge, first to Trinity, and afterwards to a fellow commoner to Trinity Hall. At the University, the young student distinguished himself by the extent of his activities and his insatiable attention, and at the competition of verse poem on sculpture, he carried away the honours. There was ample encouragement for his literary predilections at Cambridge.

A writer in *Bentley's Miscellany* says—

"He belonged to a club set up for the purchase of old English books, of which Whewell then in command fellow, and now Master of Trinity and Professor Milnes were the heads. Metaphysic was somewhat fashionable amongst the young thinking men, and the usual appendage of political economy was not neglected. The Union Debating Society was then at the height of its fame. A brilliant little club it was and has turned out considerable men, to wit, Thomas Babington Macaulay, the present Lord Grey, Kennedy, the head master of Shrewsbury. One who died a lord of the Treasury, Praed, the wit, and thought to be the best speaker, Cockburn, Charles Buller, and Charles Villiers. About ten or twelve years ago there was published a little book called *Conversations at Cambridge* which pleased and reflected the spirit of that debating club, and in which Bulwer occupied a conspicuous place. At the Union he was considered a fair speaker, but not first-rate, pretty much what is to be said of his parliamentary career. He threw more information into his speeches than most of the others and was held to be a sort of authority on English history. He was subsequently made president of the society. To give the reader some faint notion of

this society than that of an ordinary debating club, we may mention, that Macaulay, even after having taken his degree, came up from London to speak there."

In 1828 appeared *Pellam*, which in spite of the determined opposition of some critics, who ridiculed what they considered the frivolity of the subject, maintained its position as a favourite novel, and has since gone through several editions. Besides being a work of considerable entertainment, there is much real wit and truth in its pages—

"He is a keen observer, and he looks  
Quite through the dreeds of men."

The author, however, in a second edition of the book, considered some explanations of his intentions necessary, and thus announced them:—"Nor have I indulged in frivolities for the sake of frivolity, under that which has the most semblance of levity, I have often been the most diligent in my end avours to inculcate the substances of truth." "By treating trifles naturally, they may be rendered amusing, and that which adherence to nature renders amusing, the same course may also render instructive." In the same preface he thus alludes to the hostility of the reviewers—"I knew not a single critic and scarcely a single author when I began to write, and I have never received to this day a single word of encouragement from any of those writers, who were considered at one time, the dispensers of reputation. Long after my name was not quite unknown in every other country where English literature is received, the great quarterly journals of my own country disdained to recognise my existence."

It is a singular fact that this novel, which evinces a deep insight into human character, and the experience of a man of the world, was written before the author came of age. In 1829, the *Disowned* and *Duenna* were published, and in the year following appeared *Paul Clifford*, a work said to be based upon some adventures with gipsies, during which Mr. Bulwer obtained that knowledge of their peculiarities with which he has invested his romance.

The brilliancy of his genius made Bulwer a recipient of parliamentary honours, and he was elected a member for St. Ives, in Cornwall. Although no orator, he gave practical proof of his ability to sustain his senatorial duties. He brought forward the motion for a repeal of the taxes on knowledge and the committee on the state of the drama which finally resulted in his bill for the protection of dramatic copyright. The first motion ended in the reduction of advertisement and stamp duties on newspapers. After the Reform Bill, he sat for Lincoln, and on several occasions zealously advocated the public interest.

The novel of *Eugene Aram*, one of the most admired of Bulwer's productions, appeared in 1832—succeeded, in the following year, by *Godolphin*, or *The Old England and the New* and *The Pilgrims of the Rhine*. About this period he also undertook the editorship of the *New Monthly Magazine*, published by Mr. Colburn, but after a period of two years relinquished that office and went abroad. The fruits of a journey to Naples was the *Last Day of Pompeii*, a work of remarkable vision and genius, which has enjoyed a world-wide reputation.

To enumerate all the works that have proceeded from the prolific hand and active pen of Sir Edward Bulwer Lytton would occupy too much of our space sufficient to say that he is the most distinguished of writers, and one whose genius is reflected in every department of literature whether history, fiction, poetry, or the drama. Of *Ullens, its Rise and Fall*, the first two volumes of which appeared in 1837, a reviewer of Mr. Grote's *History of Greece* observes—

"It is true," he says, "that Bulwer shrinks from the completion of his brilliant work on *Ullens*. He excuses himself that the ground is already occupied we have leave to ascribe to him that such a supposition is perfectly erroneous—that there is abundant need of his and of other men's works, that such a supposition would have infinitely more plausibility with regard to the earlier portions of the history than to these more stirring times which he has undertaken to depict. His work is written for the general reader, not the scholar, and is done with a distinctive point on view. True it is that his rejection in the lighter fields of literature has damaged the reputation of his history. Because while his reputation as a novelist is against him with school boys the nature of his work is against him with the majority of his old readers. Nevertheless, there seems to be but one opinion respecting its merits by those who have read it, which we have done three times. It should not be left a fragment."

His later works of fiction consist of *Runeas*, *The Siege of Granada*, *Ernest Mallart* and the sequel, *After the Mysteries*, *Night and Morning*, *Zanoni*, *Last of the Barons*, *Lucrèce*, *Harold*, and *The Carbons*. The dramatic compositions are the *Duchess de la Vallée*, *Lady of Lyons*, *Richieu*, *Money*, *The Sea Captain*, *Not Bad as we Seem*. The poems, besides those already mentioned, are *Lines*, *Translations of the Poems of Schiller*, *King Arthur*. Besides this list, are various essays and biographical sketches, published in the magazines, a *Life of Laman Blanchard*, a pamphlet on the *Water-cure*, *The New Timon*, &c.

The *Monthly Chronicle* was undertaken with the combined editorial talents of Bulwer, Dr. Lardner, and Sir David Brewster, but after a year's trial, the publication was abandoned.

Sir Edward Bulwer Lytton is still in the prime of life, with powers of intellect that seem to gather fresh strength from exertion. He married Rosina, daughter of Francis Massey Wheeler, Esq., of Lisard Connel, Limerick.

The merits of Sir Edward Bulwer Lytton as a poet have been overlooked in the popularity attached to his works of fiction. Several of his compositions are, however, of great sweetness and beauty.

## OBSERVATIONS ON NATURAL HISTORY

I think their hearts with heavenly souls inspired"—DRYDEN

I must confess I am infinitely delighted with those speculations of nature which are to be made in a country life, and as my reading has very much been among books of Natural History, I cannot find it collecting upon this occasion the several remarks which I have met with in authors, and comparing them with what falls under my own observation, the arguments for Providence drawn from the Natural History of animals being in my opinion demonstrative.

When we call the principle which makes very different kinds of things to be regarded in the same way, the structure of its nature, and direct it to the same purpose, it is the same in all. It cannot be made to be otherwise, under pain of making it inconsistent with itself. I have found the next remark shall be the same, to the tying of a tie with all the other neckties of the same species. It cannot be a forever more. I concluded with it, as great advantage more than buildings would be different as ours, according to the different use, so that they would agree to them lives.

[illegible]

One would wonder to hear sceptical men disputing the utility of animals in the name of its only own pride and prejudices, if it will not all them the use of it facility.

With what caution does the hen provide for her young! If one intrudes unpermitted and disturbs them from noise and disturbance! When she has laid her eggs in such a manner that she can cover them, what care does she take in turning them frequently, that all parts may partake of the vital warmth! When she leaves them, to provide for her necessary attentions, how punctually does she return before they have time to cool and become incapable of producing an animal! In the summer you see her giving herself greater freedom, and quitting her care for above two hours together, but in winter, when the rigour of the season would chill the principles of life, and destroy the young one, she grows more assiduous in her attendance, and stays away but half the time. When the birth approaches with how much solicitude and tenderness does

But, at the same time, the hen, that has all this seeming ingenuity (which is, indeed, absolutely necessary for the propagation of the species) considered in other respects, is without the least glimmerings of thought or common sense. She mistakes a piece of chalk for an egg, and sits upon it in the same manner. She is insensible of any increase or diminution in the number of those she lays. She does not distinguish between her own and those of another species, and when the birth appears to be different a bird, will cherish it for her own. In all these circumstances, which do not carry an immediate regard to the subsistence of herself or her species, she is a very idiot.

As I was walking this morning in the great yard that belongs to my friend's country house, I was wonderfully pleased to see the different workings of instinct in a hen followed by a brood of ducks. The young, upon the sight of a pond, immediately ran into it, while the step-mother, with all imaginable anxiety, loved to catch the head of it to call them out of an element that is so fatal to her so dangerous and destructive. As the different principles which act in the different animals cannot be termed reason, so when we call it a movement in something we have no knowledge of to me, as I believe, says the poet, it designates the immediate direction of Providence, and the representation of the Supreme Being, is that which determines all things in the world, or rather, as Aristotle says, quoted by Thomas Aquinas, it is that which is the cause of all things, as he says, *Deus est causa prima* — the first and the chief cause. Whom I tell what to call it, it is a movement which directs them to such food as is proper to them. I must not naturally avoid whatever is noxious or is stolen from the flock. I observed that a mouse no sooner falls from its hole than it is immediately seized upon and it applies itself to the feast. I observed that a cat, when it saw a mouse, as thrown upon any of the little mice, it would catch it very sure upon the hint of any thing that it saw. I observed that a dog, when he observed that it is a day, he would go to the door and sit down without any fear or apprehension, and that a cat, when it saw a mouse, it would go to the door and sit down without any fear or apprehension.

I shall add to these general observations, an instance which Mr Locke has given us of Providence, even in the imperfections of a creature which seems the mearest and the most dejectible in the whole animal world. "We may say, 'Behold, from the mink of an object, or could we find, that it has not so many not so quick senses as a man, or several other animals, nor, if it had, would it, in that state and measure of its sense, bring itself from one place to another, be bettered by them. What good would sight and hearing do to a creature, that cannot move itself to it, or from the object wherein it is distant, it perceives good or evil.' And would not quickness of sensation be useless to a creature, if it could be still there, chained

*My worthy friend, with his usual cheerfulness, related the particulars above mentioned, and ordered the head to be brought into the room."*

and once placed it, and there receive the afflux of colder or warmer clean or foul water, as it happens to come to it.

I shall add to this instance out of Mr. Locke another out of the learned Dr. More who cites it from Cardan in relation to another animal which Providence has made defective but at the same time has she in its wisdom in the formation of the organ in which it seems chiefly to have failed. "What's more obvious and evident than a mole?" and yet, what more plausible argument of Providence than she? the members of her body are so exactly fitted to her nature and manner of life, for her dwelling being under ground there nothing is to be seen, nature has so obscurely fitted her with eyes, that naturalists can hardly agree whether she have any sight at all or no. But for me, what he is capable of for her defence and warning of danger, she has very minutely conferred upon her, for she is exceeding quick of hearing. And then her short tail and short legs but broad fore feet armed with sharp claws. We see by the event to what purpose they are, she so wittily working herself under ground and making her way first in the earth, as they that be hold it cannot but admire it. Her legs therefore are short, that she need dig no more than will serve the mere thickness of her body, and her fore feet are broad that she may scoop away mud beneath at a time, and little or no tail she has because she causes it not on the ground like the rat or mouse of whose kindred she is. But live under the earth and is fun to dig her self a dwelling there. And she in making her way through so thick an element which will not yield easily to the iron or the water it had been danger to have drawn so long a train behind her, for her enemy might fall upon her rear and fetch her out, before she had completed or got full possession of her work.

I cannot forbear mentioning Mr. Boyle's remark upon this last creature who I remember somewhere in his works\* of crabs that though the mole be not totally blind (as it is commonly thought) he has not sight enough to distinguish particular objects. Her eye is said to have but one humour in it, which is supposed to give her the idea of light but of nothing else and is so formed that this idea is probably partial to the animal. Whenever he comes up into broad day she might be in danger of being taken unless she were thus affected by a light striking upon her eye, and immediately warning her to bury herself in her proper element. More sight would be useless to her as none at all might be fatal.

I have only instanced such animals as even the most imperfect works of nature, and if Providence shows itself even in the blemishes of these creatures, how much more does it discover itself in the several endowments which it has variously bestowed upon such creatures as are more or less finished and completed in their several faculties according to the condition of life in which they are posted.

I could wish our Royal Society would compile a body of natural history, the best that could be gathered together from books and observations. If the several writers among them took each his particular species, and gave us a distinct account of its original birth and education its peculiar habits

and allures with the frame and texture of its inward and outward parts, and particularly those that distinguish it from all other animals, with their peculiar aptitudes for the state of being in which Providence has placed them, it would be one of the best services then studies could do mankind and not a little redound to the glory of the all-wise Contriver.

It is true such a natural history, after all the disquisitions of the learned would be infinitely short and defective. Seas and deserts hide millions of animals from our observation. Innumerable anticks and stratagems are acted in the "howling wilderness" and in the great deep, that can never come to our knowledge. Besides that there are infinitely more species of creatures which we not only cannot see without, nor made with the help of the finest glasses, than of such are bulky enough for the naked eye to take hold of. However from the consideration of such animals as lie within the compass of our knowledge, we might easily form a conclusion of the rest, that the same variety of wisdom and goodness runs through the whole creation and puts every creature in a condition to provide for its safety in its proper station.

I allude to his given us an admirable sketch of natural history in his second book concerning the *Nature of the Gods* and that in a style so raised by metaphors and descriptions that it lifts the subject above vulgarity and ridicule which frequently falls on such mere observations when they pass through the hands of an ordinary writer.

## CHAPTER XV.

SIR ROGER DE COVERLEY A MAGISTRATE.

All is full of life.

A man's first care should be to avoid the reproaches of his own heart, his next to escape the censures of the world. If the last interferes with the former, it ought to be entirely neglected, but otherwise there cannot be a greater satisfaction to a honest mind, than to see those approbations which it gives itself, seconded by the applauses of the public. A man is more sure of his conduct when the verdict which he passes upon his own behaviour is thus warranted and confirmed by the opinion of all that know him.

My worthy friend Sir Roger is one of those who is not only at peace within himself but beloved and esteemed by all about him. He receives a suitable tribute for his universal benevolence to mankind, in the returns of affection and good will which are paid him by every one that lives within his neighbourhood. I lately met with two or three odd instances of that general respect which is shown to the good old knight. He would needs carry Will Wimble and myself with him to the country assizes. As we were upon the road, Will Wimble joined a couple of plain men who rode before us, and conversed with them for some time, during which my friend Sir Roger acquainted me with their characters.

"The first of them," says he, "that has a spaniel by his side, is a yeoman of about one hundred pounds a year, an honest man. He is just within the Game Act, and qualified to kill an hare or a pheasant. He knocks down a finner with his gun twice or thrice a week and by that means lives much

cheaper than those who have not so good an estate as himself. He would be a good neighbour if he did not destroy so many partridges. In short, he is a very sensible man, shoots flying, and has been several times foreman of the petty jury.

"The other that rides along with him is Tom Touchy, a fellow famous for 'taking the law' of everybody. There is not one in the town where he lives that he has not sued at a quarter sessions. The rogue had once the impudence to go to law with the Widow. His head is full of costs, damages, and crotchets. He plagued a couple of honest gentlemen so long for a trespass in breaking one of his hedges, till he was forced to sell the ground it enclosed to defray the charges of the prosecution. His father left him fourscore pounds a year, but he has cast and been cast so often, that he is not now worth thirty. I suppose he is going upon the old business of the willow tree."

As Sir Roger was giving me this account of Tom Touchy, Will Wimble and his two companions stopped short till we came up to them. After having paid their respects to Sir Roger, Will told him that Mr. Touchy and I must appeal to him upon a dispute that arose between them. Will, it seems, had been giving his fellow traveller in account of his muling one day in such a hole, when Tom Touchy, instead of hearing out his story, told him that Mr. Such-a-one, if he pleased, might "take the law of him" for fishing in that part of the river. My friend Sir Roger heard them both, upon a round trot, and after having paused once, told them, with the air of a man who would not give his judgment rashly, that "much might be said on both sides." They were neither of them dissatisfied with the knight's determination, because neither of them found himself in the wrong, by it. Upon which we made the best of our way to the assizes.

The court was seated before Sir Roger came, but notwithstanding all the intrigues had taken their places upon the bench, they made room for the old knight at the head of them, who for his reputation in the country took occasion to whisper in the judge's ear that he was glad his lordship had set with so much good weather in his circuit. I was listening to the proceedings of the court with much attention, and infinitely pleased with the great appearance of solemnity which so properly a company such as this administration of our laws, when, after in hours sitting I observed, my great surprise, in the midst of a trial, that my friend Sir Roger was sitting up to speak. I was in some pain for him, until I found he had putted himself of two or three sentences, with a look of much business and integrity.

Upon his first rising, the court was hushed, and a general whisper running through the country people, that Sir Roger "was up." The speech he made was so little to the purpose that I shall not trouble my readers with an account of it, and I believe was not so much designed by the knight himself to inform the court, as to give him a figure in my eye, and keep up his credit in the country.

I was highly delighted, when the court rose, to see the gentlemen of the country, gathering about my old friend, and striving who should compliment him most. At the same time that the ordinary people gazed upon him at a distance, not a little admiring his comeliness, that was not afraid to speak to the judge.

In our return home we met with a very odd accident, which I cannot forbear relating, because it shows how desirous all who know Sir Roger are of having him minks of their estate. When we were moved upon the verge of his estate, we stopped at a little inn to rest ourselves and our horses. The man of the house had, it seems, been formerly a servant in the knight's family, and to do honour to his old master had some time since, unknown to Sir Roger, put him up in a sign post before the door, so that the knight's head had hung out upon the road about a week before he himself knew anything of the matter. As soon as Sir Roger was acquainted with it, finding that his servant's indiscretion proceeded wholly from affection and good will, he only told him that he had made him too high a compliment, and when the fellow seemed to think that could hardly be added with a more deprecating look, that it was too great an honour for any man under a duke, but told him at the same time that it might be altered with a very few touches, and that he himself would be in the charge of it. Accordingly, they got a painter by the knight's direction to add a pair of whiskers to the face, and by a little aggravation of the features, to change it into the Saracen's Head. I should not have known this story had not the inn-keeper, upon Sir Roger's sighting, told him in my hearing, that his honour's head was brought back last night with the alteration that he had ordered to be made in it. Upon this my friend with his usual cheerfulness related the particulars above mentioned, and ordered the head to be brought into the room. I could not forbear discovering greater expressions of mirth than ordinary upon the appearance of this man's face, under which, notwithstanding it was made to frown and stare in a most extraordinary manner, I could still discover a distant resemblance of my old friend. Sir Roger upon seeing me laugh, desired me to tell him truly if I thought it possible for people to know him in that disguise. I at first kept my usual silence, but upon the knight's conjuring me to tell him whether it was not still more like himself than a Saracen, I composed my countenance in the best manner I could, and replied, that "Much might be said on both sides."

These several adventures, with the knight's behaviour in them, give me as pleasant a day as ever I met with in any of my travels.

(I continue.)

ANIMALS.—Before rain swallows fly low, dogs grow sleepy and eat grass, water-fowl dive much, fish will not bite, flies are more troublesome, toads crawl about, moles, ants, bees, and many insects, are very busy, birds fly low for insects, swine, sheep, and cattle, are uneasy, and even the human body

## INTEMPERANCE IN POETS.

A GREEK poet has said, "It is pleasant to be mad now and then." Plato assures us, that "No man who was not somewhat beside himself, had ever found his way through the portals of the muses." Aristotle has a similar remark on the intimate relation subsisting between genius and madness, and the same sentiment has been echoed by an English poet of later time. We agree with Messrs. Plato, Aristotle, &c., so far as to admit that poets have often evinced a strange taste for melancholy, misery, and madness, but whether this is a necessary state of mind, or a morbid and sickly impulse, is another question. It is owing to this unfortunate proclivity for madness, we suppose, that so many of the children of song have fallen victims to the intoxicating cup. They wished to become mad, that they might enter "the portals of the muses," and there was certainly no easier or more expeditious way to accomplish their purpose than that which they adopted. They sought glory at the bottle's mouth. It was not so much the pleasure of drinking, as the pleasure of being drunk, which seduced them from the path of sobriety. There is to this day the flavour of wine and gin about their works, and their names have come down to us, embalmed in—fourth-proof spirits.

Byron as a prominent example in point—we all know whence he was wont to draw his inspiration. Burns had a similar taste. Pope remarks, that Parnell "was a great follower of diams, and strangely open and scandalous in his debaucheries." Pope also tells us, that "Cowley's death was occasioned by a mean accident, while his great friend, Dean Pratt, was on a visit with him at Chertsey. They had been together to see a neighbour of Cowley's, who, according to the fashion of the time, made them too welcome. They did not set out on their walk home till it was too late, and had drunk so deep, they lay out in the fields all night. This gave Cowley the fever, and carried him off." Pope himself, according to Dr. King, hastened his end by drinking spirits. Indeed, in the time of Queen Anne, drunkenness was rather popular and fashionable than otherwise. In the manuscripts of the British Museum, there is a letter from the private secretary of the celebrated Duchess of Marlborough, addressed to Pope, which begins thus—"Sir, my lady the Duchess being drunk, was unable to see you when you called yesterday." Shakespeare and Ben Jonson sometimes drank too hard, and, if the vicar of Stratford upon Avon may be credited, the former died of a fever contracted at a "merry meeting" with Jonson and Drayton. Prior was not free from the charge of intemperance. We are told that the temper of Addison was jealous and taciturn until thawed by wine. Dryden, in his youthful days, was conspicuous for sobriety, "but for the last ten years of his life," observes Dennis, "he was much acquainted with Addison, and drank with him even more than he ever did to do probably so far as to hasten his end." Lamb was a victim to the habit, and his left a touching confession of the misery it occasioned him. Colridge was addicted to the free use of opium, and his gifted but erratic son Hartley, was an inveterate drunkard. The last days of Thomas Campbell were embittered by his habits of too great conviviality, to use no harsher name.

This list might be extended to any desired length, and not a few poets of our own land might be added to the number, but we must desist. Of late years, we believe, the custom of seeking inspiration at the bottle has become less common. Either Apollo has so far reformed his "code of practice" as to dispense with the qualification of madness in those who woo the muses, or else our modern poets do not all come fully up to his requirements. It is to be hoped that the day of rum inspiration has for ever passed away. Strong drink has slain its thousands of mighty men, in every department of human pursuits, but the holocaust of genius and talent is not always to continue. Poets are not always to be like "maenads dancing in their chains."—ho

—gaze upon the links that hold them fast  
With eyes of anguish, excrete their lot  
Then shake them in despair and dance again!

The fatal effects of alcoholic liquors upon the intellect will no longer admit of a question. It is now beginning to be understood, that to stimulate the mind by fiery potions, is like cutting down the vine to gather the fruit. Who can calculate the loss which the literature of the world has sustained, from the intemperate habits of so many of its brightest lights? Could the world behold the tribute of human brains which Biechus has exacted as porters to the "heavenly wine," the sight would send a thrill of horror and astonishment to every heart, and lead every one to exclaim, "Why was this waste?"

INTRODUCTION OF CATTLE AND HORSES INTO AMERICA.—When Winslow was sent to England as agent for the colony in 1623, he brought back, on his return, three heifers and a bull. These were the first neat cattle introduced into the colony. About twenty years after this, we find horses are spoken of. The record concerning them was made in 1644, when we learn that a mare, belonging to the estate of Stephen Hopkins, was valued at six pounds sterling. Three years subsequent, a colt was appraised at four pounds sterling. Ten years later, the court passed an act that every freeholder who should own three mares, and who would "keep one horse for military service, should be freed from all military service, training, and watching." During the time that the colony was without horses, it was not an unusual thing for them to ride upon bulls. In 1665, the court presented Philip, the Indian chief, with a horse. "It would gratify curiosity to know in what manner King Philip, and the natives in general, were affected by the first sight of horses and cows. Their minds must have been overwhelmed with astonishment to see men riding on horses and bulls."

Now Ready,

## GRANDFATHER WHITEHEAD'S CATECHISMS.

- I. NATURAL PHILOSOPHY—ELEMENTARY PRINCIPLES.  
 II. NATURAL HISTORY—PRINCIPLES OF CLASSIFICATION  
 III. MECHANICS

Also

## STORY BOOKS FOR YOUNG PEOPLE.

BY AUNT MARY.

- I. THE COMICAL HISTORY AND DRAGICAL END OF REYNARD  
 THE FOX  
 II. THE ADVENTURES OF ROBINSON CRUSOE  
 III. TALES OF FOREIGN COUNTRIES FIRST SERIES

These are published at intervals of One Month, and the Volumes will be  
 ready early in December, 1852. Price—Numbers, 2d, Volumes, 2s 6d

London: HOULSTON &amp; STONEMAN, and all Book-sellers.

FALLACIES.

## No XXI.—"ALL LAWYERS ARE ROGUES."

From the very general reception of the notion conveyed in the old  
 offensive words, it would almost appear that in honest hearts is so much  
 stamped an idea as John Doe or Richard Roe—whose names were entered in  
 the legal proceedings, for ever being summoned to appear and answer  
 ever so gently—more visionary than the belief of Mrs. Hemans of whose  
 lament and umbrellas there were some traces. In ancient times, it seems to  
 have been considered not quite an impossibility that such a being could  
 exist, but so very rare that when found they made a sort of fun and  
 dedicated churches to his memory. But even this suit, when choosing a  
 patron for the lawyers, he himself unfolded, lighted upon the devil. The  
 story is thus told in an old book—"When I lived, it came going with a  
 Roman to see some antiquities, he showed me a chapel dedicated to one  
 St. Ivo—a lawyer of Britannie, who he said, came to Rome to reside the  
 Pope to save the lawyers of Britannie a patron, to which the Pope agreed,  
 that he knew of no saint but what was disposed of to other pious men, at  
 which St. Ivo was very sad and earnestly begged of the Pope to think of  
 a better one. At the last, the Pope proposed to St. Ivo that he should  
 go round the Church of St. John de Latere, blindfolded, and, after he had  
 said to many Ave Marias, that the first saint he layd hold of should be his  
 patron, which the good lawyer willingly undertook, and at the end of his  
 Ave Marias, he stooped at St. Michael's altar, where he layd hold of the  
 devil under St. Michael's feet, and cried out—"This is our saint, let him be  
 our patron." So, being unblinded, and seeing what a patron he had  
 chosen, he went to his lodging so dejected, that, in a few months, he died,  
 and coming to heaven's gates, knocked hard, whereupon St. Peter asked  
 whom it was that knocked so loudly. He replied that he was St. Ivo, the  
 advocate. "Away away," said St. Peter, "there is but one devil due to heaven  
 - there is no room for you lawyers." "O but, said Ivo, I met that  
 honest lawyer who never took fees on both sides, or ever pleaded in a bad  
 cause, or did I ever set my nails by the cause or lived by the sins of other  
 people." "Well then," said St. Peter, "come in." And thus he came  
 down to Rome the honest lawyer was enrolled among the number of the  
 saints. We have not been without something parallel to this in our own  
 country, for Ben Jonson has left us an epitaph on the "pious lawyer  
 Justice Randal" who kept us all in peace, and always was so good as to  
 keep us from going to law—he best man that ever lived. Ben Jonson's  
 epitaph is this—

God's works will run now and then—  
 If a lawyer and a saint in him

Well, we have found that our saying is not quite so true—let us must  
 strike it out of the word "all" and then it will stand—"Lawyers are rogues."  
 This is still rather a comprehensive kind of condemnation and requires a  
 qualification of some kind. If, for instance, we were to say "Some lawyers  
 are rogues" we should probably not be far from the truth, but then, this  
 would be no more than could be said of any profession—whether humanity,  
 physic, or law, or for any trade—rogues are to be found in all. But then,  
 we do not stigmatize a whole profession because "some rogues" are  
 occasionally found in it—except indeed the profession of the law, and here,  
 we believe, we often make the lawyers answer for the sins of the law, and  
 heap upon their heads those enormities which ought to be confined to the  
 system of which they are the ministers. How long, says Mr. Brougham,  
 "for the self-same wickedness, shall the inferior in power and opulence—  
 the inferiors who are but the instruments—be excused, and the superiors,  
 who are the authors of it, adored? Attorney, solicitors—were they the  
 makers of judge-made law? were they the makers of the system of technical  
 procedure? were they the makers of the law of evidence?" No, but

unfortunately for their reputation, they are the parties with whom the public  
 have the most intimate connexion—through whom all payments are made,  
 in whose bill appears all the fees to counsel, all the charges from the officers  
 of the court, all the payments made to auctioneers, officials, and clerks—and  
 he is thus made the party on whom the client looks as the greedy monster  
 that swallows up his substance. Hence, with that large portion of the world  
 who never look beneath the surface, the attorney is made the "scape-goat" for  
 the sins of the law, hence, too, the popularity of our saying, and a belief in  
 the roguery of all lawyers. The extent to which this prejudice is carried is  
 shown in a marked manner by an anecdote told of Foote, the comedian,  
 which would scarcely have been considered witty if it were not for the  
 existing prejudice. "A gentleman in the country, who had just buried a  
 relation, an attorney, complained to Foote of the great expenses of a country  
 funeral. "Do you bury attorneys here?" gravely inquired Foote. "Yes, to  
 be sure—how else?" "Oh, we never do that in London?" "No?" exclaimed  
 the other, much surprised—"why how do you manage then?" "When the  
 patient happens to die, we lay him out in a room, overnight, by himself, lock  
 the door, throw open the sash, and, in the morning, he is entirely off!"  
 "Indeed," said the gentleman, amazed—"and pray what becomes of him?"  
 "Why that we cannot exactly tell, not being acquainted with supernatural  
 causes. All that we know of the matter is, that there is a strong smell of  
 him in the room the next morning."

Of this, however, we are quite certain that the thick-headed obstinacy of  
 their clients is very often more to blame than the roguery of the lawyer. We  
 remember an instance of this where a small farmer was entirely ruined in a  
 dispute about four-pennyworth of apples. In this case the farmer owed his  
 ruin to his own obstinacy. He owed a neighbour fourpence for apples, there  
 was no mistake about it, but he would not pay. All blood arose between them  
 in consequence, and the other party determined to enforce his claim by law.  
 It was in the days of the old County Court practice. A summons was issued,  
 and the farmer brings it to a lawyer, that he might enter an appearance for  
 him. This lawyer finding that he really owed the money, recommended him  
 to pay it at once, and flatly refused to undertake his defence. Not satisfied  
 with this, he sought another lawyer, who gave him the same recommendation,  
 but when he found that the man was determined to find some lawyer to  
 fight for him, and the action for him, he consented to enter in person.  
 The lawyer at the opposite side was unfortunately one of those to whom the  
 world is indebted for the perpetration of our follies—he was by no  
 means a scrupulous man. As soon as he had got the unhappy farmer in  
 court, he determined to make an example of him. The proceedings of the  
 County Courts in those days, though dilatory and expensive in the extreme,  
 were nevertheless not expensive enough to suit the purposes of this lawyer,  
 so he brought the four-penny case moved by *certiorari* to one of the superior  
 courts. The costs were multiplied rapidly, and when execution issued  
 against him he had to pay, together with the fine for his debt, upwards  
 of an hundred pounds for his costs. This ruined him and drove him to  
 emigrate to America. "Ah, sir," said he one day meeting the first lawyer  
 who had sent him, "I wish I had taken your advice. Yes," said the  
 lawyer, "I did say you do. But all I get for giving you honest advice is  
 the consciousness of having done right. It is such men as you who drive  
 my lawyer to act contrary to what they know to be right, for if they  
 advise you in any way and it be contrary to your prejudices and opinions, you  
 immediately employ some one else and set him down as a stupid fellow, and  
 talk of him as such among your companions and intimates, to his serious  
 damage. The honest lawyer gets not even thanks for his honest advice, but  
 frequently loses a profitable client by it. There are many Dantes Dimmonds  
 in this world, who when advised contrary to their prejudices, exclaim  
 "Well, sir, your honesty is so agreeable to me, I will take some other advocate."  
 But it is not lawyers they must be prevailed to give them the luxury of a law-  
 suit at the least possible expense.

Sir Walter Scott, no mean authority on the influences exercised on legal  
 morality by outward circumstances, has put these remarks into the mouth of  
 an able, able, and intellectual lawyer. "It is the pest of our profession that  
 we seldom see the best side of human nature. People come to us with every  
 sort of feeling newly pointed and grinded, they turn down the very caulkings  
 of their animosities and prejudice as smiths do with horses' shoes in a  
 white heat. Many a man has come to my garret vnder, that I have at first  
 longed to put him out at the window, and yet at length have discovered that  
 he was only doing as I might have done in his case, being very angry, and,  
 of course, very unreasonable. I have now satisfied myself that if our pro-  
 fession seems more of human folly and human roguery than others, it is because  
 we witness them in that channel in which they can most freely vent them-  
 selves. In civilized society law is the chimney through which all that smoke  
 which rises itself that used to circulate through the whole house, and put  
 every one's eyes out no longer, therefore, that the vent itself should sometimes  
 get a little scoty." If the external influences of the litigants on legal  
 morality be thus strong, the internal influences of legal education are still  
 stronger. The spirit of advocacy is essentially one-sided, its object is not  
 the attainment of general truth, but the particular advantage of a certain  
 person from constant practice this produces a narrowness of mind and an  
 obliquity of perception, that is unfavourable to the moral being. This again  
 is increased by the continued series of actions in which the law deals, and  
 which not only have a tendency to nupur the reverence for truth, but ulti-  
 mately lead to the practice of mendacity. A famous orator of old says  
*Concessum est oratoribus aliquid mentis in iustis*, which our legal orators  
 translate into "It is allowable to lie a little in stating your case."

"For fees to any form they mould a cause,  
 The worst is in merit, and the best has flaws,  
 The guine is made a criminal to draw."

[illegible]

protection of innocence and maintenance of justice. And it will generally be found that it is the honest indefatigable lawyer who, in the end, is most successful. There is a story told of an attorney, who, on the marriage of his son, gave him a portion of five hundred pounds, and handed over to him a Chancery suit, and some common law actions as the foundation for a fortune. In about two years the son asked his father for some more business. "Why I gave you that capital Chancery suit," replied his father, "and then you have got a great many new clients, what more can you want?" "Yes, sir," replied the son, "but I wound up the Chancery suit, and have given my client great satisfaction, and he is in possession of the estate." "What, you unprovident fool!" rejoined the father, indignantly, "that suit was in my family for twenty-five years and would have continued so much longer if I had kept it. I shall not encourage such a fellow." And so the son, for his honesty, was deprived of all future help from the father. But it turned out in the end, that in a few years the father died in comparative poverty, while the son, who continued to give satisfaction to his clients, who kept no Chancery suits lingering on for twenty five years, retired at length from business to a handsome estate that he had purchased with his honest gains, and lived respected by all for his integrity.

We hope the day is not far distant when we shall see this long standing reproach wiped off from the profession, that in honest lawyer will be no longer looked upon as a "rare bird," and now, when we have black swans in every aviary, and common to our waters, we may find honest lawyers running in Westminster Hall, and penetrating through the fogs of the Court of Chancery, while the dishonest practitioners who disgrace our Courts and discredit the law itself, finding the sources of their income fail, are driven into obscure holes and corners to herd with other impurities that there do congregate.

## THE PLOUGHING OF THE SWORD.

The light of the world  
 Did not light the candle deep  
 And the candle found it out  
 A candle of light was set  
 It is not of the world  
 It is not of the world  
 A candle of light was set  
 It is not of the world

And I'll fly wildly w  
The d fitt r stle  
And I'll with revenge,  
And I'll ne u t f l f  
I'll I'll sc r o c t h l i n d  
D o n n u l t r e  
A l f r i t a w a y t h e b i r d s i p r e s e  
I l t i n w o u l d c o u l t r e

N o l l t e r e j n s e r t l  
W t l l e t h i d u n " i r r a r  
H a r k l t t h e r u l f n a m e d t  
I k e b e s u r g e i t i l r e

With tramp and clang the warrior Ice  
 With the red wine press tread  
 And heavily roll the loaded wine  
 With their burdens of the dead

They re p with n nder us rickle  
Mid the shrill trumpet cry  
Till the mightiest an tle lowest  
In equal ruin lie  
Till the scintillating culture wh t his took  
Where the blood pools blot the green,  
And the gaunt hyena rovs at night  
His dire repast t gleam

They store their mace and  
In history's garner will  
A reeking overflow of crop  
Of crime and woe and pride  
The woe was in the man's tear  
The evil in the tyrant's night  
And the cry of souls too vile to  
As they take their fearful flight

## THE BOY AND THE BRICK

A 101 hearing his father say, "I was a poor rule that would not work both ways, said — If father applies this rule about his work I will test it in my play

So setting up a row of bricks, three or four inches apart, he tripped over the first, which striking the second caused it to fall on the third which overthrew the fourth and so on through the whole course, until all the bricks lay prostrate.

"Well," said the boy, "each brick has knocked down his neighbour which sto d next to him. I only tipped one. Now I will raise one, and see if he will, and his neighbour. I will see if raising one will raise all the rest."

He looked in vain to see them rise

Here, father, said the boy, "is a good rule 't will not work both ways. They knock each other down, but will not raise each other up."

"My son said the father, 'Tricks and mankind are alike, made of clay, active in knocking each other down, but not disposed to help each other up'

I ather, said the boy, "does the first brick represent or resemble the first Adam?"

The father replied in the following *Moral* — "When men fall, they love company, but when they rise, they love to stand alone, like yonder brick, and see others prostrate and below them."

**VISUAL DECEPTION.**—Let a room be only lit by the feeble gleam of a fire, almost extinguished and the eye will see with difficulty the objects in the apartment, from the small degree of light with which they happen to be illuminated. The more exertion is made to ascertain what these subjects are, as by fixing the eye more steadily upon them, the greater will be the difficulty, in accomplishing it. The eye will be painfully agitated, the object will swell and contract, and partly disappear, but will again become visible when the eye has recovered from its delirium.

## ONWARD!

**PLEASURE GROUNDS FOR THE PEOPLE**—There is a bill in the House of Commons to empower the Commissioners of Her Majesty's Works and Public Buildings to enclose and lay out Kennington Common as "pleasure grounds" for the recreation of the public. The Commissioners are to be empowered to purchase the toll house, and they may accept subscriptions for the purpose of laying out and improving the inclosure for the recreation of the public. The common is to revert to the Duchy of Cornwall if not maintained as pleasure grounds for the recreation of the public.

**SLATE SAWING**—An invention has been patented by Mr. Stirell, of the Cwmorthin Quarries, for sawing slate slabs. By this contrivance circular saws, at the time they revolve, are moved forward while the slab is stationary, and is there cut into any required lengths and breadths. There is an easy method of raising or lowering the saws at pleasure, of making any number of cuts at one and the same time, &c. According to the *Ninth Wales Chronicle*, recent experiments of a successful nature have been made with this machine.

**ROYAL PATRONAGE OF SCIENCE**—Letters from Copenhagen furnish an example of the favour which learned pursuits and learned societies find in the eyes of the Danish great. At the last meeting of the Society of Northern Antiquities the king not only presided, but exhibited a collection of bronzes, and delivered a discourse on the subject of them. Only a few days ago, as will be observed in the newspapers, our own Prince Consort presided at a lecture on cotton, delivered by a Manchester manufacturer at the Society of Arts. These examples serve to suggest that literature and the arts are about to receive a larger social recognition than they have hitherto attained. Happily, there are many other signs to the same effect amongst ourselves.

**THE WORKS ENGAGED IN BY THE VICEROY OF EGYPT**—The pious Viceroy has spent £270,000 in making a carriage road across the Desert to Suéz, and large sums in improving the Nile navigation. His new undertaking, the construction of a railroad from Alexandria to Cairo will it is said, probably cost a million sterling. The works are progressing rapidly; nearly fourteen miles of the embankments have been completed, and about 10,000 men are at present employed along the line. It is probable the Pacha will insist on a distribution of the labour along the entire distance, as he is desirous Cairo should equally share with Alexandria the advantage of early communication with the interior. Through the Delta to Benneh and thence to Cairo, a distance of about seventy miles the labour required in formation will be comparatively light, owing to the existence of well formed macadamized road for most of the way, and a great portion of which, with slight alterations, will serve to lay the "permanent way" on. The works are being pressed on with great vigour, and 3,000 men drafted from the ships of war in harbour (which have been laid up) have been sent to aid in and to hasten their completion.

**GOVERNMENT SCHOOLS OF DESIGN**—Along with estimates of the year there is laid before Parliament a letter dated March 10, addressed to Mr. Henley, the President of the Board of Trade, by the superintendents of the department of practical art, Mr. Cole and Mr. Redgrave. The letter refers to the principal objects pointed out in the minutes of the Board of Trade of the 10th February, as constituting the business of the new department, viz. 1. The promotion of elementary instruction in drawing and modelling, 2. Special instruction in the knowledge and practice of ornamental art, 3. The practical application of such knowledge to improvement of manufactures. On each of these heads the superintendents offer various suggestions, and make their remarks on the best methods of carrying out the objects of the Board of Trade. A tabular statement is appended, showing the present condition of the various Government Schools of Design throughout the country, with an account of the number of pupils, the fees, expenses, instruction, and other statistical details. The letter is ably drawn up, and the Committee of Council, having expressed a general agreement in the views contained in it, have ordered it to be communicated to the managing committees of local technical schools for their guidance.

**ENCOURAGEMENT TO LABOUR**—The annual circular of the list of prizes proposed for the "Hitcham House and Mechanics' Horticultural Society" having been sent to us, we take the opportunity of calling attention to the excellent plans adopted for the improvement of the rural population of that district by the Rev. Professor Henslow and his coadjutors. Professor Henslow offers a spade, digging spade, fork, scythe, rake, and hoe, respectively, to the tenants of the six best cultivated of the cottage allotments in his parish. Both neatness in cultivation and variety in cropping will be taken into account for the prizes, the award of which is committed to two gentlemen from Stowmarket who will occasionally go over to examine the allotments. A great variety of prizes, of amounts ranging from half a crown to sixpence, are offered for the best specimens of particular flowers, vegetables, and fruits. For honey, in the hive or other vessel, there is a prize, and "no prize will be awarded for any obtained by burning the bees." Rural botany is not forgotten amidst the more practical competitions. Professor Henslow offers three prizes to the children of the parish school "who shall name most flowers, and answer best some questions about them in the wild flower nosegays." How much good might be done in many districts by country clergymen, if the intelligent desire were more frequent to promote the temporal as well as spiritual welfare of those under their charge. —*Literary Gazette*

## STATISTICS

**IMPORTATION OF EGGS**—It appears, from the annual returns relating to trade and navigation, that in the year ending the 31st of January last the number of eggs imported was 115,562,236, being an increase on the preceding year, when the number was 105,689,060. In the year ending the 31st of January, 1851, the duty was £38,577, and in the year ending the 31st of January last, £42,119.

**THEATRES IN PARIS**—It appears from a recent return that Paris, in 1680, only possessed one theatre, and in 1690, three, under Louis XV. it had only six and under Louis XVI. ten, notwithstanding the domestic disturbances or foreign wars of the Republic and the Consulate, the number rose to 11. But in 1807, a decree of Napoleon reduced it to 8. From 1810 to 1820 the number never exceeded 14. In 1832 it became 21, and in 1838, 42, but in 1840 it fell to 23. In 1849 it rose to 25, and in the next year fell to 23, at which it now remains.

**BRITISH AND FOREIGN HOSPITALS**—It is not perhaps, generally known that Paris, with a population of 1,000,000, has upwards of 10,000 beds in its hospitals, whereas London, with a population of 2,000,000 and an annual mortality of 476,000, has only 5,000 beds. St. Peterburg, with a population of 476,000, and an annual mortality of 10,000 to 11,000, has 6,000 beds. Vienna, with a population of about 400,000 and an annual mortality of 16,000 to 17,000, has 3,700 beds. Berlin with a population of 365,000 and an annual mortality of 8,000 to 9,000, has 3,000 beds. Warsaw with a population of 150,000, has 4,000 beds, and Manchester with a population of 360,000, has 193 beds. The above statement does not include the beds for the sick in the poor houses of the continental towns, or in the workhouses of London.

**STATISTICS OF LONDON**—If the streets of the metropolis were put together they would extend 3,000 miles in length. The main thoroughfares are travelled by 1,000 omnibuses and 3,000 cabs, employing 40,000 horses. In 1849 the metropolis had consumed 1,600,000 quarters of wheat, 240,000 bullock, 1,700,000 sheep, 28,000 calves, and 5,000 pigs. On market alone supplied £1,024,400 worth of game. London, in the same year ate 3,000,000 salmon, which were washed down by 43,200,000 gallons of porter and ale, 2,000,000 gallons of pints and 66,000 pipes of wine. 13,000 cows are yearly required for milk and reckoning two gallons a day for every cow we have left 7,000 gallons of London peculiar consumed by the London inhabitants. 60,000 gas lights fringe the streets. London's retail or wholesale supply is the enormous quantity of 14,383,328 gallons per day. It is said that the employed in lamping annually to London 3,000,000 tons of coal, there are no fewer than 23,517 tailors, 28,670 boot makers, 10,000 milliners and dressmakers, and 14,701 domestic servants.

**THE CORPORATION OF LONDON**—Some returns respecting the City of London, obtained by Sir Benjamin Hall, have been printed. In the 26 wards of the City of London there are 26 Aldermen and 206 common councilmen. On the register of payment of electors voted in the City in the year of 1849 there were 20,422 persons, 12,240 householders and 7,312 lodgers, whereas in the year 1844 the number was 18,993 of which 11,214 were householders and 7,779 were lodgers. The number of persons on the register of municipal electors for 1849 is as follows in the following wards—Aldersgate 173, Aldgate 222, Bassishaw, 86, Billingsgate 163, Bishopsgate, 174, Bread Street 120, Bridge, 134, Broad Street, 361, Candlewick 11, Castle Baynard 202, Cheap, 163, Coleman Street, 226, Cordwainer 111, Cornhill 128, Cripplegate within, 256, Dowgate 90, 1 ringed in within, 476, Farringdon within, 783, Ludlow, 297, Lincolns, 82, Portico, 263, Queenhithe 72, Rower, 270, Vintry, 85, and Walbrook, 88.

**FRENCH LITERARY STATISTICS**—The publication of the last number completes the volume of the *Journal de l'Éducation* for 1851, shows the literary statistics of France for the year which has just closed. They do not differ much from those of 1850. But the difference, however small, is on the right side. The total number of books, new papers, pamphlets, and works of all kinds published during the year is 72,200—showing an increase of 142 on the preceding twelvemonth. 6,817 works have been published in French, in which are included 47 written in the different provincial dialects. Among the works published in foreign languages we notice 65 German, 68 English, 93 Spanish, and 160 Italian publications. Of these, 1,219 were printed in Paris alone, and 3,087 only in the departments, Algeria furnishing 44 for her share. Reprints and new editions figure in the list for 1,677, leaving 5,673 works which may be considered new. 182 geographical maps and plans, 3,961 engravings and lithographs, 866 pieces of vocal music, and 1,509 works of instrumental music, complete the intellectual and artistic harvest of France for 1851. The labours of French journalism are well looking back to. Of the 166 newspapers which enlivened the past year, and many of which were its offspring, nearly three fourths have ceased to exist. Besides the *Tribune Chronométrique*, are *Le Moniteur des Écrivains*, the *Journal des Fleurs* and the *Journal de Conchyliologie*, the *Almanac*, the *Revue Gastronomique* and *L'Art de la Gastronomie*, the *Journal des Fleurs*, and lastly, the *Journal des Solutions Grammaticales*, the titles of which sufficiently indicate the particular classes of readers to which they were addressed. The dramatic world of France—fortunately for the dramatic world in all other countries—has not been inactive. The year 1851 shows a brilliant array of 263 works written for the French stage—35 dramas, 14 comedies, 12 operas or lyrical dramas, 5 ballets, and nearly 200 vaudevilles make up the number.

## MINIMAL RECURSIONS

$I$  On the left side of  $P$ , without the

AFTER my pison has thro n two l up n cll tcl him doubl th number f points on on c f th n dlt it th n ltr him multiply this sum by n and tll th nml f points n th cth lce to t. This being done d tcl him to tll you th nml n ltr n ltr th n out on c 25 th nml nml will be a nml c n ltr n f gaur - the first of whi h to the left i the number of points i t h c, n the second figur to the right, th number n th cth

Suppose, for example, that the number of points of the first dice which may appear is 2 and that of the other, that is to say the total of the points of the two, there be 11 and that sum which is 9 be multiplied by 5 the product will be 45 to which if we add 5 the number of points on the other dice it will make 15. Then if 2 be taken out of this number, the remainder is 13 the figure of which 2 is the number of points of the first dice and the second figure 3 is the number of the other.

**NOUN**

A party seated round a table are each to be supplied with various strips of paper, and small square pieces. On the long pieces are to be written single questions—on the square, nouns. The two sets are to be severally collected, and mixed in two trays, then each draw a question and a noun. They are to answer the question in rhyme, introducing the noun. I can remember one or two specimens from among a party of school girls. One drew the question—'How many children had David?' and the noun 'talent.' Another—"Where have you been to day" and the noun 'wood.' The answers are veritable copies—of course not to be criticised—

The number of David's children I confess,  
I do not know—nor can I even guess  
But had I half the *talent* David had,  
My sorry rhyme would not have been so  
bad

To day I've been taking a very long walk  
With a friend in Carendon wood  
Who, all the way did nothing but talk—  
Like a volatile nun in a hood

## HOLLOWAY'S OINTMENT AND

**PILLS effectual Remedies for Ulcerated Sore Legs**  
—Extract of a letter from J. M'Kenzie, of Industry,  
Montego Bay, Jamaica, dated Sept 25, 1851, to Mr  
McNish, agent for that district — "Dear Sir,—You may  
no doubt be surprised at the numerous cures I make up on  
you for Holloway's Pills and Ointment. It is not to cure  
any 'tis of my own that I use them, but to alleviate the  
sufferings of the poor about me. I have by their means  
just cured a dreadfully ulcerated leg to be cured and I  
have another case in hand which has been bad for 24  
years, and from former experience I expect it will be  
healed also. Sold by all Druggists, and at Professor  
Holloway's, 211, Strand

**GLENFIELD PATENT STARCH.**—

NOW USED IN THE ROYAL TAUNDRY —  
 The Ladies are respectfully requested to make a trial  
 of the GINIFINE PATENT DOUBLE FINISHED  
 POWDER STARCH, which, for Domestic Use, new  
 strands PATENTIZED Sells by nearly all the Oil and  
 'Colourmen and Chandlers in London, and throughout the  
 Kingdom. Agents Wanted apply to Mr H. Wotherspoon,  
 40, Dunlop Street Glasgow.  
 London Depot—Wotherspoon, Mackay & Co., 40, King  
 William Street, City.

### Editor's Note-Book.

**DOMESTIC HINTS No 2**—(Old soft towels, or pieces of old sheets or table cloths make excellent iron wipers. To bleach a faded dress wash it well in hot soda, and boil it until the colour seems to be gone then wash and rinse, and dry it in the sun, it will not quite white repeat the boiling. Flannel should always be washed with white soap and in warm but not boiling water. A hat should be brushed every day with a hat brush and twice a day in dusty weather. Rings that have tones in them should always be taken off the finger when the hands are washed, else they become discoloured. Cold green tea, very strong, and sweetened with sugar will, when not about in saucers, attract flies and delect them. If a clothes closet become infested with moths, let it be well rubbed with a strong decoction of tincture and repeatedly sprinkled with spirits of camphor. The pain caused by the sting of a nettle may be relieved by rubbing the part with rosemary tincture, or a few leaves. The usual remedies for persons overcome with the fumes of charcoal in a close apartment are to throw a little water on the head and to bleed immediately. Two apples in a third or half hour to the soles of the feet. An ever dirty bath and a grate always choked with cinders and ashes are infallible evidences of bad house keeping. To extinguish a fire in the chimney, besides any water at hand, throw on it salt, or a half pint of flour of sulphur as soon as you can obtain it. Keep all the doors and windows tightly shut and lock before the fire places a blanket or some woollen article to exclude the air. Reading in bed at night should be avoided, as, besides the danger of an accident, it never fails to injure the eyes. In escaping from a room on fire, creep or crawl along with your face close to the ground. Children should be early taught how to press out a spark when it happens to reach any part of their dress and also that turning into the air will cause it to blaze immediately. Lime water beaten up with sweet oil is an excellent ointment for burns. All paper screens should be coated with transparent varnish otherwise they will soon become soiled and discoloured. The best lamp oil is that which is clear and nearly colourless, like water. Oil glasses may be removed from a hearth by covering it immediately with thick hot ashes, or with burning coals. Candles improve by keeping a few months. If wax candles become discoloured or soiled they may be restored by rubbing them over with a clean flannel slightly dipped in spirits of wine. In lighting candles always hold the match to the side of the wick and not over the top. In closing a door for a room, avoid that which has a variety of colours or a large showy figure, as it furnishes an opportunity for advantage with such large figured patterns in a small room look still smaller. In buying a carpet, as in everything else, those of best quality are cheapest in the end. The most elegant carpets are those where the pattern is formed by one colour only, but arranged in every variety of shade. A large brick, covered with a piece of carpeting is a good contrivance for placing against the door to keep it open when necessary. A stair-carpet should never be swept down with a long broom, but always with a short handled brush, and a dust-pan held closely under each step of the stairs. An oil-cloth should never be scrubbed with a brush, but after being first swept, it should be cleaned by washing with a large soft cloth and lukewarm cold water. On no account use soap or hot water as they will bring off the paint. Straw matting may be cleaned with a large coarse cloth dipped in salt and water and then wiped dry the salt prevents the matting from turning yellow. If an oil painting is hung over the iron nail, the canvas is liable to wrinkle with the heat. Ottomans and sofas, whether covered with cloth, damask, or chintz, will look much the better for being cleaned occasionally with bran and flannel. Furniture made in the winter and brought from a cold warehouse into a warm apartment is very liable to crack. To keep rose wood furniture in good order, it should be rubbed gently every day with a clean soft cloth. Dining tables may be polished by rubbing them for some time with a soft cloth and a little cold-drawn linseed oil. Iron-stains may be removed from marble by wetting the spots with oil of vitriol, or with lemon-juice, or with oxalic acid diluted in spirits of wine, and after a quarter of an hour rubbing them dry with a soft linen cloth. Both silver and plated ware should be washed with a sponge and warm soap

as is every day after using and wiped dry with a clean soft towel. The safest, and in many respects the most pleasant tea pots, are those of china. Wedgwood ware is very apt after a time to acquire a disagreeable taste. Japanned urns and vases should be cleaned with a sponge and cold water, finishing with a soft dry cloth.

**DIET L. H.**—What is the diet most recommended for a person in tolerable good health? (the other questions of our correspondent must wait their turn to be answered)—The model diet for persons in health may be found in that used by persons training for contests of muscular strength and endurance. It consists of the lean parts of beef or mutton roasted or boiled, so as to preserve all the animal juice, farinaceous vegetables potatoes baked or boiled so as to be easily tread and soft comparatively speaking. The meals are taken at stated times and great care is used that too much is not eaten.

**LEARNING LANGUAGES E. T.**—Our correspondent wishes to know the easiest method of acquiring a knowledge of languages. As we have frequent communications of a similar nature from persons who evidently believe that it is some magical road to learning, we wish to undeceive them on this point. It is only by persevering industry and by sustaining the mind resolutely to its purpose we can hope to overcome the difficulties that must be expected and, without this determination the acquirement of a language, in any number of years is impossible. Instead of endeavouring to soften the labour of learning we should rather grapple with its most formidable obstacles. This may be easily accomplished by decision and energy. The late Sir F. Buxton after relating his various efforts in self training says—I had been a boy fond of pleasure and idleness, reading only books of unprofitable entertainment. I became suddenly a youth of steady habits of application and irresistible resolution. I soon gained the ground I had lost and found those things which were difficult and almost impossible to my idleness easy enough to my industry. And much of my happiness and all my prosperity in life have resulted from the change I made at that age. In the same manner, we would recommend all our young friends to train themselves to habits of serious study by will. As Landor says "We enjoy by anticipation somewhat like the power of sailing on a wish, from world to world. Steady application is our ruling principle; and instead of losing time in seeking an evasion from toil we should at once resolutely

TAKE ME BUT BY THE HAND

**SPELLING OF SHAKESPEARE'S NAME** (W. W.)—We think that Mr. Charles Knight has satisfactorily settled this question. In the volume of Montaigne's *Essays* by John Florio, in the British Museum there is an undoubted signature of the poet, which is spelt thus—*Willelm Shakespeare*. Sir Frederick Madden has also shown that in the five other acknowledged genuine purchases in existence the great dramatist always wrote his name in this manner. Such autographs are, of course, sufficient authority to decide the matter.

**UTILITY OF SINGING** W. B.—It is ascertained and we believe with some truth that singing is a corrective of the too common tendency to pulmonary complaints. Dr. Rush, an eminent physician, observes on this subject. The Germans are seldom afflicted with consumption and thus, I believe, is in part occasioned by the strength which their lungs acquire by exercising them in vocal music, for this constitutes an essential branch of their education. The music master of an academy has furnished me with a remark still more in favour of this opinion. He informed me that he had known several instances of persons who were strongly disposed to consumption, who were restored to health by the exercise of their lungs in singing.

**TO MAKE CAOUTCHOUC VARNISH** H. E.—Melt the caoutchouc in a close vessel, as nearly the temperature to melt lead, and stir it. Oil of turpentine should be carefully added to it, which will render it easily applicable, and leaves the substance, when dry, a firm varnish impervious to moisture. It is an

excellent varnish for preserving iron and steel from rust and it may be removed by a soft brush dipped in oil of turpentine. A solution of caoutchouc in five times its weight of oil of turpentine, and this solution mixed with eight times its weight of drying linseed oil, by boiling forms the varnish usually applied to air balloons.

**COMMUNICATIONS RECEIVED**—If STANLEY (pines were brought from France in 1543, and were first used in England by Catherine Howard queen of Henry the Eighth)—G. (thanks)—GLADSTONE (the Scalds were poets and priests of Ireland, whose rhapsodies form the Edda and other poems)—N. PARKER (the words of our National Anthem are said to be of French origin)—G. JARVIS (the three prime materials for making the works are nitre, sulphur and charcoal along with filings of iron, steel copper zinc, resin, &c.)—J. H. T. make peppermint lozenges—in mucilage of gunderago flavoured with oil of peppermint, about 2 drachms mix 2 pounds of sugar, and 2 ounces of starch—1 (the quickest and most certain mode of raising the mulberry tree, is from cutting, of the old branches. Take a branch in the month of March eight or nine feet in length and plant it in a good soil the most approved cultivation however, is from seed)—J. O. U. (soap and water will clean silver—polish with wash leather)—J. PARKER (hology &c.) after a love of water is declared to enter and the construction of language—11 (the quiet use of tobacco debilitates the system)—W. J. H. (HARRIS (many thanks for the letter)—J. GRASS (prospectives of the *House of Commons* may be had from the publisher 69 Fleet Street)—G. J. H. (will receive attention)—M. E. THOMAS (thanks)—H. S. N. (COAK (we have not space for the paper sent)—PART I. 1. of the *House of Commons* are now ready)—A. DINTON (Adelphe is a Greek word meaning a brother)—11 Olympic Games were celebrated every four years in the city of Olympia in Peloponnesus)—FRANCIS (will receive attention)—MURRAY (for particulars respecting advertisements in the *House of Commons* apply to Messrs. Maxwell & Co., No. 11, Lane Lombard Street)—W. R. C. (postcard contributions are so numerous that we cannot publish the least sent)—J. S. 4 (frequently wash the eyes with cold water)—F. A. AVOIR (we think our correspondent is mistaken in his opinion)—K. A. H. (we have no space for the article in question)—B. (Calotype is the name given by Mr. Talbot to his improved photographic method)—J. AMPUS (Fau de cloque is nothing more than aromatized alcohol)—B. BART (the circumference of Mr. Wylde's Model of the Earth in Leicester Square is 188 feet and the extent of surface 10 000 feet)—M. R. (the British Museum contains a copy of the original work of Copernicus *On the Revolution of the Heavenly Bodies*—the mean heat of the human body is 98°, and of the skin 90°)—I. T. (the Jew great coat was 22 inches and the less 18 inches)—J. HUNT (digestion is a process which is not effected in the same period of time in different individuals, in some it is slow in others rapid. In the former, a longer interval between breakfast and dinner is necessary than in the latter)—M. A. (China cement is made by beating a quantity of quicklime into a very fine powder, and through a sieve and having smeared the parts to be joined with white of egg, dust the powder over this and into the edges)—GAMMA (methelgen is probably derived from the Welch *Wydolun* a medicinal drink, and was once the common beverage of a great part of this country)—S. W. (the element can be completely decomposed by heat)—S. W. (the first was brought to England from Italy in 1511)—11 (stoves were introduced from America about 1750)—G. FAYLOR (St James's Palace was formerly an hospital and was made a palace by Henry the Eighth in 1531)—SARAH I. (much heat is not necessary for the flower to be the more the vegetable is exposed)—H. 9 (thanks)—W. R. R. (linch pin may be made with 1 quart of water & 1 pint of oil of seed lac 1 ounce of shell lac 1 ounce of gum sandarach 1 ounce of pine oil 1 ounce of oil of turpentine 1 pound the gums at 1 quart the whole into a stone bottle cork it securely and place it in hot water)—I. C. (the coffee tree is a native of Arabia and other countries of the East)—G. H. (sun-ner is the last season to commence with the shower bath)

## CAROLINE AND CATHARINA

## CHALLENGE

Write 1 do 1 the charac — II 2 I

A very large number of those who engage in retail trade find employment in the retail trade. It is a fact that a small fortune can be made in the retail trade. It is only when one has been employed in the retail trade for a long time that one can appreciate the value of the retail trade. When a man has been employed in the retail trade for a long time, he will only use his own hands. But to go through his own hands is to spend the majority of one's years in affliction and then to be called upon in the decline of life to endure poverty is a terrible thing. It is a misery for the reflection that he will only be what he is, and he will find it little better for him to live in poverty.

A broken spirited old man is a silent tale a sight as the hide a d one  
 f is a pleasant one In time there is no con gnation for him tear e  
 the grief as yet before him there is no joy for h e Prince de Leon

I have tried all my life before him there is no room for me. Once at Leon happily failed in his search for the fountain of youth and I no subsequent discoverer has ever succeeded in believing in its existence. The true secret of rejuvenescence is found in the well fed slum of hope; but when the best of one's life have fled and in the past he can find nothing but memories to mock the present, the fountain is too truly a fable to him.

William Vernon was one of these fortunate sons of fortune. He had entered upon mercantile business early in life, had learned little but the routine of buying and selling, had amassed a considerable fortune, and began to think of retiring. But habits had grown upon him for forty years and he was no

He retired. But his old habits  
 Another year found him again in  
 ut with his old partner, who claimed  
 the he transferred the good will of  
 the jury thought so too and mulcted  
 At a time peculiarly inconvenient  
 the judgment, and, in consideration  
 double the amount of the verdict  
 and while he was yet mourning  
 of his speculations stripped him of half  
 his fortune. He was still a wealthy man but he feared himself poor if  
 he did not as much as before. He deemed he had nothing. He risked his  
 remaining property wildly and recklessly resolved to recover what he had lost,  
 or lose that too. The ambition to realise his threat 'to buy and sell John  
 Falbot before he died' goaded him on continually, and at the end of seven  
 years from the dissolution of the firm of Falbot & Vernon, he found  
 him self protested—ruined—ruined

The nineteenth his son had been rapidly growing up to man's estate. The father's deficiencies in education had led him to take great pains with the education of his son. True he could do little but furnish the money; but money will buy anything even opportunities for learning, and unfortunately nothing else can. Quick parts and a facile temper, enabled him to second, by rapid advancement, the good opinion his teachers formed of him from his handsome face and pleasant manner. He became a fine scholar,

SIR HUMPHRY DAVY, BART.

SIR HUMPHRY DAVY was born December 17th, 1778, at Penzance, in Cornwall. His family was ancient, and close the middle class, his father possessed a small paternal estate opposite St Michael's Mount, called *Farial*, on which he died in 1795, after having injured his fortune by expending considerable sums in attempting agricultural improvements. Sir Humphry received the first rudiments of his education at the Grammar-schools of Penzance and Turo at the former place, he resided with Mr Tomkin, surgeon, a benevolent and intelligent man, who treated him with a degree of kindness little less than paternal. His genius was originally inclined to poetry, and there are many raptures of Penzance who remember his poems and verses, written at the early age of nine years. He cultivated this bias till his fifteenth year, when he became the pupil of Dr F Borlase, of Penzance. As a proof of his uncommon mind, at this early age, it is worthy of mention that Davy laid down for himself a plan of education which embraced the circle of the sciences. By his eighteenth year he had acquired the rudiments of botany, anatomy, and physiology, the simpler mathematics metaphysics, natural philosophy, and chemistry. But chemistry soon arrested his whole attention. Having made some experiments on the air disengaged by seaweeds from the water of the ocean, which convinced him that these vegetables performed the same part in purifying the air dissolved in water, which land-vegetables act in the atmosphere he communicated them to Dr Beddoes who had at that time circulated proposals for publishing a journal of philosophical contributions from the west of England. This produced a correspondence, in which the Doctor proposed that Davy, who was at this time only nineteen years of age, should resign his plan of going to Edinburgh, and take a part in experiments which were then about to be instituted at Bristol, for investigating the medical powers of fictitious airs to this proposal Davy consented, on condition that he should have the uncontrolled superintendence of the experiments. About this time he became acquainted with Davy's Gilbert, Esq, M.P., a gentleman of liberal scientific attainments, with whom he formed a friendship, and his judicious advice may be attributed Davy's adoption of, and perseverance in, the study of chemistry. With Dr Beddoes he resided for a considerable time, and was constantly occupied in new chemical investigations. Here he discovered the respirability of nitrous oxide, and made a number of laborious experiments on gaseous bodies, which he afterwards published in *Researches, Chemical and Philosophical* a work that was universally well received by the chemical world, and created a high reputation for its author, at that time only twenty-one years of age. This led to his introduction to Count Rumford, and to his being elected Professor of Chemistry to the Royal Institution in Albemarle street. On obtaining this appointment he gave up all his views of the medical profession, and devoted himself entirely to chemistry.

Davy's first experiments as Professor of Chemistry in the Royal Institution, were made on the substance employed in the process of tanning with others to which similar properties were ascribed, in consequence of the discovery made by M Seguer, of Paris, of the peculiar vegetable matter, now called *tannin*. He was during the same period frequently occupied in experiments on galvanism.

To the agriculturist, chemistry is of the first consideration. The dependence of agriculture upon chemical causes had been previously noticed, but it was first completely demonstrated in a course of lectures before the Board of Agriculture, which Davy commenced in the year 1802, and continued for ten years. This series of lectures contained much

popular and practical information, and belongs to the most useful of Davy's scientific labours, for the application of chemistry to agriculture is one of its most important results, and so rapid were the discoveries of the author, that in preparing these discourses for publication, a few years afterwards, he was under the necessity of making several alterations, to adapt them to the unproved state of chemical knowledge, which his own labours had, in a short time, produced.

In 1803, he was chosen a fellow of the Royal Society, and in 1805, a member of the Royal Irish Academy. He now enjoyed the friendship of most of the distinguished literary men and philosophers of the metropolis and other eminent men. At the same time he corresponded with the principal chemists of every part of Europe. In 1806, he was appointed to deliver, before the Royal Society, the Bakerian lecture, in which he displayed some very interesting new agencies of electricity, by means of the celebrated galvanic apparatus. Soon afterwards, he made one of the most brilliant discoveries of modern times, in the decomposition of two fixed alkalis which, in direct refutation of the hypothesis previously adopted, were found to consist of a peculiar metallic base united with a large quantity of oxygen. These alkalis were potash and soda, and the metals thus discovered were called *potassium* and *sodium*. Davy was equally successful in the application of galvanism to the decomposition of the earths. About this time he became Secretary of the Royal Society. In 1808, Davy received a prize from the French Institute. During the greater part of 1810, he was employed in the combinations of oxygenated gas and oxygen, and towards the close of the same year, he delivered a course of lectures before the Dublin Society, and received from Trinity College, Dublin the honorary degree of D.D.

In the year 1812, Davy married the widow of Shuckburgh Ashby Apreece, Esq. A few days previously, he received the honour of knighthood from George the Fourth, then Prince Regent, being the first person on whom he conferred that dignity.

We now arrive at a very important result of Sir Humphry Davy's labours, namely, the invention of the "Safety-lamp" for coal-mines, which has been the means of preserving many valuable lives, and preventing horrible mutilations, more terrible than death, and were this Sir Humphry Davy's only invention, it would secure him an immortality in the annals of civilisation and science. The coal-owners of the Lyne and Wear conceived their sense of the benefits resulting from this invention, by presenting Sir Humphry with a handsome service of plate, worth nearly two thousand pounds, at a public dinner at Newcastle, October 11th, 1817.

In 1813, Sir Humphry was elected a corresponding member of the Institute of France, and vice-president of the Royal Institution. In 1817, one of the eight associates of the Royal Academy in 1819, created a baronet, and he afterwards proceeded on a lengthened tour through Italy.

We could occupy many pages with the interesting details of Sir Humphry Davy's travels and his recent visits of Europe for scientific purposes particularly to investigate the causes of volcanic phenomena, to instruct the miners of the coal districts in the application of his safety lamp and to examine the state of the Herulanum manuscripts and to illustrate the remains of the chemical arts of the ancients. He analyzed the colours used in painting by the ancient Greek and Roman artists. His experiments were chiefly made on the paintings in the baths of Titus, the ruins called the baths of Livia, in the remains of other palaces and baths of ancient Rome, and in the ruins of Pompeii. By the kindness of his friend Canova, who was charged with the care of the works connected with ancient art in Rome he was enabled to set to work with his own hands, specimens of the different pigments that had been found in various excavations which have been lately made beneath the ruins of the palace of Titus, and to compare them with the colours fixed on the walls, or detached in fragments of stucco. The results of all the researches are published in the *Transactions of the Royal Society* for 1815, and are extremely interesting. The concluding observations, in which he impresses on artists the superior importance of permanency to brilliancy in the colours used in painting, are peculiarly worth the attention of artists. On the examination of the Herulanum manuscripts, at Naples, in 1818-9, he was of opinion they had not been acted upon by fire so as to be completely carbonized, but that their leaves were cemented together by a substance formed during the fermentation and chemical change of ages. He invented a composition for the solution of this substance, but he could not discover more than 100 out of 1,265 manuscripts, which presented any probability of success.

Sir Humphry returned to England in 1820, and in the same year he was elected president of the Royal Society, which he retained till the year 1827, when, in consequence of protracted ill health, in great measure brought on by injuries occasioned to his constitution by scientific experiments, he was induced, by medical advice, to retire to the Continent, and resided principally at Rome, where he had an alarming attack of a paralytic nature, but from which he was apparently, though slowly, recovering. Thence he travelled by easy stages to Geneva, without feeling any particular inconvenience, and without any circumstances which denoted the approach of

\* The great objection that has been found of late against the use of Davy's Safety-lamp was the insufficient light it afforded to the miners. This has been remedied by M. Elmin, of Belgium who has constructed a lamp perfectly safe, and giving a light equal to six Davy lamps. It consists of a lamp surrounded by a strong short glass cylinder, surrounded by an iron or brass one, capped with coarse wire gauze, the air for supporting combustion being admitted through fine wire gauze at the bottom, and made to impinge directly upon the flame. This air being only such as is necessary to support the flame, and the combustion being perfect the portion of the cylinder above the flame must always be filled with the products of combustion and never with an explosive atmosphere. The weight of the lamp is by no means objectionable. It is inexpensive, and the power of perceiving the presence of fire-damp is fully equal to the original Davy.

expression which was not usual to it; fierce passions seemed to be arousing. He spoke to Theodore in a strain of great earnestness, and was about to address the associate counsel, when the judge, leaning forward, asked the witness—

"Can you identify the person who employed you to make that key?"

"I can, sir."

"Have you seen him since you have been within the court?"

"I have, sir."

"Is that the man who employed you to make this key?" pointing to the prisoner.

The stillness of death reigned throughout the vast room, as the witness, raising his hand and pointing it, spoke in a distinct and deliberate manner—

"Yes, sir, that is the man; I can swear to him."

An hysterical scream broke the solemn stillness, and Sarah was immediately carried by her friends, senseless, from the room.

"May it please the court," said Theodore, rising and speaking with great energy, "there is some great mistake; the witness did not designate my client; he neither pointed to him nor looked at him."

A hum of voices now buzzed through the court, and for a moment the disturbance, caused by the removal of Sarah and the exit of her friends, made it impossible for the voice of the counsel to be heard.

"Silence, silence in the court!" and the crier struck his staff upon the floor with some violence.

"If your lordship pleases, the witness did not point out my client as one whom he knew."

"Let the witness confront the prisoner."

"Do you recognise that person as the one who employed you to make the key?"

Again every breath was hushed. Edwards raised his keen bright eyes, and fixed it firmly upon the witness. A moment the old man eyed the youth, and then, looking intently around upon the seat where the witnesses had been, appeared much confused.

"I saw him distinctly, your lordship, but a moment ago; this young man I have never seen before."

The audience could not restrain their feelings had become intensely excited, and a murmur of decided approbation filled the room. The judge called, in his clear, calm voice—

"Let the court be cleared, officers; unless silence is charged."

"Silence in the court!" and again the officers were busy with their staves amid the crowd.

The senior counsel for Edwards now arose.

"May it please the court, I rise to move an adjournment of this cause; circumstances have transpired since the commencement of this trial, which throw new light upon this mysterious affair; if time be allowed, my client can now, without doubt, produce testimony which will remove every shadow of suspicion from him. I, therefore, pray the court to grant us an adjournment but for another day."

For a few moments, the counsel for the Crown was in close converse with Mr. Cateham, who had retired with the witnesses when Sarah was carried from the room. He had not, from the first, appeared desirous of going further than his official duty required, and he now rose to address the court, he was evidently as much gratified as though he had been acting for the prisoner.

"May it please your lordships, I have just learned that a full confession has been made by an individual who has left the court, which entirely clears the young man who has been before us, charged with the commission of his crime. I, therefore, relinquish the cause, and pray that a *nolle prosequi* be entered."

It would be in vain to attempt a description of the scene which followed.

The court immediately arose, and all within the bar was in confusion.

The friends of James at once surrounded him, each anxious to testify the warmth of their congratulations. Mr. Wharton seized his hand, while the cars rolled down his venerable face.

"God be praised! God be praised!" he exclaimed. The judge recognised in Mr. Wharton an old friend; he approached him with much cordiality, and their salutation was hearty and long continued. He then took the hand of Edwards.

"Most truly do I congratulate you, my dear sir. You have borne your trial like a true man."

James could not speak; his emotions were swelling at each moment, as wave after wave came rolling in from that ocean of love and interest in which his heart had once bathed with such delight, and from which, of late, only dark and forbidding clouds had swept upon him.

Theodore now advanced from the circle of lawyers, from whom he had been receiving high compliments for his maiden effort. The young men poked steadily at each other, as, with the warmth of friendship, now sealed by life, their hands were clasped. Tears glistened in their bright eyes, the only expression of volumes of thought too big for utterance.

"Sarah! Theodore, where is she?" Without answering, Theodore took the arm of his friend, and accompanied by Mr. Wharton, they left the court, and entered an adjoining room within the building.

Sarah had fully recovered, and had just been informed of the result. As soon as she saw James, she arose, and he hastened towards her.

"James!"

"Sarah!" and he folded her to his bosom in a fond embrace.

No words passed between them. Words could not convey the feelings of their gushing hearts; it was the hour of love, in all its rich and trustful sweetness, without one alloy to taint its bliss.

Mr. Augustus Hunt and Betty were the only friends, besides those who

had just entered, to witness the meeting. The old man was almost beside himself with joy; again and again he took the hand of James.

"It's the happiest day of my life—it's the happiest day of my life—rot the old chest; it has like to have been the death of me. Uncle Geordie's got all his money, too, and he's gone home as happy as a lark."

Betty sat in one corner of the room, keeping a respectful distance, and wiping away the tears of joy that were running down her honest face. James did not forget her: he stepped up and took her hand.

"Well, Betty, things are brighter than when we last met."

"Oh, yes, dear sowl! I told you it would be so."

"Yes, you did, Betty; you had more confidence than any of us."

"And hadn't I good reason to be so, when that dear young fella was prayin' and prayin', night and day, that ye might be delivered; sure was I, it help was to be had, ye would have it. But, oh, dear, Mr. James, it has like to have killed me, and sich a lump as there is here, and go away it won't, do what I will, and that old withered gowk, with his eyes seven ways for Sundays, blinkin' across the room, and sayin' he knew it to be yourself. Oh, Mr. James, I could have smuck him till the breath was out of him, the old blind fule."

"Never mind, Betty, it is all over now."

And Betty pounded on her chest: "Oh, dear! oh, dear—this lump, this lump; it grows bigger and bigger."

## CHAPTER XX.

RUDOLPH had made a full confession of the vile attempt upon the character of James Edwards. A combination of circumstances had produced this result; it was not that his heart had become penitent and overcome by true contrition, but he was conscious of deep villainy. He had found, from the address which had been pointed at him in the court, that through all the specious covering which he had thrown over the exterior, his true character was discovered. He had learned also, that the female witness, who was just ready to be sworn, had, ere she left her home, witnessed the death of that poor trusting girl, who had fallen a sacrifice to his faithlessness. Evils were gathering; about him which he feared to meet, and by a sudden rush of feeling, he had been impelled to make a disclosure to his uncle, the elder Mr. Hunt, at the same time handing him back the money which he had taken from the chest, heaping, no doubt, the gain of that lost treasure would so mollify the feelings of his uncle as to enable him to obtain some advantage therefrom. But he had made a wrong calculation; his uncle Geordie was filled with rage, and it was only through the powerful intercession of Mr. Augustus Hunt that he was not at once delivered into the hands of justice. By his means he was immediately sent from the city, with, however, only a small supply of money, barely sufficient to carry him to America.

James had not been without his suspicions of Rudolph's soundness of heart, and he had, at times, strong surmises that, in some way, Rudolph was concerned in bringing about the calamity which had come upon him; but our first impressions will cling to us, and have an influence over our feelings, even after we are sure that influence is wrong.

He had lent Rudolph that knife on the very day that it had been thus left, as he now admitted not, by design, to outwit him, in case any suspicion should lead the locksmith to inform against him.

Matters had scarcely subsided, after the deep excitement of the day, into the usual quiet of that domestic circle, when James was invited by Mr. Augustus Hunt to step with him into an adjoining room, that they might have a private interview. As they entered the apartment, Mr. Geordie was sitting quietly by the window, looking out at the passing multitude with rather an indolgent stare, as though it were little matter to him what was the absorbing interest that hurried each aboag, while his hands were busily employed twisting and turning his red silk pocket handkerchief into all kinds of shapes.

Mr. Augustus carefully closed the door, and taking a seat by his brother, motioned James to bring a chair and sit near to them.

"That's all, Master James; take a seat, take a seat. We want to talk a little. But is my soul what a day this has been!"

"It has been a bad business—bad business; but you've got all your money again, haven't you, brother?"

"Ye, yes, about all."

"Well, so far, that's good; but it's been a narrow chance for Mr. James, here. What a villain he must be; but he's gone, and that's an end to it."

"I hope so."

"Well, I hope it is; I don't think, brother, he will ever put foot in your sight after the dressing you gave him. He's got enough of Uncle Geordie, I imagine. But now for this other matter. You see, Mr. Edwards," and Mr. Augustus turned his face full upon his brother, although his address was to James, "we have been talking over things a little, and I have been telling my brother some secrets of our family that perhaps I knew more about than he did." It would have been a curious sight just then to watch the contortions which the red handkerchief had to go through. "And we have been thinking, Master James, that this might possibly have been a sad misfortune for you, very sad indeed; you have run a very narrow chance."

"I know I have, sir; and I hope I shall ever remember the kind Providence by which I have been delivered."

"Yes, yes, that is all well enough so far as it goes; but I and my brother feel"—and he looked archly at his brother, while the handkerchief whirled round faster and faster—"I say, I and my brother feel that, seeing all this trouble has come upon you out of our family, as it were, we ought to make you some compensation. You feel so, don't you, brother?"

where the title was but imaginary. Florio, the name of the young heir that lived with Leontine, though he had all the duty and affections imaginable for his supposed parent, was taught to rejoice at the sight of Eudoxus, who visited his friend very frequently, and was dictated by his natural affection, as well as by the rules of prudence to make him self esteemed and beloved by Florio. The boy was now old enough to know his supposed father's circumstances, and that therefore, he was to make his way in the world by his own

diverts the rest of the club. I find, however, that the knight is a much stronger Tory in the country than in town, which, as he has told me in my ear, is absolutely necessary for the keeping up his interest. In all our journey from London to his house, we did not so much as but at a Whig inn, or if by chance the coachman stopped at a wrong place one of Sir Roger's servants would ride up to his master full speed, and whisper to him that the master of the house was against such an one in the last election. This often betrayed us into bad bid and bad cheer for we were not inquisitive about the man or the innkeeper, and provided our landlord's principles were sound, did not take any notice of the stillness of his provisions. Thus I found still the more inconvenient, because the better the host was, the worse generally were his accommodations, the fellow knowing very well that those who were his friends would take up with coarse diet and a bad lodging. For these reasons, all the while I was upon the road I dreaded entering into a house of any one that Sir Roger had applauded for an honest man.

Since my stay at Sir Roger's in the country, I daily find more instances of the narrow party-humour. Being upon a bowling-green at a neighbouring market on the other day, (for that is the place where the gentlemen of one district meet once a week,) I observed a stranger among them of a better presence and prettier behaviour than ordinary. But was much surprised, that notwithstanding he was a very fair better, nobody would take him up. But upon inquiry I found that he was one who had given a disagreeable vote at a former parliament, for which reason there was not a man upon that bowling-green who would have so much correspondence with him as to win his money of him.

Among other instances of this nature, I must not omit one, which concerns myself. Will Wimple was the other day relating several strange tales that he had picked up, nobody knew a where, of a very great man. Upon my stirring it up, as one that was supposed to be a such thing in the country, which had never been so much as whispered in the town, Will stopped short in the third of his discourse, and after dinner asked me if Sir Roger in his ear had said anything to him.

It gave me a serious concern to see such a spirit of dissension in the country, not only as it destroys virtue and common sense, but renders us in manner barbarous towards one another, but is it perhaps our misanthropy, and our breach, it transmits our present passion and prejudices to our posterity. For my own part, I am sometimes afraid that I discover the seeds of a civil war in these open divisions, and therefore cannot but bewail, in their first principle, the miseries and calamities of our children.

## CHAPTER XVII

## THE COUNTRY CHURCH

He that is a sportsman, a farmer, a soldier, a tradesman. — Dryden

As I was yesterday riding out in the fields with my friend Sir Roger, we were at a little distance from us a troop of gipsies. Upon the first discovery of them my friend was in some doubt whether I should not exert the justice of the peace upon such a kind of illegal assembly. But not having his clerk with him, who is a necessary counsellor in these occasions, and finding it impossible to find the worst for it, he left it to the night police. But at the same time gave me a particular account of the mischief they do in the country, in stealing people's goods and putting them to ruin. "I have seen," he said, "men hanged upon an gallows," says Sir Roger, "they are sure to hang if the horse loses his way in the fields, it is ten to one that he will be there in the day, our geese can not live in peace for them, if I am present with them with security, his hen roost is sure to pay for it. They generally struggle into these places about the time of the year, and so he hides from servant minds so as to go for husbands, but we do not expect to have any business done as it should be whilst they are in the country. They are honest and industrious who crosses their hands with a piece of silver every summer, and never fails being present at the hand-omst young-folk in the parish for her pains. Your friend the butler has been fool enough to be seduced by them; and though he is now to lose a knife and a spoon every time his fortune is told him, generally shuts himself up in the pantry with an old pippin for above half an hour once in a twelve-month. Such parts are the things they live upon, which they be too very plentifully upon all those that apply themselves to them. You see now and then some of our young jades among them, the sluts have very often white teeth and black eyes."

Sir Roger, observing that I listened with great attention to his account of a people who were so entirely new to me, told me that if I would, they should tell us our fortunes. As I was very well pleased with the knight's proposal, we rode up and communicated our hand to them. A Cossack of the crew, after having examined my hand very diligently, told me that I loved civility and in a corner, that I was a good woman's man with some other particulars which I do not think proper to relate. My friend Sir Roger, alighted from his horse, and exposing his palm to two or three that stood by him, they crumpled it into all shapes, and diligently scanned every wrinkle that could be made in it, when one of them, who was older and more similitudinous than the rest, told him, that he had a widow in his line of life. Upon which the knight cried, "Go, go, you are in idle baggage," and at the same time smiled upon me. The gipsy, finding he was not displeased in his heart, told him after a farther inquiry into his hand, that his true-love was constant, and that she should die in of him to-night. My old friend cried, "Fish!" and bid her go on. The gipsy told him that he was a bachelor, but would not be so long, and that he was dearer to somebody than he thought. The knight still repeated, "She was an idle baggage" and bid her go on. "Ah,

master," says the gipsy, "that roguish leer of yours makes a pretty woman's heart ache, you have not that snimper about the mouth for nothing." The uncouth gibberish with which all this was uttered, like the darkness of an oracle, made us the more attentive to it. To be short, the knight left the money with her that he had crossed her hand with, and got up again on his horse.

As we were riding away, Sir Roger told me that he knew several sensible people who believed these gipsies now and then foretold very strange things, and for half an hour together appeared more jocund than ordinary. In the height of his good humour, meeting a common beggar upon the road, who was no conjurer as he went to relieve him he found his pocket was picked, that being a kind of palmistry at which this race of vagabonds are very dexterous.

## CHAPTER XVIII

## A SUMMONS TO LONDON.

"Ore more, ye wonda' adieu"

It is usual for a man who loves country sports to preserve the game in his own grounds, and divert himself upon those that belong to his neighbour. My friend Sir Roger generally goes two or three miles from his house, and gets into the frontiers of his estate, before he beats about in search of a hare or partridge, on purpose to spare his own fields, where he is always sure of finding diversion, when the worst comes to the worst. By this means the breed about his house has time to increase and multiply, besides that the sport is the more agreeable where the game is the harder to come at, and what it does not he so thick as to produce any perplexity or confusion in the pursuit. For these reasons the country gentleman, like the fox, seldom prevails near his own home.

In the same manner I have made a month's excursion out of the town, which is the great field of game for sportsmen of my species, to try my fortune in the country, where I have started several subjects, and hunted them down with some pleasure to myself, and I hope to others. I am here fixed to use a great deal of diligence before I can spring anything to my mind which is in town whilst I am following one character, it is ten to one that I shall cross in my way by another, and put up such a variety of odd creatures in both sexes, that they foil the scent of one another, and puzzle the chase. My greatest difficulty in the country is to find sport, and find town to choose it. In the mean time, as I have given a whole month's rest to the cities of London and Westminster, I promise myself abundance of new game upon my return thither.

It is indeed high time for me to leave the country, since I find the whole neighbourhood begun to grow very inquisitive after my name and character, my way of solitude, triflingness, and particular way of life, having raised a great curiosity in all these parts.

The names which have been framed of me are various, some look upon me as very proud, some as very modest, and some as very melancholy. Will Wimple, as my friend the butler tells me, observing me very much alone, and extremely silent when I am in company, is afraid I have killed a man. The country people seem to suspect me for a conjurer, and some of them, hearing of the visit which I made to Moll White, will needs have it that Sir Roger has brought down a cunning man with him, to cure the old woman, and free the country from her charms. So that the character which I go under in part of the neighbourhood is what they here call a "White Witch."

A justice of peace, who lives about five miles off, and is not of Sir Roger's party, has it seems said twice or thrice at his table, that he wishes Sir Roger does not so often come to him in his house, and that he thinks the gentlemen of the county would do very well to make me a present out of my life.

On the other side some of Sir Roger's friends in the old knight's company set up a very different kind of flow, and say they have heard that he is a very sensible man, and that he is in town, do not know but he has brought on with him some discarded Whigs that is sullen and says nothing but "I am out of place."

Such is the variety of opinions which are here entertained of me, so that I pass among a great flock of people, and among others for a Popish priest, among some for a wizard, and among others for a undertaker, and all this for nothing but that I am in town, but because I do not noot, and hum, and mumble noise. It is true my friend Sir Roger tells me "that it is my way," and that I am only a philosopher, but this will not satisfy them. They think there is more in me than he discovers, and that I do not hold my tongue for nothing.

I therefore and other reasons I shall set out for London to-morrow, having found by experience that the country is not a place for a person of my temper, who does not love jollity, and what they call good neighbourhood. A man that is out of humour when an unexpected guest breaks in upon him, and does not care for strengthening an afternoon to every chance-comer that will be the master of his own time and the pursuer of his own inclinations, makes but a very unsociable figure in this kind of life. I shall, therefore, retire into the town, if I may make use of that phrase, and get into the city again as fast as I can, in order to be alone. I can there use what speculations I please upon others, without being observed myself, and at the same time enjoy all the advantages of company, with all the privileges of solitude. In the meanwhile, to finish the inquiry and conclude the inquiry, my rural speculations, I shall here insert a letter from my friend Will Honeycomb, who has not lived a month for these forty years out of the smoke of London, and will give me after his way upon my country life.

"DEAR SIR,—I suppose his letter will find thee picking of daisies, or

smelling to a look of hay, or passing away thy time in some innocent country diversion of the like nature. I have, however, orders from the club to summon thee up to town, being all of us curiously afraid thou wilt not be able to relish our company, after thy conversations with Moll White and Will Wimble. Pr'y thee don't send us up any more stories of a cock and a bull, nor frighten the town with spirits and witches. Thy speculations begin to smell confoundedly of woods and meadows. If thou dost not come up quickly, we shall conclude that thou art in love with one of Sir Roger's dairy-maids. Service to the knight. Sir Andrew is grown the cock of the club since he left us, and, if he does not return quickly, will make every mother's son of us commonwealth's men.—Dear Spee, thine eternally, WILL HONEYCOMBE."

(To be continued.)

## THE FLOWER OF THE FOLD.

There is some one abiding place  
On earth, to which we cling,  
There is too, some remembered face,  
That blessings with it bring.  
There is a hope that keeps above,  
The road to which we hold,  
And is there not some heart we love  
Some Flower of the Fold?

Joy! joy! upon the breeze doth come,  
It useth in the lull,  
Of one more link to Home sweet home,  
Another clasp to earth.

A bottle of sweets with in the breast  
Of kindred young and old,  
To welcome in the little guest—  
The Flower of the Fold!

A babe is on its mother's arm,  
In quiet dreamland sleep,  
With infant brow as still and calm  
As sun-burnt on the deep!

A group of children gather round  
With step as light as a bird,  
To watch in that sweet trance profound  
The Flower of the Fold!

A little girl with rosy cheeks,  
And smiling as the sun,  
Is bounding o'er the village green  
As lively as a fawn.

She stoops to pick some weeds to braid  
Within her locks of gold  
And laughingly trips on the maid,  
The Flower of the Fold!

A few more years that happy one  
Has left the pleasant fields,  
And to a distant school is gone,  
Where joy to study yields.  
But summer with its genial train,  
Brings home the world,  
With its joys and well-known strain,  
The Flower of the Fold!

Two graceful forms are in a room,  
A youth of noble air—  
A lovely maiden in the bloom  
Of womanhood—  
Then hand and eye close in embrace,  
Their vows are just been told,  
And joy in that new glory can trace  
The Flower of the Fold!

Alas! how beautiful in death  
That marble brow appears!  
A single day to forget the breath  
Is born on high amidst tears!  
A holy sleep has closed her eyes  
Her youthful heart is cold,  
And dreamingly for ever lies  
The Flower of the Fold!

## A MALAY FESTIVAL.

It was evening, and I was conducted into a large room, with a small space raised off for spectators. Candles were stuck in silver sconces, fastened to the walls in profusion, and garlands of flowers innumerable. Round the room were several old Malays, squatting on mats, and dressed in gala costume. In the centre of the room a quantity of perfume was burning. Three or four younger Malays kept marching round the room, and they and the old gentlemen aforesaid kept up a sort of grunting, whining chorus, which at first I took to be indications of severe pain in the abdominal regions, but was afterwards informed that they were chanting sentences from the Koran. Suddenly, the young gentlemen began to throw themselves about in the most gladiatorial attitudes, singing faster than ever. Thereupon the old gentlemen shouted much louder, as though the internal agonies had vastly increased. Then the young men stripped off their shirts, and I thought they were going to have a regular "set to." My friend Jones, however, cried "Go it!" and ordered to back the little one with the flat nose against the lot. But they were not going to be it all, they only danced, and jumped, and hooted, till they left little pools of sudoric exhalations on the floor. Then a boy came shouting awfully. Jones cried "Turn him out!" and at the same time two of the young men seized the boy, and plunged a sharp instrument, like a meat skewer, through his tongue—at least so it appeared—and they led him round to the admiring spectators with the skewer projecting through his tongue. Jones pronounced it "too bad," and hinted that he should like to "punch the head" of the fellow that did it, but the boy looked quite happy and contented with his tongue on a skewer, so that no doubt there was some deception, which, however, defied our detection. As soon as this interesting youth had departed, one of the young men took a dagger and plunged it into the fleshy part of his side, just above the hip, and then walked round and showed himself. There were a few drops of blood, apparently flowing from the wound, in which the dagger was left sticking. Jones informed him, gravely, that he would have a terrible "pain in his side," and offered to prescribe for him from a valuable recipe of his grandmamma's. Another man thrust a skewer through his cheek, and came and showed himself also. Then some red-hot chains were brought in, and thrown over an iron beam, when another of the Malays seized them with his bare hands, and kept drawing them fast over the beards. All the while that these exhibitions were taking place, the Malays kept up their hideous shrieking of the Koran sentences, all of them shouting together, and louder and louder as the more horrible the experiment was being tried. The noise, the sight, the weapons, the red-hot chains, together, formed a scene bordering on the diabolical; except that there was such evident jugglery in the whole affair, and the plato was so constantly handed round for money, while the comments of my cockney friend were so absurd, that the ludicrous predominated greatly over the horrible.—*Cola.*

## PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

### No XXII—"A ROSE BY ANY OTHER NAME WOULD SMELL AS SWEET."

THIS saying is perfectly true of the rose. We might degrade the lovely flower with whatever vice names the vocabulary of our language can furnish, but still its perfume would remain the same. The thing incense to the skies and filling our senses with delight. But we might give the grudging tulips the name of roses without in the slightest degree diminishing their wretched odour, rendering them less offensive to our nostrils. The fallacy we wish to illustrate under this title is the wrong application of names, the endeavour to make that which in itself is intrinsically good appear to be evil, by attaching to it a name of evil import, and to give a colour to that which is evil, by giving it a name with which are connected good and pleasant associations. The influence of names pervades every part of our social system, it is apparent in the long string of fine applications with which some parents baptize their children, who seem to expect that if they call a child Milton, he will turn out a great poet, that then Nelsons will be naval heroes, and then Alberts, princes of the blood, at least. And some seem to think, that by blending together the names of a number of celebrated characters, they shall endow their child with all the qualities which the various persons who bore those names possessed. We were once present when a clerk trained in a nunnery brought three children to the church to be christened, when the clergyman asked the sponsors to "name this child," the reply was, "Please, sir, to ask the father, I cannot remember it." And the father being appealed to, gave his eldest son the name of "Julius Caesar, Homer, Demosthenes, Rothschild," &c., in the full hope that he would be conqueror, poet, orator, and millionaire. The second son he evidently intended to become the great leader of the Whig party, for when called on for its name, he repeated with greatunction, "Charles James Fox, Russell, Henry Brougham, Melbourne," &c. Thus was he baptized. The third child was a daughter, and the spirit of Tancred and Shalimar seemed to have passed into him as he euphoniously blended the names of their favourite heroines to form an appellation worthy of his child, and she was baptized "Clotilda, Emma, Juliet, Imogen, Cordelia." When to these fine-sounding names was added the family patronymic of Potts, he seemed to us like one striving to give perfume to the tulip by calling it a rose. While on the subject of Christian names we may mention the odd fancies which some parents have for giving queer names to their children: one gentleman we knew christened one of his sons Ching Poo and another Nicky Ben—and it was with some difficulty he was prevented calling a third Old Nick. Another parent left the names of his children to chance, he used to put into a hat a number of slips of paper, on each of which was written the name of some abstract quality, or some favourite political character, and the first two names he drew out of the hat were given to the child; thus, one of his children rejoiced in the names of Radical Roebuck, to the great horror of the Tory parson to whom he was brought to be christened. Charles Lamb, in one of his productions, ridiculed the stupid annoyance which some men feel at having a family name that they conceive to be low or vulgar in sound. He called his farce "Mr. H.," but as the whole fun turned upon the concealment of the name, it was not successful on the stage, being damned the first night, poor Lamb himself sitting in the pit, and hissing with all his might. Mr. H. is a gay bachelor, wealthy and good looking, who had everything to make life comfortable except his name. He was ashamed of this, ashamed of his ancestors for having borne it; he avowed that he had been refused by "nineteen virgins, twenty-nine relicts, and two old maids" on account of his name. He had no hope left but to engage the affections of some generous girl who would consent to take him as Mr. H., without inquiring what the H. really represented. For a long

time he succeeds in concealing his hateful name; but, at length, his vanity leading him to relate a story connected with some duke, he drops out the dreaded appellation accidentally, and the world discovers that his name is "Hogsflesh." The ladies rush off from him in disgust, and he himself is driven to despair, which is cured at last by his receiving the royal license to bear the arms and name of Bacon. This trifling farce is foolish enough, but it serves to bring out the point at which we would arrive, which is, that we attach different values to the same thing, according to the name by which it is called. Hog-flesh and Bacon are one and the same thing, but we attach an idea of vulgarity to Hogsflesh as a name, while that of Bacon sounds respectable, because there was once a Lord Chancellor of that name, whose learning and wisdom were great enough to cover over his many meannesses, and make us forget them through the splendour of his abilities. When he was "Hogsflesh," the perfume of the rose was exactly the same; but, somehow, it did not seem to smell so sweet as when he was called "Bacon."

But if we are guilty of folly as regards the names of persons, we are tenfold more egregiously guilty as regards the names we give to things. Here, indeed, we often strive to degrade the rose, and invest the offensive tulip with its perfume. We have several modes of doing this. If a thing, under its proper name, be indefensible—if it be more obnoxious to our senses than the rankest smelling weed—we endeavour to make the world believe that it is as full of perfume as the rose, by giving it a name that is agreeable. Persecution, for instance, is indefensible—it stinks in our nostrils. No matter under what form the persecution be carried on, or for what objects—political, religious, or moral—for all of these have had their persecutors—we shall ever find that the name "persecution" has, by some accident, entirely dropped out of the vocabulary of those who practise the thing persecution; and in order to give it a rosy colour, and to remove all traces of offensiveness, they call it by another name, and it is known as "*zeal*"—a thing of which we all approve. When Jeffries presided at the "bloody assizes"—as his court in the west, after Monmouth's rebellion, was called—when old men and young, noble ladies and humble peasants, the innocent and the guilty, were condemned in one common judicial massacre, it was *zeal* for the Crown that animated him, but not persecution. When protestant burnt catholic, and catholic burnt protestant—when Henry the Eighth sent both to the stake upon the same hurdle—it was all *zeal* for religion, and not persecution, that lit the fires. They knew not the name persecution, but they gave the thing another name to hide the rankness of the odour, and make the world believe the tulip had assumed the perfume of the rose.

Here in England, there are few things we value more than the liberty of the press. Milton says—"Give me the liberty to know, to utter, and to argue freely, according to my conscience, above all liberties." This liberty we hold so dear, that no man ventures openly to attack it. Still, there are many to whom this liberty is hateful, who would willingly curtail it, and destroy its efficiency; but this they dare not propose to do under the name of the liberty of the press—for they know that it is held as the great palladium of a free constitution. So they call it by another name, and in every direction condemn and attack the *licentiousness* of the press. Everything which comes under the press that is, in any manner, offensive to the ruling few, is at once set down as *licentious*—is passing all due bounds of liberty. We may publish weak and twaddling articles *ad infinitum*, but the moment a bold, powerful, fearless, and truthful argument is put out, our ears are dimmed with the licentiousness of the press, and the necessity for restraining it. The only true and proper censorship of the press is an enlightened public spirit. This will brand all dangerous and false opinions. No state, governed by the rules of justice—no church, founded upon truth—need ever dread the most unrestricted freedom of the press. It is only those who seek to perpetrate injustice, and to propagate error, who clamour loudly against this freedom, which they feel to be as the spear of Phœbus, at the touch of which the injustice is proclaimed, and the error becomes manifest. Milton has most admirably defended the freedom of the press in the *Areopagitica*. "I deny not," he says, "but that it is of great concernment in the church and commonwealth, to have a vigilant eye how books demean themselves as well as men, and thereafter to confine, imprison, and do sharpest justice on them as malefactors; for books are not absolutely dead things, but do contain a progeny of life in them, to be as active as that soul whose progeny they are; nay, they do preserve, as in a vial, the purest efficacy and extraction of that living intellect that bred them. I know they are as lively, and as vigorously productive, as those fabulous dragon's teeth; and being sown up and down, may chance to spring up armed men. And yet, on the other hand, unless wariness be used, as good almost kill a man as kill a good book. Who kills a man, kills a reasonable creature—God's image; but he who destroys a good book, kills reason itself—kills the image of God, as it were, in the eye. Many a man lives a burden to the earth, but a good book is the precious lifeblood of a master-spirit embalmed and treasured up on purpose to a life beyond life. It is true, no age can restore a life, whereof, perhaps, there is no great loss; and revolutions of ages do not oft recover the loss of a rejected truth, for the want of which whole nations fare the worse. We should be wary, therefore, what persecution we raise against the living labours of public men—how we spill that seasoned life of man preserved and stored up in books—since we see a kind of homicide may be thus committed—sometimes a martyrdom; and if it extend to the whole impression, a kind of massacre, whereof the execution ends not in the dying of an elemental life, but strikes at the ethereal and fifth essence, the breath of reason itself—alas! an immortality rather than a life." So those who set down everything of which they disapprove to the licentiousness of the press would "slay an immortality" in their endeavour to curb its freedom. If it had depended upon those who cry out against the licentiousness of the press to regulate the human mind, what would have been our present

condition? Its whole progress would have been arrested; every new and interesting truth would have been strangled in its birth—every new idea proscribed; a blasting soythe would have been passed over every thought above the ordinary level, and religion, moral, legislation, science, philosophy, would have remained in the darkness of the darkest ages. The rose would never have attained its full perfume, but the stench of the tulip would have predominated.

Of late years, the gardeners have made some alterations in the mode of cultivating the rose; they have increased the variety of sorts, and introduced the practice of grafting them on tall stalks. So that they are not little scrubby bushes, that force us to stoop to examine their beauty, but are brought up to a level with our faces; and we can admire them at ease, and inhale their fragrance without inconvenience. And the people, who think this alteration in the mode of culture gives a pleasing variety to the appearance of the garden, and somewhat elevates the rose, call it an *improvement*. But there are others, who think that all old ways are best; that roses have no business to be poking their beauties in our faces, and forcing us to inhale their fragrance whether we will or not. And these give the alteration a bad name, and call it *innovation*. Well, we have had some gardeners at work among the people, pruning their excesses, cultivating their faculties, unfolding new capabilities, grafting them, as it were, to taller stalks, and elevating them to a level with prouder flowers. And we, who approve of this, who rejoice in seeing the faculties of the people expand, and their mental and moral training already producing fine blossoms, giving promise of rich fruit in the future; who believe the common garden to be more and more adorned as the humble flowers rise above the earthiness around them, and take a loftier station—we call this a *great improvement*. But there are many who look back with a wistful eye to old habits and old times, who prefer the wild rose of the hedges, with its sharp and multitudinous thorns, with its poor and ragged blossoms, to all the advantages which cultivation gives; and who call it *innovation* when we strive to train the straggling branches, and lop off the thorns, to increase its perfume, and multiply its beauty. They have, indeed, been compelled to go so far as to think that a little cultivation is necessary; but it should be the smallest possible quantity: that they should be taught to read sufficiently to be able to spell through their Bible, is looked upon, not only as an improvement, but as a duty. That they should know enough of figures not to make a mistake when sent to market by their masters, is an improvement; but any attempt to give them a knowledge of men and things, is an innovation. Thus it turns out, that there is something in a name, after all, and that men attempt to degrade the rose *improvement* into a tulip, by calling it *innovation*.

In another form they seek to elevate the tulip into a rose by a different kind of change of name, by the application of a vague generality, which is ambiguous, inasmuch as it may be good or bad, according to circumstances. Mr. Bentham says, in speaking of these vague generalities, "Take, for instance, the terms, *government, laws, morals, religion*. The *genus* comprehended in each of these terms may be divided into two species—the *good and bad*; for no one can deny that there have been and still are in the world, bad governments, bad laws, bad morals, and bad religions. The mere circumstance, therefore, of a man's attacking government or law, morals or religion, does not of itself afford the slightest presumption that he is engaged in anything blamable; if his attack is only directed against that which is bad in each, his efforts may be productive of good to any extent. This essential distinction the defender of abuse takes care to keep out of sight, and boldly imputes to his antagonist an intention to subvert all governments, laws, morals, or religion." Thus, for instance, if any one proposes to alter the present distribution of the funds of the Church, to pay the working clergy better, and the great dignitaries not quite so much, the word *establishment* is immediately pressed into the service, as being neither entirely rose, nor yet a definite tulip, but holding a sort of middle term between the two, can be applied to both, and we are told that he who proposes this alteration seeks to overthrow the establishment, and thus this vague generality is made to defend the bad parts of the establishment, by leading to the inference, that all who wish to alter these, wish to overthrow all good establishments. The word *Constitution*, again, is another of these vague generalities which men apply in this form. Whenever they like any practice that has obtained in the State they call it "*constitutional*," whenever they dislike any practice or contemplated change, they call it "*unconstitutional*." Thus, if we propose that Lord St. Leonards should preside in the Court of Chancery without a load of horsehair on his head, we should be immediately attacked by some as subverting all the principles of our matchless Constitution; as giving an unconstitutional preference to human hair over horsehair and whalebone, and bringing all our venerable institutions into discredit. And the same feeling is extended to graver matters than wigs, and is made the defender of every abuse in the state. "Among the several cloudy appellations," says Mr. Bentham, again, "which have been commonly employed as cloaks for misgovernment, there is none more conspicuous in this atmosphere of illusion than the word *order*." It may mean either a rose or a tulip, for the worst *order* is as essentially *order* as the best. The tyranny of a Caligula or a Nero was *order*, just as much as the government of Lord John Russell or Lord Derby; and any attempt to dethrone Caligula or Nero would have been a subversion of *order*, of the established order of things. And under our own government, not very many years since, we have seen men who assembled for the purpose of obtaining a remedy for the grievances under which they suffered, cut down by scores under the plea of maintaining *order*. It is true, *order* was maintained; but not many years elapsed, before the things they complained of were removed, and a better order introduced. Even at the present day, in a neighbouring land, we have a striking example of what is meant by *order*, when used by power to declare its will. Louis Napoleon, the Prince

President, has overthrown the constitution he had sworn to preserve, tyrannized over the Assembly chosen by the people, set up his own will as the law of the land; and all this, he gravely tells the people, is for the maintenance of order. Here order is used to give a perfume to the tulip, and lead men to mistake it for a rose.

In social life, too, we are continually bewildered and led astray by the endeavour to make other things smell as sweet as roses, by calling them rosy names. A man of gallantry, for instance—what a rosy hue the sound has, how redolent of perfume how full of all that is elegant and graceful! I follow this same man of gallantry into a court of justice, where he is sometimes dragged, and all the fine outside is swept away, and he is seen to be the adulterer, the destroyer of man's peace and woman's happiness. See the *bon vivant*, the good liver, with face as rosy as his name, and underneath you have the foulness of the tulip in the glutinous and excess that brutalize and degrade him. As Tim Otter called his three drinking cups, the bull, the bear, and the horse, so do we give all kinds of pet names to the excesses in which too many indulge. We invite a friend to muddle his senses with drink, and call it hospitality, we get drunk with him and call it good fellowship, we lose all consciousness, all thought, and feeling, and call it being jolly. Give these things their proper names—call a spade a spade and the illusion vanishes. But we go on for ever, striving to perfume the tulip by calling it a rose—for ever seeking to delude ourselves as to the reality of things by substituting for them vague and deceptive names.

## SELF-CONFIDENCE

WHEN Sir Walter Raleigh in a meditative mood scribbled the line, 'I fear would climb but that I fear to fall,' he was, doubtless, screwing his courage to the sticking place. His royal mistress added, 'If thy heart fail thee do not climb at all.' This trait stung him to the quick. His watering place was not a desert and permanently fixed.

Disappointments throw weak minds off their balance, the strong and the wise perceive that they are from without and make use of them for their own advantage. Instead of continuing under the dark and sullen clouds of discontent, they emerge into clearer light, and go on with more cheering alacrity. It has sometimes been remarked that great occasions produce great men. Not so, the great men already are such, they only want occasions to call forth their talents. Give them a fair field, and the confidence which belongs to true greatness will enable them to prove their strength.

There is an immense difference between self-confidence and self-conceit. When the young artist Correggio, first saw the beautiful paintings of Raphael and exclaimed, 'I too, am a painter,' it was not arrogant self-conceit, it was the consciousness of similar power.

Admiral Nelson was exceedingly piqued when he was a young man because he was not mentioned in a newspaper paragraph, in which an action was briefly described where he had been present. "Never mind," said he, 'I will one day have a Gazette of my own.' The consciousness of courage and naval skill prompted this proud resolution. Self-conceit is a worn in peacock's feathers. Self-confidence, the soaring eagle. You may have been puffed up into overweening conceit of yourself by the flattery of others, but nothing, excepting the internal conviction of power, can give you self-confidence.

It is a real in some marvellous story  
Boite léger de strage and vague

of a man who was cast upon a desert island among a people who had lost their king. The story says not how he became a runaway, but when the people saw the stranger they fancied he was their sovereign, and immediately placed the glittering crown upon his brow, and the golden sceptre in his hand.

The king lies the lord that wears a crown

the head of the hapless runaway must, indeed, have been uneasy, and the hand that had lately held the plough or grasped the blacksmith's hammer, must have trembled as it lifted the sceptre.

Many a time in life would he have relinquished these emblems of power and with them the pretence that had been thrust upon him. But, no, he was their king, and a king he must remain.

It is a mistake to fight with direful consequences that a man can only be respectable or distinguished, by belonging to one of "the learned professions."

As for the honour of different vocations, there never was a truer sentence than the stile one of Pope—still now, because it is so true—

Act well your part there all the honour lies

And it is the just boast of our own country that in no civilized nation is the force of this philanthropic maxim so nobly illustrated as in ours thanks to our glorious institutions.

When the celebrated Governor Morris, of America, left college, he lost no time in deliberating on the choice of a profession, for he seems to have destined himself for the law, from the time of his first reflections on the subject. His ancestors had gained renown in this career, and it was natural that his inclination should lead him in the same direction. He knew, moreover, that his success in life, his fortune and fame, his future usefulness and consideration, depended upon his own efforts.

"Naturally active sanguine in his temperament, conscious of his powers, and not wanting in ambition, he had an early and continued confidence in

himself, which enabled him to command all the resources of his mind, and to convert them, on any given occasion, to the best account. In fact, this self-confidence was one of the remarkable features of his character through life, and perhaps its tendency was rather to err on the side of boldness and presumption, than on that of timidity and reserve. But there are few more enviable qualities of the understanding, than the power of ascertaining its own bias and strength, and of causing these to unite and co-operate in the attainment of a difficult object. No man had this power in a greater degree than Governor Morris, nor exercised it with more skill and effect. He has often been heard to say, that in his intercourse with men, he never knew the sensation of fear or inferiority, of embarrassment or awkwardness. Although this almost daring self-possession, which never forsook him, may, at times, have deprived his manners of the charm which a becoming diffidence and gentleness of demeanour are apt to infuse, yet as a means of advancement in the world it must be allowed, when properly regulated, to take the precedence of any other quality."

Self-depreciation is not humility, though often mistaken for it. Its source is oftener mortified pride.

Self-confidence must have its foundation in self-knowledge. A proper, a just estimate of one's abilities, alone can ensure that confidence, which is neither arrogant nor presumptuous.

It might have been supposed by some persons, who were contemporaneous with the poet Milton, that he possessed an arrogant confidence in his own genius, but time, the best test, has proved that he did not over-estimate his abilities.

He says, "These abilities wheresoever they be found, are the inspired gift of God, rarely bestowed." Yet so conscious was he of the 'gift,' that he deems himself prepared for a 'work' not to be raised from the heat of youth, or the vapours of wine, but to be the result of a steady and constant effort, of the vigorous pursuit of the truth, of the trenchant fury of a rhyming pen, nor to be obtained by the invocation of some Memory and her seven daughters. But by devout prayer to that Eternal Spirit, who can enrich with all utterance and knowledge, and to his own seraphim, with the hallowed fire of his altar, to touch and purify the lips of whom he pleases."

But notwithstanding this consciousness of power and this acknowledgment of the source from which it was derived Milton expected success, without vigorous effort on his own part? No, read, young man, for your special benefit, what he says of his mode of life. "My morning haunts are where they should be at home not sleeping or concocting the stuffs of an irregular feast, but up and stirring in winter, often ere the sound of any bell wake men to labour or devotion, in summer, as oft with the bird that first rouses, or not much tardier, to read good authors or cause them to be read till the attention fails, or memory have its full freight then, with useful and generous labours preserve the body's health and hardiness to render light on the mind and not a slavish obedience to the mind, to the end of religion and our country's liberty."

See it at last!

The self-confidence which accomplishes the end designed success is not founded upon self-puffing or self-exaggeration—but upon true consistent self-knowledge, and self-respect.

PIRATES IN THE ARCTIC SEAS.—"There was no time for thinking, action, and not consideration, was necessary. The ice was closing around us, and the squadron at last sailed miles in advance, again it was mist through, or over this neck the ice must go. Sailing was useless—a mere waste of time, there was no other way but to give it the 'steam.' 'Go a head full speed,' was the word of command 'at once' she goes the concussion is terrific the vessel trembles from her keel to her top. The stubborn element bends and cracks but does not break. 'St' p her! 'Turn astern!' let us try it again. 'Go a head with all speed' you can give her!' The greater portion of the crew is now upon the ice to assist in clearing away. She comes she comes with a full force and she breaks the ice breaks—hurrah! A piece thirty feet square is drifted off he is mischievous from underneath the main floor, making a wonderful clearance. Grapnels over the bow, hook on the pieces, take a turn on land 'turn astern, st' p her, unhitch the grapnels the manœuvre was repeated over and over again with similar success until the noble craft seemed no longer a piece of mechanism, but a thing of life. Some forty tons burst landing on and crushing the barrier that opposed it. To the spectator the scene is novel and interesting the men-o-war men hurrahed and laughed at the sport, while 'hoary-headed experience'—those veterans who had grown grey in Arctic service—stood gaping with astonishment at the 'ice destroyer' smashing a floe six feet thick as if it had been a sheet of glass. She now makes rapid progress and final effort the barrier is broken, she is through she is free in the silent shores of Melville Bay echo the astounding cheers of a hundred scamen as she dashes with lightning speed towards her consort the *Assistance*. For three days was the *Itrepi* adrift from the squadron, but during that period she performed feats unparalleled in the annals of Arctic navigation. No human perseverance, no degree of physical energy no known mechanical power, save the 'strong arm of steam,' could have enabled us to regain our position."—From the Admiralty Records of the late Arctic Expedition.

MOTIVE POWER.—A method of obtaining and applying motive power by counterbalance weights so arranged as to counterbalance each other during the return stroke of the engine, and thereby to require little or no expenditure of power in returning to their original working positions, has been patented by Mr Faulkener, of Chesham.

## CHARADE.

Before my first my last appears,  
 You'll "Tally-ho!" assail their ears,  
 Over they leap with terrible glee—  
 A sport, poor fox, that is end for thee!

The fox is caught, and his brush is  
 borne  
 By the huntsman, sounding his mellow  
 horn  
 And that brush which oft sped through  
 the gale,  
 In a shop in my whole shall be placed  
 for sale

## MENTAL RECREATIONS

If I find the number of deals a person may play at the game of Whist, with out  
 holding the same cards twice

In all combinations, if from an arithmetical decreasing series, the first term  
 of which is the number out of which the combinations are to be formed, and  
 the common difference of which is 1, there be taken as many terms as there  
 are quantities to be combined, and these terms be multiplied into each other  
 —and if from the series 1, 2, 3, 4, &c., there be taken the same number of  
 terms, and these be multiplied into each other—the quotient arising from the  
 division of the first product by the second will be the number of combinations  
 required

Now, as the number of cards played with at whist amounts to 52 and 13  
 of these are dealt to each person, we are to find how many different  
 combinations of 13 can be formed out of 52. Conformably to the rule,  
 therefore, multiply 52 severally by 51, 50, 49, and so on to 41, which will  
 give 3,951,212,643,911,209,680,000 for the product. Then multiply 1, 2, 3,  
 &c., to 13 into each other and the product will be 6,227,020,800. The  
 former product, being divided by the latter, will give 635,013,559,600 for a  
 quotient, which is the number of different ways 13 cards may be taken out  
 of 52, and, consequently, the number required

A question something similar to this though much more difficult to be  
 resolved, is, to determine the number of fifteens that may be made, as in the  
 game of cribbage, out of a common pack of 52 cards, which is found, by  
 computation, to be no less than 17,264.

## TRANSPPOSITIONS

1  
 A word transpose, whose music greets the  
 ear  
 With concord of sweet sounds, harmonious,  
 clear;  
 Another sound is now heard, at which we  
 start—  
 A sound appalling to the feeling heart.

2.  
 Complete, I am seen in air;  
 Beheaded, I'm juice of the pine;  
 Reversed, am but vermin ye fair,  
 My meaning now quickly divine

3.  
 Complete, I am hypocrisy; beheaded,  
 an insect, curtailed, a drinking vessel,  
 and a very common verb

## TRANSFIGURED PLAYING CARDS.

## ENIGMAS.

1  
 Never sleeping still awake  
 Pleading most when most I speak  
 The delight of old and young,  
 Though I speak without a tongue  
 Nought but one thing can confound me—  
 Many voices joining round me  
 Then I fret and rave and gabble,  
 I like the labourers of Babel  
 Now I am a dog or cow—  
 I can bark or I can low  
 I can bleat or I can sing  
 Like the warblers of the spring  
 Let the love sick bard complain—  
 I can mourn the cruel pain  
 Let the happy swain rejoice—  
 And I join my helping voice  
 Both are welcome grief or joy—  
 I with either sport and toy  
 Though a lady I am stout  
 Drums and trumpets bring me out  
 Then I clash, and roar and rattle—  
 Join in all the din of battle  
 Joy with all his loudst thunder  
 When I'm vexed can't keep me untried  
 Yet so tender is my ear  
 That the lowest voice I fear  
 Which I dread the courtier's fate  
 When his nectar is so of date,  
 For I hate a silent breath  
 And a trumpet is my death

2  
 Sprung from the noblest meanest race,  
 I being lost in every place—  
 Newcastle Chester London Dover,  
 In short the universe all over  
 I valued likewise in my station  
 I'm of use to by all the nation  
 Not Proteus self had half my shapes,  
 A lion a horse and there an ape  
 A king sometimes I am and throw  
 My smiles on little folks below  
 Sometimes his consort queen I stand,  
 With flaming sceptre in my hand

3  
 Fired with the fury of the war,  
 I now ascend Belshazzar's car,  
 As Rodney, or as Elliot ride,  
 With ship or cannon by my side,  
 Or, mounted on the horse poetic,  
 Defiance dart at every critic,  
 In form of Shakspeare, Jonson, Pope,  
 Who surely never had a hope  
 This rather world again to rhyme in,  
 Or give their quills another prying  
 A coach and six sometimes I run  
 At others glow a golden sun  
 Descending thence I seek the spot  
 Of tinker grim and rise pot  
 Or friendly to the cobbler's news,  
 I stand confessed, a pair of shoes  
 I mark a friendly invitation  
 To every being in the nation  
 Say reader, whence I really came,  
 And give my motto form a name!

4  
 An agonious workman once made a spit  
 Five hundred turkeys were roasted on it,  
 All well roasted and all at one time,  
 All very fat and just in their prime  
 But here comes the wonder—for, what do  
 you think?  
 All the roast meat at once was turn'd into  
 drink!

## CHARADE

A country enrich'd by my first,  
 While peace and prosperity reign,  
 My yet be reduced to the dust,  
 If pleasure ascendancy gain

My second has never been seen  
 Nor ever by stratagem bound,  
 But yet in all countries has been  
 And only is known by a sound

There is not a seafaring soul,  
 That has to the Indies been borne,  
 But owes to the aid of my whole  
 His safety and speedy return

1. Because a secret is always meant for a private ear (privateer).
2. One is a foul domestic, and the other a domestic fowl.
3. Because it is a battlement (battle meant).

## OUR CORNER CUPBOARD!

WHY is a young lady forsaken by her lover like a deadly weapon? Because she is a *Cut-las*.

WHAT is the difference between the sun and bread? The sun rises in the east, and bread rises with the yeast in it.

"WILL you lend father your newspaper, sir? *His* only wants to read it." "Yes, my boy, and ask him to lend me his dinner—I only just want to eat it!"

"SAY," said one little urchin to another—"does your schoolmaster ever give you a reward of *rust*?" "I s'pose he does," was the rejoinder, "he gives me a lickin' every day, and says I merit two."

A MAN, in the country, in attempting to hang himself, forgot to put the rope round his neck, and jumped off the barrel into a mud-hole. He did not discover his mistake until he attempted to kick.

"WHY is the letter *d* like a ring?" asked a young lady of her lover, who was as dull as the generality of his sex in such a situation. "Because," added the damsel, with a modest look, "we can't be wed without it."

A MUSICAL gentleman, while performing, was lately arrested by two bailiffs, who requested him to join them in a *trio*, "I should rather im *gini*," said the unfortunate gentleman, "you wish for a *catch*!"

A GENTLEMAN, taking an apartment, said to the landlady, "I assure you, madam, I never left a lodging but my landlady shed tears." She answered, "I hope it was not, sir, because you went away without paying."

BURKE was a complete failure, when he flung the dagger on the floor of the House, and produced nothing but a smothered laugh, and a joke from Sheridan. ~~At the gentleman's~~ brought us the knife—but where is the fork?

A FARCE was produced in Hannister's time, under the title of *IV and Water*. "I predict its fate," said he. "What fate?" inquired the anxious author at his side. "What fate!" said Hannister, "why what can fire and water produce but a hiss?"

AN Irishman was brought before a judge, for taking too much beer. The judge asked him if he had any excuse for his conduct. To which he replied—"Ah! your honour, the shameful conduct of wife and children has brought many a man to his *beer*!"

AN Irishman, in contending for the antiquity of certain families in his native country, urged, as a proof, that from time immemorial a certain constellation had borne the name of *O Ryan* (Orion), adding—"Sure and everybody knows that it was a prize fighter he was, and that's how he came by the belt!"

THE MODEL HUSBAND.—Mrs Smith has company to dinner, and there are not *stewberries* enough, and she looks at Mr S with a sweet smile and offers to help him, (at the same time kicking him gently with her slipper under the table,) he always replies—"No! I think you dear, they don't care with me."

SOME poetaster wrote the following. — Long is that morn that brings no eve, tall is the corn that no cobbs leave. Blue is the sky that never looks yellier, hard is the apple that never grows meller, but I nger and bluer, and hard i, and tall, is my own lady love—my adorable Poll. P.S.—The author has since died in great agony.

A LADY, well known in the fashionable vicinity of Portland Place always accosts a stranger with—"I think I have seen you somewhere!" which often leads to a clue for her finding out the history of the party. One evening, she played off the same game on a gentleman, who replied—"Most likely, madam! for I sometimes go there."

THE initial letters of the Latin names of the kings of Bonaparte's family, form the Latin word *Nihil*, (nothing), and this used to be called the genealogical acrostic —

Napoleonic  
Bonaparte  
Hieronimus  
Joachim  
Napoleon

AN anecdote is told of a captain in the service, since dead, that whilst carrying out a British ambassador to his station abroad, a quarrel arose of the subject of precedence. High words were exchanged between them on the quarter deck when, at length the ambassador, thinking to silence the captain, exclaimed—"Recollect, sir, I am the representative of his majesty!" "Then, sir," retorted the captain, "recollect, that *here* I am *more* than majesty itself. Can the king seize a fellow up and give him three dozen?" Further argument was useless, the diplomatist struck.

THE YOUNG WIFE'S REPOSE.—"Why art thou sad, my love, to-day?—what grief is burning o'er thy heart? Why dost thou droop and turn away, and why do tears unbidden start?"—When first I wooed thee in thine *alcove*—thy *Erin*, emerald of the deep—I saw thee, sweetest, only smile, not even thought that thou couldst weep. The sun of summer lights on earth, the zephyr's kiss is on thy cheek, all nature calls thee back to mirth, then leavest, "prythee, love, so weak!"—While thus I spoke, my bosom's queen, one deep, fond glance upon me stealing, exclaimed—"Be jabsers, but you're green! *Keenions*, sure, I'm *after* peering!"

## OUR MEMORANDUM BOOK!

HEALTH AND MONEY.—There is this difference between these two temporal blessings—Health and money, money is the most envied but the least enjoyed, health is the most enjoyed, but the least envied, and this superiority of the latter is still more obvious when we reflect that the poorest man would not part with health for money, but that the richest would gladly part with all his money for health.

HOW TO OBSERVE.—It is far more difficult to observe correctly than most men imagine. "To behold," Humboldt remarks, "is not necessarily to observe, and the power of comparing and combining is only to be obtained by education." It is much to be regretted that habits of exact observation are not cultivated in our schools; to this deficiency may be traced much of the fallacious reasoning, the false philosophy, which prevails.

Avoid in youth, luxurious diet,  
Restrain the passion a lawless riot,  
Devoted to domestic quiet,  
Be wisely gay;  
So shall you spite gage's flat,  
And mock decay.

THE HUMAN VOICE.—How many singers are aware that they have an eight feet organ pipe in their throat? An American writer says—"How small is the diameter of the human throat, and how short its measure! Yet, it will give the same note with the pipe of an organ eight feet in length, and the valve which covers it, and plays with electric swiftness (without the aid of the organ) is, as all know, a very little thing, yet with the contraction and expansion of the throat, it will utter a scale of seven notes and divide every whole tone into a hundred parts."

DON'T TALK ABOUT YOURSELF.—Never introduce your own affairs for the amusement of a company, it shows a sad want of mental cultivation. Excessive self-interest is a sort of *emphysema*, always repulsive. Some folks can't tell what is related or what is said upon any subject without using the singular pronoun *I*—as, when *I* was a boy, *I* was at the head of my class, and *I* never was surprised—*I* can dive deeper, *I* can stay under longer, and *I* can come up drier—*I* can, than anybody else *I* ever saw—*I* can *I*—*I* think *I* am rather *k* in *I* do—*I* do. Really, what think you of such a specimen?

LOUIS BONAPARTE'S OPINION OF WAR.—"I have been as enthusiastic and joyful as any one in a victory, but I also confess, that even then the sight of a fallen battle-honoured only struck me with horror, but even turned me sick, and now that I am older in life, I cannot understand, any more than I could at fifteen years of age, how beings who call themselves reasonable, and who have so much foresight, can employ this short existence in not in loving and aiding each other, and passing through it as gently as possible, but on the contrary in endeavouring to destroy each other as it were. I have done this myself with such a pity!" What I thought at fifteen years of age I still think. War and the pain of death which so cruelly draws upon itself, are but organized barbarisms, an inheritance of the savage state, disguised or ornamented by ingenious institutions and false sequence."

## THE EXAMINATION

(From the *Gita* of Pythagoras.)

I ET not soft rain cloud my eyes,  
Nor I have recollecteth thine,  
The time of actions through the day  
What have my feet marked out their way?  
What have I left where'er I've been,  
I am all I've left—from *Il* I've seen?  
What know I more, that swells the knowing?  
What have I done with the long?  
What have I sought that I should shun?  
What duties have I left undone?  
Or into what new follies run?  
These self-inquiries are the road  
That leads to virtue and to God!

HOW TO MAKE A FORTUNE.—Take earnestly hold of life, as capricitated for, and destined to, a high and noble purpose. Study closely the mind's bent for labour or a profession. Adopt it early, and pursue it steadily, never looking back to the turning furrow, but forward, to the new ground that ever rims up to be broken. Means and ways are abundant to every man's necessities, if will and actions are rightly adapted to them. Our rich men and our great men have carved their paths to fortune, and by this internal principle—a principle that cannot fail to reward its votary, if it be resolutely pursued. To sigh or repine over the lack of inheritance, is unmanly. Every man should strive to be a creator instead of inheritor. He should bequeath instead of borrow. The human race, in this respect, want dignity and discipline. They prefer to wield the sword of valorous forefathers, to forging their own weapons. This is a mean and ignoble spirit. Let every man be conscious of the power in him and the Providence over him, and fight his own battles with his own good lance. Let him feel that it is better to earn a crust than to inherit coffers of gold. This spirit of self-reliance, once learned, and every man will discover within himself, under God, the elements and capacities of wealth. He will be rich, inestimably rich in self-resources, and can lift his face proudly to meet the noblest among men.

## ONWARD!

**CHLOROFORM AN ANTISEPTIC**—It has been established beyond doubt, that chloroform is a powerful agent in preserving meat from putrefaction—*Annals of Pharmacy, &c*

**RUSSIAN RAILWAYS**—The Emperor of Russia has 10,000 men at work almost night and day on the line from St Petersburg to Warsaw. All the rails are to be delivered by the end of July, and the locomotive contracts are already signed. So also has the contract for the construction of the line from Moscow to Warsaw; and for the rails 140,000 tons have been purchased in this country.

**STEAM PLOUGH**—The following account of a steam plough, described in the *New York Courier*, places all others in the distance. It is the invention of a native of Cromarty, in Scotland—"Mr Alexander T. Watson has devised a locomotive steam ploughing machine, which, if the operator desires, will also do the work of sowing and harrowing at the same time. The model exhibited by him, at 88, Wall street, is constructed to drive twelve ploughs, and in land suited to its operations a single machine will work over from thirty to forty acres a day."

**THE BIRMINGHAM SCHOOL OF DESIGN**—According to the new arrangements recently announced, there is to be no more making up for the award of prizes by a temporary competition amongst the students, the whole of the drawings, models, &c., executed in the school, after a whole session being now to enter as elements in the award. In original design the choice of subject is to be left to the invention, taste, and pursuits of the students, though certain subjects of local manufacture are recommended. The designs also must be executed in the school. This school is said to be making satisfactory progress.

**THE NEW REMEDY FOR CONSUMPTION**—We have already published several articles on the use of phosphate of lime in pulmonary disease. This new remedy for one of the most fatal diseases of our race is attracting much notice, but sufficient time has hardly elapsed to determine the result of experiments now in progress, though we hear of some cases of recovery under the new treatment. A correspondent mentions the following case, which will be read with interest by those who are suffering from pulmonary complaints—"A friend of mine has been using it for the past three or four months, in the case of a member of his family, with the most gratifying success. The patient, who has long been an invalid, and was so far reduced (having all the attendant indications of confirmed consumption) as to be confined to his bed or an easy chair, has been so much restored as to ride and walk out daily, his cough and nearly all the other unfavourable symptoms having forsaken him. Care should be taken to obtain pure and *offensive* Cod Liver Oil—much of the article sold being unfit for use—the object being to have it act as food rather than medicine, and thereby afford nourishment to the system."

**DRESSING STONE BY STEAM**—"We paid a visit yesterday," says a New York paper, 'to the works of the Empire Stone-dressing Company. The stone (mainly brown, from the Portland quarries, near Middleton, Connecticut) is hoisted by steam-power directly from the vessel in which it reaches our city, lowered upon a tram road and drawn into the shop, where it is fastened in or appropriate beds or carriages, and so drawn gradually under the cutters, which, in the most approved machines are four, revolving in a circle, and cutting away the stone to the depth of an inch, or more if required, at the rate of about two cubic feet per minute. There are six machines employed in the Empire Works, and the number will, doubtless, be increased to twenty or thirty within a short time, as the demand for dressed building-stone is practically unlimited. Each machine will dress from 300 to 500 feet per day, according to the width of the blocks. After leaving, the stone is very speedily polished and finished off by a different machine, in which the chip or dust made by cutting is used as scouring sand."

**PROGRESS OF EDUCATION IN IRELAND**—The reports of the new colleges in Ireland continue to present the evidences of a degree of harmony, usefulness, and prosperity beyond the hopes of even sanguine advocates of education. The system did not at first present itself to the Irish mind with any false attractions. On the contrary, it was introduced in such a way that the small objections to it were apparent to all, while the blessings which it promised seemed distinct and doubtful to all except an enlightened few. Hence it began modestly. Its progress was slow, and is still not so rapid as to cause any fears for its permanence. But the history of its growth is interesting and encouraging to all who feel, as we do, that education is the truest of all reforms. Take the Belfast College as an example of this steady progress. The *Report* states, that there is a very marked improvement with regard to the number of matriculated students. In the first year there were only 89; the number rose to 108 in the second year, and in the present year it was 119. There is also a considerable increase in the fees derived from the students. In the first year they amounted to £1,200, in the second to £1,300, and in the present to £1,443. The full number of scholarships founded in the college is 30 junior scholarships in the faculty of arts, 6 in that of medicine, 3 in that of law, 2 in the department of engineering, and 4 in that of agriculture. There are, besides, 10 senior scholarships; but as they are to be held by students in the fourth year of their course, they have not yet come into existence. The "discipline" is described as perfect. No student has been brought before the council for misconduct, and notwithstanding that the professors and the students are of various opinions in religion and other matters, "the greatest harmony pervades every department." Here, at least, there is some gleam of hope for Ireland.

## POETICAL QUOTATIONS.

## AUTHORS.

How many great ones may remember'd be,  
Which in their days most famously did flourish,  
Of whom no word we hear, not sign now see,  
But as things wip'd out with a sponge do perish,  
Because they living cared not to cherish  
No gentle wit, through pride or covetise  
Which might their names for ever memorise!

*Spenser's Ruins of Time.*

Let authors write for glory or reward,  
Truth is well paid, when she is sung and heard.

*R. Corbet, Bishop of Norwich.*

He that writes,  
Or makes a feast, more certainly invites  
His judges than his friends, there's not a guest  
But will find something wanting, or ill drest

*Prologue to Sir R. Howard's Surprizal.*

Much thou hast said, which I know when  
And where thou stol'st from other men;  
Whereby 'tis plain thy light and gifts,  
Are all but plagiary shifts—*Butler's Hudibras.*

Authors are judg'd by strange capricious rules,  
The great ones are thought mad, the small ones fools;  
Yet sure the best are more severely rated,  
For fools are only laugh'd at—*See one hated*  
Blockheads with reason men of sense abhor,  
But fool 'gainst fool is barb'rous civil war  
Why on all authors then should critics fall,  
Since some have writ and shown no wit at all?—*Pope*

Authors alone, with more than savage rage,  
Unnat'ral war with brother authors wage—*Pope*

None but an author knows an author's cares,  
Or fancy's fondness for the child she bears.

*Couper's Progress of Error.*

'Tis pleasant sure to see one's name in print,  
A book's a book, although there's nothing in't.—*Byron*

## AUTHORITY.

A man in authority is but as  
A candle in the wind, sooner wasted  
Or blown out than under a bushel.

*Beaumont and Fletcher's Four Plays in One.*

Not from grey hairs authority doth flow,  
Not from bald heads, nor from a wrinkled brow;  
But our past life when virtuously spent,  
Must to our age those happy fruits present—*Denham*

Authority kept up, old age secures,  
Whose dignity is long as life endures—*Denham*

Authority bears off a credent bulk,  
That no particular scandal once can touch,  
But it confounds the braver—*Shakspeare's Measure for Measure.*

Authority, though it err like others,  
Hath yet a kind of medicine in it-self,  
That skins the voice of the top—*Shakspeare's Measure for Measure.*

Man, proud man,  
Drest in a little brief authority,  
Most ignorant of what he's most assur'd,  
His glassy essence—like an angry ape,  
Plays such fantastic tricks before high Heaven  
As make the angels weep!—*Shakspeare's Measure for Measure*

My soul aches  
To know, when two authorities are up,  
Neither supreme, how soon confusion  
May enter twixt the gap of both and take  
The one by the other.—*Shakspeare's Coriolanus*

## AUTUMN

Then came the autumn, all in yellow clad  
As though he joyed in his plenteous store,  
Laden with fruits that made him laugh, full glad  
That he had banish'd hunger, which to-fore  
Had by the belly oft him pinched sore,  
Upon his head a wreath that was enfold  
With ears of corn of every sort, he bore,  
And in his hand a sickle he did hold,  
To reap the ripened fruit the which the earth had yold.  
*Spenser's Faery Queen.*

### Editor's Note-Book.

**DOMESTIC HINTS No 3.**—To clean looking glasses, first wash the glass all over with clean lukewarm soap suds and a sponge. When dry, rub it bright with a buckskin and a little prepared chalk finely

powdered. A mahogany frame should be first well-dusted and then cleaned with a flannel dipped in sweet oil. Bronzed chandeliers, lamps &c., should be merely dusted with a feather-bush, or with a soft cloth, as washing them will take off the bronzing. To clean knives and forks, wash the blades in warm (but not hot) water, and then rub them lightly over with powdered rotten-stone wet to a paste with a little cold-water, then polish them with a clean cloth. A good blacking for stoves may be made with half a pound of black lead finely powdered, and (to make it stick) mix with it the whites of three eggs well beaten; then dilute it with sour beer or porter till it becomes as thin as shoe-blackening; after stirring it set it over hot coals to simmer for twenty minutes, when cold it may be kept for use. For cleaning bristles belonging to mahogany furniture, either powdered whiting or scraped rotten-stone mixed with sweet oil and rubbed on with a buckskin is good. The best covering for a kitchen floor is a thick unfigured oil cloth, of one colour. Meat may be kept several days in the height of summer, sweet and good, by lightly covering it with bran, and hanging it in some high or windy room, or in a passage where there is a current of air. A good cold cream may be made thus: oil of almonds one pound, sweet and white lard of each one pound, spermaceti and white wax one ounce, melt them in a boiling water bath, and rose or orange-flower four ounces, essence of lavender or bergamot thirty-five drops. When velvet gets plushed from pressure, hold the parts over a basin of hot water with the lining of the dress next the water, the pile will soon rise and assume its original beauty. A tight boot or shoe goes on easier when thoroughly warmed by turning the soles next to the fire. All kinds of glass vessels and other utensils may be purified and cleaned by rinsing them out with powdered charcoal. All householders would exercise a wise precaution against fire, by directing that the last person up should perambulate the premises previous to going to bed, to ascertain that all fires are safe and lights extinguished. Should a fire break out in a chimney a wetted blanket should be nailed to the upper ends of the mantel piece, so as to cover the opening entirely when the fire will go out of itself. All flannels should be soaked before they are made up first in cold then in hot water in order to shrink them. Worsted and lamb's wool stockings should never be mended with worsted or lamb's wool, because the latter being new it shrinks more than the stockings, and draws them up till the toes become short and narrow, and the heels have no shape left. Preserved ginger is made by scalding the young roots till they become tender, then peeling them in cold water, frequently changing the water, and after this they are put into a thin sirup, from which, in a few days, they are removed to the jars, and a rich sirup poured over them. When much pastry is made in a house, a good quantity of fine flour should be kept on hand, in dry jars, and quite secured from the air, as it makes lighter pastry and bread when kept a short time, than when quite fresh ground.

**INVENTION OF GLASS.** Thomas—Pliny gives the origin of glass making thus.—As some merchants were carrying nitre, they stopped near a river issuing from Mount Carmel. Not finding nitre stones to rest their kettles on, they used some pieces of nitre for that purpose, the fire gradually dissolving the nitre, it mixed with the sand, and a transparent matter flowed, which, in fact, was no other than glass.

**PREJUDICES.** J C.—In the multifarious communications that come under our notice, we often observe with regret how many are influenced with erroneous impressions, the result of deep-rooted prejudices that no reasoning could possibly remove. We have not space to point out the folly and injustice of such ideas, but the subject shall hereafter occupy our attention. One correspondent inquires gravely whether the French people are not proverbially selfish, and whether the industrial energies of the Americans are not inferior to those of England &c? The questioner probably belongs to the same school as the Londoner, who, during an excursion to Bristol, was

shown everything remarkable there, whether the production of nature or art. "But as every object in that city was in his estimation unequal to any of a similar kind in London, he was at length led to St Vincent's Rocks. On being asked what he thought of these stupendous monuments of natural magnificence, he replied, "They are diverting enough, but they are nothing to the London rocks!"

**EMIGRATION.**—Having received several letters from correspondents, requesting our opinion on the subject of emigration, we offer a few general observations, which will apply to most of the cases brought under our notice. Appreciating the importance of the question, and not being acquainted with the circumstances of the individuals who have requested our advice, we have invariably declined issuing an opinion which might probably involve serious consequences. There cannot be a doubt that to many, emigration presents a vast field for the development of industrious habits;—for, as the old world is over-crowded—

"Some have meat, a I cannot eat  
While son a can eat, I but I have no meat."

and the smiling prospect of abundance elsewhere, is a powerful inducement to the overtaken and needy denizens of our large capitals. The following excellent remarks of Mr. M. Gregor are worth consideration. "It is a matter of the first importance to consider, before deciding on expatriation whether one can obtain, by industry and integrity, a tolerably comfortable livelihood in the country of his nativity, whether, in order to secure to his family the certain means of subsistence, he can willingly part with his friends, and leave scenes that must have been dear to his heart from childhood, and whether in search of independence, he can entail upon his family the inconveniences of a sea voyage and the fatigue attending the object of his search. If he can resolve upon facing these difficulties and enduring many privations there are not wanting, to stimulate his efforts examples of men who must have encountered and have overcome (equally, if not more disheartening hardships before they attained a state of comfortable affluence. We leave these observations to the judgment of our readers. To those aspirants who are seeking to better their condition in their own country, we would recommend the following, as

A NICE OFFERING FOR A YOUNG MAN

**BUOYANCY OF THE BODY IN WATER.** S J.—There is no doubt by attending to proper instructions, that persons falling into the water and unable to swim may float for a time until assistance is obtained. The following direction is simple and useful. An individual in this strait should carefully avoid raising his hands above the water, and then by moving them under water in any manner he chooses his head will rise high enough to enable him to breathe freely, if he moves his legs, as in the action of walking up stairs more of his body will rise above the water, which will allow him to use less exertion with his hands. To this we may add that by throwing back the head and shoulders, so as to thrust out the chest to its greatest extent, and keeping it in that position, the volume of air contained in the lungs will be so much increased, as to add very considerably to the buoyancy of the upper part of the body. This alone would enable some people to float without using any motion of their limbs.

**HOW TO MAKE HOME HAPPY.** J Simpson.—Many and various are the ways and means to promote happiness in a family. A cheerful manner, a kind word, a readiness to oblige, can always diffuse a pleasing influence around. "I noticed," said Franklin, "a mechanic among a number of others at work on a house erecting but a little way from my office, who always appeared to be in a merry humour, who had a kind word and a cheerful smile for every man he met. Let the day be ever so cold, gloomy, or unpleasant, a happy smile danced like a sunbeam on his cheerful countenance. Meeting him one morning, I asked him to tell me the secret of his constant happy flow of spirits. 'No secret, Dr.' he replied, 'I have got one of the best of wives, and when

I go to work she always has a kind word of encouragement for me, and when I go home, she meets me with a smile and a kiss, and then tea is sure to be ready, and she has done so many little things through the day to please me, that I cannot find it in my heart to speak an unkind word to anybody."

**COFFEE A DISINFECTANT.** W M.—Numerous experiments with roasted coffee, prove that it is the most powerful means, not only of rendering animal and vegetable effluvia innocuous, but of actually destroying them. A room in which meat in an advanced degree of decomposition had been kept for some time, was instantly deprived of all smell on an open coffee-roaster being carried through it, containing a pound of coffee newly roasted. In another room, exposed to the effluvia occasioned by the clearing out of a dung pit, so that sulphureted hydrogen and ammonia in great quantities could be chemically detected, the stench was completely removed within half a minute, on the employment of three ounces of fresh roasted coffee, whilst the other parts of the house were permanently cleared of the same smell by being simply traversed with the coffee roaster although the cleaning of the dung pit continued for several hours after. The best mode of using the coffee as a disinfectant is to dry the raw bean, pound it in a mortar, and then roast the powder on a moderately heated iron plate until it assumes a dark brown tint when it is fit for use. Then sprinkle it in sinks or cess pools, or lay it on a plate in the room which you wish to have purified. Coffee acid or coffee oil acts more readily in minute quantities.

**COMMUNICATIONS RECEIVED.**—J W C (the Transfigured Playing Cards, when completed in the *Home Companion* will be published separately).—M D FRANKS (the manuscripts are declined. The *Home Companion* can be forwarded to Australia if proper directions are sent).—P W (almond soap or glycerine).—W W P (if future arrangements will obviate the inconvenience).—BOCCACCIO (we shall consider the proposition).—W H CALDER (Atom is derived from the Greek words meaning 'not to cut'—one of the elementary particles of matter, and so small as to be incapable of further division).—VULCANUS (the field is open to all).—I RUTTS (the lines are good, but we have no space to insert them).—SEMPER LUDM (all will depend upon the power of the instrument).—J B D (a few bread crumbs and change the water daily).—A FATHER (the obligation to register is, we believe, imperative. Prudence would dictate it is necessary to a parent, independent of the statutory knowledge required by the state).—CALLELA (thanks).—OMEGA (thanks).—J L W (the proverb is "Many moles, &c.").—J H K (strawberries are mentioned by Theophrastus and other writers. In the Roman as well as the middle ages, children slept in them at night, when they were confined by bands across and covered with a quilt).—CIVIS (General Sir Thomas Picton, killed at Waterloo was a South Welshman).—JUNA (White Conduit House derived its name from an old stone conduit, which was erected in 1041).—WELLS (The reason why leaks are worn by Welshmen, is said to be derived from a victory obtained over the Saxons by Cadwallader, a Welsh prince in the sixth century. The Welshmen, to distinguish themselves from their enemies, and the more readily to know each other wore leaks).—B (Canada is stated to have obtained its name from the Spaniards, who when they landed in that quarter, repeated the words *aca nada*, nothing here, meaning that it no gold was to be found, of which the Indians caught the sound).—J W (coaches were introduced into England by Fitz Allan, Earl of Arundel, in 1480).—H L W (the spring alluded to is that near Wigan in Lancashire, the water of which burns like oil. This phenomenon arises from the fumes of inflammable air or hydrogen).—B R (Intemperance in a great measure arises from a want of reflection. It has been well said that if every person were to count fifty each time before taking a glass of beer, one hundred before taking a glass of wine and one thousand before taking a glass of grog, there would not be so much intemperance in the land).

Printed by WILLIAM KILLMER, 24, Goswell Street, London; and published for the Proprietor by JOHN HENRY, 69, Fleet Street, London.

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 29.—Vol. I.]

SATURDAY, JULY 17, 1852.

[PRICE ONE PENNY.]

"He advanced rapidly to her side, took her hand in his, carried it to his lips, and, sinking upon one knee, looked up into her face, and whispered impetuously and passionately—'What is my fate?' You told me you would accept me—do not—nay, you can not reject me!"

## CAROLINE AND CATHARINA

(Continued from page 436)

AFTER some discussion about the costume &c., his guests took their leave and drove away, leaving the young painter to think long and earnestly of the vision of loveliness just flitted before him. He sat for some time without moving or taking his eyes from the picture—but it was evident, from the vacancy of his gaze, that he saw nothing around him. He was not in love—it was rather too soon for that. But he had seen another page of human existence—another glimpse of beauty had been given him, and in his rapt thought it was sinking into his heart, and taking its place in his imagination. His life had been a very secluded one—secluded, too, none the less because half of a large city had passed before his eyes in unbroken succession. He had known them as an artist who had been employed by them, they were his customers—not even his patrons—for he knew their approach to him had been prompted, not by love for his art, but by vanity. Among this crowd many of the beautiful and gay had sat to him—such as are called beautiful at least; but among them all he had never seen a face which concentrated his thoughts even as an artist. Among them all, various and even opposite to each other as many of them were, he had never recognised one line of poetry—one tone of the music to which his soul could vibrate. The sight of all the gaiety and fashion around him, attractive as it would have been to many, had created no wish to mingle among them, he had kept aloof, even when his fame as an artist would have opened every door to him.

Cara's was not only a new face to him—it was almost a new world; and the sight of it almost reconciled him to the life of a portrait painter. He said truly that he would paint it with a pleasure no face had ever given him. But still he was not in love—at least not in the manner of feeling called love. He could love a beautiful object for its beauty, and yet have no wish

to possess it. His love was the love of a painter, and perhaps it would go forth with as much fervour for a stately tree, swinging and sighing in the wind or calmly sleeping in the sunlight as for a lovely woman. To have lost the opportunity of painting Cara's face, would have been a severe disappointment to him, he revelled in the very idea of painting it, and yet never thought the possession of that face could or might be sought to him, but an object to be painted.

He was not in love, then, in the meaning usually attached to the term; and yet he might be, too. She had come very near his heart when she admired and appreciated his picture—the picture of which he was so jealous. But Mr. Thorpe had admired it too, and appreciated its excellence as thoroughly as she did he, therefore, love him likewise? No; for he was not a woman and, though eminently a handsome man, he had not the beauty which the painter loves. Nor, if the face of Cara had belonged to Thorpe, would Vernon have had the same feeling towards it. It was not, therefore, only because the face was a beautiful one, that he desired to paint it; but, also because it belonged to a woman—one who combined with it all the softness and sweetness of her sex. Still, we say again, he was not in love—as yet.

He sat for a long time without moving. He then arose, took the "Sunset," gazed on it for a moment, enveloped and tied it, wrote "Miss Cara Falbot" on the paper, went out with it, and returned without it. He had sent it to her!

"She is the first who ever appreciated it," he said, "and she shall have it." But she was not the first. True, she had at once entered into the beauty of the painting at first sight, but Thorpe had fully valued it before she saw it, and he had called her attention to it. Allen did not know that; but if he had known it, would he have acted differently? We cannot tell. What would have been, had circumstances been changed, we can never know even of ourselves. It is probable, however, that he would have acted precisely as he did.

assumption; and thus the matter stood at the period of the commencement of our story.

As they left the painter's studio, Thorpe noticed that Cara was silent and thoughtful; and this was by no means a manner which he was fond of seeing. Indeed, the less she thought the better he was pleased, and least of all did he like to see that object produced by an interview with a handsome young gentleman.

"Mr. Vernon seems to have made an impression," said he, as he handed her into the carriage, and stepped in after her.

"Upon me? Why?" she asked.

"You seemed absent," said her companion, "a mood you are not much given to."

"Do you mean that as an admonition to be more serious?"

"Oh no," said he, "you please me best as you are best pleased to be."

"Well," said she, somewhat pitifully, "I am glad you do not wish to pursue the Mentor yet."

"Yet?" said he, in surprise, "what can you mean?"

"Nothing," she answered quietly, "at least, I hope, nothing."

"Homo!" asked the driver.

"No to Major Bryce's."

Thorpe made no further observation for some time, but the glitter in his eye showed that he had not forgotten her words.

"Come," said Cara, at last, "do talk to me—I feel lonely."

"Lonely Cara?" he said, reproachfully.

"O pahaw!" she exclaimed, I am sorry to say, even petulantly, "why do you persecute me with your jealousy? I can never make even the most common-place complaint but you catch me up as reproachfully as if I had uttered treason. Why should I not feel lonely, when my only companion will not say a word to me?"

"Cara," said Thorpe, with a gravity which he knew perfectly how to assume, "you know I would do anything in the world to save you from even the merest weariness."

"O well," she interrupted him somewhat softened, "let us no more about it. I was wrong no doubt, and you are you to notice my childishness so seriously. Let us forget it."

"I can forgive you, Cara," he commenced, but she broke in—

"I did not ask for that—I did not ask for that!" I only said let us forget it—and you seem to lie in wait for me as if you were cross examining a witness. Pray, Morris, when you talk to me, throw off a little of the lawyer."

"Cara," said he, slowly, "if my presence is not agreeable I will leave the carriage, and see you when you are in better spirits." He pulled the check string as he spoke, and the coachman drew up.

"By no means," said Cara, quickly, "drive on, George, Mr Thorpe has changed his mind." The driver cracked his whip, muttering at the fickleness of "big people," and Cara turned to Thorpe. "Morris," she said, gently, "I will ask your forgiveness now, will you not pardon me? I was too unreasonable—I do not know what ails me."

"Willingly," he said, smiling affectionately, and pressing the hand she had laid upon his arm. "willingly, Cara, but you try me very severely."

"I daresay, now," she said laughingly, withdrawing her hand, "that you were only trying me, and did not intend to leave the carriage at all."

"I thought you would relent before I got entirely out," said he.

"Then," said she, becoming serious again, "the next time you attempt it I will let you go—so be careful."

He had not time to reply before the carriage drew up, with a jerk in front of a large, three storied, stone house, with large windows, and yellow inside blinds. This was the residence of Major Bryce whose wife was a relative of Thorpe's mother and it whose house his sister was then residing. By a singular coincidence the Major was himself a cousin of Allen Vernon's deceased parent.

#### CHAPTER IV.

"We saw a nettle but a hettle and the faults of fools but folly —CORTOLANUS

As Cara and Thorpe entered the drawing-room at Major Bryce's, they were met by his sister Maria, a tall, fine-looking girl of about twenty years, who was in all things, except the difference necessarily produced by the difference of sex, an exact counterpart of her brother. There was, perhaps, less goodness expressed in her face, and in its stead might be traced the haughty superciliousness which in him was kept sedulously hidden. She seemed more intellectual, too, than she was, and had she been older might, with not a tittle of her brother's learning have played the "blue" with some success. The same traits which prevented her governing the pride of her character, likewise prevented her emulating him in attainments. Perhaps, the only real difference between them was a difference in the degree of patience. With this exception, she was not only a very agreeable but a very fascinating woman—sufficiently well read to mingle in, and even lead a literary circle, and yet not too learned to be tolerated.

She received Cara with the affectionate simplicity of an intimate friend, with none of the familiarity likely to impair her influence—kissing her kindly on the cheek, and leading her to a seat, while she occupied another herself. Her brother walked away to a table and looked over a pile of newspapers. A moment afterwards the door opened and Miss Bryce entered, rushing like a whirlwind up to Cara, and almost smothering her in her embrace. She was large, not tall, fleshy and round—sufficiently so, indeed, to have made her movements a little more dignified. Instead of this, however, she adopted a manner which might have suited a fairy, or which might have been tolerated in Cara, but was in her incongruous and absurd. Her appearance was that of a fine lady manufactured by the milliner, and the

character of her form was almost entirely lost in a becoming and rolling about under her clothes as if they could be moved it even to the intolerable shape God has given the shoulders, deep in the chest, thick in the wrist, and had an abundant fashion of wearing more clothes than were rationally given them—when there hundred yards was a small allowance for a woman in full dress. Long arms and large hands and feet, completed a form less adapted to the gentleman bearing than one in a thousand. Accompanying this coarseness was a face differing in the essential features from the appropriate, and expressing a character very different from what one would have expected from her form. One feature alone kept up the resemblance, this was her nose, which expressed the violent exaggeration and mingled sentimentality and coarseness of her character. Her eyes were large, deep, and expressive, of a dark grey hue, approaching to the blue, and set wide apart. In their expression they were soft, womanly, and sometimes delicate but among men they lost this character, and became inviolable, bold, and sometimes equivocal. Her mouth was large and well-filled with strong white teeth, and when she talked her lips took the line of the upper lip of which she conversed—expressing compassion, affection, religion, contempt, and every other passion predicable upon her gross nature. Her forehead was high and firm, surmounted by a mass of dark hair; her nose was thick, but smooth and round, apparently driven down like a post between her immense shoulders. Her most prominent mental characteristic was self-esteem, exaggerated into superciliousness, combined most unaccountably with an illegitimate reverence for the opinions of others, a constant tendency to become maudlin, and a superlative admiration of genius on a small scale. Her strongest passions were love of notoriety, however obtained, and of sympathy for imaginary unhappiness. Her chief sentiment was a strong desire for confidence, and she loved nothing so well as a confidence as complaisance to burn incense to her vanity, an easy temper to bear with her endless whims, and dulness to be blind to her repeated coarseties.

With all these dangerous and disgusting qualities, one would have supposed her position in society would be insecure. But nothing could be less true. She was sustained by the gentlemen, to whom her free manners were extremely fascinating. If she thought her footing becoming precarious, she would have a series of faintings each time falling into the arms of some gentleman, and waking with the most dove-like tenderness in her eyes, and the most fervent expressions of gratitude. With all this liberality of her person, she never did anything positively to compromise herself, and thus kept clear of any demonstration from her own sex, except the contempt which the majority of them did not scruple to express. She was sustained by the opposite sex; and whatever may be the thought, they can sustain any one who avoids positively compromising herself.

After she had almost smothered Cara, and at last let her loose, she suddenly perceived Thorpe. She ran to him, and taking his hand, pressed it in hers warmly, and looked up into his face with one of those dying looks with which she usually recovered from a fainting fit. Thorpe returned the pressure, and looked as if he would like to press her lips to his, had Cara not been present. As it was, he let her, still holding her hand, to the sofa where Cara sat, and left her. At the same moment her father entered.

Where or how Major Bryce had got his majority no one knew. He had served in the war of 1812, with Great Britain, and had been appointed by the colonel of his regiment, in which he was a subaltern, to the post of regimental quarter master, and when he came home he consequently bore the title of captain. Soon afterwards he had received an accession of wealth by his marriage with a woman whose wealth was her only recommendation to the poor quarter-master, (now discharged,) and, having become rich he was of course, advanced in military rank. At all events, he was now a major, by courtesy, and had been for many years. He was a short, thick set man, of about fifty, with a large, good-humoured face, and an immense pair of red whiskers, now fast verging towards the gray. His countenance was rough even coarse, (he had Scotch blood in his veins,) and florid full of health and vigour. He was somewhat fat, but his step was alert and quick, and his bearing soldierly. His small, gray eyes twinkled almost merrily, and his large mouth, opening with a kindly smile, showed two rows of strong long, but not very clean teeth. Mingled with his manners was a sort of brusqueness, which sometimes seemed rudeness; and in his mode of conversation there was sometimes a little pomposity—a habit which had grown upon him while he was a rich man, and he was, consequently, listened to as an oracle. "While he was a rich man," we said, for now he was not so. His daughter's reckless extravagance, in which she tried to compensate the coarseness of her appearance by the fineness of everything around her, combined with the major's want of capacity for "management" (a strange anomaly in a man with Scotch blood in his veins,) had gradually reduced his wealth to very narrow limits, and, at this period, he was seeking about for some means of reuniting his coffers.

As he entered the room he advanced briskly to Cara, (and the old gentleman had been eight years a widower,) kissing her upon both cheeks. He next shook hands with Thorpe, and seated himself beside his sister.

"Upon my word!" said Maria, "if you go on, at this rate Mary may look for a stepmother before she is a year older!"

"And why not?" said the old gentleman. "Wouldn't I make a good husband for any of you?"

"Certainly, if you are not over sixty, I'll take you myself," said Cara.

"Sixty!" exclaimed the old gentleman, "I'm scarcely more than fifty!"

"Oh!" said Maria, "that's worse than I thought—"

"Because that number means much more, and through all classes, the young and the young, think in love, while it may in money."

"At fifty," said Thorpe, "love for love is rare, 'tis true."

"Yes," said Cara, looking at Morris archly—

"But then, no doubt, it equally as true is,  
A good deal may be bought for fifty louis."

"Oh, Jupiter!" exclaimed the old man, "if you all quote poetry on me, I must give in, for I never could remember a line in my life."

"Then," said Cara, "I withdraw my pledge; I never could bear a man who could not occupy a whole evening in recitation."

"And, besides," said Thorpe, "she is particularly full of poetry now; we have just visited the studio of a very poetical portrait painter."

"Your description is better than your meaning," said Cara, quickly.

"Cousin Morris never liked poetry," said Mary solemnly, as if she had been imparting a secret peculiarly within her knowledge.

"Indeed!" said Cara, opening her eyes very wide.

"We have been to the studio of young Mr. Vernon," said Thorpe to the major. "Do you know him?"

"Do I know him?" said the latter, pompously drawing himself up. "Was not his mother my second cousin?"

"Indeed I don't know," said Morris, gravely.

"Well, I do," said the major. "Certainly, I know him! he is my daughter's third cousin, sir!"

"Oh! father!" exclaimed the young lady referred to. "That common painter my cousin!" And she held up her large hands in horror at the idea.

"A common painter, did you say?" asked Cara, almost angrily. "Did you ever see him, or any of his works?"

"She refers to his occupation," interposed Thorpe, "and not to the man."

"And what have you to say against his occupation?" pursued Cara. "Is it not respectable—nay, honourable and intellectual in a very high degree?"

"Indeed, I don't know," said Mary, shrinking from the discussion, because she felt incompetent to continue it.

Thorpe interposed again—without noticing Cara's warmth.

"More portrait painting," said he, "can only be an intellectual occupation when the artist has intellectual faces to paint; and even then it cannot compare with the production of such works as the one we saw, Cara, representing a sunset."

"I would like to possess that picture," said Cara.

"You will hardly ever be so fortunate," said Morris. "He seems to value it too highly to part with it. Nothing, I think, short of love for you would enable you to secure it."

"Even that," said she, laughing, "is not impossible."

"Certainly not," said Thorpe; "on the contrary, rather."

"Is he painting your portrait?" asked the major.

"He will soon," she answered; "we take the first sitting to-morrow."

Having prevented an angry discussion, Morris walked away to the table, and again looked at the newspaper.

"You will see by the paper, there," said the major, "that we are likely to have some difficulty on the Rio Grande."

"Yes," said Thorpe, reading on, "our government can scarcely avoid a war now—"

"Even if she wishes to do so," interrupted the major.

"Which she does not," added Thorpe; and he read on through a long account of the capture and murder of Captain Thornton, just before the declaration of war in 1846.

"We may look for a proclamation, I think, soon," he said, as he finished the account, and laid the paper quietly down. The major looked as if he could say more, but was silent.

"Suppose war should be declared," said Maria to the latter, "would you think of rejoining the army?"

"That depends upon circumstances," said he, cautiously.

"That is," said Cara, "if you should be appointed brigadier by the President you would go; if not, you would stay."

"My aspirations are not so high," he replied.

"Then you have aspirations?" said Maria.

"Expectations would be the more proper word," the major answered, mysteriously; and turning to Thorpe, he added, "I want to speak to you, Morris, privately, before you leave the house."

"I am here on attendance," said the latter, "and my movements depend upon Miss Cara."

"Then come with me now," said he; "she will wait, I am sure."

"That depends upon how long he stays," said Cara.

"Oh, we will not be absent a moment," and they passed out.

"I have positive and reliable information," the major commenced as soon as he had shut the door behind him, "that our government has been expecting a rupture with Mexico for several weeks; and in evidence of it, read that letter."

Thorpe took the letter and found it to be an intimation from a gentleman in one of the departments, who might be supposed to speak *ex cathedra*, that the President was already casting about among "citizens of known patriotism and capacity," to find persons "adapted to fill important stations in the army, in the event of a war with Mexico." The letter went on to detail with brevity the stations to be filled until it came to the head of quarter-masters; and then came the gist of the communication. It was hinted that, if he would accept a post in that department, it would be at his service. An immediate answer was requested, and the letter closed. A postscript, however, contained information no less important, and was in these words:—

"I think I hazard nothing in saying that, in the event above anticipated, your State will be called upon for a number of volunteer regiments. Possibly the timely notice of this may enable you to do the country service more effectual than if it came to you through the usually tardy channels."

(To be continued.)

## LOVE'S TRIALS; OR, MISTAKEN EVIDENCE.

(Continued from page 461.)

### CHAPTER XXI.

THE shades of night were just closing in, as Edwards landed on the opposite shore. The stage-house stood upon the high ground a little back from the river, and could only be distinguished, through the large trees which surrounded it, by the light from two of its windows. He threaded his way along the winding path which led up to the house, followed at some distance by his attendant, whom he had previously instructed should not be seen by Rudolph, if it proved that he was still there.

James could not help feeling a little trepidation as he found himself drawing near the place where he had reason to suppose the unhappy young man then was. As he approached the building, a long, low house, he saw a light but from one end, which proved to be the bar-room. He entered without knocking. The bar-keeper was sitting before the fire, and two or three men, apparently stage drivers and ostlers, were resting on the benches in different parts of the room. The former at once turned towards him.

"Is there a young man here from the city, intending to take the stage in the morning?"

"There is a young man here who expects to take the early stage, but where he is from, I don't know."

"Is he about the house?"

"He has gone to his room; he asked for a light a few minutes since."

"Can you show me the room?"

The young man hesitated a moment.

"Why, yes; I can show you the room."

He took a light and led the way into a small passage, and from thence into that appeared to be the hall of the house. Several doors opened into it, to one of which James was directed; he knocked gently, and a voice, which he recognised as Rudolph's, called—

"Who's there?"

"A friend; James—James Edwards."

The door was immediately opened, and Rudolph stood before him; his brow was knit, and his whole countenance stern and cold.

"May I ask your special business in thus intruding upon me?"

"I come as a friend, Mr. Hunt."

"Indeed! then why so formal, you have always called me Rudolph."

"Pardon that inadvertence, Rudolph, but believe me that as a friend I have sought you."

"Come in, then, and be seated."

James took a chair, and Rudolph, closing the door, looked it and put the key in his pocket. James noticed the act, and, for an instant, unpleasant thoughts rushed into his mind; but they could not rest there; strong in the consciousness of the purity of his intentions, his mind retained its firmness. Rudolph did not take a seat, but kept walking about the room, apparently attending to matters connected with his departure, for James heard him clasp the lock of his valise and fasten it; he, at length, walked up to where James was sitting.

"You say you have come as a friend; may I know what your friendly designs are?" As he said this, he did not look at Edwards, but kept his eye fixed upon a piece of paper which he was folding, evidently with no other design than that of affording a diversion to his sight from an object that was not agreeable to him. He shrunk from the clear, honest gaze of Edwards.

James arose and extended his hand, but Rudolph did not notice the act, or did not wish to commit himself.

"Believe me, Rudolph, I have no feelings toward you but those of perfect kindness, and my errand to you now is an errand of love."

"Edwards, I don't want any of your cant; it may answer for young girls and old women, but I tell you, candidly, I don't want to hear it; you have come here, I suppose, to condole with me, that through you I have become an outcast from society." Rudolph's voice grew harsher and louder as he said this, and he turned his face full upon Edwards; a contemptuous sneer was visible, as well as fierce and deadly passion; his brow was knit, his eye distended, and his teeth compressed.

"What is there you can bring by way of consolation to me?" he added.

"I bring you, Rudolph, my forgiveness, and you cannot but feel that you have endeavoured to do me a dreadful evil; but I most heartily forgive it all; and I bring you a message from your uncles that may give you hope for the future."

"You bring me forgiveness! And who asked your pardon? You tell me that my uncles may still aid me, and perhaps through your intercession? You who have wormed yourself into favour with those whose friendship was my birthright, and have now come to triumph in my misery."

"Rudolph, you do me great injustice, and you know you do. God is my witness that I have never sought to injure you, and my sole object here to-night is—"

"Edwards, your words are idle, they are wasted upon me; this world is not wide enough to contain us both; take that, and defend yourself!" drawing a pistol from his breast, and handing it to James, at the same instant cocking another and taking deadly aim. "I shall count five, and fire; so be quick." [See Engraving, p. 368.]

James was horror-stricken for a moment, but as Rudolph began to count, he threw the pistol which had been put into his hands, across the room, and rushed towards Rudolph to wrest the other from his murderous grasp. But Rudolph anticipated his attempt and fired. James fell to the floor; Rudolph sprang to the window, opened it, seized his valise, and was out in an instant.

The noise of the pistol soon brought the members of the family to the door; as it was locked, and no answer made to their call, it was burst open. James lay weltering in blood, and apparently dead or dying. They, however, raised him and placed him upon the bed, and by using what means they had on hand to revive him, he was enabled to give some directions; his attendant was despatched to the city to inform his friends and order medical aid, and an express was sent to bring his mother and sisters.

Mr. Tightbody, who had arrived expressly to learn the result of the trial, was beginning to be very impatient, as the evening was wearing away, and James had not made his appearance, when a loud knock at the street door, and a hasty call for Mr. Wharton, as soon as the servant opened it, started the two worthies, who were deeply engaged in conversation. Theodore immediately stepped into the passage.

"The man wants the Rev. Mr. Wharton."

"Mr. Wharton is here; do you wish to see him?"

"He is wanted at Mr. Hunt's as soon as possible; there is some great trouble, and they wish him to come as quick as he can."

Mr. Tightbody did not exactly understand the nature of the summons which Mr. Wharton had so suddenly received, but was glad of an opportunity to slip off, inwardly resolving that nothing should any longer impede his progress towards home. His mind was glowing with the glorious idea of being the first to communicate the good tidings. He had not relished the plan which Mr. Wharton had proposed, and would, in some way, have willingly declined it. He was not by nature or habit a waterman, and when he reached the ferry stairs, and saw how dark the night looked, and how very black was the water, except where the white caps occasionally glittered in the distance, giving tokens of a fresh breeze upon the open stream, he heartily wished that he had started earlier.

"Rather a fresh breeze to-night!" As he said this the boatmen were resting on their oars, and waiting for their passenger, the only one who was to cross.

"It's a gettin' late, and if all's ready, we're off."

Mr. Timothy sprang in, hastily took the seat assigned him, and putting one hand on each side of the boat, held on with a tight grasp.

"There seems to be considerable wind!"

"It's a freshen' up some; there'll be more a stirrin' afore we get over."

On landing, it had become, to use Mr. Tightbody's own words, "exceeding dark," and the lights which shone from the house were not of much use beyond the line of trees which surrounded it, as only an occasional glimmer could be seen through the openings in the thick branches. All at once, however, he stopped, and if it could have been possible, just then, to take cognizance of the matter, it would have been seen that Mr. Timothy was very pale. His eyes had for some time been widely stretched, in order to take in all the rays of light that were to be had; but now he opened them, if possible, wider still; then he rubbed them, and peering into the mist before him, began to feel the cold chills creeping up his back, and the hat fairly moving on his head.

He would have spoken, but the creature was one of such a questionable appearance that he really felt unable to do so; and it was very near to him. Nothing separated them but the little ditch which ran by the side of the road, Mr. Timothy being in the middle of the road, and the object which thus alarmed him, standing by the fence, and apparently holding fast to it. [*See Engraving, p. 401*] The road near this struck off to the stage-house, and Mr. Timothy, after standing awhile and gazing at the spectre, his thoughts by no means becoming more reconciled to its appearance, very gently, and by almost an imperceptible movement, began to move towards the house. Could it be possible! was he correct?—was the thing really advancing towards him? He quickened his pace; but there it was, keeping about the same distance, and moving along after him with noiseless steps.

It was no time for trifling, he made more speed—skipped once or twice. The creature gained upon him; he started into a race, and just then a whisper came upon the cold night air—"Master." Mr. Timothy fairly flew, and without stopping for leave or license, burst, in all his trepidation, straight into the bar-room.

The room was, by this time, well filled, for the report of the tragedy which had been enacted that evening had spread through the neighbourhood.

"What the dickens is the matter now?" said a fat old gentleman, who started from his chair and held it up before him, while all were more or less agitated, and looked at the intruder in a very inquisitive manner.

Mr. Timothy was too much out of breath to do anything in the way of explaining matters. He walked up to the bar, and then from that to the fireplace, and so around the room, until it became a matter of doubt with some whether he was not a subject for some lunatic asylum, and had just escaped. Presently he stopped near to the fat old gentleman, above mentioned, and they both looked at each other for some little time without speaking.

"You have ran hard, sir! Anything happened?—been frightened?"

"Oh, no—oh, no, not at all."

"You came in such a kind of a hurry, neighbour, that I didn't know what was to pay; and seeing there's been such doings here a-ready to-night, it kind a startled me; one murder is enough for one night."

"What!—what is it you say? Murder!—was it a—"

"No, it isn't just a murder yet, but p'rhaps it may turn out something like it; ah! you heered of the young man as was shot in this very house not an hour ago!"

"Shot?"

"Yes, shot with a pistol, and the fellow's cleared out."

"Hollo! hollo, bring out a light here, some of you." All rushed to the door, for the call was a very loud one, and the utterer of it seemed to be alarmed.

"What is it, Bill?" called out one of the footmen.

"Bring a light here quick, will you; get bet; you, you," and the man, with his hat on, flew through the door, all making way for him, while just behind him, and clinging to his coat tail, was a small-sized lad, all head and legs, and no body; he was under bare poles, with no mortal covering but a white under garment.

There was great confusion in the bar-room, and some even went out at the first opening that presented itself. Mr. Timothy was not lucky enough to get out, so he went up into one corner, and there stood, casting a look of the most unreserved astonishment at the poor object that had thus pounced into the room.

The fat old gentleman who had been talking with Mr. Timothy, still kept fast hold of the chair, and as it happened that the lad made towards him, and tried to get behind him, he raised his weapon aloft, and was going to make sad work with somebody's head, when his hand was attracted by Mr. Timothy.

"There's no danger, sir, no danger; I know him."

"You do, hey!"

"I do, sir; there is some great mistake. Charles! how is this?—what do you mean, running round in this shape, and—and—alarming folks; where are your clothes, sir?"

"I don't know, master."

"Don't know! What business had you to strip yourself in this shape?"

"I didn't do it, master; he did it all."

"Charles, don't lie, now; tell me the truth." The youth had squatted down, and was trying to make the most of what little covering he had; he raised one hand.

"It sivilin' truth, master; he took 'em all off, and then he drew off with carriage and horses. Whew! they go spankin' along, just like wind."

"My gracious! Charles! Gentlemen—a lamp—a lantern! Will any of you go with me? The carriage and horses gone! Where?—who look them?—you scoundrel, tell me quick, or I'll take every bit of skin off you. Who took them?"

Mr. Timothy looked round for the man who had gone for a lantern.

"He's a coming," said the fat gentleman, "but I think now, I can unravel this whole mystery. You left a barouche and pair of horses under the shed at the corner, in charge of this—this—boy, or man, I don't know which; he looks like a little of both; didn't you, sir?"

"I did, sir, and a fine span it is too."

"Exactly so; that fellow who shot the man in this house, has, no doubt, taken the liberty to take a ride with that same team; they will help him on his way, pretty considerable fast; now, that is my guess."

Mr. Timothy seized the lantern, and bestowing his overcoat upon Charles, went forth to see what was to be seen.

## CHAPTER XXII.

MRS. EDWARDS and her two daughters had passed a day of mental agony; they could do nothing to aid him on whom their earthly hopes rested, and could only wait with patience the result, whatever it might be.

It was at the hour of midnight, when her watching ear heard the distant rumbling of a carriage. Nearer and nearer it approached; her very heart rested its beat; it stopped at the gate, and in an instant more, loud knocking at the door aroused each inmate of the little family.

"Does Mrs. Edwards live here?" said a young man to the widow herself, who had gone calmly forward to meet the messenger of weal or woe.

"She does; I am Mrs. Edwards." The face of the youth paled as he looked into her beautiful, yet sorrow-stricken countenance.

"Your son, madam, has sent for you to come to him immediately; he has been severely injured, and may not recover."

"Injured! How? By what means? Tell me—tell me quick."

"Indeed, madam, I can tell you but little about it; I was sent off in great haste. He has been shot by some person, and is now lying very low at a house near the ferry."

"How has the trial terminated? Can you tell me?"

"I know nothing about it, madam."

To describe the conflict of contending thoughts and feelings, is not within the power of a common pen. The effect produced was, that which often fills the soul, when amid the war of elements, an awe pervades it that hushes all other feelings into quiet. God, in his terrible might, seems near, and man must be still.

The mother and sisters looked at each other in calm, mute agony, and at once prepared to go on their sad journey.

Mr. Wharton, accompanied by Theodore, was soon at the mansion of Mr. Hunt; a carriage was in waiting at the door, and there was an appearance of confusion in the passage as though persons were preparing to depart.

As they entered the dwelling, Sarah flew to Mr. Wharton.

"Oh, Mr. Wharton! James!—James!" She almost fell into his arms, and her feelings broke forth in sobs and tears.

Mr. Augustus Hunt saw the agonised look of Mr. Wharton, and immediately led him on one side, and in a few words communicated the heart-rending intelligence.

"The Lord's will be done." He stepped up to Sarah, and affectionately embracing her, "Let us be still, my child; this last evil is not worse than the first. We can better afford to lose our dear James, than to see him an outcast, with a stain of deep disgrace on his character for life; better death than an ignominious doom. But let us hasten to him!"

"My dear uncle, I must go; you will not refuse me!"

"You shall go, my darling."

They were soon at the ferry; the night was dark, and the heavy waves

rolled along by the sea-breeze, which was now quite fresh, dashed against the leag piers, as their little boat shot into the open stream; not a word was passed from any of the little company; thoughts too engrossing held them bound in close communion with itself. The rough water upon which they tossed, and the spray that occasionally flew over them, they heeded not, but it seemed a long time before the rowers raised their oars, and moored on the opposite shore.

As they entered the dwelling, the first inquiry was,—

"Is the young man alive?"

"He is."

The surgeon accompanied by his assistant, immediately repaired to the room where James was still lying.

Mr. Wharton, Mr. Augustus Hunt, Sarah, and Theodore retired to await the professional report.

How much of life is sometimes compressed within a short half-hour! What thrilling anxieties work up the very depths of the soul! raising the excited feelings, now upon the pinnacle of hope, and now plunging it down—down to darkness and gloom, like the shadows of the grave!

At length, the foot of the surgeon was heard approaching the room. Every eye was fixed with eloquent intensity upon him as he opened the door, but not a sign could they read upon his calm, cold countenance.

"He has had a narrow escape!"

"Then you think he can possibly recover, doctor?" said Mr. Wharton stepping up to him.

"Yes, sir; I think he will undoubtedly recover, but he must be kept quiet, he has lost much blood."

Mr. Wharton and Sarah were first permitted to enter the sick chamber.

The door was opened by the attendant, and they stood by the side of him they loved so much, and looked upon his pallid countenance, almost marked with lineaments of death. No word was spoken. He looked up at Sarah, and smiled! She stooped over him, and kissed his fair forehead, and then whispered in his ear—

"I shall stay with you, James."

It was ascertained that the express which had been sent for Mrs. Edwards and her daughters, would probably arrive by nine o'clock the next morning, and Mr. Wharton, anxious to relieve their troubled minds, resolved upon an early start, that he might meet them on their way.

That morning broke in all the beauty of a clear, bright sky, and bracing air; as the yellow streaks of light were shooting up from the east, this true-hearted friend stepped forth to go on his errand of love. James had slept well, he was much refreshed, and all danger was felt to be past. The joyful hope that filled the breast of Mr. Wharton, inspired him with the elasticity of youth, and five miles were soon passed over, and he had reached the tavern where he designed to await the little company of mourners. A carriage, driven rapidly, was soon despatched, and he advanced beyond the premises as he wished not to expose to the public gaze the uterine motions of that agonised group. As the vehicle approached he motioned the driver to stop. His cheerful countenance at once inspired their hopes.

Oh, Mr. Wharton! Mr. Wharton! James lives?

"Yes, he lives and will no doubt recover. All is well, praise God my dear madam, your son is cleared from every blot upon his name and his body, we trust, will soon be healed of the injury he has received."

Silently the mother's heart sent forth its gushing notes of praise to Him who power and presence she had so long so ardently implored, and then its fullness was poured out in tears of holy joy, fondly the lovely sisters clasped their mother in their arms, and mingled the overflowing of their happy hearts with hers.

Soon was the distance passed that separated them from the spot towards which their yearnings would have hastened the speed of an angel's wing.

As they entered the hall of the house, Sarah was there with her bright smile to meet the new friends of her heart.

Mary hastened towards her.

"Is this Sarah?"

"And is this Mary?"

And they were clasped together in a fond embrace.

"My dear child," said Mrs. Edwards, as she folded the happy, noble girl to her heart, "may Heaven's best blessings rest upon your noble conduct to my dear James."

### CHAPTER XXIII

MAY is, in general, a beautiful month, it has its squalls, and showers, and softens its chilly days; but it has bright suns that send their gladdening warmth not only upon the opening flower, but even to the very heart of man. It has sparkling days, such as inspire hope and love, and kindly feeling, they thaw away the frosts of winter, and free nature from her icy chain. Few can feel gloomy on a bright, warm May day.

It was on one of these days, the brightest that some ever remember to have seen, about nine o'clock in the morning, two carriages filled with smiling faces stopped at the door of the mill house, and more than one neighbour stepped to their window to see what was going on.

From the first carriage an elderly gentleman alighted, the same who had been seen superintending the repairs, &c. he was easily recognised, for he had a remarkably round face, and his eyes twinkled very fast. Any one who had once seen the face, would be apt to remember it. But he was now arrayed in quite a gala dress; for he had on a blue coat and brass buttons, drab kerseymerie small-clothes, and white top-boots. He sprang in a lively manner from the carriage, and gave his hand to a beautiful girl who needed, however, but little assistance, for she came forth with the grace of a deer,

and bounded up the steps and into the house, as though the very stones had been a spring to send her forward.

And next, he handed forth a lady of more advanced years, although from the ease and elasticity of her step, she might have equalled the younger in rapidity of movement. But her demeanour was staid, elegant, and in perfect keeping with the manners of one who might have reached the age of forty.

Taking his hat, which was a broad-brimmed beaver, from his head, the elderly gentleman gave his arm to this last-described lady, and she ascended with him into the house.

The second carriage now drove up, and a young man, well dressed, stepped out, and gave his hand to the lady who had been sitting beside him. He certainly seemed proud as she took his arm and entered the house; and well he might be, for a lovelier girl of nineteen could not have been found in many an assemblage of earth's beautiful ones.

And from that same carriage, came afterwards another young man of fair form and manly look. His countenance was rather pale, but it may have appeared so in contrast with his hair, which was very dark, and his eye so keen and vivid. He gave his hand to another fair one by whom he had been seated; but in an instant the elderly gentleman was by the carriage.

"Sally dear, lean on my arm. James must not exert himself."

"Oh! I do not lean on him, uncle, see, I help to support him, although he will not acknowledge that he needs any assistance."

The young man smiled at the dear one who clung to his arm, and who evidently was not an oppressive burden to it, as they ascended the steps.

As the last pair entered the house the old gentleman closed the door, and the carriages drove off.

For a short time the parties walked from room to room, and from one nook and corner to another, until the whole had been surveyed. When the two young persons who had entered the house last, and for whom all this preparation had been made, came up walking arm-in-arm, to the old gentleman as he stood reclining against the mantel shelf and looking about with a very happy and contented air.

The young man put forth his hand, and it was grasped in a very friendly manner while the lovely fair one by his side threw both her arms around the neck of the old man, silently weeping tears of happiness.

"Mr. Hunt, I know not what to say, nor how to express the emotions which fill my heart. Your kindness has followed me so long, has been manifest in so many ways, and especially in this last token of it—this beautiful house which you have fitted up with so much care."

"Not a word, James, not a word, you will be good children to me, I have no fat of it."

"We have not, my dear sir, but one more wish, to make our happiness complete. And it is this, that you will consent to make this house your home. Sarah and I pledge to you all that two faithful children can do, to make you happy."

A moment he wiped away the tears which had started freely as James spoke.

"I have made up my mind so to do, here, I wish to live and die, but everything here is yours, and at your disposal. You and Sarah are sole master and mistress. God bless you!"

The little party that witnessed this scene of domestic interest, was each a deeply concerned spectator.

It was the bridal party of James Edwards and his beloved Sarah. They had been married the previous evening at the house of Mr. George Hunt, and were now taking possession of their new home.

Mrs. Edwards and her two daughters, Theodore Berry and Mr. Augustus Hunt, had accompanied the happy bride and groom.

Theodore Berry and Mary Edwards had been special attendants upon the wedding ceremony, and there is every reason to believe that, before long, some kind friends will be invited to perform the same happy office for them.

Mrs. Edwards will remain a few days with the happy pair, and then return with her daughters to take possession of the white cottage, which James has purchased for her as a permanent home.

The first happy day had been passed, cheerful lights were throwing their radiance through the ample parlours. Mrs. Edwards and her daughters were seated together upon the sofa, while James and Sarah were walking to and fro, recounting some of the scenes upon which their memories loved to dwell.

"Well, my son! I think that I and your sisters can say you have fully redeemed your pledge, faithfully have you provided for us when your means were very small, and now, in your abundance, you have made us rich partakers. That home, which you have purchased for us, will be precious, a thousand fold precious beyond its moneyed value."

"My dear mother, I beg you to make no mention of what I have done, I promised a great deal, and have had a disposition to do as I engaged, but my own agency has been very trifling. The Lord has brought about all this, and I have been but a mere instrument in His hand."

"Yes, James, that is all true. The Lord has raised you up friends, and shielded you from enemies. He has blessed you as few young men are blessed, you have the present comforts of life, and the prospect of future wealth. But I wish your dear Sarah joy in the husband she has chosen, more from what I know of your devotion as a son, than for all your other bright prospects."

"And, my dear mother," said Sarah as she took the hand of Mrs. Edwards, and looked up with all her lovely spirit beaming from her bright countenance, "I value him more on that account, than for all the wealth we have in prospect. It was the support of my confidence in my darkest days, and it was the foundation of my joy when, yesterday, I united myself for ever to him."

Continued from page 14

**FAREWELL TO COVER**

HAVING notified to my good friend Sir Roger that I was to leave London the next day, his house was ready for the appointment. On the evening, and attended by one of his grooms, I arrived at the house at twilight, in order to be ready for the stage-coach the day following. As soon as we arrived at the house, the servant who waited upon me inquired of the chamberlain in my name what company he had for the coach. The fellow answered, "Mey Beary, a stable, the eldest son, and the widow her mother, a recruiting officer who took a place because they were to go; a young squire Quickset, her cousin (that her mother wished her to be married to), Ephraim, the Quaker, her guardian; and a gentleman that had studied himself dumb, from Sir Roger to Governor's." I observed by what he said of myself that according to his office, he dealt much in truth-telling; and doubted not but that there was some foundation for his reports of the sort of company as well as for the physical account he gave of me.

We were in so no little time fixed in our boats, and sat with that dislike which people not too good natured usually conceive of each other at first sight. The coach jumbled in and out of the city all day. I did not move above two miles, when the fellow asked the captain what he had in his recruiting? The officer with a frankness he believed very successful told her that in need he had but very little luck, and had suffered much by desertion, therefore should be glad to end his war in the service of her or her fair daughter. In a word, continued he, I am a soldier, and to his plain is my character. You see me, madam, young, sound, independent, like me yourself, widow, or give me a wife, I will be wholly at your disposal. I am a soldier of fortune, ha! This was followed by a vain laugh of his own, and a deep silence of all the rest of the company. I had nothing left to say but to fall flat as I could, which I did with all speed. Come, said he, let me upon it, I will make a wedding at the next town we all will be glad to see you in who has fallen asleep, to be the first to rise, and (giving the Quaker a clap on the knee) he concluded, thus, say saint, who, I warrant understands what's what as well as you or I, allow shall give the bride herself.

Here Ephraim presented the captain, with a happy and uncommon impudence, which can be conceived and support itself at the same time ones. "Fith, friend, I thank thee, I should have been a little unpertinent if thou hadst not reprimanded me. Come, thou art, I see, a smoky old fellow, and I will be very orderly the chusing part of my journey. I was going to give myself airs; but, ladies, I beg pardon."

The captain was so little out of humour, and our company was so far from being soured by this little ruff, that Ephraim and he took a particular delight in being agreeable to each other for the future, and assumed their different provinces in the conduct of the company. Our reckoning, apartments, and accommodation, fell under Ephraim; and the captain looked to all disputes upon the stand, as the good behaviour of our coachman, and the night we had of taking place, as going to London, of all vehicles coming from thence. The sportsmen we met with were ordinary, and very little happened which could entertain by the malice of them, but when I considered the company we were in, I took it for no small good-fortune, that

His time, however, was not spent in impertinences, which to the one part of his acquaintance, to the other a suffering. What, therefore, when the first vessel arrived in London, had to me an air, and manner, which denoted a good breeding. "Upon the young lady," said he, "I have taken an extraordinary and surprising how delightful it is to me, and how he delighted himself as follows — "There is no person in the world who expresses so much a good mind, and a good heart, as a young lord upon meeting with strangers, especially such as are distinguished by uncommon compositions to him: such a man, I think, is more than worth a hundred of simplicity and ignorance, however they may be the eyes of men, will not vaunt himself thereof, but will rather make it his superiority and boast, that he may not be painful unto himself. A good friend, equal to his master, to the sufferer, "then and I am to part, and he, and, perhaps, we may never meet again. But he desired, as a plain man, modest and unassuming, but true to the point, therefore do not think such a man is a threat terrible for thy grief, but need a sign as a contemptible man, and such as thee and I meet, with such a man as we ought to have. I have said other, you should not believe me as a miserable creature, but should be glad to see thy strength and ability to protect me."

I was not a little pleased with the curiosity of the old knight, though I did not much wonder at it having heard him say more than once in private discourse that he looked upon Prince Eugenio (for so the knight always calls him) to be a greater man than Scanderbeg.

I was touched with a secret joy at the sight of the good old man, who before he saw me was engaged in conversation with a beggar-man that had asked an alms of him. I could hear my friend chide him for not finding out some work but at the same time saw him put his hand in his pocket and give him sixpence.

He then proceeded to acquaint me with the welfare of Will Wimble. Upon which he put his hand into his job and I presented me in his name with a tobacco stopper, telling me that Will had been by all the beginning of the winter in turning great quantities of them; and that he made a present of one to every gentleman in the country who had good principles, and amity. He added that poor Will was at present under great tribulation for that Tom Touchy had taken the law of him for cutting some hazel sticks out of one of his hedges.

Among other pieces of news which the knight brought from his country, he informed us that Moll White was dead, and that about a month after her death, the wind was so very high, that it blew down the end of one of his lums. "But for my own part," says Sir Roger, "I do not think that the old woman had any hand in it."

He afterwards fell into an account of the diversions which had passed at his house during the holidays for Sir Roger after the traditional custom of his ancestors always kept up in house at Christmas. "I learned from him," that he had killed eight fat hogs for this season, that he had dealt about thirteen very liberally amongst his retainers, and that, in particular, he had sent a string of hog's-puddings with a sack of candles to every poor family in the parish. "I have often thought," said Sir Roger "it happens very well that Christmas should fall out in the middle of winter. It is the most dead, uncomfortable time of the year, when the poor people would suffer very much from their poverty and cold, if they had not got their warm fires, and Christmas gambols, to support them. I love to relieve the poor hearts at this season, and to see the whole village merry in my great hall. I allow a double quantity of malt to my small beer, and set it a running for twelve days to every one that calls for it. I have always a pile of cold beef and a mince-pie upon the table, and am wonderfully pleased to see my tenants pass away a whole evening in playing their innocent tricks, and amusing and

\* The prince was at this time in London, and much grieved by the queen and her courtiers.

"Upon my coming down, I found all the children of the family got about my old friend, and my landlady herself, who is a notable prating gossip, engaged in a conference with him."

another. Our friend Will Wimple is as merry as any of them, and shows a thousand roguish tricks on these occasions."

I was very much delighted with the reflection of my old friend, which carried so much goodness in it. He then launched out into the praise of the late act of parliament for securing the Church of England, and told me with great satisfaction, that he believed it already began to take effect; for that a rigid dissenter who chanced to dine at his house on Christmas day, had been observed to eat very plentifully of his plum-porridge.

After having despatched all our country matters, Sir Roger made several inquiries concerning the club, and particularly of his old antagonist, Sir Andrew Freepport. He asked me with a kind of smile, whether Sir Andrew had not taken advantage of his absence, to vent among them some of his republican doctrines; but soon after, gathering up his countenance into a more than ordinary seriousness, "Tell me truly," says he, "don't you think Sir Andrew had a hand in the pope's procession?" But without giving me time to answer him, "Well, well," says he, "I know you are a wary man, and do not care to talk of public matters."

The knight then asked me if I had seen Prince Eugenio, and made me promise to get him a stand in some convenient place where he might have a full sight of that extraordinary man, whose presence did so much honour to the British nation. He dwelt very long on the praises of this great general; and I found that, since I was with him in the country, he had drawn many observations together out of his reading in Baker's *Chronicle*, and other authors, that always lie in his hall window, which very much redound to the honour of this prince.

Having passed away the greatest part of the morning in hearing the knight's reflections, which were partly private and partly political, he asked me if I would smoke a pipe with him over a dish of coffee at Squire's. As I love the old man, I take delight in complying with everything that is agreeable to him, and, accordingly, waited on him to the coffee-house, where his venerable figure drew upon us the eyes of the whole room. He had no sooner seated himself at the upper end of the high table, than he called for a clean pipe, a paper of tobacco, a dish of coffee, a wax candle, and the *Supplement*,\* with such an air of cheerfulness and good-humour, that all the boys in the coffee-room (who seemed to take pleasure in serving him) were at once employed on his several errands; inasmuch, that nobody else could come at a dish of tea, until the knight had got all his conveniences about him.

## CHAPTER XXI.

### SIR ROGER IN WESTMINSTER ABBEY.

"With Ancus, and with Numa, kings of Rome,  
We must descend into the silent tomb."

My friend Sir Roger de Coverley told me t'other night that he had been reading my paper upon Westminster Abbey, in which, says he, there are a

\* A periodical paper of that time.

great many ingenious fancies. He told me, at the same time, that he observed I had promised another paper upon the tombs, and that he should be glad to go and see them with me, not having visited them since he had read history. I could not at first imagine how this came into the knight's head, till I recollected that he had been very busy all last summer upon Baker's *Chronicle*, which he had quoted several times in his disputes with Sir Andrew Freepport since his last coming to town. Accordingly, I promised to call on him the next morning, that we might go together to the Abbey.

I found the knight under his butler's hands, who always slaves him. He was no sooner dressed, than he called for a glass of the Widow Trueby's water, which he told me he always drank before he went abroad. He recommended to me a dram of it at the same time, with so much heartiness, that I could not forbear drinking it. As soon as I had got it down, I found it very unpalatable, upon which the knight, observing that I had made several wry faces, told me that he knew I should not like it at first, but that it was the best thing in the world against the stone or gravel.

I could have wished, indeed, that he had acquainted me with the virtue of it sooner; but it was too late to complain, and I knew what he had done was out of good will. Sir Roger told me further, that he looked upon it to be very good for a man whilst he stayed in town, to keep off infection; and that he got together a quantity of it upon the first news of the sickness being at Dantzic. When, of a sudden, turning short to one of his servants, who stood behind him, he bade him call a hackney-coach, and take care that it was an elderly man that drove it.

He then resumed his discourse upon good Mrs. Trueby, telling me that the widow Trueby was one who did more good than all the doctors and apothecaries in the country; that she distilled every poppy that grew within five miles of her; that she distributed such gratis among all sorts of people; to which the knight added, that she had a very great jointure, and that the whole country would fain have it a match between him and her; "and truly," said Sir Roger, "if I had not been engaged, perhaps I could not have done better."

His discourse was broken off by his man telling him he had called a coach. Upon our going to it, after having cast his eye upon the wheels, he asked the coachman if his axletree was good; upon the fellow telling him he would warrant it, the knight turned to me, and told me he looked like an honest man, and went in without further ceremony.

We had not gone far, when Sir Roger, popping out his head, called the coachman down from his box, and, upon his presenting himself at the window, asked him if he smoked. As I was considering what this would end in, he bade him stop by the way at any good tobaccoist's, and take in a roll of their best Virginia. Nothing material happened in the remaining part of our journey till we were set down at the west end of the Abbey.

As we went up the body of the church, the knight pointed at the trophies upon one of the new monuments, and cried out, "A brave man, I warrant him!" Passing afterwards by Sir Cloudesley Shovel, he flung his hand

that way, and cried, "Sir Cloudeley Shovel—a very gallant man!" As we stood before Busby's tomb, the knight uttered himself again, after the same manner—"Dr. Busby—a great man! he whipped my grandfather—a very great man! I should have gone to him myself if I had not been a block-head—a very great man!"

We were immediately conducted into the little chapel on the right hand. Sir Roger, planting himself at our historian's elbow, was very attentive to everything he said, particularly to the account he gave us of the lord who had cut off the King of Morocco's head. Among several other figures, he was very well pleased to see the statesman Cecil upon his knees; and, concluding them all to be great men, was conducted to the figure which represents that martyr to good housewifery, who died by the prick of a needle. Upon our interpreter telling us that she was a maid of honour to Queen Elizabeth, the knight was very inquisitive into her name and family; and, after having regarded her finger for some time, "I wonder," says he, "that Sir Richard Baker has said nothing of her in his *Chronicle*."

We were then conveyed to the two coronation chairs, where my old friend (after having heard that the stone underneath the most ancient of them, which was brought from Scotland, was called Jacob's Pillar) sat himself down in the chair, and, looking like the figure of an old Gothic king, asked our interpreter what authority they had to say that Jacob had ever been in Scotland? The fellow, instead of returning him an answer, told him that he hoped his honour would pay his forfeit. I could observe Sir Roger a little ruffled upon being thus trepanned; but, our guide not insisting upon his demand, the knight soon recovered his good humour, and whispered in my ear that, if Will Wimple were with us, and saw those two chairs, it would go hard but he would get a tobacco-stopper out of one or t'other of them.

Sir Roger, in the next place, laid his hand upon Edward the Third's sword, and, leaning upon the pommel of it, gave us the whole history of the Black Prince; concluding that, in Sir Richard Baker's opinion, Edward the Third was one of the greatest princes that ever sat upon the English throne.

We were then shown Edward the Confessor's tomb, upon which Sir Roger acquainted us that he was the first who touched for the evil, and afterwards Henry the Fourth's, upon which he shook his head, and told us there was fine reading in the casualties of that reign.

Our conductor then pointed to that monument where there is the figure of one of our English kings without a head; and, upon giving us to know that the head, which was of beaten silver, had been stolen away several years since, "Some whig, I'll warrant you," says Sir Roger: "you ought to lock up your kings better; they will carry off the body too if you don't take care."

The glorious names of Henry the Fifth and Queen Elizabeth gave the knight great opportunities of shining and of doing justice to Sir Richard Baker, who, as our knight observed, with some surprise, had a great many kings in his work whose monuments he had not seen in the Abbey.

For my own part, I could not but be pleased to see the knight show such an honest passion for the glory of his country, and such a respectful gratitude to the memory of its princes.

I must not omit that the benevolence of my good old friend, which flows out towards every one he converses with, made him very kind to our interpreter, whom he looked upon as an extraordinary man; for which reason he shook him by the hand at parting, telling him that he should be very glad to see him at his lodgings in Norfolk Buildings, and talk over these matters with him more at leisure.

## CHAPTER XXII.

### SIR ROGER AT THE PLAY-HOUSE.

"Those are the likeliest copies, which are drawn From the original of human life."—ROSCOMMON.

My friend Sir Roger de Coverley, when we last met together at the club, told me that he had a great mind to see the new tragedy with me, assuring me, at the same time, that he had not been at a play these twenty years. "The last I saw," said Sir Roger, "was the *Committee*, which I should not have gone to neither, had I not been told beforehand that it was a good Church of England comedy." He then proceeded to inquire of me who this distressed mother was, and upon hearing that she was Hector's widow, he told me that her husband was a brave man, and that when he was a school-boy, he had read his life at the end of the dictionary. My friend asked me, in the next place, if there would not be some danger in coming home late, in case the Mohocks should be abroad. "I assure you," says he, "I thought I had fallen into their hands last night, for I observed two or three lusty black men that followed me half way up Fleet Street, and mended their pace behind me in proportion as I put on to get away from them. You must know," continued the knight with a smile, "I fancied they had a mind to hunt me; for I remember an honest gentleman in my neighbourhood who was served such a trick in King Charles the Second's time, for which he has not ventured himself in town ever since. I might have shown them very good sport had this been their design; for, as I am an old fox-hunter, I should have turned and dodged, and have played them a thousand tricks they had never seen in their lives before." Sir Roger added that, if these gentlemen had any such intention, they did not succeed very well in it; "for I threw them out," says he, "at the end of Norfolk Street, where I doubled the corner and got shelter in my lodgings before they could imagine what was become of me. However," says the knight, "if Captain Sentry will make one with us to-morrow night, and if you will both of you call upon me about four o'clock, that we may be at the house before it is full, I will have my own coach in readiness to attend you, for John tells me he has got the fore-wheels mended."

The captain, who did not fail to meet me there at the appointed hour, bid Sir Roger fear nothing, for that he had put on the same word which he made use of at the battle of Steenkirke. Sir Roger's servants, and among the rest my old friend the butler, had, I found, provided themselves with good oaken plants to attend their master upon this occasion. When we had placed him in his coach, with myself at his left hand, the captain before him, and his butler at the head of his footmen in the rear, we conveyed him in safety to the playhouse, where, after having marched up the entry in good order, the captain and I went in with him, and seated him betwixt us in the pit. As soon as the house was full, and the candles lighted, my old friend stood up and looked about him with that pleasure which a mind seasoned with humanity naturally feels in itself at the sight of a multitude of people who seem pleased with one another, and partake of the same common entertainment. I could not but fancy to myself, as the old man stood up in the middle of the pit, that he made a very proper centre to a tragic audience. Upon the entering of Pyrrhus, the knight told me that he did not believe the King of France himself had a better strut. I was, indeed, very attentive to my old friend's remarks, because I looked upon them as a piece of natural criticism; and as well pleased to hear him, at the conclusion of almost every scene telling me that he could not imagine how the play would end. One while he appeared much concerned for Andromache; and a little while after as much for Hermione; and was extremely puzzled to think what would become of Pyrrhus.

When Sir Roger saw Andromache's obstinate refusal to her lover's importunities, he whispered me in the ear that he was sure she would never have him; to which he added, with a more than ordinary vehemence, "You can't imagine, sir, what 'tis to have to do with a widow." Upon Pyrrhus's threatening afterwards to leave her, the knight shook his head, and muttered to himself, "Ay, do if you can." This part dwelt so much upon my friend's imagination, that at the close of the third act, as I was thinking of something else, he whispered in my ear, "These widows, sir, are the most perverse creatures in the world. But pray," says he, "you that are a critic, is the play according to your dramatic rules, as you call them? Should your people in tragedy always talk to be understood? Why, there is not a single sentence in this play that I do not know the meaning of."

The fourth act very luckily began before I had time to give the old gentleman an answer: "Well," says the knight, sitting down with great satisfaction, "I suppose we are now to see Hector's ghost." He then renewed his attention, and from time to time, fell a praising the widow. He made, indeed, a little mistake as to one of her pages, whom at his first entering he took for Astyanax; but quickly set himself right in that particular, though, at the same time, he owned he should have been very glad to have seen the little boy, "who," says he, "must needs be a very fine child by the account that is given of him." Upon Hermione's going off with a menace to Pyrrhus, the audience gave a loud clap, to which Sir Roger added, "On my word, a notable young baggage!"

As there was a remarkable silence and stillness in the audience during the whole action, it was natural for them to take the opportunity of these intervals between the acts to express their opinion of the players and of their respective parts. Sir Roger hearing a cluster of them praise Orestes, struck in with them, and told them, that he thought his friend Pylades was a very sensible man; as they were afterwards applauding Pyrrhus, Sir Roger put in a second time: "And let me tell you," says he, "though he speaks but little, I like the old fellow in whiskers as well as any of them." Captain Sentry, seeing two or three wags, who sat near us, lean with an attentive ear towards Sir Roger, and fearing lest they should smoke the knight, plucked him by the elbow, and whispered something in his ear, that lasted till the opening of the fifth act. The knight was wonderfully attentive to the account which Orestes gives of Pyrrhus's death, and at the conclusion of it, told me it was such a bloody piece of work, that he was glad it was not done upon the stage. Seeing afterwards Orestes in his raving fit, he grew more than ordinarily serious, and took occasion to moralise (in his way) upon an evil conscience, adding, that Orestes, in his madness, looked as if he saw something.

As we were the first that came into the house, so we were the last that went out of it; being resolved to have a clear passage for our old friend, whom we did not care to venture among the jostling of the crowd. Sir Roger went out fully satisfied with his entertainment, and we guarded him to his lodging in the same manner that we brought him to the playhouse; being highly pleased, for my own part, not only with the performance of the excellent piece which had been presented, but with the satisfaction which it had given to the old man.

## CHAPTER XXIII.

### SIR ROGER AT VAUXHALL.

"A benighted garden, but by vice maintained."

As I was sitting in my chamber, and thinking on a subject for my next *Spectator*, I heard two or three irregular bounces at my landlady's door, and, upon the opening of it, a loud cheerful voice inquiring whether the philosopher was at home. The child who went to the door answered very innocently, that he did not lodge there. I immediately recollected that it was my good friend Sir Roger's voice, and that I had promised to go with him on the water to Spring-gardens, in case it proved a good evening. The knight put me in mind of my promise from the bottom of the staircase, but told me that if I was speculating, he would stay below till I had done. Upon my

\* Now known by the name of Vauxhall.

coming down, I found all the children of the family got about my old friend; and my landlady herself, who is a notable prating gossip, engaged in a conference with him; being mightily pleased with his striking her little boy on the head, and bidding him be a good child and mind his book.

We were no sooner come to the Temple-stairs, but we were surrounded with a crowd of watermen, offering us their respective services. Sir Roger, after having looked about him very attentively, spied one with a wooden leg, and immediately gave him orders to get his boat ready. As we were walking towards it, "You must know," says Sir Roger, "I never make use of anybody to row me, that has not either lost a leg or an arm. I would rather help him a few strokes of his oar than not employ an honest man that has been wounded in the queen's service. If I was a lord or a bishop, and kept a barge, I would not put a fellow in my livery that had not a wooden leg."

My old friend, after having seated himself, and trimmed the boat with his coachman, who, being a very sober man, always serves for ballast on these occasions, we made the best of our way for Spring Gardens. Sir Roger obliged the waterman to give us the history of his right leg; and, hearing that he had left it at La Hogue, with many particulars which passed in that glorious action, the knight, in the triumph of his heart, made several reflections on the greatness of the British nation; as, that one Englishman could beat three Frenchmen; that we could never be in danger of Popery so long as we took care of our fleet; that the Thames was the noblest river in Europe; that London Bridge was a greater piece of work than any of the seven wonders of the world; with many other honest prejudices which naturally cleave to the heart of a true Englishman.

After some short pause, the old knight, turning about his head twice or thrice, to take a survey of this great metropolis, bid me observe how thick the city was set with churches, and that there was scarce a single steeple on this side Temple-bar. "A most heathenish sight," says Sir Roger; "there is no religion at this end of the town. The fifty new churches will very much mend the prospect; but church-work is slow, church-work is slow."

I do not remember I have anywhere mentioned in Sir Roger's character, his custom of saluting everybody that passes by him with a "Good-morrow," or a "Good-night." This the old man does out of the overflowings of his humanity, though at the same time it renders him so popular among all his country neighbours, that it is thought to have gone a good way in making him once or twice knight of the shire. He cannot forbear this exercise of benevolence, even in town, when he meets with any one in his morning or evening walk. It broke from him to several boats that passed by us on the water; but, to the knight's great surprise, as he gave the good-night to two or three young fellows a little before our landing, one of them, instead of returning the civility, asked us, what queer old Put we had in the boat, with a great deal of the like Thames ribaldry. Sir Roger seemed a little shocked at first, but at length, assuming a face of magistracy, told us "That if he were a Middlesex justice, he would make such vagrants know that Her Majesty's subjects were no more to be abused by water than by land."

We were now arrived at Spring Gardens, which is exquisitely pleasant at this time of the year. When I considered the fragrant of the walks and bowers, with the choirs of birds that sang upon the trees, and the loose tribe of people that walked under their shades, I could not but look upon the place as a kind of Mahometan paradise. Sir Roger told me it put him in mind of a little coppy by his house in the country, which his chaplain used to call an aviary of nightingales. "You must understand," says the knight, "there is nothing in the world that pleases a man in love so much as your nightingale. Ah, Mr. Spectator! the many moonlight nights that I have walked by myself, and thought on the widow by the music of the nightingale!" He here fetched a deep sigh, and was falling into a fit of musing, when a Maak, who came behind him, gave him a gentle tap upon the shoulder, and asked him if he would drink a bottle of mead with her? But the knight being startled at so unexpected a familiarity, and displeased to be interrupted in his thoughts of the widow, told her she was a wanton baggage, and bid her go about her business.

We concluded our walk with a glass of Burton ale, and a slice of hung beef. When we had done eating ourselves, the knight called a waiter to him, and bid him carry the remainder to the waterman that had but one leg. I perceived the fellow stared upon him at the oddness of the message, and was going to be saucy; upon which I ratified the knight's commands with a peremptory look.

## CHAPTER XXIV.

### SIR ROGER, THE WIDOW, WILL HONEYCOMB, AND MILTON.

"The greedy lioness the wolf pursues,  
The wolf the kid, the wanton kid the browse."—*DRYDEN.*

As we were at the club last night, I observed that my friend Sir Roger, contrary to his usual custom, sat very silent, and instead of minding what was said by the company, was whistling to himself in a very thoughtful mood, and playing with a cork. I jugged Sir Andrew Freeport, who sat between us; and as we were both observing him, we saw the knight shake his head, and heard him say to himself, "A foolish woman! I can't believe it." Sir Andrew gave him a gentle pat upon the shoulder, and offered to lay him a bottle of wine that he was thinking of the widow. My old friend started, and recovering out of his brown study, told Sir Andrew that once in his life he had been in the right. In short, after some little hesitation, Sir Roger told us in the fulness of his heart, that he had just received a letter from his steward, which acquainted him that his old rival, Sir David Dundrum, had been making a visit to the widow. "However," says Sir Roger, "I can never think that she'll have a man that's half a year older than I am, and a noted republican into the bargain."

Will Honeycomb, who looks upon love as his particular province, interrupting our friend with a jaunting laugh; "I thought, knight," says he, "thou hadst lived long enough in the world not to pin thy happiness upon one that is a woman and a widow. I think that without vanity I may pretend to know as much of the female world as any man in Great Britain, though the chief of my knowledge consists in this, that they are not to be known." Will immediately, with his usual fluency, rambléd into an account of his own amours. "I am now," says he, "upon the verge of fifty" (though, by the way, we all knew he was turned of threescore). "You may easily guess," continued Will, "that I have not lived so long in the world without having had some thoughts of settling in it, as the phrase is. To tell you truly, I have several times tried my fortune that way, though I can't much boast of my success."

"I made my first addresses to a young lady in the country; but when I thought things were pretty well drawing to a conclusion, her father happening to hear that I had formerly boarded with a surgeon, the old 'Put' forbid me his house, and within a fortnight after married his daughter to a fox-hunter in the neighbourhood."

"I made my next application to a widow, and attacked her so briskly that I thought myself within a fortnight of her. As I waited upon her one morning, she told me that she intended to keep her ready money and jointure in her own hand, and desired me to call upon her attorney in Lyon's Inn, who would adjust with me what it was proper for me to add to it. I was so rebuffed by this overture, that I never inquired either for her or her attorney afterwards."

"A few months afterwards I addressed myself to a young lady who was an only daughter, and of a good family: I danced with her at several balls, squeezed her by the hand, said soft things to her, and, in short, made no doubt of her heart; and, though my fortune was not equal to hers, I was in hopes that her fond father would not deny her the man she had fixed her affections upon. But as I went one day to the house in order to break the matter to him, I found the whole family in confusion, and heard, to my unspeakable surprise, that Miss Jenny was that very morning run away with the butler."

"I then courted a second widow, and am at a loss to this day how I came to miss her, for she had often commended my person and behaviour. Her maid, indeed, told me one day that her mistress had said she never saw a gentleman with such a spindle pair of legs as Mr. Honeycomb."

"After this I laid siege to four heiresses successively; and being a handsome young dog in those days, quickly made a breach in their heart; but I don't know how it came to pass, though I seldom failed of getting the daughters' consent, I could never in my life get the old people on my side."

"I could give you an account of a thousand other unsuccessful attempts, particularly of one which made some years since upon an old woman, whom I had certainly borne away with flying colours, if her relations had not come pouring in to her assistance from all parts of England; nay, I believe I should have got her at last, had she not been carried off by a hard frost."

As Will's transitions are extremely quick, he turned from Sir Roger, and, applying himself to me, told me there was a passage in the book I had considered last Saturday, which deserved to be writ in letters of gold; and taking out a pocket Milton, read the following lines, which are part of one of Adam's speeches to Eve after the fall:—

"Oh! why did God,  
Creator wise! that peopled highest heav'n  
With spirits masculine, create at last  
This novelty on earth, this fair defect  
Of Nature! and not fill the world at once  
With us, angels, without need of female?  
Or find some other way to generate  
Mankind! 'Tis mischief hath not done befall'n,  
And more than shall befall, immutable  
Disturbances on earth, through female snares,  
And straight conjunction with this sex. For either  
He never shall find out fit mate; but such  
As some misfortune brings him, or mistake;  
Or, whom he wishes most, shall seldom gain  
Through her perverseness; but shall see her gain'd  
By a far worse: or if she love, with child  
By parents; or his happiest choice too late  
Shall meet already link'd, and woe-lock-bound  
To a fell adversary, his hate or shame;  
Which infinite calamity shall cause  
To human life, and household peace confound."

Sir Roger listened to this passage with great attention, and, desiring Mr. Honeycomb to fold down a leaf at the place, and lend him his book, the knight put it up in his pocket, and told us that he would read over those verses again before he went to bed.

## CHAPTER XXV.

### SIR ROGER PASSES AWAY.

"Mirror of ancient faith,  
Undaunted worth! Inviolable truth."—*DARWIN.*

WE last night received a piece of ill news at our club, which very sensibly affected every one of us. I question not but my readers themselves will be troubled at the hearing of it. To keep them no longer in suspense; Sir Roger de Coverley is dead. He departed this life, at his house in the country, after a few weeks' sickness. Sir Andrew Freeport has a letter from one of his correspondents in those parts, that informs him the old man caught a cold at the county-sessions, as he was very warmly promoting an address of his own penning, in which he succeeded according to his wishes. But this particular comes from a whig justice of peace, who was always Sir Roger's enemy and antagonist. I have letters both from the chaplain and Captain Sentry which mention nothing of it, but are filled with

many particulars to the honour of the good old man. I have likewise a letter from the butler, who took so much care of me last summer, when I was at the knight's house. As my friend the butler mentions, in the simplicity of his heart, several circumstances the others have passed over in silence, I shall give my reader a copy of his letter, without any alteration or diminution:—

"HONOURED SIR,—Knowing that you was my old master's good friend, I could not forbear sending you the melancholy news of his death, which has afflicted the whole country, as well as his poor servants, who loved him, I may say, better than we did our lives. I am afraid he caught his death the last county-session, where he would go to see justice done to a poor widow woman and her fatherless children, that had been wronged by a neighbouring gentleman; for you know, sir, my good master was always the poor man's friend. Upon his coming home, the first complaint he made was, that he had lost his roast-beef stomach, not being able to touch a sirloin, which was served up according to custom; and you know he used to take great delight in it. From that time forward he grew worse and worse, but still kept a good heart to the last. Indeed we were once in great hope of his recovery, upon a kind message that was sent him from the widow lady whom he had made love to the forty last years of his life; but this only proved a lightning before death. He has bequeathed to this lady, as a token of his love, a great pearl necklace, and a couple of silver bracelets set with jewels, which belonged to my good old lady his mother: he has bequeathed the fine white gelding, that he used to ride hunting upon, to his chaplain, because he thought he would be kind to him, and has left you all his books. He has, moreover, bequeathed to the chaplain a very pretty tenement with good lands about it. It being a very cold day when he made his will, he left for mourning, to every man in the parish, a great frieze coat, and to every woman a black riding-hood. It was a most moving sight to see him take leave of his poor servants, commending us all for our fidelity, whilst we were not able to speak a word for weeping. As we most of us are grown grey-headed in our dear master's service, he has left us pensions and legacies, which we may live very comfortably upon, the remaining part of our days. He has bequeathed a great deal more in charity, which is not yet come to my knowledge, and it is preposterously said in the parish, that he has left money to build a steeple to the church; for he was heard to say some time ago, that if he lived two years longer, Coverley church should have a steeple to it. The chaplain tells everybody that he made a very good end, and never speaks of him without tears. He was buried, according to his own directions, among the family of the Coverleys, on the left hand of his father Sir Arthur. The coffin was carried by six of his tenants, and the pall held up by six of the quorum: the whole parish followed the corpse with heavy hearts, and in their mourning suits, the men in frieze, and the women in riding-hoods. Captain Sentry, my master's nephew, has taken possession of the Hall-house, and the whole estate. When my old master saw him a little before his death, he shook him by the hand, and wished him joy of the estate which was falling to him, desiring him only to make a good use of it, and to pay the several legacies, and the gifts of charity which he told him he had left as quit-rents upon the estate. The captain truly seems a courteous man, though he says but little. He makes much of those whom my master loves, and shows great kindness to the old house-dog, that you know my poor master was so fond of. It would have gone to your heart to have heard the moans the dumb creature made on the day of my master's death. He has never joyed himself since; no more has any of us. It was the melancholiest day for the poor people that ever happened in Worcestershire. This is all from,—HONOURED SIR, your most sorrowful servant, EDWARD BISCUIT.

"P.S.—My master desired, some weeks before he died, that a book, which comes up to you by the carrier, should be given to Sir Andrew Freeport in his name."

This letter, notwithstanding the poor butler's manner of writing it, gave us such an idea of our good old friend, that upon the reading of it there was not a dry eye in the club. Sir Andrew opening the book, found it to be a collection of Acts of Parliament. There was in particular the Act of Uniformity, with some passages in it marked by Sir Roger's own hand. Sir Andrew found that they related to two or three points which he had disputed with Sir Roger the last time he appeared at the club. Sir Andrew, who would have been merry at such an incident on another occasion, at the sight of the old man's hand-writing burst into tears, and put the book in his pocket. Captain Sentry informs me that the knight has left rings and mourning for every one in the club.

END OF SIR ROGER DE COVERLEY.

St. PAUL'S CLOCK.—A writer in the *Foreign Quarterly* thus describes the machinery of this great London clock:—"The pendulum is fourteen feet long, and the weight at the end is one hundred weight; the dial on the outside is regulated by a smaller one within; the length of the minute hand on the exterior dial is eight feet, and the weight of each seventy-five pounds; the length of the hour figures, two feet and two and a half inches. The finetoned bell, which strikes, is clearly distinguished from every other bell in the metropolis, and has been distinctly heard at the distance of twenty miles. It is about ten feet in diameter, and is said to weigh four and a half tons. The bell is tolled on the death of any member of the Royal family, of the Lord Mayor, Bishop of London, or Dean of the cathedral. The whole expense of building the cathedral was about a million and a half pounds sterling."

## PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

### XXIII.—"LOVE ME, LOVE MY DOG."

"PUNCH" has lately been giving us some pictorial illustrations of this fallacy, in which the respectable Mrs. Baker will insist on every friend of hers being also the friend of her mischievous cur: no matter how great the annoyance or the mischief occasioned by the yelping little animal, it must be loved; if they would preserve the friendship of Mrs. Baker. And, in the present day, we cannot walk the streets without meeting some fair young creature, with every attribute that might provoke to love, tenderly carrying in her arms some shaggy little poodle, or silky spaniel, on which she lavishes her caresses, and stares at you with a look that plainly says, "Love me, love my dog." If a handsome figure catches your eye in a carriage, and you strive to get a glimpse at the face, you are certain to find a grim terrier or other canine monstrosity thrusting its head out of the window and blocking up your view exactly at the critical moment. There may be some little excuse for carrying these snarling pets in their arms in the crowded thoroughfares of the metropolis, where dog-fanciers abound whose admiration of canine nature is often too strong for their virtue; but we fear there is a sort of dog-star frenzy, a kind of canicular madness raging which is extending even into country districts, where the poor little animals might be allowed to jump and frisk about without any great danger of being snapped up by some hirsute man in corduroys. It was but the other day, in a country town, we saw a young lady parading the streets with great dignity, followed by a tall footman bearing in his arms an ugly little white poodle; and ever and anon the young lady would turn back to caress and kiss the little monster as it lay in the footman's arms. We hardly knew which most to pity of the three, the flunkey, the dog, or the lady. We understood she had only lately become rich enough to keep a footman, and we conclude did not know exactly to what use to put him. At all events she was giving due notice to all who might be inclined to become her suitors, that her affections must be won through her dog. "Love me, love my dog."

This custom of fondling and carrying about brutes appears to have prevailed in ancient as well as in modern times, for Plutarch commences his life of Pericles with this anecdote of Cæsar:—"Cæsar having accidentally seen certain rich strangers at Rome carrying about in their bosoms and fondling the cubs of dogs and apes, asked them if their wives did not bring forth children, rebuking them in the tone of a prince, and with great severity, for wasting upon brutes the affections innate in human nature, and due only to man." And Plutarch goes on to reason upon this inordinate love for brutes, and to contend that those who set their love on low and base things entirely neglect both the beautiful and the useful. If Cæsar or Plutarch had lived in these our days, and witnessed the onresses that are lavished on the brute creation by the fairer portion of the sex, they would have lamented over this waste of affection, this giving to brutes what was due to man, and denounced it in no very measured terms. And we are not quite certain but some satirical and ill-natured reflections might have been passed on those young ladies who are fond of kissing their dogs in their footmen's arms. If the proverb had been known in their days, it would most probably have elicited the commentary that those who strongly insist on people loving their dogs, would not be very likely to have any love given to themselves.

"In the intercourse of life," says Charles Lamb in one of the brilliant essays of *Elia*, in which he treats this very subject, and into which we should not have ventured to enter after him but that he had confused in one species of these canine boreas, and left untouched a very large portion of the kennel—"in the intercourse of life, we have had frequent occasions of breaking off an agreeable intimacy by reason of these canine appendages. They do not always come in the shape of dogs; they sometimes wear the

more plausible and human character of kinsfolk, near acquaintances, my friend's friend, his partner, his wife, or his children. We could never yet form a friendship—not to speak of more delicate correspondences—however much to our taste, without the introduction of some third anomaly, some impertinent dog affixed to the relation—the understood dog in the proverb. The good things of life are not to be had singly, but come to us with a mixture; like a schoolboy's holiday, with a task affixed to the tail of it." And then he goes on to describe sundry kinds of "dogs" that appear in the shape of tall cousins, stupid brothers, tiger aunts, and viper sisters, whom you are compelled to endure if you would partake of the society of those to whom you are attracted, but whom you can never meet without one or other of these canine appendages. "Cannot we like Sempronia, without sitting down to chess with her eternal brother? or know Sulpicia without knowing all the round of her card-playing relations? Must my friend's brethren of necessity be mine also? must we be hand in glove with Dick Selby, the parson, or Jack Selby, the calico-printer, because William Selby, who is neither, but a ripe wit and a critic, has the misfortune to claim a common parentage with them? Let him lay down his brothers, and it is odds but we will cast him in a pair of ours (we have a superfluous) to balance the concession. Let F. H. lay down his garrulous uncle; and Honorius dismiss his rapid wife, and superfluous establishment of six boys—things between boy and manhood—too ripe for play, too raw for conversation, that come in impudently staring their father's old friend out of countenance; and will neither aid nor let alone the conference, that we may once more meet upon equal terms, as we were wont to do in the disengaged state of bachelorhood. It is well if your friend or mistress be content with these canicular probations. Few young ladies but in this sense keep a dog. But when Rutilla hounds at you her tiger aunt, or Ruspina expects you to cherish and fuddle her viper sister, whom she has preposterously taken into her bosom, to try stringing conclusions upon your constancy, they must not complain if the house be rather thin of suitors. Seylla must have broken off many matches in her time, if she insisted upon all who loved her loving her dogs also."

However annoying these kindred dogs may be, there is also a still larger class who insist, that if we love them, we shall also love their dogs, of whatever breed they may happen to be—whether they be little crooked-legged pugs, with tails curled so tight that they cannot close their eyes, or rough Skye terriers, called handsome from their very ugliness—whether they be those graceful and stupid Italian greyhounds, for ever gnawing up and destroying whatever comes within their reach, or a grave poodle, in a judge's wig, walking on its hind legs. Among the human dogs that are often forced upon our love, whether we will or no, none are more detestable than the breed known as toadies—sometimes answering to Byron's description:—

"Born in the garret, in the kitchen bred,  
Propagated thence to deck her mistress' bed;  
Next—for some gracious service unexpress'd,  
And from its wages only to be guess'd—  
Raised from the toilet to the table, where  
Her wondering betters wait behind her chair.  
With eye unmov'd, and forehead unabash'd,  
She dines from off the plate she lately wash'd;  
Quick with the tale, and ready with the lie—  
The genial confidante, and general spy."

Sometimes not quite so low in origin, but with a cringing spirit that makes them odious to all but the favoured recipient of the toadyism, who insists that every one shall regard the cunning flatterer with the same feelings as herself. "Love me, love my dog." Servilia was a young lady of very moderate means, and most immoderate desires, which she found it impossible to gratify in her original station. She had some considerable mental powers and attainments, and her introduction to the rich, and somewhat eccentric, Religiosa, gave her an opportunity for bringing her talents into play. Most completely did she succeed in fixing herself in the affections of the great heiress; she played upon all her foibles, she fostered all her weaknesses, she flattered every latent spark of vanity, she won her way into her affections, until the house and purse of the heiress were more at the command of Servilia than of Religiosa herself. So strong had become the influence of Servilia over the mind of Religiosa, so powerful were the fetters in which she had bound her, that Religiosa could not move without Servilia being ever at her side. "Love me, love my dog," was the test she applied to all her friends. Nowhere would she visit without Servilia. Her aristocratic friends, who valued the many good qualities of Religiosa, for a time put up with the nuisance of being bored with the company of Servilia whenever Religiosa came to visit them; but the fawning manners of the "dog" became at length unendurable, and Religiosa received several hints that the company of Servilia was not desired. Servilia, in the meantime, had been continually insinuating that this old friend of Religiosa laughed at some of her notions, and that another old friend denied her pretensions to knowledge—that one lady spoke disrespectfully of her, and another turned her into ridicule. The seeds of distrust were thus sown between Religiosa and her old friends, and when she found they disliked Servilia, and refused to receive her, she was quite prepared to quarrel with them because they could not "love her dog." Servilia had now complete control over the mind of Religiosa, and she endeavoured to use this control for her own permanent establishment in life. Religiosa had a nephew, who was the heir to her vast wealth. This young man—many years younger than herself—Servilia determined to marry. The "love me, love my dog" theory, had been so strongly inculcated in the mind of the young man, that he believed he was best ingratiating himself in the affections of the aunt by showing affection towards her "dog." Servilia—well knowing how flattering it is to a very young man to be loved by a clever woman older than himself, and the

influence which such a woman could exercise over him—laid herself out to attract him. Religiosa was perfectly blind to the schemes of her whom she had thus fostered; she looked upon the interest which Servilia took in the proceedings of her nephew only as another mark of her attachment to herself, and the little familiarities to which she was occasionally witness between them, seemed to her only the natural consequence of the great love they both of them bore to the aunt and the patroness. She could not conceive the possibility of the "dog" she had cherished so fondly attacking her in the tenderest point—for Religiosa was of high birth, and proud of being so born; she was anxious that her nephew should connect himself highly, and maintain the importance of the family. We may easily guess the feelings of dismay with which, at length, she discovered the designs of her intriguing friend. The young man had found himself entangled in a web that sat not easily upon him, but which he could not break. Some young friends had penetrated the schemes of Servilia, and continually ridiculed them before him, so that, instead of feeling flattered by her love, he was disgusted. She saw the time was come for "a bold stroke for a husband," and she played her game boldly. She claimed his hand from her friend in fulfilment of a promise which she avowed he had made her, and which Religiosa had sanctioned by her tacit allowance of the love she must have seen. And if the young man himself had not lost some of his infatuation, she might have succeeded; but he had been ridiculed out of all feeling for one whom his companions irreverently called an old woman, and was only too happy to second his aunt in getting rid of her altogether. The promise was easily disproved; Servilia was dismissed from the companionship of Religiosa; sent back into her former obscurity—not, indeed, without a provision for the future, for Religiosa was both generous and just, and willingly paid the penalty of her misplaced confidence. But she was for ever cured of insisting that other people should see with her eyes; her old friends were welcomed back, and were never more greeted with the phrase—"Love me, love my dog."

There are some people whose "dog" is not a separate animal from themselves, but is carried within themselves; and they insist upon our loving this disagreeable part of themselves as much as their more agreeable and amiable parts. Nay, they are continually calling out and exhibiting this most tormenting feature in their character for public admiration and love, in preference to all that is good and valuable. These are the men of crotchets. Their language is not—"Love me, love my dog," but "Love me, love my crotchet;" and they are quite prepared to quarrel with their best friend whenever this crotchet interferes between them. Like the lady with her toady, they can never be persuaded to leave their crotchet at home. It must go with them into every society, to be a pest and nuisance in every company. They have earned for themselves the generic appellation of borses, and in their endeavours to make us love their "dog," they generally succeed in making us hate the very name of it, and to lose all regard for themselves. We remember once being pounced upon by one of this class. Knowing him to have been a man who had seen a good deal of the world, had mixed in some of the best society of the metropolis—the wits, scientific and literary—and, when he chose, had a happy knack of retailing the good things he had heard in their society, we willingly yielded ourselves up to him for some hours. Unfortunately for our comfort he had a crotchet, which he insisted should be our crotchet also. He had become interested in some horrible combination of mineral substances, from which some atrocious kind of paint was to be made, that was to beat all other kinds of paint out of the market—that was to eat into iron, and become a part of the metal—make wood more indestructible than stone, and convert stone itself into something, the like of which the world had never seen. For four long hours did he strive to make us "love his dog," to believe in his crotchet. Instead of witty sayings of clever men, we heard nothing but paint. We had all his squabbles about the patent; all his dealings with the trade; all the jealousies which painters felt at his discovery, which was certain to ruin their trade, for when once used it lasted for ever; hence the conspiracy of the painters to prevent its use, and his intrigues to sell it in spite of the painters. Uncasually did his brush move on covering everything with paint; black paint and white, red paint and grey, mingled for ever in his speech, until, at last, in our despair, we imagined ourselves to be converted into a paint-pot—a mere receptacle for his hideous compounds, and were about to fling ourselves against the wall, that we might be no longer capable of containing any more of the villainous mixture. "Love his dog!"—we have scarcely been able to endure the sight of a picture since, and have avoided him as carefully as we should have avoided one of his newly-painted walls with a court suit on our backs.

When we are attacked by one of these tormentors who will force us to "love his dog" whether we will or not, the only way that we know to prevent being worried by his dog, is to adopt a dog of our own for the nonce, and set that upon him; the odds are, that if you skilfully manage your "dog," you will drive the enemy away. There were few men more open to attacks of this worrying kind than Sir Walter Scott; he was persecuted by those who hunted with whole packs of dogs—young ladies with albums, pestering him to write something in them, and fancying their albums must be loved as well as themselves, they are such pretty delicate things: inquisitive travellers, who would insist on his standing on his hind legs, like a well-bred lion, for their amusement, and expected to be loved for the very pertinacity of their curiosity. Then he was worried with professed wits, who would retell their stale jokes, and imagine that they and their jokes were equally to be loved. In general, he rather piqued himself "upon being one of the best conditioned animals that ever was shown since the time of him who was in vain defied by the Knight of the Woeful Figure; for I get up at the first touch of the pole, rouse myself, shake my mane, lick my chops, turn round, lie

down, and go to sleep again." But sometimes he could not stand the worry of the "dog," and defended himself, not by turning Maïda loose upon his opponent, but by adopting a dog of the same breed as his opponents, only stronger and more enduring. He gives a ludicrous account of one of these contests in one of his letters to his son's wife:—"I had proceeded thus far in my valuable communication, when, lo! I was alarmed by the entrance of that terrific animal, a two-legged boar, one of the largest size, and most tremendous powers. By the way, I learned from no less an authority than George Canning, what my own experience has since made good, that an efficient boar must always have something respectable about him, otherwise no one would permit him to exercise his occupation. He must be, for example, a very rich man, (which, perhaps, gives the greatest privilege of all)—or he must be a man of rank and condition, too important to be treated *sans cérémonie*—or a man of learning, (often a dreadful bore)—or of talents undoubted—or of high pretensions to wisdom and experience—or a great traveller—in short, he must have some tangible privilege to sanction his profession. Without something of this kind, one would treat a boar as you do a vagrant mendicant, and send him off to the workhouse if he presumed to annoy you. But when properly qualified, the boar is more like a beggar with a badge and pass from his parish, which entitles him to disturb you with his importunity, whether you will or no. Now my boar is a complete gentleman and an old friend, but, unhappily for those who know him, master of all Joe Miller's stories of sailors and Irishmen, and full of quotations from the classics, as hackneyed as the post-horses of Melrose. There was no remedy—I must either stand his *smack* within doors, or turn out with him for a long walk, and, for the sake of elbow-room, I preferred the last. Imagine an old gentleman who has been handsome, and has still that sort of pretension which leads him to wear tight pantaloons and a smart half-boot, neatly adapted to show off his leg; suppose him as upright and straight as a poker, if the poker's head had been by some accident bent on one side; add to this that he is a dogged Whig; consider that I was writing to Jane, and desired not to be interrupted by much more entertaining society. Well, I was *had*, however, fairly caught, and out we sallied, to make the best we could of each other. I felt a sort of necessity to ask him to dinner, but the invitation, like Macbeth's 'Amen,' stuck in my throat. For the first hour he *gave* the lead and kept it; but opportunities always occur to an able general, if he know how to make use of them. In an evil hour for him, and a happy one for me, he started the topic of our intended railroad; *there* I was a match for him, having had, on Tuesday last, a meeting with Harden, the two Torwoodlees, and the engineer on this subject, so that I had at my finger end every cut, every lift, every degree of elevation or depression, every pass in the country, and every means of crossing them. So I kept the whip-hand of him completely, and never permitted him to get off the railway again to his own ground. In short, so thoroughly did I bore my boar, that he sickened and gave in, taking a short leave of me. Seeing him in full retreat, I then ventured to make the civil offer of a dinner. But the railroad had been breakfast, luncheon, dinner, and supper to boot—he hastily excused himself, and left me at double quick time, sick of railroads, I dare say, for six months to come."

In whatever form our "dogs" may be reared, tiresome kinsfolk, fawning dependants, troublesome crotchets, stupid prejudices, or any other of the numerous shapes which they may assume, to insist upon "love me, love my dog," is certain to end in hatred of the "dog," and dislike of the "me."

**A COLD FIG.**—The late Earl of Bristol (Bishop of Derry) was in the habit of taking a bath. He had given orders to his valet, an Irish giant, to call him in the morning for that purpose. One day, his lordship being very sleepy, could not be induced to rise, but feeling himself at breakfast unwell, and attributing it to his non-compliance with his usual custom, "Teddy," said he, "you know what benefit I have derived from bathing; and you know very well, that when a man is inclined to sleep, he'll sacrifice anything to enjoy his bed. Another morning, when you find me unwilling to rise, take me up in your arms—you are strong enough—and carry me to the bath!" "Very well, sir," said Teddy, "I'll remember it." The following morning it rained again, and Teddy, true to his duty, came into the earl's chamber, and awoke him to take the bath; but his master was as little inclined to rise on this occasion as before, and moreover, felt displeased at being so hastily summoned from a beautiful pantomime that was performing in the playhouse of his brain. But Teddy was not to be put off or got rid of, and insisted on his getting up. "I tell you I shall not rise this morning, sir," said the earl. "But you must rise." "Must! get out of the room, you rascal!" "By the powers! I'll do no such thing." "Am I not your master?" "Don't I know it is for your health?" "I command you, sir!" "Yes, but please your grace, you are either not awake now, or you're not sensible of what you're saying; and if I let you sleep now, don't I know very well that at breakfast you'll be scowling me again, as you did yesterday? So come along, my lord, 'tis no use your kicking and bawling; you must come and bathe yourself." Saying which, he quietly took the earl up in his arms, as he would a lapdog, and carrying him to the tub, plunged him in it. The latter knowing it was no use to struggle in such a situation, when the shock was over, called for soap and towel. At breakfast the earl was rather gloomy, and could not acquaint his family with the cause, till Teddy came in, who nodding his head and rubbing his hands in great glee, approached him and said, "Well, my lord, I managed to wake you this morning!" "At these words," said he to me, "my features relaxed, and I could not deny the poor fellow the approbation he expected."

## STATISTICS.

**DISTILLATION OF SPIRITS.**—It appears from a parliamentary paper, printed on Monday the 5th of January last, there were 24,548,687 gallons of proof spirits distilled in the United Kingdom. The duty paid on proof spirits for home consumption in the year amounted to £6,017,318, 7s. 4d. At the end of the year given (5th January last) there were 179,005 gallons actually warehoused under the Excise lock. In bonded stores on the 5th of January there were 7,024,313 gallons of spirits.

**POST OFFICE RETURNS.**—The following is a return of the number of cities or towns in Great Britain and Ireland, in 1851, contributing more than £10,000 to the revenue of the Post Office. Thirteen places, it will be seen—of which ten are in England, two in Scotland, and one in Ireland—contribute more than £10,000.

|                      | £       | s. | d. |                     | £      | s. | d. |
|----------------------|---------|----|----|---------------------|--------|----|----|
| London . . . . .     | 953,663 | 17 | 10 | Bristol . . . . .   | 25,115 | 7  | 2  |
| Liverpool . . . . .  | 75,926  | 6  | 4  | Leeds . . . . .     | 16,932 | 9  | 10 |
| Manchester . . . . . | 60,070  | 13 | 9  | Hull . . . . .      | 15,497 | 10 | 8  |
| Dublin . . . . .     | 47,466  | 18 | 4  | Newcastle . . . . . | 11,441 | 0  | 11 |
| Glasgow . . . . .    | 43,414  | 5  | 2  | Bath . . . . .      | 11,349 | 4  | 6  |
| Edinburgh . . . . .  | 42,623  | 2  | 7  | Sheffield . . . . . | 10,408 | 3  | 9  |
| Birmingham . . . . . | 28,805  | 6  | 3  |                     |        |    |    |

The two most curious points elicited by this return are, the monster greatness of London over Liverpool and Manchester, and the quantity of letter-writing that is going on among old ladies and retired officers at Bath.—*Literary Gazette.*

**OFFICIAL RETURNS OF THE LAST CENSUS, 1851.**—The official returns of the last census, 1851, and the Registrar-General's reports of "Births, deaths, and marriages," afford materials for inferences calculated to affect materially our future progress and welfare. The future is foreshadowed by the past; and we may safely act in many circumstances, from a consideration of what has gone before, as if we knew, under Providence, what would occur hereafter. Events which we deem accidental and irregular, viewing only part of their cycle, are found to be orderly and consequent, when we see their whole course. The facts collected throw much light on the circumstances affecting the prosperity and health of the people, and suggest the means of lessening sickness, lengthening life, and guarding against the evil effects of death, in a pecuniary point of view, on those who are left behind. Two statistical charts, one for London, the other for England and Wales, have recently been compiled by Mr. C. Cooke from the returns we have mentioned, and other authorities. These give, in a readable form, much information, which, in the barrenness of figures alone, would be passed by; and they place forcibly before the inhabitants of this metropolis many startling facts little thought of. Few, for example, know that in every seven minutes of the day a child is born in London, and that in every nine minutes one of its inhabitants dies! The population of London is, roundly, 2,362,000. If the averages of the past fifty years continue, in thirty-one years from this time as many persons as now compose its population will have died in it; and yet in about thirty-nine years from this time, if the present rate of progress continue, the metropolis will contain twice as many persons as it does now. The whole population of Liverpool in 1851 numbered 255,000; while the increase of inhabitants in the metropolis, between 1841 and 1851, was 413,000. It is truly marvellous! Where will it stop, and how food and shelter are provided for these masses, are subjects for speculation. The fact that one in every three persons who die in England falls by consumption—that insidious and invincible scourge of this country—is very striking, especially when we remember the influence which the nature of the air we breathe must have in producing it, and the extent to which sanitary improvements might affect it. Statistical returns prove beyond a doubt or question, that those who dwell in confined, unventilated, badly-drained, and over-crowded habitations, live a much shorter time than those who are more favourably situated in this respect. When persons observe the large number of houses building on all sides of London, the question is often asked, where are the tenants to be found? In truth, however, the number of houses building scarcely keeps pace with the present increase of the population, and in fifty years hence more than double the number of houses existing in 1851 (307,722) would be required to keep pace with the geometrical progress of the living. "To a casual observer," says the author of the charts to which we have referred, "comparatively few houses seems unoccupied in London. The census returns give five in every hundred, not including those building. The additional houses required for habitation in the year 1852 will number about 6,151; in the following year, 6,268; and so on increasing. But although the inhabitants of this vast city have increased in ten years twenty-one per cent., the inhabited houses indicate an increase only of seventeen per cent.; which proves the masses are either more densely packed together than ten years ago, or that the houses recently constructed are more commodious and of larger dimensions." A walk through the older districts of London shows a large number of houses uninhabited, even in streets where, but a few years ago, it would have been scarcely possible to obtain a house on any terms. The unavoidable inference is, knowing the number of houses built, and the increase of the population, that the inhabitants are worse lodged than they were—the houses more crowded. In Birmingham there were 27,272 inhabited houses in 1841, 2,958 uninhabited, and 226 building; and 1851, 34,076 inhabited, 1,663 uninhabited, and 436 building. In Liverpool, 1841, 32,079 inhabited, 971 uninhabited, and 469 building; and in 1851, 36,360 inhabited, 3,276 uninhabited, and 90 building. In Manchester, 1841, 32,814 inhabited, 2,745 uninhabited, and 172 building; and in 1851, 36,562 inhabited, 1,193 uninhabited, and 167 building.—*Builder.*

## OUR CORNER CUPBOARD!

Practice flows from principle; for, as a man thinks, so will he act.

The thinking man hath wings; the acting man has only feet and hands.

The storms of adversity are wholesome; though, like snow-storms, their drift is not always seen.

"My pills," cried Bolus, "all disorders end!"

"And patients, too!" exclaims his doubting friend.

The following is the title to an advertisement, in an Irish newspaper, of a washing-machine:—"Every man his own washerwoman!"

## ON A BALD HEAD.

My hair and I are quite, d'ye see—  
I first cut my hair—it now cuts me.

A NAUT REPARTEE.—"Isn't your hat sleepy?" inquired a little urchin, of a gentleman with a "shocking bad un" on. "No; why?" inquired the gentleman. "Why, because I think it's a long time since it had a nap!" was the reply.

"Doctor," said a man to a physician, "my daughter had a fit this morning, and continued for half an hour without knowledge or understanding." "Oh," replied the doctor, "never mind that—many people continue so all their lives."

TIPPLERS often say they drink ardent spirits to drown melancholy. Burton, in his *Anatomy of Melancholy*, gives them a proper answer:—"As good be melancholy still, as drunken beasts and beggars;" from which proposition, we think, few sober men will dissent.

Quorn Tom, "My book is full of fire,

It sparkles like a jewel;"

"Yea," cries his friend, "that's truth entire,

It is the best of fuel."

A LINGUIST.—A raw Scotchman, who had evidently not been long from "Aberdeen awa," went into a shop in the city, the other day, and inquired "Whilk is the way to the Minoaries?" "They speak Dutch next door," was the immediate reply.

A JESTER, in the court of Francis I., complained that a great lord threatened to murder him if he did not cease joking about him. "If he does so," said the king, "I will hang him in five minutes after." "I wish your majesty would hang him five minutes before," replied the jester.

A FAPER of Bangor, Maine, gives the following specimen of Yankee grandiloquence:—"Tell about drummin'—now d'ye ever hear Ben Biglick's drum? He was a coolor, I tell ye, for real sentimental stuff; drummin' round a corner, and such like—he'd drum the coat-skirts off anything ever I heard."

LINGUISTS.—Once on a time, a Dutchman and a Frenchman were travelling in Pennsylvania, when their horse lost a shoe. They drove up to a blacksmith's shop, and no one being in, they proceeded to the house to inquire. The Frenchman rapped, and called out—"Is de smitty mittin'?" "Shtand back," says Hans, "let me shpeak—Ish der blackemit's shop en de house!"

AT the theatre one evening, behind the scenes, Suett observed a performer put something under his cloak, and asked him, "What he had got there?" "Oh, only my dagger," answered the player. Suett, however, drew out a small bottle, and having ascertained that it contained his favourite beverage, drank the contents, and returned him the bottle with these words—"there's the sheath."

CAT-o'-NINE-TAILS.—The captain of one of the British frigates, a man of undaunted bravery, had a natural antipathy to a cat. A sailor, who, from misconduct, had been ordered a flogging, saved his back by presenting to his captain the following petition:—

"By your honour's command

A culprit I stand—

An example to all the ship's crew;

Am plinon'd, and stript,

And condemned to be whipt,

And if I am flogged—tis my due.

A cat I am told,

In abhorrence you hold—

Your honour's aversion is mine:

If a cat with one tail

Makes your stout heart to fail,

Oh, save me from one that has nine!"

An Englishman, boasting of the superiority of the horses in his country, mentioned that the celebrated Eclipse had run a mile in a minute. "My good fellow," exclaimed an American present, "that is rather less than the average rate of our common roadsters. I live at my country seat, at Philadelphia, and when I ride in a hurry to town, of a morning, my own shadow can't keep up with me, but generally comes into the store to find me from a minute to a minute and a half after my arrival. One morning the beast was restless, and I rode high, as fast as I possibly could, several times around a large factory—just to take old Harry out of him. Well, sir, he went so fast, that the whole time I saw my back directly before me, and was twice in danger of riding over myself!"

## OUR MEMORANDUM BOOK!

MINUTENESS OF ATOMS.—A grain of musk will scent a room for twenty years, and will have lost little of its weight.

JOHN WESLEY'S OPINION OF A CHANCERY BILL.—The following passage occurs in the journal of the Rev. John Wesley, under the date of Thursday, 27th of December, 1744:—"I called on the solicitor whom I had employed in the suit lately commenced against me in Chancery; and here I first saw that foul monster, a Chancery Bill! A scroll it was, of forty-two pages, in large folio, to tell a story which needed not to have taken up forty lines! and stuffed with such stupid, senseless, improbable lines (many of them, too, quite foreign to the question), as I believe would have cost the compiler his life, in any heathen court, either of Greece or Rome. And this is equity in a Christian country!—this is the English method of redressing grievances!"

THE HUMAN FACE.—"The expression of the face is a beautiful distinction of humanity. We are little aware of the influence which it constantly exerts. If the dumb animal on whom man exercises his cruelty—if the horse or the dog, when suffering by a blow from the violence of man, could turn upon him with a human look of indignation or appeal, could any one resist the power of the mute expostulation? How extraordinary, too, the difference of expression in the human face, by which the recognition of personal identity is secured. On this small surface, nine inches by six, are depicted such various traits, that among the millions of inhabitants on the earth, no two have the same lineaments of face. What dire confusion would ensue if all countenances were alike!—if fathers did not know their own children by sight, nor husbands their wives! But now, we could pick out our friend from among the multitudes of the assembled universe."

WANT OF PUNCTUALITY.—In many cases, this amounts to robbery. A short time since, at a village in the neighbourhood of London, a committee of eight ladies, who managed the concerns of an institution which had been formed for the relief of the neighbouring poor, agreed to meet on a certain day at eleven o'clock precisely. Seven of them attended punctually at the appointed hour; the eighth did not arrive till a quarter of an hour after. She came in according to the usual mode, with "I am very sorry to be behind in the time appointed, but really the time slipped away, without my being sensible of it; I hope your goodness will excuse it." "One of the ladies, who was a quakeress, replied, "Truly, friend, it did not appear clear to me that we ought to accept thy apology. Hadst thou only lost a quarter of an hour, it would have been merely thy own concern; but in this case, the quarter must be multiplied by eight, as we each lost a quarter; so that there have been two hours sacrificed by thy want of punctuality."

## MORAL DISTICHES.

(From the *Gnomology* of Gregory Nazianzen.)

Light be thy bark to sail life's stormy sea,  
Too large a cargo sinks itself and thee.

Devote thy soul a temple to thy God,  
The Deity will there make his abode.

Trust not to wealth, it comes and goes for ever,  
In ceaseless currents like a rapid river.

To words, as to thy life, attention pay,  
The former goes, the latter wastes away.

Man, know thyself, and whence thy life is given,  
And thus regain the archetype of heaven.

Day follows day; time flies, no trace remains,  
But the poor soul a life eternal gains.

THE WAY TO MAKE PLENTY OF MONEY IN EVERY MAN'S POCKET.—At this time, when the general complaint is that "money is scarce," it will be an act of kindness to inform the moneyless how they may reinforce their pockets. I will acquaint them with the true secret of money-catching—the certain way to fill purses, and how to keep them full. Two simple rules, well observed, will do the business. First, let honesty and industry be thy constant companions; and, secondly, spend one penny less than thy clear gains. Then shall thy hide-bound pocket soon begin to thrive, and will never again cry with the empty belly-ache; neither will creditors insult thee, nor hunger bite, nor nakedness freeze thee. The whole hemisphere will shine brighter, and pleasure spring up in every corner of thy heart. Now, therefore, embrace these rules and be happy. Banish the bleak winds of sorrow from thy mind, and live independent. Then shalt thou be a man, and not hide thy face at the approach of the rich, nor suffer the pain of feeling little when the sons of fortune walk at thy right hand; for independence, whether with little or much, is good fortune, and placeth thee on even ground with the proudest of the golden fleece. Oh, then, be wise, and let industry walk with thee in the morning, and attend thee until thou reachest the evening hour for rest. Let honesty be as the breath of thy soul, and never forget to have a penny when all thy expenses are enumerated and paid; then shalt thou reach the point of happiness, and independence shall be thy shield and buckler, thy helmet and crown; then shall thy soul walk upright, nor stoop to the siltken wretch because he hath riches, nor pocket an abuse because the hand which offers it wears a ring set with diamonds.—*Franklin*.

## CHARADE.

*My first*: how in my hopes attend  
The breaking of its seal!  
What more can test a seeming friend  
Than what it will reveal?

*My second* soon we all shall be,  
Though lofty be our grade;  
And those who live shall surely see  
My *whole* above us cast its shade.

## MENTAL RECREATIONS.

*To tell by the dial of a watch at what hour any person intends to rise.*

DESIRE the person to set the hand of the dial to any hour he pleases, to which number, when he has informed you what it is, add in your mind 12.

After this, tell him to call the hour the index stands at that which he has fixed upon, and by reckoning backwards from this number to the former, it will bring him to the hour required.

EXAMPLE.—Suppose the hour at which he intends to rise be 8, and that he has placed the hand at 5. Then, adding 12 to 5, you bid him call the hour at which the index stands the number on which he thought, and by reckoning back from this number to 17, it will bring him to 8, the hour required.

This recreation may also be performed as follows:—Let 12 cards be placed in a circular order, to represent the dial of a watch, so that an ace may correspond with 1, a deuce with 2, and so on to 11 and 12—the first of which must be a queen, and stand for 11, and the second a king, and stand for 12. Having done this, so that you can recollect the situation of the cards, desire any person to put his hand on one of them, and think on the hour at which he intends to rise; then, adding 12 to the number of this card, in your mind, bid him count backwards, from the hour he thought on to this number, and he will come to a card which, being turned up, shows the number required.

## CONUNDRUMS.

1. What singing bird is not pleasant at sea?
2. What nation is most likely to succeed in a difficult enterprise?
3. Why should the letter F not be used in skinning fish?
4. When does a man of business become a snob?
5. Why would the letter P make an animal a tradesman?
6. Two skating gentlemen got a fall on the ice—Why were they something easy and comfortable?
7. What quantity of land must I rent, to be on an equality with Admiral Napier?
8. Why should a convivial party beware of the letter S?
9. What kind of hooks are not fit to catch fish with?

## TRANSFIGURED PLAYING CARDS.

"THE TRAY OF HEARTS."

Our readers may colour the Diamonds and Hearts of the "Transfigured Playing Cards" red, by employing a simple water-colour.

22

10. I have to serve out a ration to mankind—what will be the most beneficial?

11. If a Jack and a John-dory were sleeping in the water together, what fish would you send to awaken them?

## MAGICAL SQUARE PROBLEM.

An innkeeper had nine guests—four ladies and five gentlemen. Upon making inquiry, it was found that their respective ages, added together, amounted to 342 years, and that the ladies, individually, were younger than any of the gentlemen. The youngest gentleman asked Mr. Bonifacio how old he was. He replied, that he could form a square with the nine persons present—by placing three in front, three in the middle, and three behind—so that, by adding the ages of the three persons in each of the different ranks or diagonals, it would be his age, and the age of the gentleman who had put the question, added together. Also, by omitting the youngest gentleman, he could give each lady a partner; and the age of each couple, added together, would be his age. What was the innkeeper's age, the age of the youngest gentleman and the place he stood in the square, and the individual ages of each lady and gentleman forming a couple.

PHILO-PERIODICUS.

## TRANSPOSITION.

My whole, physicians always claim,  
When they successful are;  
Beheaded, I become a name  
For murder and for war.  
Losing another head—oh, save me!  
Physicians, cure!—or death will have me.

## CHARADE.

*My first* is an instrument, which, though small, has more power than any monarch on earth. It is the lover's friend, and the poet's pride, yet has overthrown kingdoms, ruined reputations, set folks together by the ears, and caused more destruction than plague, pestilence, or famine. *My second*, though not quite so mischievous, is very destructive when in improper hands; and my *whole*, though employed against my first, is deemed its friend and improver.

## ANSWERS TO THE PASTIME OF LAST EVENING,

### Editor's Note-Book.

#### DOMESTIC HINTS. No. 4.—The

readiest method of softening hard water, or of purifying river water, is to boil it, and then leave it to atmospheric exposure. Where painted wainscot, or other wood-work requires cleaning, fullers' earth will be found cheap and useful; and, on wood not painted, it forms an excellent substitute for soap. To destroy flies in a room take half a tea-spoonful of black pepper in powder, one tea-spoonful of brown sugar, and one table-spoonful of cream, mix them well together, and place them in the room on a plate, where the flies are troublesome, and they will soon disappear. Where a chimney only smokes when a fire is first lighted, this may be guarded against by allowing the fire to kindle gradually. Whenever oil is used for the purpose of artificial light, it should be kept free from all exposure to atmospheric air; as it is apt to absorb considerable quantities of oxygen. If oil is very coarse or tenacious, a very small portion of oil of turpentine may be added. Family clocks ought only to be oiled with the very purest oil, purified by a quart of lime-water to a gallon of oil, in which it has been well shaken, and suffered to stand for three or four days, when it may be drawn off. Where circumstances require a bed to be heated at a moment's notice, a little salt thrown into the warming-pan and suffered to burn for a minute previous to use, will generally be beneficial. Those who wish to ascertain whether their bed be properly aired, will do well to introduce a glass goblet between the sheets for a minute or two, just when the warming-pan is taken out; if the bed be dry, there will only be a slight cloudy appearance on the glass, but if not, the damp of the bed will assume the more formidable appearance of drops, the warning of danger. Flowers and shrubs should be excluded from a bed-chamber. Almost every kind of water, except rain water, will speedily cover the inside of a tea-kettle with an unpleasant crust: this may easily be guarded against by placing a clean oyster-shell in the tea-kettle, which will always keep it in good order, by attracting the particles of earth or of stone. In preparing the fragrant infusion for the tea-table, a good economist will be careful to have the best water, that is, the softest and least impregnated with foreign mixture; for if tea be infused in hard and in soft water, the latter will always yield the greatest quantity of the tanning matter, and will strike the deepest black, with sulphate of iron in solution. In making coffee, observe that the broader the bottom and the smaller the top of the vessel, the better it will be. To drive away moths from clothes, wrap up some yellow or turpentine soap in paper; or place an open bottle containing spirits of turpentine in the wardrobe. The white of an egg, well beaten with quicklime, and a small quantity of very old cheese, form an excellent substitute for cement, when wanted in a hurry, either for broken china or old ornamental glass ware. The expressed juice of garlic is an enduring cement, leaving no mark of fracture, if neatly applied to china or glass. Cooks should be cautioned against the use of charcoal in any quantity, except where there is a free current of air; for charcoal is highly prejudicial in a state of ignition, although it may be rendered even actively beneficial when boiled, as a small quantity of it, if boiled with meat on the turn, will effectually cure the unpleasant taint. The housewife who is anxious to dress no more meat than will suffice for the meal, should know that beef loses about one pound in four in boiling, but in roasting, loses in the proportion of one pound five ounces; and in baking about two ounces less, or one pound three ounces; mutton loses in boiling about fourteen ounces in four pounds; in roasting, one pound six ounces. The English, generally speaking, are very deficient in the practice of culinary economy; a French family would live well on what is often wasted in an English kitchen: the bones, drippings, pot-liquor, remains of fish, vegetables, &c., which are too often consigned to the grease-pot or the dust-heap, might, by a very trifling degree of management on the part of the cook, or mistress of a family, be converted into sources of daily support and comfort, at least to some poor passer-by or other, at an expense that even the miser could scarcely grudge.

**TO MAKE IMPRESSIONS OF MEDALS.** Junius.—Make a very clear and distinct impression of your medal in black sealing-wax, and while warm, clip the superfluous wax

neatly off from the edges; mix a little vermilion with common gum-water, and lay it on the sealing-wax with an hair-pencil, taking care to fill all the interstices. Then wipe this carefully off with the finger, but so as to leave the indented parts full of the composition. Then lay a piece of thin post paper, made quite wet through, upon it, and putting it in a small press, give it a moderate pressure. When taken out, the paper will present a beautiful and perfect impression of the medal.

**TO RESTORE HAIR WHEN REMOVED BY ILL HEALTH OR AGE.** Civis.—A trial might be made of onions, rubbed frequently on the part requiring it. The stimulating powers of this vegetable are of service in restoring the tone of the skin, and assisting the capillary vessels in sending forth new hair; but it is not infallible. Should it succeed, however, the growth of these new hairs may be assisted by the oil of myrtle berries, the repute of which, perhaps, is greater than its real efficacy. These applications are cheap and harmless, even where they do no good; a character which cannot be said of the numerous quack remedies that meet the eye in every direction.

**THE EVILS OF WAR.** We do not agree with those melancholy enthusiasts who speculate on the probabilities of an European collision: we confess to a lingering belief that the good sense of mankind is not wholly departed; that the effects of brutal strife are too deeply engrained upon the industrial history and morality of a nation, not to make us shun the fearful scourge. We all know that to carry on the wars of the past century, the currency was depreciated, paper-money was increased, and the circulation, from a few millions, in 1688, to fifty millions in 1815, besides inland bills and notes for 400 or 500 millions. By this means, the taxes, of less than two millions at the Revolution, were increased to seventy millions in 1815, and the annual public expenses from three to one hundred and thirty millions! The vast amount of domestic misery entailed by war is too frightful to contemplate. The stratagems for wholesale slaughter, of daily invention, betray the presence of smouldering passions ready for ignition, but which, we trust, may be quenched by the increasing spread of intelligence. Our artist, who, we may premise, is a staunch advocate of the Peace cause, has given in his ideas upon the subject of

"TAKING A TOWN BY STORM."

**COPAL VARNISH.** S. J.—Reduce two parts of gum copal to a fine powder; wash it repeatedly in water; then introduce it into a flask, and pour over it four parts of pure oil of rosemary; digest the mixture in a gentle heat for three days, after which, add as much highly rectified spirits of wine as is deemed necessary, and suffer it to remain undisturbed until the impurities subside, then decant the varnish.

**TO MAKE PRESERVES KEEP.** H. W.—The secret of preserving them from change is to exclude the air. The easiest way to do this, is to brush over a sheet of paper with the white of an egg, and cover the jar, pressing it down around the edges while moist, and it will cement perfectly tight. It is cheaper, neater, and better than sealing up the mouth of the jar with wax or covering it with bladder.

**RULES OF CONDUCT.** S. B.—We cannot do better than quote the valuable injunctions of that excellent woman, Mrs. Fry, who combined in her character and conduct all that is truly admirable in woman. 1. I never lose any time; I do not think that lost which is spent in amusement or recreation some time every day; but always be in the habit of being employed. 2. Never err the least in truth. 3. Never say an ill thing of a person when thou canst say a good thing of him; not only speak charitably, but feel so. 4. Never be fribble or unkind to anybody. 5. Never indulge thyself in luxuries that are not necessary. 6. Do all things with consideration; and, when thy path to act right is most difficult, feel confidence in that Power alone which is able to assist thee, and exert thy own powers as far as they go.

**STAMMERING.** E. Wilson.—At page 308, we gave some instructions for the relief of impeded speech. To comply with the wish of several correspondents we add the following simple directions, which will be found of great service, if strictly followed. 1. Commence speaking whilst respiring, or in other words, when the breath is going out, and speak slowly. [The stammerer always attempts to speak whilst drawing in breath, but seldom succeeds in uttering a word or sentence until he has taken a full inspiration and begins to respire, when he speaks fluently until he begins again to draw his breath.] 2. Place the tongue flat on the bottom of the mouth, before attempting to speak. [The stammerer's tongue always cleaves to the roof, and is there kept by striving to speak whilst inspiring.] 3. Begin by speaking short sentences and easy words. [The Lord's prayer is a good exercise, as it commences with a word which places the tongue in a good position.] 4. Speak sentences with easy words at the beginning, and terminating with hard words.—By strictly observing the above general rules, we believe that many stammerers may entirely free themselves from any impediment in speaking.

**COMMUNICATIONS RECEIVED.**—T. MASON (The first lottery in England was drawn in the year 1688, near the west door of St. Paul's Cathedral. It consisted of 40,000 lots at 10s. each).—T. MASON (the sentence occurs in the following couplets, which were written by Butler:—

"For loyalty is still the same,  
Whether it win or lose the game,  
Till as the dial to the sun,  
Although it be not shown upon."

C. R. (many thanks, but the papers are declined).—THOMAS (zoophytes are an order of animals in the Linnæan system, under the class *Ferææ*, or worms, comprehending such as hold a medium between animals and vegetables).—CURTOS (the process of petrification may be thus explained:—A vegetable substance is buried in the earth, and decomposition soon commences; and while the process is going on gradually and obviously, the substance is sometimes likewise surrounded and pressed on by a stony juice. As each vegetable particle dissolves and disappears, a stony particle replaces it, and being moulded in the cavity left vacant, it copies, feature by feature, the organic body).—DELTA (potash is so named from being prepared by evaporating in iron pots the lixivium or ley of the ashes of wood fuel).—T. H. (the Habeas Corpus Act is the 31st Charles the Second, chap. 11).—CHARLES (the air pump was discovered in 1680).—INQUIRER (the German language is the richest in words of any European language, owing to the number and power of its roots or monosyllables).—T. T. (the smoke-jack is said to be of German origin, and as old as the fourteenth century).—THOMAS (a lieutenant in the navy ranks as a captain in the army; a post-captain as colonel; and an admiral as general).—C. (many thanks, but we eschew all interference in politics).—G. LEE (calico was first manufactured in England in 1776).—SUSAN (most of the cosmetics for the complexion are objectionable; many of them are formed from metallic oxides, which are known to be highly deleterious. The best and safest cosmetic, next to plain soap-and-water, is a little good butter-milk, fresh or stale).—W. THOMPSON (a sympathetic, or changing ink may be obtained by writing with nitro-muriate of gold, and afterwards brushing the letter over with muriate of tin in a diluted state. The writing, before invisible, will now appear of an exquisitely beautiful purple colour).—M. M. (the manuscripts are declined).—DEMETRIUS (New Zealand was first discovered by Abel J. Tasman, in 1642).—INQUIRER (Sir John Franklin left for the Arctic regions on the 19th of May, 1845; and on the 26th of July following, was heard from at Melville Bay).—TEMPUS (Baron Humboldt, the celebrated philosopher, was born in 1769).—F. R. (the tree which produces gutta-serena is a native of Malacca and the Malay Islands).—Clio (many thanks for the papers).—GUSTO (articles of a sporting character are declined).—VERAX (we do not interfere in bets).—H. (the only way to acquire success in so is to be industrious. "I have been wondering," observed the brother of Edmund Burke, to a friend, "how Ned has contrived to monopolise all the talents of the family; but then, again I remember when we were at play, he was always at work").—H. JAMISON (the papers are not suited to us).

# THE HOME COMPANION

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL

No. 30.—Vol. I.]

SATURDAY, JULY 24, 1862.

[Price One Penny.]

"Sometimes Farmer Flamborough, our talkative neighbour, and often the blind piper, would pay us a visit, and taste our gooseberry-wine."

## THE VICAR OF WAKEFIELD.

### CHAPTER I.

*The description of the family of WAKEFIELD.*

I was ever of opinion, that the honest man who married and brought up a large family, did more service than he who continued single, and only talked of population. From this motive, I had scarcely taken orders a year, before I began to think seriously of matrimony, and chose my wife, as she did her wedding-gown, not for a fine glossy surface, but for such qualities as would wear well. To do her justice, she was a good-natured notable woman; and as for breeding, there were few country ladies who could show more. She could read any English book without much spelling; but for pickling, preserving, and cookery, none could excel her. She prided herself also upon being an excellent contriver in housekeeping; though I could never find that we great riches with all her contrivances.

However, we loved each other tenderly, and our fondness increased as we grew old. There was, in fact, nothing that could make us angry with the world or each other. We had an elegant house situated in a fine country, and a good neighbourhood. The year was spent in moral or rural amusements, in visiting our rich neighbours, and relieving such as were poor. We had no revolutions to fear, nor fatigues to undergo; all our adventures were by the roadside, and all our migrations from the blue bed to the brown.

As we lived near the road, we often had the traveller or stranger visit us to

taste our gooseberry-wine, for which we had great reputation; and I profess with the veracity of an historian, that I never knew one of them find fault with it. Our cousins, too, even to the fortieth remove, all remembered their affinity, without any help from the herald's office, and came very frequently to see us. Some of them did us no great honour by these claims of kindred, as we had the blind, the maimed, and the halt amongst the number. However, my wife always insisted that as they were the same flesh and blood, they should sit with us at the same table. So, though we had not very rich, we generally had most happy friends about us; for this remark will hold good through life, that the poorer the guest, the better pleased he ever is with being treated; and as some men gaze with admiration at the colours of a tulip, or the wings of a butterfly, so I was by nature an admirer of happy human faces. However, when any one of our relations was found to be a person of very bad character, a troublesome guest, or one we had desired to get rid of, upon his leaving my house, I ever took care to lend him a riding-coat, or a pair of boots, or sometimes a horse of small value, and I always had the satisfaction of finding he never came back to return them. By this system, the house was cleared of such as we did not like; but never was the family of WAKEFIELD known to turn the traveller or the poor dependant out of doors.

My children, the offspring of temperance, as they were educated with softness, so they were at once well formed and healthy; my sons were active, my daughters beautiful and blooming. When I stood in the midst of the little cove, which promised to be the supports of my declining age, I could not avoid repeating the famous story of Count Alexander, who in Henry II.'s progress through Germany, while other courtiers came with

their treasures, brought his thirty-two children, and presented them to his sovereign as the most valuable offering he had to bestow. In this manner, though I had but six, I considered them as a very valuable present made to my country, and consequently looked upon it as my debtor. Our eldest son was named GEORGE, after his uncle, who left us ten thousand pounds. Our second child, a girl, I intended to call after her aunt Grissel; but my wife, who, during her pregnancy, had been reading romances, insisted upon her being called OLIVIA. In less than another year we had another daughter, and now I was determined that Grissel should be her name; but a rich relation taking a fancy to stand god-mother, the girl was, by her directions, called SOPHIA; so that we had two romantic names in the family; but I solemnly protest I had no hand in it. Moses was our next, and after an interval of twelve years, we had two sons more.

It would be fruitless to deny exultation when I saw my little ones about me; but the vanity and the satisfaction of my wife were even greater than mine. When our visitors would say, "Well, upon my word, Mrs. Primrose, you have the finest children in the whole country:" "Ay, neighbour," she would answer, "they are as heaven made them, handsome enough, if they be good enough; for handsome is that handsome does." And then she would bid the girls hold up their heads; who, to conceal nothing, were certainly very handsome. Mere outside is so very trifling a circumstance with me, that I should scarcely have remembered to mention it, had it not been a general topic of conversation in the country. Olivia, now about eighteen, had that luxuriance of beauty with which painters generally draw Hebe; open, sprightly, and commanding. Sophia's features were not so striking at first, but often did more certain execution; for they were soft, modest, and alluring. The one vanquished by a single blow, the other by efforts successively repeated.

The temper of a woman is generally formed from the turn of her features, at least it was so with my daughters. Olivia wished for many lovers; Sophia to secure one. Olivia was often affected, from too great a desire to please. Sophia even repressed excellence, from her fears to offend. The one entertained me with her vivacity when I was gay, the other with her sense when I was serious. But these qualities were never carried to excess in either, and I have often seen them exchange characters for a whole day together. A suit of mourning has transformed *my coquette* into a pride, and a new set of ribbons has given her younger sister more than natural vivacity. My eldest son George was bred at Oxford, as I intended him for one of the learned professions. My second boy Moses, whom I designed for business, received a sort of miscellaneous education at home. But it is needless to attempt describing the particular characters of young people that had seen but very little of the world. In short, a family likeness prevailed through all, and properly speaking, they had but one character, that of being all equally generous, credulous, simple, and inoffensive.

## CHAPTER II.

*Family Misfortunes.—The loss of fortune only serves to increase the pride of the worthy.*

THE temporal concerns of our family were chiefly committed to my wife's management; as to the spiritual, I took them entirely under my own direction. The profits of my living, which amounted to but thirty-five pounds a year, I made over to the orphans and widows of the clergy of our diocese; for having a fortune of my own, I was careless of temporalities; and felt a secret pleasure in doing my duty without reward. I also set a resolution of keeping no curate, and of being acquainted with every man in the parish, exhorting the married men to temperance, and the bachelors to matrimony; so that in a few years it was a common saying, that there were three strange wants at Wakefield, a parson wanting pride, young men wanting wives, and ale-houses wanting customers.

Matrimony was always one of my favourite topics, and I wrote several sermons to prove its happiness; but there was a peculiar tenor which I made a point of supporting; for I maintained with Whiston, that it was unlawful for a priest of the church of England, after the death of his first wife, to take a second, or, to express it in one word, I valued myself upon being a strict monogamist.

I was early initiated into this important dispute, on which so many voluminous volumes have been written. I published some tracts upon the subject myself, which, as they never sold, I have the consolation of thinking were read only by the happy few. Some of my friends called this my weak side; but, alas! they had not, like me, made it the subject of long contemplation.

The more I reflected upon it, the more important it appeared. I even went a step beyond Whiston in displaying my principles; as he had engraven upon his wife's tomb that she was the *only* wife of William Whiston; so I wrote a similar epitaph for my wife, though still living, in which I extolled her prudence, economy, and obedience till death; and having got it copied fair, with an elegant frame, it was placed over the chimney-piece, where it answered several very useful purposes. It admonished my wife of her duty to me, and my fidelity to her; it inspired her with a passion for fame, and constantly put her in mind of her end.

It was thus, perhaps, from hearing marriage so often recommended, that my eldest son, just upon leaving college, fixed his affections upon the daughter of a neighbouring clergyman, who was a dignitary in the church, and in circumstances to give her a large fortune. But fortune was her smallest accomplishment. Miss Arabella Wilnot was allowed by all (except my two daughters) to be completely pretty. Her youth, health, and innocence, were still heightened by a complexion so transparent, and such an happy sensibility of look, as even age could not gaze on with indifference.

As Mr. Wilnot knew that I could make a very handsome settlement on my son, he was not averse to the match; so both families lived together in all that harmony which generally precedes an expected alliance. Being convinced by experience that the days of courtship are the most happy of our lives, I was willing enough to lengthen the period; and the various amusements which the young couple every day shared in each other's company, seemed to increase their passion. We were generally awaked in the morning by music, and on fine days rode a hunting. The hours between breakfast and dinner the ladies devoted to dress and study: they usually read a page and then gazed at themselves in the glass, which even philosophers might own often presented the page of greatest beauty. At dinner, my wife took the lead; for as she always insisted upon carving everything herself, it being her mother's way, she gave us, upon these occasions, the history of every dish. When we had dined, to prevent the ladies leaving us, I generally ordered the table to be removed; and sometimes with the music-master's assistance, the girls would give us a very agreeable concert. Walking out, drinking tea, country dances, and forfeits, shortened the rest of the day, without the assistance of cards, as I hated all manner of gaming, except backgammon, at which my old friend and I sometimes took a two-penny hit. Nor can I here pass over an ominous circumstance that happened the last time we played together; I only wanted to sling a quatre, and yet I threw dence ace five times running.

Some months were elapsed in this manner, till at last it was thought convenient to fix a day for the nuptials of the young couple, who seemed earnestly to desire it. During the preparations for the wedding, I need not describe the busy importance of my wife, for the sly looks of my daughter-in fact, my attention was fixed on another object, the completing a tract which I intended shortly to publish in defence of my favourite principle. As I looked upon this as a master-piece, both for argument and style, I could not, in the pride of my heart, avoid showing it to my old friend Mr. Wilnot, as I made no doubt of receiving his approbation; but not till too late I discovered that he was most violently attached to the contrary opinion, and with good reason; for he was at that time actually courting a fourth wife. This, as may be expected, produced a dispute attended with some acrimony, which threatened to interrupt our intended alliance: but on the day before that appointed for the ceremony we agreed to discuss the subject at large.

It was managed with proper spirit on both sides: he asserted that I was heterodox, I retorted the charge: he replied, and I rejoined. In the meantime, while the controversy was hottest, I was called out by one of my relations, who, with a face of sincerity, advised me to give up the dispute, at least till my son's wedding was over. "How," cried I, "relinquish the cause of truth, and let him be an husband already driven to the very verge of absurdity. You might as well advise me to give up my fortune as my argument." "Your fortune," returned my friend, "I am now sorry to inform you, is almost nothing. This merchant in town, in whose hands your money was lodged, has gone off, to avoid a statute of bankruptcy, and is thought not to have left a shilling in the pound. I was unwilling to shock you or the family with the account till after the wedding; but now it may serve to moderate your warmth in the argument; for, I suppose your own prudence will enforce the necessity of assembling, at least till your son has the young lady's fortune secured."—"Well," returned I, "if what you tell me be true, and if I am to be a beggar, it shall never make me aascal, or induce me to desave my principles. I'll go this moment and inform the company of my circumstances: and as for the argument, I even here retract my former concessions in the old gentleman's favour, nor will I allow him now to be an husband in any sense of the expression."

It would be endless to describe the different sensations of both families when I divulged the news of our misfortune; but what others felt was slight to what the lovers appeared to endure. Mr. Wilnot, who seemed before sufficiently inclined to break off the match, was by this blow soon determined: one virtue he had in perfection, which was prudence, too often the only one that is left us at seventy.

## CHAPTER III.

*A Migration.—The fortunate circumstances of his lives are generally found at last to be of our own procuring.*

THE only hope of our family now was, that the report of our misfortune might be malicious or premature; but a letter from my agent in town soon came with a confirmation of every particular. The loss of fortune to myself alone would have been trifling; the only uneasiness I felt was for my family, who were to be humble without an education to render them callous to contempt.

Near a fortnight had passed before I attempted to restrain their affliction; for premature consolation is but the remembrance of sorrow. During this interval, my thoughts were employed on some future means of supporting them; and at last a small cure of fifteen pounds a-year was offered me in a distant neighbourhood, where I could still enjoy my principles without molestation. With this proposal I joyfully closed, having determined to increase my salary by managing a little farm.

Having taken this resolution, my next care was to get together the wrecks of my fortune; and, all debts collected and paid, out of fourteen thousand pounds we had but four hundred remaining. My chief attention, therefore, was now to bring down the pride of my family to their circumstances; for I well knew that aspiring beggary is wretchedness itself. "You cannot be ignorant, my children," cried I, "that no prudence of ours could have prevented our late misfortune; but prudence may do much in disappointing its effects. We are now poor, my fondlings, and wisdom bids us conform to

our humble situation. Let us then, without repining, give up those splendours with which numbers are wretched, and seek in humble circumstances that peace with which all may be happy. The poor live pleasantly without our help; why then should we not learn to live without theirs? No, my children, let us from this moment give up all pretensions to gentility; we have still enough left for happiness if we are wise, and let us draw upon content for the deficiencies of fortune."

As my eldest son was bred a scholar, I determined to send him to town, where his abilities might contribute to our support and his own. The separation of friends and families is, perhaps, one of the most distressing circumstances attendant on penury. The day soon arrived on which we were to disperse for the first time. My son, after taking leave of his mother and the rest, who mingled their tears with their kisses, came to ask a blessing from me. This I gave him from my heart, and which, added to five guineas, was all the patrimony I had now to bestow. "You are going, my boy," cried I, "to London on foot, in the manner Hooker, your great ancestor, travelled there before you. Take from me the same horse that was given him by the good bishop Jewel, this staff, and this book too; it will be your comfort on the way: these two lines in it are worth a million, 'I have been young, and now am old, yet never saw I the righteous man forsaken, or his seed begging their bread.' Let this be your consolation as you travel on. Go, my boy; whatever be thy fortune, let me see thee once a year; still keep a good heart, and farewell." As he was possessed of integrity and honour, I was under no apprehensions from throwing him naked into the amphitheatre of life; for I knew he would act a good part whether vanquished or victorious.

His departure only prepared the way for our own, which arrived a few days afterwards. The leaving a neighbourhood in which we had enjoyed so many hours of tranquillity, was not without a tear which scarcely fortitude itself could suppress. Besides, a journey of seventy miles to a family that had hitherto never been above ten from home, filled us with apprehension; and the cries of the poor, who followed us for some miles, continued to increase it. The first day's journey brought us in safety within thirty miles of our future retreat, and we put up for the night at an obscure inn in a village by the way. When we were shown a room, I desired the landlord, in my usual way, to let us have his company, with which he complied, as what he drank would increase the bill next morning. He knew, however, the whole neighbourhood to which I was removing, particularly Squire Thornhill, who was to be my landlord, and who lived within a few miles of the place. This gentleman he described as one who desired to know little more of the world than its pleasures, being particularly remarkable for his attachment to the fair sex. He observed that no virtue was able to resist his arts and seducement, and that scarcely a farmer's daughter within ten miles round, but what had found him successful and faithless. Though this account gave me some pain, it had a very different effect upon my daughters, whose features seemed to brighten with the expectation of an approaching triumph; nor was my wife less pleased and confident of their allurements and virtue. While our thoughts were thus employed, the hostess entered the room to inform her husband, that the strange gentleman, who had been two days in the house, wanted money, and could not satisfy them for his reckoning. "Want money!" replied the host, "that must be impossible; for it was no later than yesterday he paid three guineas to our headle to spare an old broken soldier that was to be whipped through the town for dog-stealing." The hostess, however, still persisting in her first assertion, he was preparing to leave the room, swearing that he would be satisfied one way or another, when I begged the landlord would introduce me to a stranger of so much civility as he described. With this he complied, showing in a gentleman who seemed to be about thirty, dressed in clothes that once were laced. His person was well formed, and his face marked with the lines of thinking. He had something short and dry in his address, and seemed not to understand ceremony, or to despise it. Upon the landlord's leaving the room, I could not avoid expressing my concern to the stranger at seeing a gentleman in such circumstances, and offered him my purse to satisfy the present demand. "I take it with all my heart, sir," replied he, "and am glad that a late oversight in giving what money I had about me, has shown me that there are still some men like you. I must, however, previously entreat being informed of the name and residence of my benefactor, in order to repay him as soon as possible." In this I satisfied him fully, not only mentioning my name and late misfortunes, but the place to which I was going to remove. "This," cried he, "happens still more luckily than I hoped for, as I am going the same way myself, having been detained here two days by the floods, which I hope by to-morrow will be found passable." I testified the pleasure I should have in his company, and my wife and daughters joining in entreaty, he was prevailed upon to stay supper. The stranger's conversation, which was at once pleasing and instructive, induced me to wish for a continuance of it; but it was now high time to retire and take refreshment against the fatigues of the following day.

The next morning we all set forward together: my family on horseback, while Mr. Burchell (our new companion), walked along the foot-path by the road side, observing with a smile, that as we were ill-mounted, he would be too generous to attempt leaving us behind. As the floods were not yet subsided, we were obliged to hire a guide, who trotted on before, Mr. Burchell and I bringing up the rear. We lightened the fatigues of the road with philosophical disputes, which he seemed to understand perfectly. But what surprised me most was, that though he was a money-borrower, he defended his opinions with as much obstinacy as if he had been my patron. He now and then also informed me to whom the different seats belonged that lay in our view as we travelled the road. "That," cried he, pointing to a very magnificent house which stood at some distance, "belongs to Mr. Thornhill, a young gentleman who enjoys a large fortune, though entirely dependent on

the will of his uncle, Sir William Thornhill, a gentleman, who, content with a little himself, permits his nephew to enjoy the rest, and chiefly resides in town." "What!" cried I, "is my young landlord then the nephew of a man whose virtues, generosity, and singularities are so universally known? I have heard Sir William Thornhill represented as one of the most generous yet whimsical men in the kingdom; a man of consummate benevolence." "Something, perhaps, too much so," replied Mr. Burchell, "at least he carried benevolence to an excess when young; for his passions were then strong, and as they were all upon the side of virtue, they led it up to a romantic extreme. He early began to attain the qualifications of the soldier and scholar; was soon distinguished in the army, and had some reputation among men of learning. Adulation ever follows the ambitious; for such alone receive most pleasure from flattery. He was surrounded with crowds, who showed him only one side of their character; so that he began to lose a regard for private interest in universal sympathy. He loved all mankind; for fortune prevented him from knowing that they were fools. Physicians tell us of a disorder, in which the whole body is so exquisitely sensible that the slightest touch gives pain: what some have thus suffered in their persons, this gentleman felt in his mind. The slightest distress, whether real or fictitious, touched him to the quick, and his soul laboured under a sickly sensibility of the miseries of others. Thus disposed to relieve, it will be easily conjectured he found numbers disposed to solicit; his professions began to impair his fortune, but not his good-nature; that, indeed, was seen to increase as the other settled in decay: he grew improvident as he grew poor; and though he talked like a man of sense, his actions were those of a fool. Still, however, being surrounded with importunity, and no longer able to satisfy every request that was made him, instead of money he gave promises. They were all he had to bestow, and he had not resolution enough to give any man pain by a denial. By this he drew round him crowds of dependants, whom he was sure to disappoint, yet wished to relieve. These hung upon him for a time, and left him with merited reproaches and contempt. But in proportion as he became contemptible to others, he became despicable to himself. His mind had leaned upon their adulation, and that support taken away, he could find no pleasure in the applause of his heart, which he had never learned to reverence. The world now began to wear a different aspect; the flattery of his friends began to dwindle into simple approbation. Approbation soon took the more friendly form of advice; and advice, when rejected, produced their reproaches. He now, therefore, found that such friends as benefits had gathered round him, were little estimable; he now found that a man's own heart must be ever given to gain that of another. I now found that—that I forgot what I was going to observe; in short, sir, he resolved to respect himself, and laid down a plan of restoring his falling fortune. For this purpose, in his own whimsical manner, he travelled through Europe on foot, and now, though he has scarcely attained the age of thirty, his circumstances are more affluent than ever. At present, his humours are more rational and moderate than before; but still he preserves the character of an humourist, and finds most pleasure in eccentric virtues."

My attention was so much taken up by Mr. Burchell's account, that I scarcely looked forward as he went along, till we were alarmed by the cries of my family, when turning, I perceived my youngest daughter in the midst of a rapid stream, thrown from her horse and struggling with the torrent. She had sunk twice, nor was it in my power to disengage myself in time to bring her relief. My sensations were even too violent to permit my attempting her rescue: she must certainly have perished had not my companion, perceiving her danger, instantly plunged in to her relief, and, with some difficulty, brought her in safety to the opposite shore. By taking the current a little farther up, the rest of the family got safely over, where we had an opportunity of joining our acknowledgments to her's. Her gratitude may be more readily imagined than described: she thanked her deliverer more with looks than words, and continued to lean upon his arm, as if still willing to receive assistance. My wife also hoped one day to have the pleasure of returning his kindness at her own house. Thus, after we were refreshed at the next inn, and had dined together, as Mr. Burchell was going to a different part of the country, he took leave, and we pursued our journey; my wife observing as he went, that she liked him extremely, and protesting, that if he had birth and fortune to entitle him to mate into such a family as ours, she knew no man she would sooner fix upon. I could not but smile to hear her talk in this lofty strain; but I was never much displeased with those harmless delusions that tend to make us more happy.

(To be continued.)

DUT OF NAPOLEON.—The frugality of Napoleon was such, that his taste gave the preference to the most simple and the least seasoned dishes; as *coufs au miroir* and *haricots en salade*. His breakfast was almost always composed of one of these dishes and a little Parmesan cheese. As dinner he ate little, rarely of tagons, and always of wholesome things. I have often heard him say, "that however little nourishment people took at dinner, they always took too much." Thus his head was always clear, and his labour easy, even when he rose from table. Gifted by nature with a healthy stomach, his nights were as calm as those of an infant; nature, also, had bestowed on him a constitution so admirably suited to his station, that a single hour of sleep would restore him after twenty-four hours' fatigue. In the midst of the most serious and urgent events, he had the power of resigning himself to sleep at leisure, and his mind enjoyed the most perfect calm, as soon as directions were given for the necessary arrangements. *Anecdotes of the French Court, by M. Bonaparte.*

GOLDSMITH.

THERE are few writers for whom the reader feels such personal kindness as for Oliver Goldsmith, few having so eminently possessed the magic gift of identifying themselves with their writings. We read his character in every page, and grow into familiar intimacy with him as we read. The artless benevolence that beams throughout his works; the whimsical, yet amiable views of human life and human nature; the unforced humour, blending so happily with good feeling and good sense, and singularly dished at times with a pleasing melancholy: even the very nature of his mellow, and flowing, and softly-tinted style, all seem to bespeak his moral as well as his intellectual qualities, and make us love the man at the same time that we admire the author. While the productions of writers of more loftier pretension and more sounding names are suffered to moulder on our shelves, those of Goldsmith are cherished and laid in our bosoms. We do not quote them with ostentation, but they mingle with our minds, sweeten our tempers, and harmonize our thoughts; they put us in good humour with ourselves and with the world, and in so doing they make us happier and better men.

Oliver Goldsmith was born on the 10th of November, 1728, at the hamlet of Pallas, or Pallasmore, county of Longford, in Ireland. He sprang from a respectable, but by no means a thrifty stock. His father, the Rev. Charles Goldsmith, married when very young and very poor, and starved along for several years on a small country curacy and the assistance of his wife's friends. His whole income, eked out by the produce of some fields which he farmed, and of some occasional duties performed for his wife's uncle, the rector of an adjoining parish, did not exceed forty pounds.

"And passing rich with forty pounds a year."

The family of the worthy pastor consisted of five sons and three daughters. Henry, the eldest, was the good man's pride and hope, and he tasked his slender means to the utmost in educating him for a learned and distinguished career. Oliver was the second son, and seven years younger than Henry, who was the guide and protector of his childhood, and to whom he was most tenderly attached throughout life. Oliver's education began when he was about three years old, and at six years of age he passed into the hands of the village schoolmaster, one Thomas Byrne; but a severe attack of the small-pox caused him to be taken from under his care. His malady had nearly proved fatal, and his face remained pitted through life. On his recovery he was placed under the charge of the Rev. Mr. Griffin, schoolmaster of Elphin, in Roscommon, and became an inmate in the house of his uncle, John Goldsmith, Esq., of Ballyvaughan, in that vicinity.

Fitted out in a great measure by this considerate relative, Oliver was soon transferred to schools of a higher order, to prepare him for the university; but his proficiency does not appear to have been brilliant. He was indolent and careless, however, rather than dull, but, on the whole, appears to have been well thought of by his teachers. When sixteen years of age, he entered Trinity College, Dublin; but his father was no longer able to place him there as a pensioner, as he had done his eldest son Henry; he was obliged, therefore, to enter him as a sizar, or "poor scholar." It was with the utmost repugnance that Goldsmith entered college in this capacity. His shy and sensitive nature was affected by the inferior station he was doomed to hold among his gay and opulent fellow-students, and he became, at times, moody and despondent.

In consequence of a wild freak which was likely to lead to disagreeable consequences, Goldsmith sold his books and clothes, and sallied forth from his college, intending to embark at Cork for — he scarce knew

where — America, or any other part beyond the sea. With his usual heedless imprudence, however, he loitered about Dublin until his finances were reduced to a shilling; with this amount he set out on his journey. Hunger, fatigue, and destitution brought down his spirit and calmed his anger. In this extremity he conveyed to his brother Henry information of his distress, and of the rash project on which he had set out. By him he was furnished with money and clothes, and prevailed upon to return to college.

The time soon arrived for Goldsmith to apply for orders, and he presented himself accordingly before the Bishop of Elphin for ordination. He was, however, rejected: some say for want of sufficient studious preparation; others attribute his rejection to reports of his college irregularities.

A new consultation was held among Goldsmith's friends as to his future course, and it was determined he should try the law. His uncle Contarine agreed to advance the necessary funds, and actually furnished him with fifty pounds, with which he set off for London, to enter on his studies at the Temple. Unfortunately, he fell in company at Dublin with a Roscommon acquaintance, one whose wife had been sharpened about town, who beguiled him into a gambling-house, and soon left him as penniless as when he ran away from college.

Physic was the next pursuit recommended to him, and in the autumn of 1752 Goldsmith arrived in Edinburgh to commence his studies. He now attended medical lectures, and attached himself to an association of students called the Medical Society. He set out, as usual, with the best intentions; but, as usual, soon fell into idle, convivial, thoughtless habits. His usual carelessness in money matters attended him. Though his supplies from home were scanty and irregular, he never could bring himself into habits of prudence and economy; often he was stripped of all his present finances at play; often he lavished them away in fits of unguarded charity or generosity.

After spending two winters at Edinburgh, Goldsmith prepared to finish his medical studies on the Continent, for which his uncle Contarine agreed to furnish the funds. Although medical instruction was the ostensible motive for this visit to the Continent, the real one in all probability was his long-cherished desire to see foreign parts. Abroad, he was reduced to such misery from want of means, that he was compelled to exercise his talents on the flute to obtain temporary lodging. After two years spent in roving about the Continent, "pursuing novelty," as he said, "and losing content," Goldsmith landed at Dover early in 1756. At length we find him launched on the great metropolis, or rather drifting about its streets, at night, in the gloomy month of February, with but a few halfpence in his pocket. The first authentic trace we have of him in this new part of his career, is filling the situation of an usher to a school, and even this employ he obtained with some difficulty, after reference for a character to his friends in the University of Dublin.

Goldsmith remained but a short time in this situation, and his next shift was as assistant in the laboratory of a chemist near Fish-street Hill. Through the advice and assistance of Dr. Sleight, he commenced the practice of medicine, but in a small way, in Bankside, Southwark, and chiefly among the poor; for he wanted the figure, address, polish, and management, to succeed among the rich. Soon after, by the advice of Dr. Milner, Goldsmith once more changed his mode of life, and in April, 1757, became a contributor to the *Monthly Review*, at a small fixed salary, with board and lodging; and accordingly took up his abode with Mr. Griffiths, at the sign of the Lunciad, Paternoster Row. In Goldsmith's experience the track soon proved a thorny one; but this literary vassalage, however, did not last long. The engagement was broken off at the end of five months, by mutual consent.

The prolific talents of Goldsmith secured him steady occupation from the booksellers; but his unthrifty habits lost him the benefit of these advantages. It was about this period he secured the friendship of Dr. Johnson, and other eminent literati of the day. "I received one morning," says Johnson, "a message from poor Goldsmith that he was in great distress, and, as it was not in his power to come to me, begging that I would come to him as soon as possible. I sent him a guinea, and promised to come to him directly. I accordingly went as soon as I was dressed, and found that his landlady had arrested him for his rent, at which he was in a violent passion; I perceived that he had already changed my guinea, and had a bottle of Madeira and a glass before him. I put the cork into the bottle, desired he would be calm, and began to talk to him of the means by which he might be extricated. He then told me he had a novel ready for the press, which he produced to me. I looked into it, and saw its merit; told the landlady I should soon return; and, having gone to a bookseller, sold it for sixty pounds. I brought Goldsmith the money, and he discharged his rent, not without rating his landlady in a high tone for having used him so ill."

The novel in question was the *Picar of Wakefield*; the bookseller to whom Johnson sold it was Francis Newbery, nephew to John. Strange as it may seem, this captivating work, which has obtained and preserved an almost unrivalled popularity in various languages, was so little appreciated by the bookseller, that he kept it by him for nearly two years unpublished! It came out on the 27th of March, 1766; before the end of May a second edition was called for; in three months more, a third; and so it went on, widening in a popularity that has never flagged. Though so exclusively a picture of British scenes and manners, it has been translated into almost every language, and everywhere its charm has been the same. Goethe, the great genius of Germany, declared, in his eighty-first year, that it was his delight at the age of twenty; that it had, in a manner, formed a part of his education, influencing his taste and feelings throughout life, and that he had recently read it again from beginning to end with renewed delight, and with a grateful sense of the early benefit derived from it.

It is needless to expatiate upon the qualities of a work which has thus

passed from country to country, and language to language, until it is now known throughout the whole reading world, and is become a household book in every hand. The secret of its universal and enduring popularity is undoubtedly its truth to nature, but to nature of the most amiable kind—to nature such as Goldsmith saw it. The author, as we have occasionally shown in the course of this memoir, took his scenes and characters in this, as in his other writings, from originals in his own motley experience; but he has given them as seen through the medium of his own indulgent eye, and has set them forth with the colourings of his own good head and heart. Yet how contradictory it seems that this, one of the most delightful pictures of home and homefelt happiness, should be drawn by a homeless man; that the most amiable picture of domestic virtue, and all the endearments of the married state, should be drawn by a bachelor, who had been severed from domestic life almost from boyhood; that one of the most tender, touching, and affecting appeals on behalf of female loveliness should have been made by a man, whose deficiency in all the graces of person and manner seemed to mark him out for a cynical disparager of the sex.

Goldsmith's comedy of *The Good-natured Man* was completed early in 1767, but was doomed to experience delays and difficulties to the very last; at length it was performed for ten nights in succession; the third, sixth, and ninth nights were for the author's benefit; the fifth night it was commanded by their majesties; after this it was played occasionally, but rarely, having always pleased more in the closet than on the stage. The profits resulting from *The Good-natured Man* were beyond any that Goldsmith had yet derived from his works. He netted about four hundred pounds from the theatre, and one hundred pounds from his publisher. The heedless expenses, however, of Goldsmith, soon brought him to the end of his "prize-money;" he was soon obliged to resume his old craft of book-building, and set about his *History of Rome*, undertaken for Davies. *The Citizen of the World* had already appeared.

The popularity attending the publication of his celebrated poem, the *Traveller*, had prepared the way for the *Deserted Village*, an exquisite picture of village life. The constant drudgery to which he had been exposed by his want of means had a serious effect upon his health, and obliged him to quit London for the country. After rusticating for some time he returned to town in the autumn of 1772, with his health much disordered. His close fits of sedentary application, during which he, in a manner, tied himself to the mast, had laid the seeds of a lurking malady in his system, and produced a severe illness in the course of the summer. Town life was not favourable to the health either of body or mind. He could not resist the siren voice of temptation, which, now that he had become a notoriety, assailed him on every side.

The gaieties of society, however, cannot medicine for any length of time a mind diseased. Wearied by the distractions and harassed by the expenses of a town life, which he had not the discretion to regulate, Goldsmith took the resolution, too tardily adopted, of retiring to the serene, quiet, and cheap and healthful pleasures of the country, and of passing only two months of the year in London. He accordingly made arrangements to sell his right in the Temple chambers, and in the month of March retired to his country quarters at Hyde, there to devote himself to toil. Death, however, was silently stealing apace. An access of a local complaint, under which he had suffered for some time past, added to a general prostration of health, brought Goldsmith back to town before he had well settled himself in the country. The local complaint subsided, but was followed by a low nervous fever. He was not aware of his critical situation, and intended to be at the club on the 25th of March, on which occasion Charles Fox, Sir Charles Bunbury, and two other new members, were to be present. In the afternoon, however, he felt so unwell as to take to his bed, and his symptoms soon acquired sufficient force to keep him there. His malady fluctuated for several days, and hopes were entertained of his recovery, but they proved fallacious. He had skilful medical aid and faithful nursing, but he would not follow the advice of his physicians, and persisted in the use of James's powders, which he had once found beneficial, but which were now injurious to him. His appetite was gone, his strength failed him, but his mind remained clear, and was perhaps too active for his frame. Anxieties and disappointments, which had previously sapped his constitution, doubtless aggravated his present complaint and rendered him sleepless. In reply to an inquiry of his physician, he acknowledged that his mind was ill at ease. This was his last reply; he was too weak to talk, and in general took no notice of what was said to him. He sank at last into a deep sleep, and it was hoped a favourable crisis had arrived. He awoke, however, in strong convulsions, which continued without intermission until he expired, on the 4th of April, at five o'clock in the morning, being in the forty-sixth year of his age.

His death was a shock to the literary world and a deep affliction to a wide circle of intimates and friends; for, with all his foibles and peculiarities, he was fully as much beloved as he was admired. Burke, on hearing the news, burst into tears. Sir Joshua Reynolds threw by his pencil for the day, and grieved more than he had done in times of great family distress.

Never was the trite, because sage apophthegm, that "the child is father to the man," more fully verified than in the case of Goldsmith. He is shrewd, awkward, and blundering in childhood, yet full of sensibility; he is a butt for the jeers and jokes of his companions, but apt to surprise and confound them by sudden and witty repartees; he is dull and stupid at his tasks, yet an eager and intelligent devourer of the travelling tales and campaigning stories of his half-military pedagogue; he may be a dunce, but he is already a rhymist; and his early scintillations of poetry awaken the expectations of his friends. He seems from infancy to have been compounded of two natures, one bright, the other blundering; or to have had fiery gifts laid in his cradle by the "good people" who haunted his birth-place, the old goblin mansion on the banks of the Inny.

## CAROLINE AND CATHARINA.

(Continued from page 430).

"This has a little of the 'official' twang," said Thorpe. "You have answered it, of course?"

"Of course," echoed the major, "and have accepted in advance a post as quarter-master. The fact is, Morris, my affairs are not in as flourishing a situation as they have been, and I know enough of this business to be pretty sure of recruiting them in it. But that was not my reason for communicating with you." He paused a moment, and then went on—

"This war, if a war there is to be, will be a popular one, and all who engage in it will derive benefit from it. Now, you are ambitious of a seat in Congress—don't deny it; I know it—and you can secure it in one way only. 'Take time by the forelock;' secure a position in public opinion by taking an active part in the agitation; talk, as you know how, at public meetings, and when the call comes for volunteers, depend upon it you can secure the position of a field-officer—perhaps of the commandant of a regiment. Go to Mexico, exercise your talents, get into a fight, acquire yourself creditably, and come home—my word for it you will overstep men of twice your years, and fifty times your experience in politics."

"Yes," said Thorpe, smiling: "but, major, suppose some Mexican should shoot me? Probably my promotion would have to be sought in a place upon which some people look as being hardly equivalent to the capital—I mean heaven."

"In that, of course," said the major, "you would have to take your chance—but that you would be willing to do, certainly."

"Certainly," said Thorpe—"just as I would have to take my chance afterwards for a seat in Congress."

"But this would make that chance better," argued the major.

"I believe you are right," said Thorpe, after a moment's thought, "and I am very much obliged to you for the intimation. I will begin to act upon it immediately."

"Do so, do so—and, my word for it, you will be benefited."

After some further conversation, they returned to the drawing-room, and found that Cara had gone.

"She is in an awful humour about something, this morning," said Mary; "do tell us, cousin Morris, what it is?"

"I am as ignorant as yourself—in that matter," said Morris, making an ominous pause where we have placed the dash.

He, too, was in "an awful humour," and soon took his leave.

In the meantime, Cara had reached home. On entering a little private parlour adjoining her bed-chamber, which she called her library, she found a package lying on the table, directed to her in dark crimson paint. She tore it open with a trembling hand, and discovered, what she expected—"The Sunset."

"How generous!" she exclaimed—"and to the daughter of his father's enemy, too!" And she ran away to detail the whole story to her father, with a volubility she seldom exhibited.

"I always said there was something good in the boy," said her father. "We must have him among us by some means. How can we manage it?"

The rising painter was too famous to be despised; and, besides, to add him to his circle would be another triumph over old Vernon.

## CHAPTER V.

"'Tis beauty truly blent, whose red and white  
Nature's own sweet and cunning hand laid in."—TWELFTH NIGHT.

WITH the earliest rays of the morrow's sun, Vernon was engaged again upon Cara's portrait. The face he had finished, with the exception of a few slight touches, the evening before; he was now to paint her costume and arrange the back-ground. He worked still with the same assiduity and with more rapidity; and by eleven o'clock, the hour at which he opened his studio, the picture was finished. The likeness was perfect, both in features and expression.

There are works, which can be done only under the impulse which makes them desirable; and the flash of genius must be arrested and fixed in the moment of its conception, else it will pass like the shadow of a cloud over a sunny landscape, to return no more. Had Vernon taken a week or a month in which to paint this portrait, he would never have been able to catch the intangible expression, which was, in fact, the soul of Cara's face. He must have been immediately under the influence of her glance—and its power, too, not decreased by habit or dimmed by change—to have caught so perfectly the hovering smile and the ethereal thought of her varying countenance. As a simple work of art, it was by no means a fine picture—the execution had been too hasty for that; but no portrait he had painted had ever so perfectly embodied the original, no face had made the canvass so like breathing nature.

He was still gazing at it, when steps on the gravelled walk in front of the house announced visitors. He opened the door, and the original stood before him, accompanied not by Thorpe this time, but by Major Bryce and his daughter. Allen had seen the major before, but not for several months; and he shook him cordially by the hand. Cara advanced and gave him her hand frankly and unostentatiously; followed by Mary Bryce, who seemed at a loss, whether to treat him condescendingly, as one infinitely beneath her, or reverentially, as one equally her superior. She succeeded admirably in assuming neither character, and impressed him truly, as one whose self-respect was not equal to her vanity, and whose respect for others was mingled with a fear, and defiance of an anticipated assumption of superiority.

"I did not intend," said Cara, "to disturb you so early; but Major Bryce was on his way here, and I availed myself of his escort."

"Then I am much obliged to Major Bryce," said Allen, smiling, "for I was just wishing you were here."

"For what purpose?" she asked.

"To rectify my portrait and prove its features," said he.

"Pa, look here," said Mary to her father, directing his attention to a row of portraits ranged along the wall. The major walked across the room, and Cara and Vernon were alone.

"What portrait?" she asked.

He turned the rapidly-painted picture from the wall.

"What!" she exclaimed; "have you painted that since yesterday?"

"Yes," said he, "do you think it like?"

"If my glass be a true one," she answered, "it is perfect."

"I had thought," said Allen, as they both stood looking at it, "that I would not show you this—"

"Why not?" she asked, quickly.

"But," he continued, "go on and paint another."

"But, why?" asked Cara; "this is certainly as perfect as possible."

"Probably," said he, "as perfect as I can make it; but so soon finished that I will not even have a sitting."

"Well," said she, ingeniously, "is it not so much the better?"

"To you, perhaps," he replied; "but not to me."

"Why?"

But she looked up into his face and waited for no reply. She felt embarrassed, and wished to change the subject.

"I have not thanked you," she said, "for allowing me to be the purchaser of that fine picture—"

"Purchaser!" he said. "Purchaser! You did not buy it from me!"

"No," said she, timidly, "but I supposed you knew from my manner that I coveted it, and—"

"And sent it to you as a purchaser, you would say," interrupted Vernon. "You are mistaken, Miss Talbot; perhaps I took too great a liberty for an acquaintance of only a few minutes' standing. But you were the first who had fully appreciated it, and I sent it to you because you knew the value of it—had soul enough to understand it. If you will not keep it on these terms, I am sorry; but I will accept no price for it."

"Oh!" she exclaimed, "I would not part with it on any terms! I will keep it most gratefully. But since you have given me the picture, you must do me another favour: come to my father's and show me in what light to hang it."

Allen hesitated, and she perceived it.

"I know," said she, advancing more closely to his side, "I know what you would say, or, at least, what you are thinking; our parents are not friends, &c.; but that ought not to make us enemies."

"True," said he, gazing earnestly at her; "I will come."

"When? Can you not come to-day?"

"I fear not. But to-morrow, perhaps."

"And then," said Cara, jestingly, "we can have our sittings there."

"You must allow me to paint another picture for you," said Allen, "and this one I will keep myself."

"We'll see; but I think I would rather have this than any other."

"But then," said Allen, smiling, "what shall we do at our sittings?"

"Oh," said she, gaily, "we'll find enough to do: talk about painting, and poetry, and sculpture; and then you shall teach me to paint in oils and mix colours. Oh! we'll find enough to do!"

"Well," said Vernon, "so that we have enough to keep us together, I shall be content."

"Miss Bryce, there," said Cara, smiling, "would appear to be half-offended at such a speech as that; perhaps she would slap you in the face;—a pretty formidable demonstration, too—but she would, at the same time, be as much pleased as I am to hear it."

"What's that you are saying to Mr. Vernon about me?" said that young lady, tripping across the room.

"Only justifying myself by citing your example," said Cara.

"I am afraid," said the major, coming forward, "that your sitting will not amount to much to-day, my dear."

"The picture is finished," said Cara, pointing to it.

"That's capital, upon my honour!" exclaimed the old gentleman; "why, you told me you were just about to take the first sitting!"

"And I told you the truth," said Cara; "that picture has been painted since this hour yesterday."

"What? since yesterday!" exclaimed the major; "why, you are equal to a daguerreotypist."

"Oh?" said Mary, tragically throwing her fat hands into the air, "isn't that beautiful?" And she looked as if it were something good to eat.

"Pshaw, Mary!" said her father; "don't be so rhapsodical! Mr. Vernon probably knows the value of the picture much better than you do, you need not enlighten him."

Mary received this somewhat rude rebuke with an exaggeration of wounded feeling truly ridiculous; and began to shake her hands, and agitate her chest, as if about to faint.

"You will soon have a scene to paint," said Cara.

"I hope not," said Vernon, earnestly.

The major understood his daughter's humour, and paid no attention to her. Like most fainting people, as soon as she found her fainting produced no excitement she recovered, and looked as little like swooning as ever. A glance of intelligence passed between Vernon and Cara, in which the major joined by a quiet smile, and a shrug of the shoulders.

"Mary," said the major, after a short pause, resuming the conversation, "you had better return with Cara; she will set you down at home and leave me here; I have some conversation for Mr. Vernon."

"Well," said Cara, "since we are not to have our sitting to-day, I will go immediately, if Mary is ready. Remember," said she to Allen, as they passed out, "I shall expect you to-morrow, to advise me about the painting."

"I will not fail," said the latter; and he and the major were alone.

"I will not detain you long," said that gentleman, as he shut the door.

"My object in calling on you was to ask you how you would like to have an opportunity of painting some of the finest scenery in the world?"

"Rather a superfluous question, I should think, major."

"True, true; I know well enough. Thorpe has told me that he thought you would like it excessively; he says your talents are even better adapted to landscape, than to portrait painting; and he thinks you would like to exercise them."

"What can Mr. Thorpe know about it?" said Vernon, proudly.

"He did not wish me to mention his name," said Bryce; "but he was very forcibly struck by a picture of yours—a sunset—which I have also seen to-day; and he thinks I might be of service to you, and I think so too; and plague it, man, we are cousins, anyhow, and—" the major stopped.

"I am very grateful, major," said Vernon, smiling; "but I do not see how I am to have this opportunity, even by your aid."

"Why, you see, the fact is this—I may as well come to the point first as last—I have information that we are on the eve of a war with Mexico—"

"Of that I presume there is no doubt," said Allen.

"Precisely," continued the major; "no doubt at all, as you will see by reading that letter." He handed him the letter which he had previously shown to Thorpe. Vernon read and returned it.

"Well," the major resumed, "in the event of a war, Mexico will be invaded, and the army, of course, will need quartermasters. I have already written to accept the post spoken of in that letter, in advance, and I shall be with the army. Now, Thorpe says (and I don't doubt it) that Mexico contains some of the finest scenery in the world."

"It does, indeed," said Vernon, thoughtfully.

"Certainly," said the major, glad to be corroborated; "and it is fine scenery you want to paint. Besides, there will be battles, sieges, marches, bivouacs, camps, &c., &c., interminable; then there are the long train of wag-gons—" and the major, filled with recollections, was about to enumerate all the trappings of a marching army, but Vernon interrupted him:—

"All very true, major," he said, "and I should like to paint them all; but, still, I do not see how I am to have an opportunity."

"Well, this is it," said the major, at last: "in my department there are many posts; the best of the you can command, and I shall doubtless be able to give you one which would give you the means of support—I know that, like myself, you are not rich—and, at the same time, would give you leisure to pursue your art as diligently and constantly as you might desire. Let us come to the point—would it suit you?"

"Suit me!" he exclaimed. "It would be precisely what I desire!"

"Then we will consider it settled," said the major. "And now," he continued, to escape Vernon's expressions of gratitude, "you must come to my home to dine to-morrow; we have made you the first visit, and you must return it, you know."

Vernon accepted, and the major left him.

What was Thorpe's design in all this? For it was all arranged by him, and the major and his good heart were really only acting from Thorpe's prompting. He had observed the admiration of Vernon for Cara, and her ill-nature after their visit. He was too sharp-sighted to be deceived; and he at once saw that unless he could withdraw Vernon from her society, into which he seemed likely to enter, his own prospects were null. The war, he hoped, would be declared immediately; in the meantime he had to trust to his own ingenuity, and afterwards to his superior advantage. This sudden and adroit combination was only one example of the kind of strategy he was every day practising successfully.

## CHAPTER VI.

"I cannot be mine own,  
Nor anything to say, if I be not thine."—WINTER'S TALE.

THE further you draw a pendulum in one direction, the further it will swing in the opposite, when you let it go. Men of reserved habits, when their reserve is once overcome, are generally the most social of all. This observation is confined, of course, to those whose habits, (and does not extend to those whose natures) are reserved; for even the pendulum will not swing away from the point where gravitation, (its nature) leads it.

Allen Vernon was only reserved by habit; constitutionally, no man was more social or less morose. He was impulsive, too, and he needed only an attraction to withdraw him, at almost any time, from his solitude. He was somewhat conscious of this, and had avoided everything of the sort. True, he was a poor painter, and therefore but few occasions were afforded him upon which to exercise his self-denial. But now he had become known, was no longer struggling against starvation—he was no longer in absolute need of the world's countenance, and consequently the world began to smile upon him. Napoleon, though called the "child of fortune," strove to owe as little as possible to her favours, conscious that she was most gracious to those who trusted least to her. So it is with every successful man, with regard to what is called "the world." He knows that the more independent of favour he can make himself, the more favours he will receive: that in this, as in all

other things, an equilibrium is established, by the law of which the world will help him, precisely in proportion as he does not want assistance: and he will be absolutely cast off, only when his means of helping himself are absolutely nought.

Allen began to be an object of interest to all the people of fashion who had heard of him; invitations had begun to pour in upon him, even before the period of Cara's visit, all of which he had declined. For some reason, however, as soon as he had made up his mind to take advantage of Cara's invitation, he suddenly felt as though accepting all others. The want of society began to be felt; and he acknowledged to himself that he had been too much alone. He accepted Major Bryce's invitation, not, as might be supposed, because that gentleman had laid him under an obligation, but because of his rapidly-increasing desire for society. The habit of mind produced by seclusion was fast giving way; the removal of the force which had made him solitary, was likely to produce a sudden bound to the other extreme.

"I have been expecting you for some time," said Cara, as Vernon entered the drawing-room on the morning appointed. As she spoke she advanced from the window at which she had been sitting, and gave him her hand with almost childish, but graceful simplicity.

"I am sorry, then," said he, pressing her hand slightly, and taking the seat she pointed to, "that you had not a more pleasant anticipation."

"How?" she asked.

"Something more pleasant to look forward to, I mean——"

"Than a visit from you?" she interrupted. "Oh! nothing could have been more so, I assure you."

"I am afraid you will be disappointed, then," said Allen.

"Oh," said she, smiling, "I am not afraid of that; and I say so to you," she added, with some emphasis, "because I know you are above the flattery which would speak as you do, only to be re-assured by a compliment."

"I am, indeed!" he exclaimed, warmly; "though a compliment from you is the only thing that has really flattered me for years."

"Flattered you out of your favourite picture, did it? Well, if it be so, you shall have it back—or, stay, we can compromise; it shall hang here as yours, while I will have the enjoyment of it."

"No, no," said Allen, catching the spirit of lightness from her, "it is yours, and shall remain so; it is no longer my favourite picture either—I have got a substitute in my affections, in a certain portrait."

"I am afraid I shall have to deprive you of that, too," said Cara: "I have already told my father of it, and he is very anxious to see it."

"I'll take a copy of it, then," said Vernon.

"I'll take a copy of it, then," said she, "if you intend to do so; to be prudent, I should forbid you, and if I were imprudent you would not want my picture."

"But," said Allen, "if you did forbid it, I would not be forced to obey you; I have not sworn allegiance—yet."

"Yet?" said she, looking at him in surprise; "do you intend ever to do so? If you do, you must give me notice: for it would shake my nerves, if it came unannounced."

"Then," said Allen, gaily, "I'll prelude it, as your friend, Miss Bryce, does her commonplaces, with a grand flourish of trumpets; and when you hear and see the signs, expect a storm."

"Nay," said Cara, "if you are of the stormy mood, you had better select Mary for your lady-love."

"I am not very stormy," said Allen. "Let me show you how I should approach you, if I were about to——"

"If you were!" she exclaimed, "and are you not?"

"Let me show you," said he. As he spoke, he passed from the seat he had occupied, and, taking her hand, sank half-kneeling by her side. At the same moment he carried her hand to his lips and looking up, whispered——

"What is my fate?"

"Oh, admirable!" she exclaimed. "You shall be accepted by all means, whenever you do that again."

"Is it a bargain?" said he, half seriously.

"Certainly," said she, "have I not said it, and is it part of a lady's character to be regardless of her word?"

"Remember, then," said he, now quite seriously, "whenever I do the same again, your answer shall be favourable. Is it agreed?"

"Decidedly," she answered; "and now let us go and see the proper light for the 'Sunset.' Ought it to be in a bright light, or should the light be softened?"

"It will make but little difference," said Allen; "for there are no shadows in it, except such as are relative to another point in the picture, which is central. If the light were lateral and vertical, or either, the light in which you place it would be very material; but it is central and horizontal, and therefore depends upon no accessories."

"Is that a principle of painting?" she asked.

"It is only a principle of arranging paintings," said he, as he followed her through a door, and found himself in the most tastefully-arranged and chaste-furnished room he had ever seen. It was small—perhaps not more than fifteen feet square, and lighted by only one window; over which was now drawn a rich, heavy curtain of the finest crimson damask, which lay in folds upon the soft, noiseless carpet. This latter was of the kind called tapestry carpet—a pattern in which the same crimson hue so predominated as, at first sight, to appear plain unmixt red. On closer inspection, however, you discovered that nearly every colour of the rainbow was thrown upon it with almost the art of the painter—all blending and harmonizing in the one hue, presenting no startling contrasts and no tasteless combinations. The singularity of the taste was enhanced, too, by the fact that it was an architectural pattern; and on following the figures with your eye, you found every conceivable sort of building, and every known order of architecture; from

the massive, solemn, and yet attractive Gothic, through the mouldering and yet beautiful Composite, the grave and severe Doric, the simple and graceful Ionic and the ornamental, and sometimes ostentatious Corinthian—through them all even to the stately, yet dreamy and distant Moorish. Here, too, were grand cathedrals, stately temples, graceful porticos, massive churches, Mohammedan mosques crowned by the shining crescent. Beautiful cottages upon the banks of running streams, embowered in willows, with playful children at the door; and winding walks among old oak trees and waving shrubs; quiet lakes, set like islands among hoary, moss-grown rocks; and upon their silent shores were shining temples erected to the guardian spirits of the solitude; here stretched in long perspective a weary desert, and far in the distance stood a cool oasis with its mosque-shaped fountain, and a camel and Arabian travellers asleep; here was a mausoleum, and at one side stood a child with sunny though saddened hair, strewn flowers over the dead; the same winding line which in one place was a gravelled walk, in others became successively, a musical stream, a desert path and the trunk of a stately palm; a spot which in one point of view was a lone leaf waving in the wind, in others became the dome of a mosque, the arch of a ruined bridge, and the gateway of a palace; the mazes of a forest changed as you changed your station, and became at once the nave of a vast cathedral, the hoary trunks became columns, and the foliage the fratted roof; as you traced the lines you were lost in inextricable windings, and you ended by seeing only the first impression—a quivering surface of shadowy forms, all merged in the predominant crimson.

In keeping with the floor were the walls and ceiling, the latter painted with harmonious colours, all varying in broad but ever decreasing lines of waving hues, until they all ended at once, and seemed to begin in the centre. From that centre, calm, serene, and watchful, its almost unearthly brightness increased by the crimson hues, looked down a large, deep-meaning eye, from which half the light in the room seemed to proceed. The walls were covered with paper, of which the predominant colour was a light purple; and hung along three sides of it were some twenty or more pictures, each so placed as to receive and reflect the mellow light of the single window. The furniture was in keeping with the decorations—light, fantastic, and appropriate—bronzes and painted in perfect keeping, and so arranged as to fill the room, and yet not crowd it. The frail ottomans, the light chairs, the small divan, and the miniature tables—each seemed to have been made for each, and all for this room. Even the books on the graceful shelves were bound all in crimson, and preserved the unity of the design.

Immediately in front of the window stood Cara, the divinity who had created and presided over all this chaste magnificence, her face suffused by the crimson hue; and her lips parted by a smile, gazing earnestly at Allen's "Sunset," which stood leaning against the wall, exactly opposite to her. The light, mellowed and deepened by the curtain, fell in rich, soft, luxurious beams full upon the painting—not glaringly, so as to conceal any of its peculiar delicacy of colouring, but strongly, so as to bring out, and thoroughly define, every one of its luminous and splendid outlines.

For a moment Allen gazed upon the scene before him, noticing nothing but the splendour and taste of the accessories. In his circuit of observation his eyes rested upon hers; and arrested, and almost spell-bound, his gaze fixed itself upon her. Had she been an adept in the science of magic, she could not have contrived a situation more likely to make a poet or a painter worship her with all his soul. She looked at him a moment, and her eye fell—she sank half-smiling, half-frightened, upon an ottoman. He advanced rapidly to her side—took her hand in his—carried it to his lips, and, sinking upon one knee, looked up into her face, and whispered passionately—

"What is my fate? You told me you would accept me: do not—nay, you cannot reject me!"

She withdrew her hand suddenly, and covered her face.

"I cannot, indeed!" she murmured. "But I cannot accept you, either! I am——" She hesitated, and then continued rapidly to herself: "Why should I tell him so? I am free!" She was silent, but her breath came thick and fast. By degrees she recovered her composure. She looked up after awhile, and laying her hand on his, spoke:—

"You took me by surprise," she said, gently; "I was not prepared for it—so soon." She smiled again, and continued. "Painters are all alike, I believe—impetuous and startling. But we must say no more of this—now; some other time, perhaps, if you wish—not now. And besides," she added, after a pause, "this is not the place for such things—this is my private drawing-room, and no young gentleman was ever before in it, except——" she stopped a moment, but went on almost immediately. "Well, well—no matter. We came here to talk about that picture—Come, come," she continued, playfully laying her hand on his lips, "don't break out into passionate prayers, like the heroes of novels—praying for hope, &c., &c.; for, like them, if you had it not already, you would not pray for it!"

"Well," said he, smiling faintly—for she had talked him into self-possession again—"at least you have not rejected me; and I may hope, then."

"Hope?" said she, looking round at him in the most matter-of-fact way imaginable—"Hope? Certainly. Why not?"

"You are the strangest creature I ever saw!" he exclaimed.

"Why?" she asked, suddenly; "because I allow a gentleman, whom I have not known three days, kiss my hand, and almost clasp me in his arms? That is a little strange, I must confess."

"Oh! no!" he began.

"Pshaw!" said she, laughing—"I understand you, of course. And now let me say one word—and mind, you are to receive it as a law of the Medes, and never mind protestations—it is this: you are not to mention this subject to me again for twenty days—by that time my resolution will be formed. And remember, you do not know the reason why I make this stipulation. And therefore, you are not to be impatient of it."

"As he reached the door, a printer's boy came along with a bundle of handbills and a paste-pot, and stopping to paste one of them to the side of the house."

"That were impossible," he said.

"Did you not paint my portrait in twelve hours, and is this more impossible than that?"

"I promise!" said Allen, and they turned to the picture. Cara talked about the effect of lights and shades, colours and tints, with as much calmness as if nothing had occurred. Allen, too, soon recovered his composure; and when they returned to the drawing-room, and found Colonel Talbot there, he met him as calmly as if he had known him all his life. As Major Bryce's dinner-hour approached, he took leave, having received and made a decidedly "favourable impression."

## CHAPTER VII.

"He that will have a cake out of the wheat,  
Must tarry the grinding."—*THEOCLITUS AND CÆCÆSIDA.*

"I MUST get this painter out of the way as soon as possible," said Thorpe to himself, as he left the major's. "He is precisely the man to undermine all my plans in life; and I am resolved that shall not be done. If I can get him out of the way a year or two—or even six months—I can so entrench myself as not to fear him. At all events I must prevent her seeing him often, or even at all, if I can, and I can, surely."

We have seen the rapidity and dexterity with which he seized upon the first opportunity to effect his object. Calmly, deliberately, and skillfully, he insinuated his scheme into the mind of the unsuspecting major, who thought he was doing an act dictated by his own goodness of heart. In order the more firmly to secure his success he wrote an application, which he persuaded the major to forward to Washington, (after having it signed by a large number of influential citizens,) setting out his merits, and asking for his appointment to the post of quarter-master. With the interest the major already had at the Capitol, this was sufficient to make him secure.

This was done on the day following Cara's first visit to Vernon's studio; and after posting the petition, Thorpe was vexed to find on repairing to Colonel Talbot's, that Cara had already gone to make her second visit. He was vexed, because he had intended to accompany her; and he trusted to his dexterity and the fact of his being forewarned of the danger, to enable him to escape it, and prevent her being more impressed by the young painter than she was already. "One visit," he however thought, as he turned away, "cannot make much difference; and next time she goes I shall be with her. In the meantime," he continued, after a pause, "Mary is jealous of Cara—thinks I am too attentive to her—I must cultivate that; and to-day the major will invite Vernon to his house. I must be there so that Mary will be induced to lay herself out for him, to pique me—" he paused—"Yes, that will do; and if Mary does not take his attention the case is hopeless; but he is not very experienced, and her free manners must capture him—at least for a time. She will capture herself, too; and then I will draw the major off, and leave them alone, and I am more mistaken than ever I was in my life,

if she does not hurry him into some demonstration friendly to my interests. Maria must do her best, too—at least, must not be in the way. I must drill her beforehand." And he proceeded to arrange his schemes. We have seen how they were prospering. He knew nothing of Vernon's sending Cara the "Sunset," and was so intent upon his arrangements that he did not re-appear at Colonel Talbot's until a few moments after Allen had left there for Major Bryce's.

"You did not wait for me yesterday," he said to Cara; "you must have been in haste to see the handsome painter."

"I was," said she, coolly, "and I suppose you were not; at least, you did not seem to be."

"I was detained," he said, "longer than I supposed, until I looked at my watch—"

"O," said she, indifferently, "it made no difference; you are here now—so make no apologies."

"You were a little petulant, Cara," said he, "when I saw you last, and I see you have not got over it yet. Have I said or done anything to incur your displeasure?"

"You will do something, Morris," said Cara coldly, "if you preserve that tone to me. I think you might be: aside the manner of admonition now; I am old enough to be emancipated."

"Cara," said he, gravely, taking her hand, "if you are displeased with me, I am sorry for it; but I cannot but say that whatever my manner may be, it is prompted by no motive but intense anxiety for your good."

"Well, well," she said impatiently, "I know all that of course; but still I think you treat me too much as if you were the teacher and I the pupil. Now we do not stand in any such relation to each other—I mean we are not in any relation resembling that, and probably will not be—not for a long time at any rate; and you sometimes offend me by assuming too much of the monitor—I cannot bear it."

This was all very plausible; but Thorpe was altogether too clear-sighted not to see, that some other reason was at the bottom of what he very properly called her petulance. His manner was not different from what it had been for a long time—indeed, ever since he had first paid any attention to her; on the contrary, if changed at all, he had assumed less of the admonitory in the last three days than had been his custom. Yet now appeared an impatience, which she had never shown before. She had always received his attentions and admonitions with the docility belonging to her character. His manner, too, was that adopted after mature deliberation, and founded on very accurate and deep knowledge of her character. She was gentle, tractable, and easily accessible to every species of feeling; although when aroused neither he nor any one else could govern or change her; yet, (a seeming contradiction,) this slightly dictatorial manner was that least likely to make her rebel. He had always veiled his more severe censures under deep solicitude; and had generally succeeded in making her believe that it gave him far more pain to perceive, than it did her to be admonished, of any of her very frequent misdeemeanors. Very frequent they were, too, if we were to judge of their

frequency by the number of Thorpe's delicate and well-considered censures. In reality she was never guilty of positive imprudence; but she was sufficiently thoughtless often to act in such a manner as to give one of his ingenuity an opportunity to colour and represent her actions in an unfavourable light. If the policy which induced him to take this course was over-acted, it was only because by its very refinement it required capacities and watchfulness which even he was not able to bring to his assistance. It was only for this reason; for he calculated correctly that assuming that tone would be far more likely to give him the influence he desired than any other course. That influence he had certainly acquired; and up to the present time it had been gradually but steadily increasing—assisted by almost every prominent trait of her light, gentle and impulsive character. To find her impatient of it now, was therefore a new feature of the affair, which would have puzzled a man less acute. He was not, however the least in the dark. He thoroughly understood Cara, and he was not ignorant of any of her movements. When, therefore, she spoke to him as we recorded at the beginning of this ill-timed explanation, he knew precisely, even better than she did, what was moving her. It was not, however, his policy to seem to know; that would have ruined all; but he still pretended to think that nothing but what she had spoken of had any influence in producing her petulance. He bent his head, and cast his eyes upon the floor as if to recall some occasion upon which he had so acted or spoken, as to merit her displeasure.

"I cannot recollect, Cara," he said gently, and his soft, musical voice was still more soft and musical than usual—"I cannot recollect an instance in which I have not spoken to you kindly, at least—certainly I have never felt otherwise; and this you should know."

"Pshaw!" said she, rising, "let us say no more of it. I dare say I was wrong, to be petulant—and this is the second time I have made this acknowledgment to you in three days. You ought to be satisfied with that."

"It is not I, Cara, who am dissatisfied," said he; "I was only regretting that you were displeased with me."

"Well, well," said she, attempting though unsuccessfully to resume her usual light manner, "I suppose you are right, as usual, and I am wrong.—so let us say no more about it."

"Willingly," said he, frankly; "and in future, Cara, I will be careful how I assume the tone of an interested friend."

"Interested!" she exclaimed, "it is time!"—but she did not finish the sentence. "Never mind," she answered to his inquiring look, "I was not about to say anything—only, be sure you do as you say."

He had feathered the shaft with injured friendship, but it had missed its aim. "I must wait," he thought, "and the time will come." He remained with her only a few minutes longer; and bidding her good morning, took his way to Major Bryce's. For the first time in her life, Cara felt relieved on his departure.

## CHAPTER VIII.

"The compensation which thou seekest here  
Will be denied."—SHEKESPEARE.

VERNON was received by Major Bryce with the cordial, though somewhat ostentatious courtesy, which marked his manner on all occasions. He met him at the door and took him into his own private room, when he again showed him the letter which he had exhibited to Thorpe; after which he led him away into the drawing-room and impressively introduced him to Miss Maria Thorpe, who sat reading at a window. She laid down her book and came forward a step or two, slightly inclining her head, and throwing a keen glance over Allen, as if to take his measure.

"I believe," said she, in the most insinuating tone conceivable, "I believe I can claim some consanguinity with Mr Vernon. I hope you have enlightened him, major, on that subject?"

"One who has such a right," said Allen, politely, "ought not to need enlightening. I am glad to be reminded of the fact."

"Is Morris to be with us to-day?" asked the major.

"Really I cannot tell," said Maria; "I suppose Mary will know." She smiled significantly, as if to say, "at all events she ought to know, since she is in his secrets." The major felt like a father.

"What is that? I will know," asked Mary, entering the room, like Iser, "rolling rapidly." She was dressed immoderately, wearing twice as much "finery" as would have sufficed to deck out even her enormous size—but all "pitched upon her" and hanging about her in the most ludicrous and *outré* fashion. Not an article of her wardrobe—for she wore one—was put on or worn with either taste or elegance; and the only idea she seemed to have of dress, was the amount of money she could sink in the dry goods on her person. Still, her decidedly fine face would have redeemed the coarseness of her form, had not the affectation and awkwardness of her fairy-like movements, constantly drawn attention to it. As she passed across the room, she suddenly perceived Vernon—apparently, she had not seen him before. She halted "with a round turn," as boatmen say, and rushed towards him.

"How glad I am you are come!" she exclaimed, throwing up her hands in well acted surprise. "Why did you not tell me Mr. Vernon was here, Maria?" She took his hand, warmly pressing it, and gave him a look of awful tenderness, which he did not understand. She then threw herself violently into a chair, and drawing a long breath, seemed overcome with delight. Maria did not think it necessary to answer her very reasonable question; and a moment afterwards Thorpe entered. With one comprehensive glance as he crossed the threshold, he took in the whole scene, his quick eye dwelling for a moment upon Mary as she sat near Vernon, and then calmly turning away.

"I hope I have not kept you waiting, major," said he, seating himself opposite to Mary.

"That question, one would think, ought to have been addressed to the ladies," said Maria, laughing.

"If it had been on a less unromantic subject, you would be right," said her brother; "but, certainly, being detained from eating ought not to offend a delicate woman."

"Is eating, then," asked Allen, "incompatible with delicacy?"

"By no means," said Thorpe; "on the contrary, rather, since there is nothing really more indelicate than pretending abstinence. For nearly all who mince at the table, are far from being so particular afterwards."

"I like to see a woman eat well," said the major.

"And so do I," answered Thorpe; "but eating well has reference to more things than quantity. One woman may eat twice as much as another, and yet the latter may be an hundredfold more gross and indelicate than the former."

"How so?" asked Allen.

"Delicacy," continued Thorpe, to whom the lead in the conversation was as usual tacitly conceded—"Delicacy is a much larger term than quantity, including, say, consisting in manner and form more than in substance. A woman who goes about eating as if the dinner-hour were the hour for which all other hours were made, may not eat more in quantity than she ought to eat; yet, she betrays at the same time, by the manner in which she 'makes a business of it,' that her ideas, and consequently her sentiments, are not above a common animal appetite."

"You must have been much disgusted at some time," said Vernon, "to be so severe in your sketch."

"I have been," said the other, "very often, too."

"Well," said the major, "we must all be on our guard; for some of us may sit for our portraits when we are not aware of it."

"How severe cousin Morris is!" said Mary, in a confidential aside to Allen. Thorpe affected to observe her furtively, and thus encouraged, (the effect he designed to produce,) she became rapidly more and more exclusive and confidential—ostentatiously so, indeed—until she seemed no longer conscious of the presence of any other person but her interlocutor. She seemed to be no longer conscious; but Thorpe observed her now and then casting a side-glance at him, as if to note the progress she made. When she did so, he generally contrived to give her the impression that he was jealously watching her; and this served to quicken her attack. At the same time, he kept up an easy, flowing conversation with the major and his sister, in which he never lost a word, nor failed to preserve the thread.

Vernon was inexperienced, and unsuspicious; so that this assault, horse, foot, and artillery, as it were, almost overwhelped him. He strove, however, to keep up a decent show of seconding her, and became, apparently, as much interested as she was. He spoke fluently and elegantly, and all his eloquence was called out by the deference and interest with which she listened, and the exaggerated pleasure she exhibited in listening. He was in reality, less interested than Thorpe supposed—perhaps less so than he supposed himself—for the suddenness and impetuosity of her onslaught had carried away his defences, and made him join in the advance, without once thinking whether the movement were true or false. She was altogether a new character to him; and, not having been fore-armed by experience, he was at once carried down the tide.

"Let that continue an hour each day for a week," thought Morris, "and my game is won."

But on this occasion it did not last so long. A servant threw the doors open, and announced dinner. Let not the reader be alarmed; we shall not trouble him with a description of the table, the decorations of the room, the liveries of the servants, or the small-talk and large eating of the guests. Of all the modes of spending time together, yet invented by social beings, the dinner-party is the most stupid. Let it suffice, therefore, that the major's table was well-furnished, and that those who sat down to it did justice to the viands. Mary Bryce, especially, notwithstanding the severe remarks of her "cousin Morris," took especial pains to have her plate well provided, and soon unloaded—a process in which she was very skilful. She did not, however, fail to continue her impressive attentions to Allen; nor did she neglect to look occasionally at Thorpe, by way of enjoying her fancied triumph. That gentleman was calm, collected, and polished, both in manner and conversation; but he contrived to put on, in the eyes of Mary Bryce, an uneasiness which was more perceptible in his occasional glances, than in anything else. As the dinner proceeded, this gradually increased; and in exact proportion to this increase, was the openness and freedom of Mary's manner towards Allen. So dexterously did he manage his game, that towards the end of the repast, even the major's attention was attracted from the viands with which his plate was plentifully stocked, to the exclusiveness and pre-occupation of his daughter. He made no remark, however, understanding her reasonably well—a very uncommon knowledge in a parent; but allowed Maria to engross his attention almost as exclusively as Mary had engrossed that of Allen. This relieved Thorpe, who immediately became silent and apparently abstracted—a state of things which Mary did not fail to notice and improve.

When the dinner was over, and they had returned to the drawing-room, Morris pleaded business and departed, apparently not a little displeased. Mary was elated beyond measure, at what she considered the evidence of her success. But a quick observer, who had seen Thorpe when the street door closed upon him, would have thought him as highly elated as she was, and correctly, too.

"The shallow fool!" he muttered, "to think to play upon me!"

## PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

## No. XXIV.—"FOREIGN FIELDS ARE GREEN."

It is the undoubted privilege of an Englishman to grumble. The growl seems an inherent part of his constitution; physically, morally, and politically he delights in a grievance; and if he cannot find one ready made to his hand, he manufactures one for the occasion, and then, having given it the due accompaniment of growls, he afterwards laughs at the very thing he has made his torment; notwithstanding it had been a source of real annoyance to him at the time. The growls uttered by Timothy Testy and Samuel Sensitive, on what they were pleased to call *The Miseries of Human Life*, are a good exemplification of the propensity. Sir Walter Scott, in reviewing this publication, says, "The Englishman alone, we think, occupies himself seriously in this manufacture of unhappiness, and seems to possess, almost exclusively, the power of afterwards laughing at his misfortunes; which, however, during their immediate existence, gave him as much torment as ever the crushing an earwig, or beating a jackass, inflicted on the sensibility of a lachrymose German." It is the English only who submit to the same tyranny from all the incidental annoyances and petty vexations of the day, as from the serious calamities of life. In Ben Jonson's time, it was an unmeaning humour to be gentleman-like and melancholy. We believe it is since those days that a cause for that melancholy has been invented. It is only by the present race that the drawing on tight boots, or the extinguishing a candle under your nose, has been found entirely to embitter life. These trifling uneasinesses are now dwelt and commented upon in conversation, as of the highest importance; are considered an excuse for spleen or ill-nature, and, sometimes, almost a reason for doubting the beneficence of Nature altogether. These restless concomitants of life are only valued and cultivated in our gloomy atmosphere. The lively Frenchman either passes them unnoticed, or, if he does perceive them, only moulds them into a pleasantry to amuse his next companion. The haughty Spaniard will not suffer his gravity and grandeur to be broken in upon by such paltry considerations. The quiet Scotchman patiently endures them, without knowing them to be evils; or if he by chance receives annoyances, hereafter goes round about to avoid them. The violent Irishman, either passionately throws them off in an instant, or persuades himself it is comfort and amusement to him to let them continue. The phlegmatic Dutchman hides them from his view by the smoke of his pipe; while the philosophising German, who only feels for all mankind, thinks everything a trifle that affects himself. The sombre Englishman alone contents himself with grumbling at the evils, which he takes no steps to avoid; and, perhaps, the proneness to suicide, that is objected to John Bull by foreigners, might more reasonably be attributed to this indulgence in unhappiness, and domestication of misery, than to the influence of fogs, or the physical effects of sea-coal fires."

It is this petting and nursing of the minor vexations and miseries of life, that has given such general currency to the fallacy that, "foreign fields are green." We have grumbled and growled ourselves into dissatisfaction with everything around us, until it all seems dry and arid to our distempered vision. Nowhere, on the face of the earth, is there to be found such a rich green sward as in the plains and valleys of our fortunate island; and yet we are continually grumbling at them, and imagining that "foreign fields are greener." "Distance gives enchantment to the view," and paints in glowing colours those scenes which charm our imagination, but which fade into hot and brown plains when we approach them. We growl at our climate, at our want of sun, at our fogs, our mists, our rains; we growl when it is hot, we grumble when it is cold; we growl at a moist west wind, we groan at a dry easterly one; clouds or sunshine, wet or dry, hot or cold, every change has

its own appropriate growl; which only ceases, when some importunate foreigner takes the same liberty to abuse our climate, in which we continually indulge ourselves, and then we suddenly find out that it is the finest climate in the world, and transfer our growls to him, for daring to have a suspicion that it is not more excellent than any climate he had ever witnessed. And this habit is not confined to climate, but extends to everything connected with us; we growl at our government, our laws, our taxes; we growl at our ministers, our judges, our excisemen, and our custom-house officers; everybody and everything connected with public affairs comes in for his share of obprobrium and rebuke; and in private life it is pretty much the same—we growl when we are invited to a party, we growl if our friends seem to neglect us; we growl at being pestered with visitors, we growl if nobody calls. Habits, manners, customs, all have their growl, and are unfavourably contrasted with other countries, "foreign lands are green;" but if any one echoes our growls, the national feeling springs up, and we laud our government as the most free in the world, our judges as the most learned and honest, our taxes—confound the taxes—they are heavy, burdensome, obnoxious, bad—but we can afford to pay them, and they are not so very oppressive after all. And as for our habits, manners, and customs—no country in the world is so blessed with all that makes society pleasant and home desirable as ours.

So much for our growling. We will now turn to the general fallacy, that "foreign fields are green." The Latin proverb says, *omne ignotum pro mag-nifico*, "all unknown things are mistaken for magnificent." And thus it is that we are so often led to fancy that "foreign fields are green." We mistake that which we do not know for something better and more green than those things which are familiar to us. We endow the unknown with a thousand good qualities, which we refuse to recognise in the known, although, perhaps, the latter really possesses them, and in the former, they have no existence but in the imagination. An intriguing foreigner, for instance, pays a visit to England; he has some scheme against our pockets, to carry out which, it is necessary he should be received into good society: his curling moustache, his unabashed bearing, his daring compliments, win him the applause of the women, they mistake his assurance and guineas for the essence of good manners, and if he says or does anything that is offensive, it is charitably set down as being so French, or so Italian, that it is quite charming; a poor Englishman doing or saying precisely the same thing, would be set down as so vulgar, that he is unmemorable. The false coin gains currency, where the true metal fails. We choose to suppose that "foreign fields are green," that foreign manners are superior to our own, and we suffer our ignorance to magnify the unknown into some superior excellence. For, in truth, it is our ignorance of the niceties of language, that enables an uneducated and vulgar foreigner to pass himself off as a person of distinction and breeding; while we should detect instantly an Englishman of the same stamp, who attempted thus to impose on us. But the false idioms of the foreign language are not understood, and the broken and imperfect English does not convict them of vulgarity. And thus men, who in their own country would not be received into good society, are often admitted here into the very best; and their presuming manners are thought worthy of imitation, and are called graceful and elegant. "Foreign fields are green," and we ourselves are of the greenest to be taken in by them.

We seem to have a greater propensity to believe in the greenness of foreign fields than other nations; we are a locomotive race, continually roaming over the world in search of wealth, information, or pleasure. No difficulties deter us, no distances checks our ardour: the icy shores of the north seas, the fiery heats of the torrid zone, are familiar to us. In every clime, in every land, we are to be found seeking "those green fields," which, when found, only serve to remind us of the greener ones at home. Go wherever we may, if we open up the treasures of new lands, if we gather stores of information from every clime, if we discover new pleasures to gratify our tastes, still, however, the remembrance of home clings to us, and it is here we look forward to return for the full and free enjoyment of all that we have gained. Wherever we may settle, however "green" may be the "fields," still our home, and all that is associated with that name, is here. We may vilify and abuse it as much as we please, attack its climate, its government, its social restraints, but still there is something about Old England that clings to her wandering sons, and draws us home at last. The green fields of foreign lands are but as the mirage of the desert, even if we gain in them all that the ardour of our youth anticipated; the longing desire for the happy fields of the home of that youth is strong within us, and it is among these we wish to rest. The same feelings which Wordsworth describes on first landing after his continental travel, fills the minds of all Englishmen on their return home, however long may have been their sojourn in foreign fields:—

"Here, on our native soil, we breathe once more.  
The cock that crows, the smoke that curls, that sound  
Of bells;—those boys who in yon meadow-ground  
In white-sleeved shirts are playing; and the roar  
Of the waves breaking on the chalky shore;—  
All, all are English. Oft have I looked around  
With joy in Kent's green vales; but never found  
Myself so satisfied in heart before.  
Europe is yet in bonds; but let that pass,—  
Thought for another moment. Thou art free  
My country! and 'tis joy enough and pride  
For one hour's perfect bliss, to tread the grass  
Of England once again."

"Foreign fields are green." Our young imaginations are fired with the thoughts of Greece—the birthplace of liberty, the nurse of poetry and art, of science and of literature. Her fields are green to our thoughts; we long

to visit the land where Homer sang, where Phidias carved his gods; where Socrates and Plato breathed divine philosophy and made it—

"Not harsh and crabbed, as dull fools suppose,  
But musical, as is Apollo's lute,  
And a perpetual feast of nectar'd sweets  
Where no rude surfeit dwells."

The land of Harmodius and Aristogiton, who slew the tyrant and gave to Athens equal laws—the land where Leonidas fell, where Miltiades conquered in the cause of liberty—before whose few but free-born sons, the mighty armies of the voluptuous Persian melted away. Athens, and Sparta—the plains of Marathon, the pass of Thermopylae, the Bay of Salamis, are ever "magic words" bringing before us the indomitable hearts of the men who fought for freedom.

"Where'er we tread 'tis haunted, holy ground;  
No earth of thine is lost in vulgar mould.  
But one vast realm of wonder spreads around,  
And all the Muse's tales seem truly told,  
Till the sense aches with gazing to behold  
The scenes our earliest dreams have dwelt upon:  
Each hill and dale, each deepening glen and wold  
Defies the power which crush'd thy temples gone:  
Age shakes Athena's tower, but spurs grey Marathon."

We tread on the hallowed land—the mountains, the plains, the sky, are still the same, but man and the works of man are changed. "Human institutions perish, but Nature is permanent." There, where once the arts and learning flourished, the Turk had laid his iron grasp: there, where the spirit of liberty sprung up to enlighten the world, centuries of slavery have degraded man; her fields may be green—still may the olive flourish and the honey abound, but under the rule of the imbecile Bavarian, Greece languishes as under the tyranny of the Turk.

"Greeks only should free Greece,  
Not the barbarian, with his mask of peace.  
How should the autocrat of bondage be  
The king of serfs, and set the nations free?  
Better still serve the haughty Mussulman,  
Than swell the Cossack's prowling caravan,  
Better still toil for masters, than await  
The slave of slaves before a Russian gate."

The Englishman, whatever may have been his early dreams—however he may be inspired with his old poetic lore—however he may admire the sunny skies and balmy air when he looks on the plains of Greece, with their old historic memories and degenerate and base inhabitants, finds his own green fields rise greener in his mind; for here the foot of a despot has never trod—nor here freedom has found a home.

And shall we seek these "green fields" in Italy—

"Thou who hast  
The fatal gift of beauty, which became  
A funeral dower of present woes and past,  
On thy sweet brow is sorrow plough'd by flame,  
And annals graved in characters of flame.  
Oh God! that thou wert in thy nakedness  
Less lovely or more powerful, and could'st claim  
Thy right, and awe the robbers back, who press  
To bleed thy blood, and drink the tears of thy distress;  
Thou might'st thou more appal; or, less desired,  
Be humbly and be peaceful, undeplored,  
For thy destructive charms; then still unmet,  
Would not be seen the armed torrents pour'd  
Down the deep Alps; nor would the hostile horde  
Of many nation'd spoilers from the Po  
Quaff blood and water; nor the stranger's sword  
Be thy sad weapon of defence, and so,  
Victor or vanquish'd, thou the slave of friend or foe."

Are her fields more verdant than our own? Ask her sons, who now find that security here which is denied them in their own land. Beautiful are her plains, majestic her mountains, lovely her climate—nature and art combine to pour their choicest gifts upon the land—but man mars all this beauty. We wander over her plains filled with the monuments of the past, the immutable hues of nature are still the same—the gorgeous fabrics of the past still rise in majesty—the chiselled forms of grace and beauty still remain, and modern art strives zealously to equal them; the "thunder-stricken-nurse of Rome" stands as it did in the old days of the Empire; but where are the "iron men?" Noble hearts there yet are among them—some pining in Austrian dungeons—some wanderers and exiles; and savage hordes from Austria's many tongued lands, revel in her palaces and tyrannise over her people. Can "foreign fields be green" with such accompaniments? The music of Italy is drowned by the braying of the Austrian trumpet. And Rome herself, is held against herself, by foreign bayonets. We wander over these fair fields, and feel that we tread upon internal fires that must soon burst out; that the war of liberty against despotism will mar their beauty for a time and change their hue, to be replaced by a brighter destiny. When the "lone mother of dead empires" shall break the bonds in which she is enslaved—cast off the night of ages and of ignorance—and once more the earth shall see

"That brightness in her eye she bore when Rome was free"

There are, indeed, Englishmen to be found, who find that "foreign fields are green," even in enslaved Italy. The sensual and the selfish, who would shake off the restraints of society—who prefer a life of Sybaritic indolence and indulgence to one of manly energy and action, find, in the luxurious climate of Italy and its lax morality, the only pleasures which they seek; corrupting and corrupt they help to spread the moral contamination over the home they have chosen, and, too often, bring back to sully our own "green fields," the habits which have there become their nature.

Where shall we seek "green fields?" In what country or what clime are they to be found, if not here, where Freedom dwells? In France? In that blood-stained land, whose crime it has been to bring shame on liberty? who neither knew how to use it when obtained, or keep it when in her grasp; who sinks prone into the arms of a tyrant at the first blow. Are her "fields green," ploughed with reeking bayonets, and watered with the blood of citizens? Is her voice heard, stifled at the will of the tyrant? Is there one green spot in that land of shame? Yes; one. The law. The hand of the spoiler has been arrested by the law. The judges of the land have risen above the general corruption—have boldly dared to thwart the tyrant's will; have upheld the dignity of the law, with exile or the dungeon staring them in the face. It is not all barren; "the sap lasts," to bring forth "less bitter fruit." Shall we seek these "green fields" in Spain? the dead corpse of ruin, monk-ridden and benighted, haughty and idle, whose only symptoms of vitality are intrigue, revenge. Shall we seek them in Austria?—poor bankrupt Austria, doubling its necessities by its own tyranny, at the very moment it has most need to lessen them? Or in its victim Hungary, with its bravest driven from the land, and its women tortured with the whip? Shall we seek them in Poland—almost blotted out of the map of the world? In Prussia? In any part of Germany? In Russia, with its plains of Siberia, its knout, and its slaves crouching at the foot of their tyrant? Are the fields in any of these greener than our own? Is there as much happiness, security, and comfort, as here? There may be more favoured climates, with brighter skies and softer air, but the spirit of man becomes enervated in them, and "green fields" never spring up to his hopes, through his own labour and exertion. It is the pains we take to make our fields green, that brighten their hue, and make the verdure lovely. It may be that our hardy sons seek new fields to make green; that they have cleared the forests in the vast continent of America, and changed her dreary solitudes to busy scenes of industry; that they have founded there a great State, and have learned the art of governing themselves; that her fields are green through the labour of the sons of England; that her wide expanse gives labour, and the wealth that springs from labour to that portion of the population of the parent country who have not room at home—that already, though as it were but in her infancy, she plays an important part in the business of the world; and, united with England, forms a barrier to stay the progress of the despotism of rulers, and affords a refuge and a protection to the persecuted of every nation and every creed. But there is one black spot even there with all its boasted freedom; for man claims property in his fellow man, and the prejudice of caste and colour defaces their escutcheon. Again we trace our wandering sons in the far south, peopling there a new continent, undismayed by Columbus; forming new fields and opening new treasures; Australia and California teeming with gold, stand in the place of the fabulous El Dorado, the treasure city of the olden times; and the search, directed by labour, is more successful than that guided only by rapine, which was instituted by the nobles of old. And these new fields, wherever they may be, which are made green by the labour of Englishmen, serve to make our own fields greener at home, by the increased industry, the stirring activity, the extended commerce of the world. The mountains and the sea, these are the natural guardians of freedom. What, though it takes toil to make the mountain valleys green?—the hardy Swiss, wherever he may roam, looks back with longing heart to the snow-crowned hills, and dreams of his verdant valleys, even though the avalanche may be pending over them; he fears but one avalanche—that which should destroy his liberty. What though the paths of the sea are dangerous? The islander in every clime thinks of the happy and safe pastures there, and gathers wealth to adorn his free and dear-loved home. The mountains and the sea are Nature's barriers against wrong; within their rampart, hearts grow strong, and energy is given to hands to labour and to conquer difficulties, and thought is free, and intellect expands, and virtue, and morality, and true piety are the hand-maidens of liberty. The mountains and the sea are its bulwarks.

"Even so doth God protect us if we be  
Virtuous and wise. Winds blow, and waters roll,  
Strength to the brave, and Power, and Deity;  
Yet in themselves are nothing! One decree  
Spoke laws to them, and said that by the soul  
Only, the nations shall be great and free."

A NEWSMONGER is a retailer of rumour, that takes up upon trust, and sells as cheap as he buys. He deals in a commodity that will not keep; for if it be not fresh it lies upon his hands, and will yield nothing. True or false it is all one to him; for novelty being the grace of both, a truth grows stale as soon as a lie; and as a slight suit will last as well as a better while the fashion holds, a lie serves as well as truth until new ones come up. He is little concerned whether it be good or bad, for that does not make it more or less news; and if there be any difference, he loves the bad best, because it is said to come soonest; for he would willingly bear his share in any public calamity to have the pleasure of hearing and telling it. He tells news, as men do money, with his fingers; for he assures them it comes from very good hands. The whole business of his life is like that of a spaniel, to fetch and carry news; and when he does it well he is clapped on the back, and fed for it; for he does not take to it altogether like a gentleman, for his pleasure; but when he lights on a considerable parcel of news, he knows where to put it off for a dinner, and quarter himself upon it, until he has eaten it up; and by this means he drives a trade, by retrieving the first news to truck it for the first meat in season; and, like the old Roman luxury, ransacks all seas and lands to please his palate.—Butler.

## ONWARD!

**RATIONAL RECREATION FOR THE WORKING CLASSES.**—The *Leeds Intelligencer* directs attention to an advertisement in its columns, offering prizes of £5, £3, and £2, for the three best essays "On the most desirable plan of supplying innocent and elevating Recreation for the Working Classes." The prizes are to be conferred only on working men, though essays from other persons desirous to promote the objects of the society are also invited.

**REFORMS IN LEGAL EDUCATION.**—In answer to a question in Parliament, the Attorney-General stated what has been done so far by the four Inns of Court in regard to the needful reforms in legal education. The Benchers, it seems, after long consultation, have determined to establish certain professorships and readerships in each of the Societies—liberally endowed, as they can well afford that they should be—in addition to classes for private instruction. Attendance on the lectures delivered will be for the future compulsory; as every student on presenting himself to be called to the bar must hand in a certificate of attendance, and pass a public examination. These new regulations are not to be made retroactive. As an additional inducement to attend the lectures, Sir Fitzroy Kelly announced to the House that the Benchers have determined to endow a number of Studentships, to be given to the students whose conduct is most satisfactory.

**WORKING MEN'S EDUCATIONAL UNION.**—An association has lately been formed in London under the name of the "Working Men's Educational Union," the object being the elevation of the working classes in their physical, intellectual, moral, and religious condition. Among the vice-presidents and honorary office-bearers of the society are the names of many who are distinguished for their active and influential interest in the welfare of the working classes, such as Lord Robert Grosvenor, the present Lord Mayor, Hunter, Sir Culling E. Eardley, Alderman Challis, Captain Trotter, R.N., and Mr. Henderson, of Glasgow. Correspondence is to be maintained with Associations in various parts of the country, and the Metropolitan Union will give assistance in the institution of popular lectures, libraries, and mutual instruction classes. One obvious benefit can be conferred by this central Association in the department of lecturing. Their recommendation of known and qualified lecturers, and arranging their visits to different localities, supplying them, perhaps, with diagrams or illustrations, would greatly promote the efficiency and economy of this mode of popular instruction; many such lectures being at present got up with great labour for a single delivery, and the qualification of many of the teachers being limited. We hail with pleasure this movement in a design so important and benevolent.

**GRAND EXHIBITION IN IRELAND.**—The stimulating effect of the Exhibition of last year is very visible in the fact—to which we have already alluded—that the south of Ireland, the quarter that sent least to the Crystal Palace, is making great efforts to have an Exhibition of its own in the course of the summer. Since we last noticed this undertaking, symptoms of great activity have been exhibited for its promotion, and the proposed Exhibition has been opened to all Ireland. Sir Robert Kane, the President of Queen's College, Cork, is one of the most active supporters of the proposal; and after hearing a statement on the subject, Lord Clarendon so much approved of its utility as to give his own private subscription of £50 towards the undertaking. The present Viceroy of Ireland has since been waited on, and he has undertaken to open the Exhibition in person. There has been more canvassing for patronage of this Exhibition than we can quite approve of:—but we are willing to make some allowance on that head for a country that has not yet realised the advantages resulting from steady self-reliance. The utility of the Exhibition will consist in its tendency to awaken an industrial spirit in a locality very backward; and we have reason to think that many parties, not heretofore caring for industrial progress are, in consequence of this movement, beginning to fix their attention on those permanently useful measures which can best benefit Ireland.

**EXTENSION OF THE PHOTOGRAPHIC ART.**—All who have studied the productions of the daguerreotypist, and all who love the truthful and beautiful, will be glad to learn that one of the most talented American professors has succeeded in attaining a very desirable object, viz., the power of taking large daguerreotypic pictures with the same certainty and the same beauty as the smaller ones. From the first discovery of the art, now some ten years since, improvements have been constantly introduced, alike in the instruments employed, the use of the chemicals, and the management of the light. The result is, that the portraits and pictures now produced have a charm and a perfection wholly foreign to the earlier daguerreotypes. Mr. Mayall, an American artist, who, we believe, has devoted no small sum of expenditure in research and experiments, has at length succeeded in producing daguerreotype views of a most extraordinary size. The American Institution, 433, West Strand, exhibits the valuable results in the shape of an extended series of views of the late Exhibition. The size of the pictures and the delicate beauty of their execution, stamp the productions as the most faithful representations, and certainly as the most accurate and interesting of the many records of the event of 1851. The power of producing large pictures is not, however, confined to fixed scenes of that description; the same power is applicable to ordinary works of portraiture. It has often been regretted that so beautiful an agent as photography should be confined to a mere lookout of Morocco cases; now, that regret must be placed among the things that were, for Nature's vivid and beautiful representations—daguerreotype pictures, may take their place on our walls, framed and mounted, along with the choicest specimens of the painter and the engraver's skill.

## POETICAL QUOTATIONS.

## AVARICE.

WHEN all sins are old in us,  
And go upon crutches, covetousness  
Does but then lie in her cradle.—*Decker.*

In all the world there is no vice  
Less prone to excess than avarice;  
It neither cares for food nor clothing;  
Nature's content with little, that with nothing.—*Butler.*

See  
The difference 'twixt the covetous and the prodigal!  
The covetous man never has money,  
And the prodigal will have none shortly!

*Jonson's Staple of News.*

'Tis strange the miser should his cares employ  
To gain those riches he can ne'er enjoy;  
Is it less strange the prodigal should waste  
His wealth to purchase what he ne'er can taste?

*Pope's Moral Essays.*

The lust of gold succeeds the lust of conquest,  
The lust of gold, unfeeling and remorseless!  
The last corruption of degenerate man.

*Dr. Johnson's Irene.*

Some, o'er-enamour'd of their bags, run mad,  
Groan under gold, yet weep for want of bread.

*Young's Night Thoughts.*

Who, lord of millions, trembles for his store,  
And fears to give a farthing to the poor;  
Proclaims that penury will be his fate,  
And, scowling, looks on charity with hate.

*Dr. Wolcot's Peter Pindar.*

The love of gold, that meanest rage,  
And latest folly of man's sinking age,  
Which, rarely venturing in the van of life,  
While nobler passions wage their heated strife,  
Comes skulking last with selfishness and fear,  
And does collecting lumber in the rear.—*Moore.*

And greedy avarice by him did ride  
Upon a camel laden all with gold;  
Two iron collars hang on either side,  
With precious metall full as they might hold,  
And in his lap an heap of coin he told;  
For of his wicked self his god he made,  
And unto hell himself for money sold;  
Accursed usury was all his trade,  
And right and wrong ylike in equal balance waide,  
His life was nigh unto death's dore yplaste;  
And threadbare cote and cobbled shoes he wore,  
He scarce good morsell all his life did taste,  
But both from backe and belly still did spare,  
To fill his bags, and riches to compare;  
Yet child ne kinsman living had he none  
To leave them to; but thorough daily care  
To get, and night, feare to lose his owne.  
He led a wretched life unto himselfe unknowne.  
Most wretched wight whom nothing might suffice,  
Whose greedy lust did lack in greatest store,  
Whose need had end, but no end coverise.  
Whose wealth was want, whose plenty made him poor,  
Who had enough, yet wished evermore.

*Spenser's Fairy Queen.*

## AWKWARDNESS.

What's a fine person, or a beauteous face,  
Unless deportment gives them decent grace?  
Bless'd with all other requisites to please,  
Some want the striking elegance of ease,  
The curious eye their awkward movement tires,  
They seem like puppets led about by wires.

*Churchill's Rosciad.*

Awkward, embarrass'd, stiff, without the skill  
Of moving gracefully, or standing still,  
One leg, as if suspicious of his brother,  
Desirous seems to run away from t'other.

*Churchill's Rosciad.*

Not all the pumice of the poliah'd town  
Can smother the roughness of the barn-yard clown;  
Rich, honour'd, titled, he betrays his race  
By this one mark—he's awkward in his face.

*O. W. Holmes.*

CHARADE.

My first, where sandy plains are spread,  
Fiercely consumes the life  
Of those who o'er the desert tread—  
Far from the cities' strife.

My second, 'mid the cities' strife,  
Consumes the very soul  
Of those who waste their precious life,  
And never find my whole.

MENTAL RECREATIONS.

Several cards being shown to different persons, that each of them may choose one, to name that which each person has fixed on.

THERE must be as many different cards shown to each person as there are persons to choose, so that, if there be three persons, you must show to each of them three cards, and telling the first to retain one of them in his memory, you then lay those three cards down, and show three others to the second person, and so to the third.

This being done, take up the first person's cards, and lay them down one by one, separately, with their faces uppermost. You next place the second person's cards over those of the first, and, in like manner, the third person's cards over those of the second—so that, in each parcel, there may be one card belonging to each person.

Having done this, ask each of them in which parcel his card is, and when he has informed you, you may immediately know which card it is—for the first person's card will always be the bottom one, the second person's the middle card, and the third person's the uppermost one, in that parcel where each says his card is.

This recreation may be performed with a single person, by letting him fix on three, four, or more cards; in which case you must show him as many parcels as he is to choose cards, and every parcel must consist of that number, out of which he must fix on one; the rest of the process being then as above.

CHARADES.

1.  
My first, if you do, you won't hit it;  
My second, if you do, you won't leave it;  
My whole, if you do, you won't guess it.

I am a word of 12 letters. My 9, 6, 7, is the name of an animal; my 6, 9, 2, is a part of a gun; my 6, 1, 10, 3, is the place where money is obtained; my 5, 9, 8, 1, 9, is a lady's name; my 6, 7, 9, 8, is a delicious fruit; my 6, 4, 9, is a garden vegetable; my 11, 12, 2, 3, is a small coin;

TRANSFIGURED PLAYING CARDS.

THE TWO OF HEARTS.—"WE THREE LOGGERS BE!"

my 6, 12, 2, is a small enclosure; my 6, 4, 6, 7, 8, is an aromatic kind of plant; my 11, 9, 3, is a small animal; my 8, 12, 5, 2, 9, 10, 3, is that which is left; my 6, 7, 8, 1, 8, is the name of one of the books in the New Testament; my 3, 12, 9, is a Chinese plant; my 8, 4, 9, 6, is what farmers do; my 1, 10, 2, is a travellers' home; my 3, 12, 2, is a certain number; my 10, 4, 3, is what fishermen use; my 9, 8, 5, is a part of the human body; my 1, 5, 6, 9, 3, 1, 4, 10, 11, 12, is a bad thing; and my whole is a moral evil.

ENIGMAS.

1.  
A kind of crown much used of old,  
My name most truly will unfold;  
Read back or forward, still the same—  
Now, surely, you'll find out my name.

2.  
What is the longest and shortest thing in the world; the swiftest and the slowest, the most divisible and the most extended, the least valued and the most regretted; without which nothing can be done; which devours all that is small, yet gives life to all that is great?

ANSWERS TO THE PASTIME OF LAST EVENING,

Page 463.

CONUNDRUMS.

1. A night-in-gale.
2. Determination.
3. It would make an eel feel.
4. When he is a gent (agent).
5. It would make an otter a potter.
6. They were a pair of allppers.
7. I must take an acre (Acres).
8. Added to their wine, it will make them wine.
9. Pot-hooks.
10. Arbitration.
11. Sturgeon.

MAGICAL SQUARE PROBLEM.

The solution of this problem, as its title indicates, is founded on the properties of the magic square. To form a magic square with the nine digits, the mid number, 5, is taken for the centre, thus—

|   |   |   |
|---|---|---|
| 2 | 7 | 6 |
| 9 | 5 | 1 |
| 4 | 3 | 8 |

These nine figures, added together, make 45. Then, if 45 is divided by 3 for a centre, what

will 342 (the ages of the nine guests) give? It gives 38. The square will then be—

|    |    |    |
|----|----|----|
| 35 | 40 | 39 |
| 42 | 33 | 34 |
| 37 | 36 | 41 |

The ladies, individually, being younger than any of the gentlemen, the respective age of each will be 34, 35, 36, 37—consequently, the youngest gentleman's age will be 38, and the place he stood in the square the centre. The lines, or diagonals of the square, added together, make 114; deduct this from the youngest gentleman's age, and 76 will remain, which is the innkeeper's age. To give each lady a partner, so that the united ages of each couple will also be the innkeeper's age, take the youngest lady and the oldest gentleman, thus—

|    |    |    |    |
|----|----|----|----|
| 34 | 35 | 36 | 37 |
| 42 | 41 | 40 | 39 |
| 72 | 76 | 76 | 76 |

TRANSPPOSITION.—SKILL, KILL, ILL.

CHARADE.—PEN-ENNY.

PICTORIAL CHARADE.—WILLOW.

## OUR CORNER CUPBOARD!

WHAT kind of wine is both meat and drink?—Old port, with a crust.

AN IRRITABLE MAN.—Hood gives this graphic picture of an irritable man:—"He lies like a hedgehog rolled up the wrong way, tormenting himself with his prickles."

THE common ingredients of health and long life are—

Great temperance, open air,  
Easy labour, little care.—*St. Philip Sydney.*

WHEN Baxter was on one occasion brought before Judge Jeffries, "Richard," said the brutal chief justice, "I see a rogue in thy face." "I had not known before," replied Baxter, "that my face was a mirror."

A WEDDING.—A tragic-comic meeting, compounded of favours, footmen, faintings, farewells, prayers, parsons, plumcakes, rings, refreshments, bottles, blubberings, God-bless-yo's, and galloping away in a post-chaise and four.

NEVER give up!—if adversity press,  
Providence wisely has mingled the cup,  
And the best counsel in all your distresses,  
Is the stout watchword of—"Never give up!"

"Has that cookery book any pictures?" said Miss M. C. to a bookseller. "No, madam, none," was the answer. "Why," exclaimed the witty and beautiful lady, "what is the use of telling us how to make a good dinner, if they give us no plates."

"Mr. Jones, you said you were connected with the fine arts. Do you mean by that, that you are a sculptor?" "No, sir, I don't sculpt myself, but I furnish the stone to the man who does." Jones may be looked upon as a distant relation of the Chisel family.

GRITS. GREEK.—*First young gentleman*:—"There! that's a Pileulum, isn't it—that 'un with four wheels?" *Second young Gentleman*:—"No, you bass; that's a Eunetablon. Can't you see the Athktothatron on the step, von stupid whacker?"

"If thy neighbour should sin," old Christoval said,  
"Never, never unmerciful be,  
For remember it is by the mercy of G. I,  
Thou art not as wicked as he."

THE following is the negro's definition of a gentleman:—"Massa make de black man workee—make de horse workee—make de ox workee—make every ting workee, only de hog; he, de hog, no workee; he eat, he drink, he walk about, he go to sleep when he please, he liff like a gentleman."

"We have never found," says a contemporary, "that blacksmiths, by conversing with them, are more or less given to iron-y, and somewhat addicted to *nice*. Carpenters, for the most part, speak plainly, but they will *chisel* when they get a chance. Not infrequently they are *bored*, and often annoy one with their old *saws*."

A CERTAIN parish clerk, whose name we withhold, overheard a school-master giving lessons in grammar. "You cannot place *a*, the singular article," said the preceptor, "before plural nouns. No one can say *a* pigs, *a* women, *a*——" "Nonsense!" cried the clerk; "the prayer-book knows better than you, I should think; and doesn't it teach me to say, every Sunday, *a* men?"

TO DRESS A DUCK.—This may be done in various ways, but it is rather an expensive process. The quickest way is to take the duck to Sagn & Edgar's, and let her choose her own mode of dressing in the feathers, or a garniture of ribbons may be substituted. If the duck is very tender, the dressing may be extremely rich; but when the duck is old, it may be served with common sauce and left quite plain.

## RESPECTABILITY.

"Pray what do you mean by 'respectability'?"  
Is it wisdom, or worth, sir? or rank, or gentility?  
Is it rough sound sense? or a manner refined?  
Is it kindness of heart? or expansion of mind?  
Is it learning, or talent, or honour, or fame,  
That you mean by that phrase so expressive to name?  
"No, no—these are hot, sir, the things now in vogue:  
A 'respectable man,' sir, may be a great rogue—  
A respectable person may be a great fool—  
Have lost even the little he picked up at school—  
Be a glutton, or swindler, deep drowned in debt—  
May forfeit his honour, his best friend forget—  
May be a base grophant, tyrant, or knave—  
But a lively servant, at least, he must have:  
In vice he may vie with the vilest of sinners—  
But he must keep a'cook, and give capital dinners."

A FEMALE servant, sweeping out a bachelor's room, found a four penny piece on the carpet, which she carried to the owner. "You may keep it for your honesty," said he, smiling, and chucking her under the chin. A short time after he missed his gold pencil-case, and inquired of the girl if she had seen it. "Yes, sir," was the reply. "And what did you do with it?" "Kept it for my honesty, sir!" The old bachelor grinned horribly a ghastly smile and vanished.

## OUR MEMORANDUM BOOK!

MUCH WISDOM IN LITTLE.—"Keep good company or none. Never be idle. If your hands cannot be usefully employed, attend to the cultivation of your mind. Always speak the truth. Make few promises. Live up to your engagements. Keep your own secrets, if you have any. When you speak to a person, look him in the face. Good company and good conversation are the very sinews of virtue. Good character is above all things else. Your character cannot be essentially injured except by your own acts. If any one speaks evil of you, let your life be so that none will believe him. Drink no kind of intoxicating liquors. Ever live, misfortune excepted, within your income. When you retire to bed, think over what you have been doing during the day. Make no haste to be rich if you would prosper. Small and steady gains give competency with tranquillity of mind. Never play at any kind of game of chance. Avoid temptation, through fear you may not withstand it. Earn money before you spend it. Never run in debt, unless you see a way to get out again. Never borrow if you can possibly avoid it. Do not marry until you are able to support a wife. Never speak evil of any one."

PROGRESS OF MUSIC.—The organ may be traced as far back as Julian the apostate; it was in common use in the Christian churches and convents before the end of the tenth century. A monk, named Guido, is said to have been the inventor of the gamut and counterpoint. The first specimens on record of secular music are those of the Troubadors; some stanzas of one of them, Anslem Faidit by name, composed on the death of our Richard Cœur de Lion, are the earliest extant; these are preserved in the Vatican. There are also three songs of the Châtelain de Coucy, written about the same period. Thibaut, King of Navarre, born about the beginning of the twelfth century, has also left behind him some specimens of vocal melody, not unlike in character to the French airs of the present day. The earliest English song appears to be a contemporary celebration of the Battle of Agincourt, and is the only relic of that period. The Italian *Opera Buffa*, with native singers, was first introduced into this country in 1748.

## ALPHABETICAL MAXIMS

A love all rules observe this—honesty is the best policy.  
B e just to others, that you may be just to yourself.  
C ut your coat according to your cloth.  
Desperate cuts must have desperate cures.  
E nough is as good as a feast.  
F air and softly go sure and fair.  
G entility, without ability, is worse than beggary.  
H alf a loaf is better than no bread.  
I dle folks take the most pains.  
J oke as are as bad coin to all but the jocular.  
K eep your business and conscience well, and they will keep you well.  
L ive and let live; that is, do as you would be done by.  
M isunderstandings are best prevented by pen and ink.  
N ever take credit; and, as much as possible, avoid giving it.  
O ut of debt out of danger.  
P assion will master you, if you do not master your passion.  
Q uick at meat, quick at work.  
R evenge a wrong by forgiving it.  
S hort reckonings make long friends.  
T he early bird catcheth the worm.  
U nmannerliness is not so impolite as overpoliteness.  
V enture not all you have at once.  
X auntine your accounts and your conduct every night.  
Y ou may find your worst enemy or best friend in yourself.  
Z ealously keep down little expenses, and you will not incur large ones.

ANCIENT WRITING MATERIALS.—Books were extremely rare amongst the Scandinavian and northern nations. Before their communication with the Latin missionaries, wood appears to have been the material upon which their runes were chiefly written; and the verb *write*, which is derived from a Teutonic root, signifying to scratch or tear, is one of the testimonies of the usage. The Cymri adopted the same plan. Their poems were graven upon small staves or rods, one line upon each face of the rod; and the old English word *stave* as applied to a stanza, is probably a relic of the practice, which in the early ages, prevailed in the west. In the east, you will find the custom still subsisting; the slips of bamboo upon which the inhabitants of the Indian Archipelago now write or scratch their compositions with a bodkin, are substantially the same with our ancient staves. Vellum or parchment afterwards supplied the place of these materials. Real paper, manufactured from the pellicle of the Egyptian reed, or "papyrus," was still used occasionally in Italy, but it was seldom exported to the countries beyond the Alps; and the elaborate preparation of the vellum, upon which much greater care was bestowed than in the modern manufacture, rendered it a costly article; so much so, that a pains-taking clerk could find it worth his while to erase the writing of an old book, in order to use the blank page for another manuscript. Books thus re-written are called *codices rescripti*, or *palimpsesti*. The evanescent traces of the first layer of characters may occasionally be discerned beneath the more recent text which has been imposed upon them; and some valuable fragments of the ancient classical writers have been lately recovered from such volumes, by the patient diligence of foreign antiquaries.

Just Published, price 1s. 6d., bound in cloth, or in stiff covers, 1s.

## THE VILLAGE QUEEN, and Other Poems. By Rachel Weston.

London: Published by J. ALLEN, 20, Warwick Lane, PATERNOSTER ROW; and sold by all Booksellers.

"A BOOK THAT EVERY ONE SHOULD POSSESS."

Answers on Business, Law, Love, &c., &c., &c., forwarded on receipt of twelve Stamps each. Address, by letter only, D. VANDYCK, 25, Pelton Lane, Halifax, Yorkshire.

**HOLLOWAY'S PILLS** for the Cure of SICK HEADACHE, RHE, AND WEAK AND DISORDERED STOMACHS. These wonderful pills have been the means of restoring to health many persons pronounced incurable by the faculty, both at home and abroad. They may be taken with perfect safety, and a certainty of effecting a cure, by persons suffering from General Debility, Sick Headache, Diseases of the Stomach, &c., or by Liver Complaints; and those who are predisposed to Dropsy cannot use a more effectual remedy than Holloway's Pills, for acting as they do upon the very main springs of life, no disease can resist their influence. Their effect is mild, yet speedy; and as a family medicine they are unequalled, and sold by all Druggists; and at Professor Holloway's Establishment, 241, Strand, London.

"Costly thy habit as thy purse can buy,  
But not expressed in fancy—rich, not gaudy;  
For the apparel oft proclaims the man."—*Hamlet*.

**EVERY WELL-DRESSED MAN** KNOWS how difficult it is to find a tailor who thoroughly understands the peculiarities of each figure, and can suit its requirements with a well-cut gentlemanly fitting garment, in which ease and taste, being equally regarded, the eye of the observer is pleased with its graceful effect, while the comfort of the wearer is secured. Hence it is that so few feel "at home" during the first day's wear of any new garment, and so many are apparently doomed to appear in clothes, however costly, that never can become adapted to their forms. To remedy so manifest a deformity in costume, FREDERICK FOX adopts this means of making known that he has practically studied both form and fashion in their most comprehensive meaning, and in the course of an extensive private connexion has clothed every conceivable development during the past thirteen years, always adapting the garment, whether coat, waistcoat, or trousers, to the exigencies of its individual wearer, and the purpose it is intended to serve, thus invariably attaining elegance of fit with that regard for economy which the spirit of the age dictates.—F. FOX, practical tailor, 78, Cornhill, same side of the way as the Royal Exchange.

## PROFESSOR'S EDITION OF THE PARLOUR LITERATURE OF ALL NATIONS.

Now Ready, Bound in one thick Volume, price 6s., elegantly ornamented as a Memento of the Great Exhibition.

## THE PARLOUR MAGAZINE OF THE LITERATURE OF ALL NATIONS, Printed in the Crystal Palace, Hyde Park, at Machines No. 158, and 162, Class 6.

We have no doubt that this volume of the PARLOUR MAGAZINE will be treasured by many future generations. People flocked to the Crystal Palace after its close, and eagerly bought up, at enormous prices, articles that had been exhibited there, that they might possess some memento of the Exhibition. We supply not only a work exhibited therein, but one actually produced by machinery within its crystal halls, and in the view of millions of spectators. The value of our book will therefore increase with the advance of years, until it will be regarded as a curiosity and a treasure.—These volumes contain translations of Literary Treasures from the

With original ENGLISH Contributions by celebrated authors, and elegant adaptations from the American. Each volume is embellished by a superior Steel Engraving and by numerous Woodcuts.

London: HOULSTON & STONEMAN, 65, PATERNOSTER ROW.

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers, or Twelve Monthly Parts, which comprise one Volume: At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The Price is Two Shillings. The duty will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully embossed, and illuminated with silver, by a new invention introduced by LEIGHTON, SON, & HONOR. It is an ornament for the drawing-room table.—Order of any Bookseller.

## TO THE LADIES.—MRS. TULLAN succeeds MRS. WARREN as EDITRESS OF THE NEEDLE-WORK Department of THE FAMILY FRIEND. Beautiful Patterns in every Number.

London: HOULSTON & STONEMAN.—Price 2d.

Handel's "Judas Maccabæus"

O'er my Peace, with plenty crown'd,

## THREATENED DEMOLITION OF THE CRYSTAL PALACE.

IN consequence of many thousands of persons in the United Kingdom having been unable to obtain a Copy of the

## GREAT EXHIBITION CHART,

Printed in Colours, and Presented by the Proprietors of the WEEKLY DISPATCH, to their Subscribers and the Public, in the months of January and February last, A RE-ISSUE has been determined upon, to take place on SUNDAY, THE 16th OF MAY.

The Chart, which has undergone a careful revision, shows, by simple diagrams, the number of persons that visited the Exhibition daily, the amount of money taken at the various entrances, the quantity of refreshments consumed, the names of the Royal Commissioners, an account of the origin of the Palace, and its dimensions in feet.

In order that every individual in the country may possess this statistical reflex of curious and interesting results, to mark the demolition of the building, and to serve as a memento of its existence, the Chart will be delivered, GRATIS, to every Subscriber and Purchaser of the DISPATCH on the day stated.

The DISPATCH is published at four o'clock every Saturday morning, in time for the First Railway Trains leaving London, and for the Morning Mail.

Early orders should be given to any Newsvendor in Town and Country or to Mr. R. J. Wood, No. 139, Fleet Street.

N.B.—The News Agents will have a Copy of the Chart with every DISPATCH of May 16th.

## NO. 70 of the FAMILY FRIEND,

Revelation and Science. Appendix:—The Tutor and his Pupils.

### Editor's Note-Book.

**DOMESTIC HINTS.** No. 5.—If you are about to furnish a house, do not spend all your money, be it much or little. Do not let the beauty of this thing, and the cheapness of that, tempt you to buy unnecessary articles. Doctor Franklin's maxim was a wise one—"Nothing is cheap that we do not want." Buy merely enough to get along with at first. It is only by experience that you can tell what will be the wants of your family. If you spend all your money, you will find you have purchased many things you do not want, and have no means left to get many things which you do want. If you have enough, and more than enough, to get everything suitable to your situation, do not think you must spend it all, merely because you happen to have it. Begin humbly. As riches increase, it is easy and pleasant to increase in comforts; but it is always painful and inconvenient to decrease. After all, these things are viewed in their proper light by the truly judicious and respectable. Neatness, tastefulness, and good sense may be shown in the management of a small household, and the arrangement of a little furniture, as well as upon a larger scale; and these qualities are always praised, and always treated with respect and attention. The consideration which many purchase by living beyond their income, and of course living upon others, is not worth the trouble it costs. The glare there is about this false and wicked parade is deceptive; it does not, in fact, procure a man valuable friends, or extensive influence."

**VARNISH FOR COLOURED DRAWINGS AND PRINTS.** J. Wilson.—Take of Canada balsam one ounce; spirit of turpentine two ounces; mix them together. Before this composition is applied, the drawing or print should be sized with a solution of isinglass in water, and when dry, apply the varnish with a camel's hair brush.

**TO GET RID OF A BAD SMELL IN A ROOM NEWLY PAINTED.** T. C.—Place a vessel full of lighted charcoal in the middle of the room, and throw on it two or three handfuls of juniper berries, shut the windows, the chimney, and the door close; twenty-four hours afterwards, the room may be opened, when it will be found that the sickly unwholesome smell will be entirely gone. The smoke of the juniper berry possesses this advantage, that should anything be left in the room, such as tapestry, &c., none of it will be spoiled.

**GORDIAN KNOT.** W.—"Why is a certain knot, which cannot be loosed, called Gordian?"—Because Gordias, a king of Phrygia Major, being raised from the plough to the throne, placed the horses, or furniture of his wain and oxen, in the Temple of Apollo, tied in such a knot, that the monarchy of the world was promised to him who could untie it; which, when Alexander, "that tumour of a man," had long tried, and could not do, he cut it with his sword. Such, at least, is the ancient story: if not true, it is certainly ingenious.

**ORIGIN OF BANKS.** G. Austin.—Banks, now so useful, were of Venetian invention; and the first was contrived about 1160, to assist in the transactions of a loan, and called The Chamber of Loans. It soon became the celebrated bank of Venice, and conducted all money transactions. The plan was carried into foreign countries; and the projectors being called Lombards, the great banking street in London is to this day called Lombard-street. Its celebrity led to the establishment of similar public banks at Barcelona in 1401, at Genoa, 1407; at Amsterdam, in 1609; in London, 1694; at Edinburgh, 1695; and at Paris, in 1716.

**ORIGIN OF THE PAYMENT OF SIX HORSE SHOES AND NAILS, BY THE SHERIFFS OF LONDON AND MIDDLESEX.** T. Lee.—The origin of the payment or tender of "six horse shoes, with the nails thereunto belonging," by the Sheriff of London and Middlesex, at the time of their being sworn into office by the Chief Baron of the Exchequer, is not generally known, even to those to whom the custom itself is familiar. One Walter le Bruin, a farmer, granted to the City of London a piece of ground in the Strand, within the parish of St. Clement Danes, which he had in the year 1288 obtained from the Crown, for the purpose of erecting a forge upon it, at an annual quit-rent of six horse shoes, nails, &c. The piece of ground is not at present in the possession of the city; the custom is, nevertheless, kept up.

**TO MAKE INVISIBLE INK.** R.—Dissolve green vitriol and a few drops of nitrous acid, in rain water. Write with this solution, which, if done with a new pen, will be invisible. Then, if you wish the writing to appear, take a brush and dip it in water, in which some Aleppo galls have been infused, when, upon drawing it over the writing it will become a deep black.

**LONG AND SHORT DAYS.** S. Mason.—At Berlin and London, the longest day has sixteen hours and a half; at Stockholm it has eighteen and a half hours; at Hamburg, seventeen hours, and the shortest seven; at St. Petersburg, the longest day has nineteen, and the shortest, five hours; at Torsee, in Finland, the longest day has twenty-one hours and a half, and the shortest, two hours and a half; at Wanderhus, in Norway, the day lasts from the 21st of May to the 22d of July; and at Spitzbergen, the longest day is three months and a half.

**COMPANIONS WELL BOUND.**—We are happy to perceive the warm attachment of our friends, evidenced by their inquiries respecting our arrangements for binding the First Volume. We think it wise of our subscribers to preserve their numbers for this purpose, by which they secure, through the payment of one penny a-week, not merely a weekly number and supply of *scatte paper*, but a weekly number and, at the end of the year, a *Handsome volume* that may be their *Companions* for life, and for their children after them. "Father took in this book, and used to read it to us weekly. Here is his name written by himself, and the date when he had the book bound." "I took in this book when a mere boy, and many pleasant hours it afforded me. Here it is, my children, for you." These are the things we wish to be said of us. We have, therefore, issued a Portfolio for the reception and preservation of the Numbers, that they may be taken out and bound at the year's end. We shall then issue a neat cover at a moderate price, so that our "Companions" everywhere may be known by a respectable exterior. We shall give an elaborate index to the contents, that reference even to small paragraphs may be easy. To the welfare and appearance of books, as well as of men, there is one thing essential, and that, we suggest, is

ELIGANT BINDING.

**ANCIENT PROPHECY OF THE ELECTRIC TELEGRAPH.** E.—Is it true that some old prophecy of the Electric Telegraph has been discovered?—The passage in question appears in Geoffrey of Monmouth's *British History*, book vii. chap. 4. The words are those of Merlin—"Ere shall hide his apples within it, and shall make subterraneous passages. At that time shall the stones speak, and the sea towards the Gallic coast be contracted into a narrow space. On each bank shall one man hear another, and the soil of the Isle shall be enlarged. The secrets of the deep shall be revealed, and Gaul shall tremble for fear."

**CULTIVATION OF MUSICAL TALENTS.** J. J.—It is scarcely necessary to recommend the cultivation of music, so many are the advantages it confers upon the persevering student. The most powerful minds have found relaxation and delight in sweet sounds. Bacon, Milton, Warburton, and Alfieri, required to hear music previous to settling to work; and the learned French divine, Bourdaloue, invariably played an air on the violin before sitting down to compose a sermon. On the subject of Bourdaloue's fiddle playing we find the following anecdote related:—On one occasion Bourdaloue had to preach a sermon on some very serious topic, and had retired to his room for meditation. Being a few minutes behind the appointed time, he was sent for, when 101 the messengers found him with his fiddle in his hand scraping a lively air, to which he was dancing merrily. On observing his visitors he said, "Pardon me, brothers; but the fact is, I was so depressed in spirits by the terrible subject, that I have been striving to rouse my heart with this little foolery." It is said he never preached a more powerful sermon than the one which followed "this little foolery."

**COMMUNICATIONS RECEIVED.**—Davis (many thanks for the suggestions).—G. (the articles are, too carelessly written).—Erecting (the *Geographical Magazine*, called also *Drum*, was discovered by Humboldt on the 13th of March 1781).—J. Watson (a patient of Magellan's nobility confers both a title and political power, such as voting on the making and repealing of all laws, &c.).—BENJAMIN (the *Home Companion* can be forwarded as desired addressed as a newspaper. Odell's *Sheridan* is considered good).—J. MASON (the words apply to notes in music).—W. CLERMONT (the manuscripts are unsuited to our pages. With regard to pursuing literature as a profession, we would strongly dissuade our correspondent from such a course. He should remember what Dryden says:—

"The unhappy man who once has tilled a pen,  
Lives not to please himself, but other men.  
Is always drudging, wastes his life, and blood,  
Yet only drinks and eats a hat you think good.  
What praise sees'er the poetry deserve,  
Yet every fool can bid the poet starve.")

W. T. E. (can be forwarded as a newspaper).—STUDENT (an excellent plan is to keep a diary, in which any striking passages found in the course of reading can be inserted. Cobbett used to say it was desirable for every man to keep a diary, even if he set down nothing more every day than which way the wind blew).—EMMA (the best Windsor soap is made of about nine parts tallow to one of olive oil and soda lye. The scents or perfumes are always added during the melting).—T. BACON (Picaudilly owes its name to a tailor who invented new ruffs, turn-downs, or capes; he built Picaudilly Hall, where Backville-street now is).—EMERSON (Taxidermy requires not only an acquaintance with natural history, but mechanical dexterity).—J. C. M. (the articles necessary for angling are:—Hooks for trolling; the gorge, snap, &c., tied on gimp; winches for running tackle; disgorgers; split-shot; booklets tied on gut of various sizes, to No. 12; hooks tied on hair, from No. 11 to 13; bags for worms; gentle boxes; floats of various sizes; plumbets for taking the depth; baiting-needles; caps for floats; kettle for carrying live-bait; rods for trolling and bottom fishing; drag to clear the line when entangled in heavy weeds; landing-net; clearing-ring; lines of gut, hair, &c., those of four yards long will be found most useful).—GIRSE (we cannot offer advice on matters purely personal).—NUMISMATA (Greek medals and medallions are very rare, few being known of earlier date than the establishment of the imperial power at Rome, and when Greece was under Roman dominion).—JESS (to cure mildew the soil should be neither too rich, nor too freely watered, and every precaution should be taken to prevent the spores of the mildew plants from being communicated to the soil).—I. (Canary birds breed three or four times a year).—PHILANTHROPOS (a Penny Society for the relief of the poor is no new idea, as our correspondent imagines. Several establishments of the kind have been attempted, and have conferred great benefits. We most cordially support any judicious plan for the amelioration of the poor).—L. LAWTON (it is a well known fact that globular glass water-bottles, placed in windows, have acted as burning-glasses).—J. WILSON (a remedy for the removal of insects from a conservatory may be found, without destroying the little intruders, by concentrating tobacco smoke for a few minutes, and then to open the sashes, thus allowing them an opportunity to escape).—J. MASON (telegraph is derived from two Greek words signifying distantly, to write).—JUVENIS (to clean ivory, the best way is to rub it with fine pumice-stone powder, and expose it to the sun's rays for several days under a glass cover).—W. M. (other means than soap for the purification of the skin are highly objectionable. The various washes and wash powders seriously injure the skin, and though in some cases they may cause the disappearance of redness and eruption, these efforts of nature being checked, the system sometimes seriously suffers in consequence. Any of the milder kinds of soaps will be found to answer the purpose of keeping the hands clean, soft, and as white as nature will permit).—SUSAN (to remove a grease spot from silk, scrape some French chalk on the wrong side; let it remain some time, and then brush off).

Printed by WILLIAM ROBERTSON, 92, Goswell Street, London; and published for the Proprietor by JOHN BARNETT, 68, Fleet Street, London.

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 31.—Vol. I.]

SATURDAY, JULY 31, 1852.

[PRICE ONE PENNY.]

"The business of the toilet being over, we had at last the satisfaction of seeing him mounted upon the colt, with a deal box before him to bring home groceries in."

## THE VICAR OF WAKEFIELD.

(Continued from page 467.)

### CHAPTER IV.

A PROOF THAT EVEN THE HUMBLEST FORTUNE MAY GRANT HAPPINESS, WHICH DEPENDS NOT ON CIRCUMSTANCES BUT CONSTITUTION.

THE place of our retreat was in a little neighbourhood, consisting of farmers, who tilled their own grounds, and were equal strangers to opulence and poverty. As they had almost all the conveniences of life within themselves, they seldom visited town or cities in search of superfluity. Remote from the polite, they still retained the primeval simplicity of manners; and frugal by habit, they scarcely knew that temperance was a virtue. They wrought with cheerfulness on days of labour; but observed festivals as intervals of idleness and pleasure. They kept up the Christmas carol, sent true-love knots on Valentine morning, eat pancakes on Shrove tide, showed their wit on the first of April, and religiously cracked nuts on Michaelmas-eve. Being apprised of our approach, the whole neighbourhood came out to meet their minister, dressed in their finest clothes, and preceded by a pipe and tabor. A feast also was provided for our reception, at which we sat cheerfully down; and what the conversation wanted in wit, was made up in laughter.

Our little habitation was situated at the foot of a sloping hill, sheltered with a beautiful underwood behind, and a prattling river before: on one side a meadow, on the other a green. My farm consisted of about twenty acres

of excellent land, having given an hundred pounds for my predecessor's good-will. Nothing could exceed the neatness of my little enclosures; the elms and hedge-rows appearing with inexpressible beauty. My house consisted but of one story, and was covered with thatch, which gave it an air of great snugness: the walls on the inside were nicely whitewashed, and my daughters undertook to adorn them with pictures of their own designing. Though the same room served us for parlour and kitchen, that only made it the warmer. Besides, as it was kept with the utmost neatness, the dishes, plates, and coppers being well scoured, and all disposed in bright rows on the shelves, the eye was agreeably relieved, and did not want richer furniture. There were three other apartments, one for my wife and me, another for our two daughters, within our own, and the third, with two beds, for the rest of the children.

The little republic to which I gave laws, was regulated in the following manner:—by sunrise we all assembled in our common apartment; the fire being previously kindled by the servant. After we had saluted each other with proper ceremony, for I always thought fit to keep up some mechanical forms of good breeding, without which freedom ever destroys friendship, we all bent in gratitude to that Being who gave us another day. This duty being performed, my son and I went to pursue our usual industry abroad, while my wife and daughters employed themselves in providing breakfast, which was always ready at a certain time. I allowed half an hour for this meal, and an hour for dinner; which time was taken up in innocent mirth between my wife and daughters, and in philosophical arguments between my son and me.

As we ~~were~~ with the man, ~~so~~ we never pursued our labours after it was gone down, ~~but~~ returned home to the ~~expecting~~ family; whose smiling looks, a neat hearth, and pleasant fire, were prepared for our reception. Nor were we without guests: sometimes Farmer Flamborough, our talkative neighbour, and often the blind piper, would pay us a visit and taste our gooseberry wine; for the making of which we had lost neither the receipt nor the reputation. These harmless people had several ways of being good company; while one played, the other would sing some soothing ballad, Johnny Armstrong's Last Good Night, or the Cruelty of Barbara Allen. The night was concluded in the manner we began the morning, my youngest boys being appointed to read the lessons of the day; and he that read loudest, distinctest, and best, was to have an halfpenny on Sunday to put in the poor's box.

When Sunday came, it was indeed a day of finery, which all my sumptuary edicts could not restrain. How well soever I lanced my lectures against pride had conquered the vanity of my daughters, yet I found them still secretly attached to all their former finery; they still loved laces, ribbons, huckles, and eagles; my wife herself retained a passion for her crimson paduasoy, because I formerly happened to say it became her.

The first Sunday in particular their behaviour served to mortify me. I had desired my girls the preceding night to be dressed early the next day; for I always loved to be at church a good while before the rest of the congregation. They punctually obeyed my directions; but when we were to assemble in the morning at breakfast, down came my wife and daughters, dressed out in all their former splendour: their hair plastered up with pomatum, their faces patched to taste, their trains huddled up in a heap behind, and rustling at every motion. I could not help smiling at their vanity, particularly that of my wife, from whom I expected more discretion. In this exigence, therefore, my only resource was to order my son, with an important air, to call our coach. The girls were amazed at the command; but I repeated it with more solemnity than before.—

"Surely, my dear, you jest," cried my wife, "we can walk it perfectly well: we want no coach to carry us now."

"You mistake, child," returned I, "we do want a coach; for if we walk to church in this trim, the very children in the parish will hoot after us."

"Indeed," replied my wife, "I always imagined that my Charles was fond of seeing his children neat and handsome about him."

"You may be as neat as you please," interrupted I, "and I shall love you the better for it; but all this is not modesty, but frippery. These ruffings, and pinkings, and patchings, will only make us hated by all the wives of all our neighbours. No, my children," continued I, more gravely, "those gowns may be altered into something of a plainer cut, for finery is very unbecoming in us, who want the means of decency. I do not know whether such flouncing and shredding is becoming even with the rich; if we consider, upon a moderate calculation, that the nakedness of the indigent would be clothed from the trimmings of the vain."

This remonstrance had the proper effect; they went with great compassure, that very instant, to change their dress; and the next day I had the satisfaction of finding my daughters, at their own request, played in cutting up their trains into Sunday waistcoats for Dick and I: the two little ones, and what was still more satisfactory, the gowns seemed improved by this curtailing.

#### CHAPTER V.

A NEW AND GREAT ACQUAINTANCE INTRODUCED.—WHAT WE PLACE MOST HOPES UPON, GENERALLY PROVES MOST FATAL.

At a small distance from the house, my predecessor had made a seat, overshadowed by an edge of hawthorn and hollyhuckle. Here, when the weather was fine and our labour soon finished, we usually sat together, to enjoy an extensive landscape in the calm of the evening. Here too we often, which was now become an occasional banquet, and as we had it but seldom, it diffused a new joy, the propitiations for it being made with no small share of bustle and ceremony. On these occasions our two little ones always read to us, and they were regularly served after we had done. Sometimes, to give a variety to our amusements, the girls sang to the guitar; and while they thus formed a little concert, my wife and I would stroll down the sloping field, that was embellished with blue bells and centaury, talk to our children with rapture, and enjoy the breeze that wafted both health and harmony.

In this manner we began to find that every situation in life might bring its own peculiar pleasures: every morning awakened us to a repetition of toil, but the evening repaid it with vicarious hilarity.

It was about the beginning of autumn, on a holiday, for I kept such as intervals of relaxation from labour, that I had drawn out my family to our usual place of amusement, and our young musician, began their usual concert. As we were thus engaged, we saw a stag bound nimbly by, within about twenty paces of where we were sitting, and by its panting it seemed pressed by the hunters. We had not much time to reflect upon the poor animal's distress, when we perceived the dogs and horsemen come sweeping along at some distance behind, and making the very path it had taken. I was instantly for returning in with my family; but either curiosity or surprise, or some more hidden motive, held my wife and daughters to their seats. The huntsman, who rode foremost, past us with great swiftness, followed by four or five persons more, who seemed in equal haste. At last a young gentleman of a more genteel appearance than the rest came forward, and for a while regarding us, instead of pursuing the chase, topped short, and giving his horse to a servant who attended, approached us with a careless superior air. He seemed to want no introduction; but was going to salute my daughters, as one certain of a kind reception; but they had early learned the lesson of

looking presumption out of countenance. Upon which he let us know his name was Thornhill, and that he was owner of the estate that lay for some extent around us. He again therefore offered to salute the female part of the family, and such was the power of fortune and fine clothes, that he found no second repulse. As his address, though confident, was easy, we soon became more familiar; and perceiving musical instruments lying near, he begged to be favoured with a song. As I did not approve of such disproportioned acquaintances, I winked upon my daughters, in order to prevent their compliance; but my hint was counteracted by one from their mother; so that, with a cheerful air, they gave us a favourite song of Dryden's. Mr. Thornhill seemed highly delighted with their performance and choice, and then took up the guitar himself. He played but very indifferently; however, my eldest daughter repaid his former applause with interest, and assured him that his tones were louder than even those of her master. At this compliment he bowed, which she returned with a courtesy. He praised her taste, and she commended his understanding: an age could not have made them better acquainted; while the fond mother, too, equally happy, insisted upon her landlord's stepping in, and tasting a glass of gooseberry. The whole family seemed earnest to please him. My girls attempted to entertain him with topics they thought most modern, while Moses, on the contrary, gave him a question or two from the ancients, for which he had the satisfaction of being laughed at: my little ones were no less busy, and fondly stuck close to the stranger. All my endeavours could scarcely keep their dirty fingers from handling and tarnishing the lace on his clothes, and lifting up the flaps of his pocket-holes, to see what was there. At the approach of evening he took leave; but not till he had requested permission to renew his visit, which, as he was our landlord, we most readily agreed to.

As soon as he was gone, my wife called a council on the conduct of the day. She was of opinion that it was a most fortunate hit; for that she had known even stranger things at last brought to bear. She hoped again to see the day in which we might hold our own head, with the best of them; and concluded, she protested she could see no reason why the two Miss Wrinkles should marry great fortunes, and her children get none. As this last argument was directed to me, I protested I could see no reason for it either, nor why Mr. Simkins got the ten thousand pound prize in the lottery, and we sat down with a blank.

"I protest, Charles," cried my wife, "this is the way you always damp my girls and me when we are in spirits. Tell me, Sophy, my dear, what do you think of our new visitor? Don't you think he seemed to be good-natured?"

"Immensely so, indeed, mamma," replied she. "I think he has a great deal to say upon everything, and is never at a loss; and the more trifling the subject, the more he has to say."

"Yes," cried Olivia, "he is well enough for a man; but for my own part, I don't much like him, he is so extremely impudent and familiar; but on the guitar he is shocking."

These two last speeches I interpreted by contraries. I found by this, that Sophia internally despised, as much as Olivia secretly admired him.

"Whatever may be your opinions of him, my children," cried I, "to confess the truth, he has not prepossessed me in his favour. Disproportioned friendships ever terminate in disgust; and I thought, notwithstanding all his ease, that he seemed perfectly sensible of the distance between us. Let us keep to companions of our own rank. There is no character more contemptible than a man who is a fortune-hunter; and I can see no reason why fortune-hunting women should not be contemptible too. Thus, at best, we shall be contemptible if his views be honourable; but, if they be otherwise!—I should shudder but to think of that. It is true I have no apprehensions from the conduct of my children, but I think there are some from his character."

I would have proceeded, but for the interruption of a servant from the Squire, who, with his compliments, sent us a side of venison, and a promise to dine with us some days after. This well-timed present pleaded more powerfully in his favour than anything I had to say could obviate. I therefore continued silent, satisfied with just having pointed out danger, and leaving it to their own discretion to avoid it. That virtue which requires to be corrected is scarcely worth the sentinel.

#### CHAPTER VI.

THE HAPPINESS OF A COUNTRY FIRE-SIDE

As we carried on the former dispute with some degree of warmth, in order to accommodate matters, it was universally agreed that we should have a part of the venison for supper; and the girls undertook the task with alacrity.

"I am sorry," cried I, "that we have no neighbour or stranger to take a part in this good cheer: feasts of this kind acquire a double relish from hospitality."

"Bless me," cried my wife, "here comes our good friend, Mr. Burchell, that saved our Sophia, and that ran you down fairly in the argument."

"Confute me in argument, child!" cried I. "You mistake there, my dear. I believe there are but few that can do that. I never dispute your abilities at making a goose-pie, and I beg you'll leave argument to me."

As I spoke, poor Mr. Burchell entered the house, and was welcomed by the family, who shook him heartily by the hand, while little Dick officiously reached him a chair.

I was pleased with the poor man's friendship for two reasons: because I knew that he wanted mine, and I knew him to be friendly as far as he was able. He was known in our neighbourhood by the character of the poor gentleman that would do no good when he was young, though he was not yet thirty.

He would at intervals talk with great good sense; but in general he was fondest of the company of children, whom he used to call harmless little men. He was famous, I found, for singing them ballads, and telling them stories; and seldom went out without something in his pockets for them; a piece of gingerbread, or a halfpenny whistle. He generally came for a few days into our neighbourhood once a year, and lived upon the neighbours' hospitality. He sat down to supper among us, and my wife was not sparing of her gooseberry-wine. The tale went round; he sang us old songs, and gave the children the story of the Duck of Beverland, with the history of Patient Grissel, the adventures of Catskin, and then Fair Rosamond's Boyer. Our cock, which always crew at eleven, now told us it was time for repose; but an unforeseen difficulty started about lodging the stranger—all our beds were already taken up, and it was too late to send him to the next ale-house. In this dilemma, little Dick offered him his part of the bed, if his brother Moses would let him lie with him.

"And I," cried Bill, "will give Mr. Burchell my part, if my sisters will take me to theirs."

"Well done, my good children," cried I, "hospitality is one of the first Christian duties. The beast retires to its shelter, and the bird flies to its nest; but helpless man can only find refuge from his fellow-creature. The rarest stranger in this world was he that came to save it. He never had an house, as if willing to see what hospitality was left remaining amongst us. Deborah, my dear," cried I to my wife, "give those boys a bump of sugar each, and let Dick's be the largest, because he spoke first."

In the morning early I called out my whole family to help at saving an after-growth of hay, and our guest offering his assistance, he was accepted among the number. Our labours went on lightly, we turned the swath to the wind. I went foremost, and the rest followed in due succession. I could not avoid, however, observing the assiduity of Mr. Burchell in assisting my daughter Sophia in her part of the task. When he had finished his own, he would join in hers, and enter into a close conversation; but I had too good an opinion of Sophia's understanding, and was too well convinced of her ambition, to be under any uneasiness from a man of broken fortune. When we were finished for the day, Mr. Burchell was invited, as on the night before; but he refused, as he was to lie that night at a neighbour's, to whose child he was carrying a whistle. When gone, our conversation at supper turned upon our late unfortunate guest.

"What a strong instance," said I, "is that poor man of the raptures attending a youth of levity and extravagance. He by no means wants sense, which only serves to aggravate his former folly. Poor, fallen creature, where are now the revellers, the flatterers, that he could once inspire and command! Gone, perhaps, to attend the bagnio pander, grown rich by his extravagance. They once praised him, and now they applaud the pander; their former raptures at his wit are now converted into sneers at his folly; he is poor, and perhaps deserves poverty; for he has neither the ambition to be independent, nor the skill to be useful."

Prompted perhaps by some secret reasons, I delivered this observation with too much acrimony, which my Sophia gently reproved.

"Whatever his former conduct may have been, papa, his circumstances should exempt him from censure now. His present indigence is a sufficient punishment for former folly; and I have heard my papa himself say, that we should never strike one unnecessary blow at a victim over whom Providence holds the scourge of its resentment."

"You are right, Sophy," cried my son Moses, "and one of the ancients finely represents so malicious a conduct, by the attempts of a rattle to slay Marsyas, whose skin, the fable tells us, had been wholly stripped off by another. Besides, I don't know if this poor man's situation be so bad as my father would represent it. We are not to judge of the feelings of others by what we might feel if in their place. However dark the habitation of the mole to our eyes, yet the animal itself finds the apartment sufficiently lightsome. And to confess a truth, this man's mind seems fitted to his station; for I never heard any one more sprightly than he was to day, when he conversed with you."

This was said without the least design; however, it excited a blush, which she strove to cover by an affected laugh, assuring him, that she scarcely took any notice of what he said to her; but that she believed he might once have been a very fine gentleman. The readiness, with which she undertook to vindicate herself, and her blushing, were symptoms I did not internally approve; but I repressed my suspicions.

As we expected our landlord the next day, my wife went to make the venison pasty. Moses sat reading, while I taught the little ones: my daughters seemed equally busy with the rest; and I observed them for a good while cooking something over the fire. I at first supposed they were assisting their mother; but little Dick informed me by a whisper, that they were making a wash for the face. Washes of all kinds I had a natural antipathy to; for I knew that instead of mending the complexion, they spoiled it. I therefore approached my chair by sly degrees to the fire, and grasping the poker, as if it wanted mending, seemingly by accident overturned the whole composition; and it was too late to begin another.

## CHAPTER VII.

A TOWN WIT DESCRIBED—THE DUTILEST FELLOWS MAY LEARN TO BE COMICAL FOR A NIGHT OR TWO.

WHEN the morning arrived on which we were to entertain our young landlord, it may be easily supposed what provisions were exhausted to make an appearance. It may also be conjectured that my wife and daughters expanded their gayest plumage upon this occasion. Mr. Thornhill came with a couple of friends, his chaplain and feeder. The next day, when we were num-

rous, he politely ordered to the next alehouse, but my wife, in the triumph of her heart, insisted on entertaining them all; for which, by-the-by, she herself was pinched for three weeks after. As Mr. Burchell had hinted as us the day before, that he was making some proposals of marriage to Miss Wilnot, my son George's former mistress, this a good deal damped the heartiness of his reception: but accident in some measure relieved our embarrassment; for one of the company happening to mention her name, Mr. Thornhill observed with an oath, that he never knew anything more absurd than calling such a fright a beauty: "For, strike me ugly," continued he, "if I should not find as much pleasure in choosing my mistress by the information of a lamp under the clock at St. Dunstan's." At this he laughed, and so did we:—the jests of the rich are ever successful. Olivia, too, could not avoid whispering loud enough to be heard, that he had an infinite fund of humour.

After dinner, I began with my usual toast, the Church; for this I was thanked by the chaplain, as he said the Church was the only mistress of his affections.

"Come, tell us honestly, Frank," said the Squire, with his usual archness, "suppose the Church, your present mistress, dressed in lawn sleeves, on one hand, and Miss Sophia, with no lawn about her, on the other, which would you be for?"

"For both, to be sure," cried the chaplain.

"Right, Frank," cried the Squire, "for may this glass suffocate me, but a fine girl is worth all the priestcraft in the creation. For what are tilles and tricks but an imposition, all a confounded imposture, and I can prove it."

"I wish you would," cried my son Moses; "and I think," continued he, "that I should be able to answer you."

"Very well, Sir," cried the Squire, who immediately smoked him, and winking on the rest of the company to prepare us for the sport, "if you are for a cool argument upon that subject, I am ready to accept the challenge. And first, whether are you for managing it analogically or dialogically?"

"I am for managing it rationally," cried Moses, quite happy at being permitted to dispute.

"Good again," cried the Squire; "and firstly, of the first: I hope you'll not deny, that whatever is, is. If you don't grant me that, I can go no further."

"Why," returned Moses, "I think I may grant that, and make the best of it."

"I hope, too," returned the other, "you'll grant that a part is less than the whole."

"I grant that too," cried Moses; "it is but just and reasonable."

"I hope," cried the Squire, "you will not deny that the two angles of a triangle are equal to two right ones."

"Nothing can be plainer," returned the other, and looked round with his usual importance.

"Very well," cried the Squire, speaking very quick, "the premises being thus settled, I proceed to observe, that the concatenation of self-existence, proceeding in a reciprocal duplicate ratio, naturally produce a problematical dialogism, which in some measure proves that the essence of spirituality may be referred to the second predicable."

"Hold, hold!" cried the other, "I deny that: Do you think I can thus tamely submit to such heterodox doctrines?"

"What!" replied the Squire, as if in a passion, "not submit! Answer me one plain question: Do you think Aristotle right when he says, that relatives are related?"

"Undoubtedly," replied the other.

"If so, then," cried the Squire, "answer me directly to what I propose: Whether do you judge the analytical investigation of the first part of my enthymem deficient *secundum quoad*, or *quoad minus*, and give me your reason: give me your reasons, I say, directly."

"I protest," cried Moses, "I don't rightly comprehend the force of your reasoning; but if it be reduced to one simple proposition, I fancy it may then have an answer."

"O, sh!" cried the Squire, "I am your most humble servant; I find you want me to furnish you with argument and intellects too. No, sir, there I protest you are too hard for me."

This effectively raised the laugh against poor Moses, who sat the only dismal figure in a group of merry faces; nor did he offer a single syllable more during the whole entertainment.

But though all this gave me no pleasure, it had a very different effect upon Olivia, who not took it for humour, though but a mere act of the memory. She thought him, therefore, a very fine gentleman; and such as consider what powerful ingredients a good figure, fine clothes, and fortune are in that character, will easily forgive her. Mr. Thornhill, notwithstanding his real ignorance, talked with ease, and could expatiate upon the common topics of conversation with fluency. It is not surprising, then, that such talents should win the affections of a girl who, by education, was taught to value all appearance in herself, and consequently to set a value upon it in another.

Upon his departure, we again entered into a debate upon the merits of our young landlord. As he directed his looks and conversation to Olivia, it was no longer doubted but that she was the object that induced him to be our visitor. Nor did she seem to be much displeased at the innocent raillery of her brother and sister upon this occasion. Even Deborah herself seemed to share the glory of the day, and exulted in her daughter's victory as if it were her own.

"And now, my dear," cried she to me, "I'll fairly own that it was I that instructed my girls to encourage our landlord's addresses. I had always some ambition, and you now see that I was right; for who knows how this man will go?"

"Ay, who knows that, indeed!" answered I, with a groan: "For my part, I don't much like it; and I could have been better pleased with one that was poor and honest, than this fine gentleman with his fortune and infidelity; for depend on't, if he be what I suspect him, no freethinker shall ever have a child of mine."

"Sure, father," cried Moses, "you are too severe in this; for Heaven will never arraign him for what he thinks, but for what he does. Every man has a thousand vicious thoughts, which arise without his power to suppress. Thinking freely of religion may be involuntary with this gentleman; so that allowing his sentiments to be wrong, yet as he is purely passive in his assent, he is no more to be blamed for his errors, than the governor of a city without walls for the shelter he is obliged to afford an invading enemy."

"True, my son," cried I; "but if the governor invites the enemy there, he is justly culpable. And such is always the case with those who embrace error. The vice does not lie in assenting to the proofs they see; but in being blind to many of the proofs that offer. So that, though our erroneous opinions be involuntary when formed, yet as we have been wilfully corrupt, or very negligent in forming them, we deserve punishment for our vice, or contempt for our folly."

My wife now kept up the conversation, though not the argument. She observed, that several very prudent men of our acquaintance were freethinkers, and made very good husbands; and she knew some sensible girls that had skill enough to make converts of their spouses.

"And who knows, my dear," continued she, "what Olivia may be able to do. The girl has a great deal to say upon every subject, and to my knowledge is very well skilled in controversy."

"Why, my dear, what controversy can she have read?" cried I; "it does not occur to me that I ever put such books into her hands; you certainly overrate her merit."

"Indeed, papa," replied Olivia, "she does not: I have read a great deal of controversy. I have read the disputes between Thwackum and Square; the controversy between Robinson Crusoe and Friday the savage, and am now employed in reading the controversy in Religious Contship."

"Very well," cried I, "that's a good girl; I find you are perfectly qualified for making converts; and so go help your mother to make the gooseberry-pie."

To be continued

## IMPORTANCE OF A KNOWLEDGE OF CHEMISTRY.

BY EDWARD L. YOUNG.

THE physical system of every human being may be looked upon as a *chemical laboratory*, in which exactly the same kind of changes are carried on as are produced by the working chemist in his shop, and by means of similar instruments, the main difference being, that here, and elsewhere, the operations of art are coarse and bungling compared with the matchless perfection of nature.

The chemist finds it necessary to dissolve all solid substances; that is, to bring them into the condition of fluids, in order to separate the various elements of which they may be composed. For a like reason, in order to separate the nutritious from the innutritious portions of food, it must first be dissolved or digested in certain cavities or vessels of the body, provided exclusively for the purpose.

The chemist in his laboratory, makes use of knives, rasps, and mortars, to cut, pulverise, and grind down the substances which he wishes to dissolve. The teeth in man perform a similar work; the incisors (front teeth) cut, the molars (double teeth) crush the food, which is to be digested within the system. The principal substances which the chemist uses to bring solids into the state of solution are acids, such as vinegar and oil of vitriol; and alkalies, such as potash or soda. Precisely the same agents are employed by Nature in the living laboratory.

The juice of the stomach is acid, while that poured into the intestines is alkaline; and the class of foods which is not acted upon by one, is dissolved by the other; in both cases, that which is capable of forming blood is separated from that which is not. To aid and hasten chemical action, the operator stirs and agitates the mixtures in his vessels. For a similar purpose, to facilitate digestion, the food in the stomach is kept constantly in motion by a peculiar action of that organ.

As a man is thus, from necessity and nature, a chemist, his bodily system being a chemical apparatus, and each act of eating, drinking, breathing, and digestion, a chemical experiment; and as this chemical action goes on at a rapid rate, involving the conditions of health and disease, and never ceasing for an instant, from birth to death, it is certainly proper that he should understand something of a science of which he is himself so complete and wonderful an illustration.

Few subjects can compare, either in interest or importance, with that which informs us of what our physical being is composed, the character and object of these remarkable changes which incessantly take place within us, and the nature of our relations to the surrounding world.

Physiology, which teaches the structure and uses of the various parts of the human body, is pursued as a regular branch of study in a great number of schools; it should be in all. But physiology is in a large measure dependent upon Chemistry for the explanation of its principles; and the discoveries of every succeeding year tend to make that dependence more and more complete.

Chemistry possesses, also, great interest from its application to the arts of daily life. It is the object of industry in acting upon the outward world to

produce two classes of changes in the materials which it employs. The first are *mechanical* changes, which influence only the *forms* of matter, as in the operations of cabinet-making, and cotton-spinning; the second are *chemical* changes, wrought in the *nature* of the substance used, and altering their properties, as in glass-making, and tanning. In both these cases the changes which take place are governed by certain fixed principles or laws, to which the workman must conform if he would operate successfully.

The principles of mechanics, taught by natural philosophy, are quite generally understood; indeed, as this science considers only the relations of *masses of matter* which readily strike the senses, it was very naturally investigated earlier, and has always been a more popular study than chemistry, which inquires only concerning the relations of *invisible atoms*. Yet the laws which control chemical action are as unchangeable as those which hold the planets in their places; every kind of matter is subject to them, and no vocation in which they are concerned can be pursued to the best advantage unless they are clearly understood.

The farmer, the miner, the metallurgist, the paper-maker, the bleacher, the dyer, the druggist, the soap-manufacturer, the painter, and innumerable other craftsmen, are constantly acting upon chemical substances, constantly dealing with chemical laws, and hence, it is clear, require to know what they are.

Among the various occupations which require a knowledge of this science to be successfully carried on, that most noble, useful, and universal, of all human pursuits—*agriculture*—stands pre-eminent. The farm is a great laboratory, and all those changes in matter, which it is the farmer's chief business to produce, are of a chemical nature. He breaks up and pulverizes his soil with plough, harrow, and hoe, for the same reason that the practical chemist powders his materials with pestle and mortar; namely, to expose the materials more perfectly to the action of chemical agents. The field can only be looked upon as a chemical manufactory; the air, soil, and manures, are the farmer's raw materials, and the various forms of vegetation are the products of manufacture.

The farmer who raises a bushel of wheat, or a hundred weight of flax, does not fabricate them out of nothing; he performs no miraculous work of creation; but it is by taking a certain definite portion of his raw material and converting it into new substances through the action of natural agents; just as those substances are again manufactured, in the one case into bread, and the other into cloth.

When a crop is removed from the field certain substances are taken away from the ground, which differ with different kinds of plants; and if the farmer would know exactly what, and how much, his field loses by each harvest, and how, in the cheapest manner, that loss may be restored, chemistry alone is capable of giving him the desired information.

There are also potent reasons why chemistry should be embraced in a liberal system of mercantile education. The extent to which a vast variety of commercial articles are adulterated for fraudulent purposes, and thus greatly depreciated in value, is little suspected by those unacquainted with the facts. These gross impositions upon the public cannot be arrested by penal enactments; the only effectual way of preventing them, or of sheltering the community from their effects, is for the merchant to possess himself of the necessary knowledge to determine spurious and genuine articles.

It is eminently proper, also, that chemistry should be taught to girls. In the present arrangements of society, domestic duties, either by supervision or direct performance, devolve chiefly upon females; and household operations, such as the preparation and cooking of food for the table, the preservation of fruits and meats, and the various processes of cleansing, can only be best performed when the principles of chemistry are well understood. It is also worthy of consideration, whether substantial information upon this subject might not be beneficially substituted for much of that trivial knowledge which is imparted in fashionable female education.

But besides those more palpable benefits which spring from the application of chemistry to daily business, there are others connected with mind itself, which deserve to be noticed in this place. The superiority of natural sciences over all other objects of study, to engage the attention, and awaken the interest of pupils, is conceded as a fact of experience by the ablest teachers. This cannot be otherwise; for the infinite wisdom of the Creator is nowhere so perfectly displayed, as in the wonderful adaptation which exists between the young, unperverted mind, and the natural world with which it is encompassed.

On one hand there is the realm of nature, endless in the variety of its objects, indescribable in its beauty, immutable in its order, boundless in its beneficence, and ever admirable in the simplicity and harmony of its laws; on the other, there is the young intellect, whose early trait is curiosity, which asks numberless questions, presses into the reason of things, and seeks to find out their causes as if by the spontaneous promptings of instinct.

The study of nature is therefore the most congenial employment of the opening mind, and one of its purest sources of pleasure. Every fact that is learned becomes a key to others; every progressive step discloses wonders previously unimagined. The more we acquire, the greater is our desire to learn, while each advance multiplies the sources of delight, instead of exhausting them.

**USE OF MICA IN CHEMICAL ANALYSES ON A SMALL SCALE.**—As mica is not fragile, and does not change in the flame of a taper, it may be employed with much advantage as a support to substances which we wish to expose simply to the flame of a lamp or candle; take a thin plate of mica, which may be easily separated from the mass by a knife, and after each experiment, wipe it with a moist cloth.

REVIEW.

WALKS ABROAD AND EVENINGS AT HOME. No. I.—L. don: J. Bennett, 69, Fleet-street.

THE Editor of this new candidate for favour has entered upon a broad field of instruction and amusement, and in a manner calculated to win for him the encouragement of all who appreciate sound and wholesome literature. He will also obtain the cordial sympathy of every father who desires that his children should understand and admire the marvels of Nature,

"The vicar of Almighty God,"

and receive those impressions of virtue and wisdom which are the surest guarantees of happiness in after life:

"Children, like tender oysters, take the bow,  
And as they're fashion'd, so they always grow."

It is true we live in an age of wonderful progress. Invention is constantly striving to find the quickest and least troublesome way of satisfying our wants and desires, and with regard to literature, there is not a branch of general knowledge which has been left unexplained, or has not been subject to the most patient research. But among the large number of periodical works chiefly devoted to the improvement of youth, and many of which are of considerable merit, we have observed a deficiency in the treatment of some subjects of high interest and attraction, which the work we have now under review seems to supply. The style of the publications to which we allude, is either too prosaic, or ill suited in other respects to the intelligence of the readers for whom they are intended. A gorgeous binding and fascinating engravings are too often made to pass current instead of a sensible and judicious miscellany calculated to improve the mind, and not merely to please the eye.

The "Walks Abroad and Evenings at Home," is a work eminently entitled to meet the object desired. The wonders of the creation are explained in an easy unaffected manner, suited to the comprehension of a child, and yet containing the principal results which the wisest philosophers of past and present times have spent long years of patient toil to investigate and confirm.

The Number before us contains the commencement of a rural tale, entitled "Summerfield; or, Life on a Farm," which will be continued through the volume. It consists of sketches of country scenery, written with great spirit, and which are likely to prove very attractive. "Views of the Microscope and Telescope" follow, and this article is a fair specimen of the easy and pleasant manner in which scientific subjects will be treated. "The Awakening of the Birds" is a curious and interesting statement of facts connected with the organization of the feathered tribe. We are glad to perceive also that natural phenomena, respecting which so many erroneous impressions prevail, will occupy a place in the work, and receive careful explanation. "Rapids" form the first subject, and are illustrated by an incident on one of the great American rivers. "Autobiographies of Animals, dictated by themselves," affords an opportunity to a Chimpanzee, or wild man of the woods, relating a diverting history of his own adventures.

But the subject, which we think will more especially interest our readers, is one entitled, "The Adventures of Prince Pretty in the World of Insect Wonders," from the pen of the Editor. In order to describe the minute objects which animate the garden of life—those wonderful creatures that pass unheeded in our daily walks, except by the student and lover of Nature,—the writer has constructed a tale, which we think will become deservedly popular, and will be read with increasing pleasure as the Numbers appear. There is a healthy moral tone throughout the article which we highly commend, as opposed to the stories without any ulterior object of utility commonly offered to the young. The birth of Prince Pretty is thus described:

"A poet sat by the window of a palace. It was not a palace wrought out of costly marble, having Corinthian pillars, and domes, and works of statuary in its vestibule. There were no artificial lakes and fountains before it; no swans gliding upon the surface of still waters, from which leaped fish with golden scales; no peacocks spreading their beautiful feathers to be fanned by the gentle breeze. But it was a palace—a small edifice—so small that it was completely hidden by trees that clustered round it, and seemed to hold it in their arms. From the thatched roof hung many a straw, for the sparrows built their nests therein; and those who looked up to the old chimney might see the martins flitting in and out; that chimney had long been known to them, and many a young bird had been hatched near the spot whence its white smoke ascended in graceful curls."

"At length he thought that the insects found voices which he could understand. Thus it was with him when the Dragon Fly said, 'Come with me to the water's brink, and I will show you wonders that shall delight and edify your soul. You shall stand upon the leaf of a lily, and looking down into crystal waters, shall see a new world composed of creatures of most beautiful and curious forms and colours. You shall see in this miniature world beasts of prey more ferocious than the wolf or the lion; you shall see how they change their shapes and their habits of life—now actively swimming the stream, then lying motionless on its bottom or floating heedlessly about, and, lastly, quitting the water, becoming tenants of the air, more active than the birds, and equally joyous!' And the Bee said, 'Come with me, and I will show you wondrous examples of skill and industry. I will take you into our hive, and give you audience with our Queen; she will command our tribe to pay you homage, and you shall pass through the galleries of our workshops, and see how we build our cells and store them with honey!' And the Ant came and said, 'I will take you to our hills, and you shall witness our skill. We have places of curious construction beneath the ground. You shall see the wonderful architecture of our homes; you shall review our armies, and see how we care for each other, and for our young!'

"These all moved the Poet more and more to vivid imagination and strong desire; and when he heard the cricket's voice appealing to him from his own hearth, he fell into a reverie in which he felt his very nature change. He became a tiny thing, smaller than his smallest finger had been. Before him lay a wardrobe composed of wings and plumes of insects; there were also their weapons of defence, their instruments of labour, their breastplates, and their shields. Habiting himself in some of these, the Poet looked beautiful, and seemed almost to be an insect. He wore a cap taken from a moth's head, and on it he placed two beautiful plumes. Around his body he wrapped a garment made of butterflies' wings; and his pantaloons, which fitted tightly to his shape, were formed of the skins of caterpillars, striped elegantly with green and gold. And thus Prince Pretty, the hero of the Poet's imagination, was born, and he became invested with powers which no human prince ever possessed. Laying himself down upon a leaf which rested upon the oriel, he was lulled to sleep by the song of the nightingale."

The second chapter ushers Prince Pretty into the region it was his desire to visit. A chatty, good-humoured Bee undertakes the kind office of introducing the guest to the Queen of the hive, and gives him many sage counsels on his future conduct, not forgetting to caution the Prince against the drone, who appears to have the character of a lazy vagabond among the bee tribe, and here the opportunity of conveying a good moral to young minds is not lost.

Prince Pretty afterwards holds his levee, which is well described; and after a song of salutation from the assembled insects, he delivers an address, a portion of which we extract:

"Queens, Emperors, nobles, and workers of the Insect race, accept my thanks for the homage you pay me for this brilliant reception on the threshold of your fairy world. Every way I turn, I see beauties that fascinate my sight, and wonders that elevate my soul. It is my intention to devote a short season to intercourse with your several tribes, that I may learn your feelings and habits, and be able to speak elsewhere of the wonderful beauties and powers with which you are blessed. Lead me, therefore, to the hive of the Bee, the nest of the Hornet, the tent of the Leaf-roller, the stores of the Humble Bee, the hill of the Ant, the hermitage of the Gall-fly, the grotto of the Mason Bee, the gondola of the Gnat, the retreat of the Glow-worm, the cocoon of the Silkworm, the pit of the Ant-lion; and, rely upon it, that my intentions are pacific, and that my chief desire is to establish an Exhibition of the Industry and Art of all Insects, for the promotion of useful knowledge and the establishment of proper ties of fraternity between the highest and the lowest grades of God's creatures!"

The conclusion of this address was followed by a loud buzz of applause. The first adventures of the Prince are then narrated. The engravings illustrating these "Adventures" are exceedingly original and pretty. By the courtesy of the Proprietors of the work, we are enabled to give some of them. We must not omit to mention, that a beautiful steel engraving is presented to each purchaser, and that this alone is worth three times the cost of the book.

## CAROLINE AND CATHARINA.

(Continued from page 173.)

## CHAPTER IX.

"The painted Man shall on his altar set,  
Up to the east in blood!"—H. S. IV, c. 1

PASSED down the street, after leaving the Major's, Vernon paused before one of those odd, dingy frame buildings, which are sometimes allowed to stand for years in the midst of populous and well-built cities. He looked at the sign over the door, as if not quite sure he was at the right place, and saw "Uriah Manning, cabinet-maker," painted in large gilt letters along a weather-beaten sign. From within came the sound of the hammer and the plane, vouching for the truth of the sign; and in more definite evidence, just inside of the door could be seen poles of furniture, arranged in various room-saving modes, reaching quite to the ceiling.

Satisfied with his examination, Allen passed in, and approached a stout, man of square, strong build, and florid, cheerful countenance, who was pushing the plane and accompanying himself with a tune, which he whistled with great apparent relish. He laid down his tools, and as Allen came near him, he leaned against the bench and ceased his accompaniment—not, however, until he came to the end of a bar, which rounded off with the peculiar lengthened notes of a stately march. He was not above the medium height, and as we have said, strongly built; his face was one of those free, open and yet shrewd countenances so often met among the descendants of the Puritans; and about his eye was perceptible a slight leer, good-humoured, however, and attended by an expression of cool determination. His mouth was large and well formed, and the other features of his face corresponded with this sketch in every particular. A small admixture of conceit might be noticed in his bearing, but it was not obtrusive, and rather added to the respect we conceived for him, by giving the idea of self-respect. He was in his shirt-sleeves, and his arms were bare to the elbow; showing a power of muscle and proportion not often met. His clothes were of a material much finer than that generally worn by mechanics at their work, and as Allen approached him he stooped and brushed off a few specks of sawdust which clung to his pantaloons, with his hand. On the whole, his appearance and bearing were grand and free, giving one the idea of a man far above the ordinary level of journeyman mechanics. The reader must not be impatient with this somewhat minute description of an apparently insignificant person; for he should remember that, in almost everything, all our wisdom is insufficient to discover what in fact is insignificant and what important. We can all tell, when the cards are laid down on the table, with their faces upward, upon what precise card the game turned; and it not unfrequently happens, that this pivot-card is one to which very few would have attached the least importance, nay, one which, after the deal, the player was very much dissatisfied with holding. Now, if we have not already showed our hand, the reader does not know, but Hugh Manning, (son of Uriah, of the sign), is, figuratively speaking, precisely this card. We do not say *he is*; we leave that to the end; but in fact, he is really an important character, and is, therefore, fully entitled to the reader's attention.

"How do you do, sir," said he, as Vernon approached, in a free, bold, outspoken, and not unmusical voice.

Vernon returned his salutation, and asked,

"Is Mr. Manning in the shop?"

"No, sir," said Hugh; "you will scarcely ever find him here at this time of the day."

"Well," said Allen, "probably you can do what I wish. I want a little work done on a wardrobe." And he went on to explain, as we will do hereafter.

"Yes," said Hugh, when Allen finished, "I can do it. Where is it?"

"At my house, on Franklin-street, No. 200."

"Your name is Vernon, then?" said Hugh, inquiringly.

"Yes," replied Allen, "I should like to have this done as soon as I can—to-morrow, if possible."

"I shall be busy all day to-morrow," said Hugh, "but I can do it on Thursday, if that will answer."

"Very well," said Allen, and he turned to depart. As he reached the door, a printer's boy came along with a bundle of handbills and a paste pot, stopping to paste one of them to the side of the house.—(See *Engraving, page 472.*)

"What's that, Tom?" asked Hugh.

"The Governor's proclamation," said the boy, pompously, "about the declaration of war!"

"Declaration of war!" exclaimed Vernon.

"Yes, sir; the war with Mexico." And the boy passed on as if the fate of that war depended upon the posting of the handbill.

On reading it, Vernon found it as the boy had said—a proclamation by the Governor of the State, calling for volunteers, in pursuance of a requisition from the President. War had just been declared "already existing" by an act of Congress, and the power to raise fifty thousand troops, was, by the same act, (13th May, 1846,) lodged in the hands of the Chief Magistrate. By the Governor, the officers of the militia were directed to assemble their respective brigades, regiments, etc., and proceed immediately to raise and organize a force, which afterwards proved itself in some of the hardest fought battles on record.

"The President means to invade the country, I reckon," said Hugh.

"I suppose so," said Allen; "fifty thousand men will make a large army—larger than necessary to stand on the defensive."

"I will be in that army," said Hugh; "I have had a spite at those Mexicans ever since their throat-cutting in Texas."

"You express a very common feeling, I apprehend," said Allen.

"I shall go, anyhow," repeated Hugh, as if he had been debating the question, and had thought of some possible objection.

"We may possibly meet there," said Allen.

"Will you go, to?"

"Probably; it depends upon some contingencies, but I think I shall certainly go."

"Then," said Hugh, "we are the first volunteers, for this is the first bill stuck up; it is only three doors to the printing-office."

"I hope your old-clothes will not prevent your coming to repair my wardrobe!" said Allen, smiling.

"Not unless we march before Thursday," said Hugh; and Vernon walked away towards home, resolved at once to communicate with his father in regard to his projected excursion. It is true Major Bryce had not yet been placed by the government in a position to make good his overtures to him; but war was declared at all events, and he doubted not the appointment tendered him, would be given the Major by the time he could make his arrangements. Full of these thoughts he entered his home, and passed immediately into the little room where his father was sitting, looking haphazardly out at the window upon the passengers on the street.

William Vernon—he had recovered his Christian name recently, his son's rising fame having expelled the contemptuous soubriquet of "Old Bill," in a great measure, from his neighbours' mouths—was really not more than fifty-five or sixty years old; but tall and disappointed had added to his apparent age at least ten years. His hair was quite white, his face sunken and vacant, and his gait uneasy and tottering. This, however, arose more from the uncertainty and peevishness of his mind, than from any positive physical decay. He had never been a fleshy, nor a very tall man; but constant fretting had made him even thinner than his wont, and the habit of brooding over his misfortunes had given him a stoop, which materially lessened his moderate height. He was in good health, however; and his movements, though, as we have said, uncertain, were still alert and indicative of considerable strength and activity, for a man of his apparent age. His eyes were a little sunken, but their glance was still sharp and merchant-like, though sometimes vacant, and always a little suspicious. His voice, though sharp and peevish, was still strong and clear. Indeed, had success continued his, he would have had a good promise of twenty years of cheerful life, and a green, respectable old age.

But success was no more for him, and in spite of all the favourable points he have noticed, it was plain enough that the shattered hulk could be launched no more. It was, perhaps better that it should not be; for he had arrived at that point when almost his only pleasure was derived from vague calculations, of how much he could have been worth if he had continued successful, and how many "lucky speculations" it would still require to make him "even with John Talbot."

As Allen entered the room where the old man was sitting, he seemed to be in an unusually complaining humour, and turned to his son with even more than his wonted peevishness.

"Do hand me my slippers, Allen," were the first words he uttered—in a tone which seemed to denote that he was making a last appeal, after having been several times refused. The slippers were within a few feet of him, and he had been sitting with nothing but his yarn stockings on his feet for hours, rather than make the effort necessary to get them.

Allen handed him the slippers without a word, and drew up a chair in a position to converse with him. But the old man began again,

"Where in the world have you been so long?" he asked complainingly.

"Away from home all day with out saying a word, and dinner kept waiting for you more than an hour!"

This charge was true, for Allen had stayed so long at Talbot's that he had no time to return home before Major Bryce's dinner hour, as he had intended.

"I intended to have returned home before dinner, father," said Allen, patiently, "but was detained."

"Well," said the old man, seeing him hesitate, "where and how were you detained?"

"It makes no difference," said his son, "since I am come home. But I dined at Major Bryce's."

"I wouldn't have thought that of you, Allen," said the father with a whine, as if his son had done something very undutiful.

"What, father?"

"To go off dining among those people without saying a word to me about it. It is really too bad!" And he turned with a quivering lip to the window.

"Well, well, don't scold, father," said his son, soothingly, "and I will not go again without telling you. And as an earnest of my good faith I will begin now. I think it very probable, father," he continued, gravely, "that I may take a long journey soon, and probably an uncertain one. War has just been declared against Mexico."

"What is that to me?" interrupted his father peevishly; "unless I had the means I have been robbed of to enable me to profit by it. You are not going to enlist?"

"No, certainly not," said Allen; "but I have been offered employment in the Quarter-Master's department, which will enable me to paint some of the finest scenery in the world, if our armies invade Mexico, as of course they will."

"And you have accepted it?" whined the old man.

"Nay, it is not time yet," said his son, "but I shall do so."

"And you will go away off there, to stay heaven knows how long, and leave me to take care of myself!"

"I have thought of that, too, father," answered Allen. "Ann will stay with you, I have no doubt; and then I can leave you a thousand dollars in money—ample means of support for the twelve or fifteen months I shall be away."

"A thousand dollars!" exclaimed the old man, "where would you get a thousand dollars?"

"No matter, father, so I only get it honestly. You must recollect my art has not been profitable by any means."

This was an evasion. His art had been profitable, indeed; but the greater portion of what he had been able to lay up in four years, had gone to pay for the cottage in which he lived; and borrowing was, therefore, his only resource. He had thought of this long and painfully; but, having consulted Major Bryce, he had at last determined that the advantages of his projected journey would outweigh even the disadvantages of borrowing. It was in part on this business that he had called to see Uriah Manning. That gentleman (this is not exactly his description, but he had money, and, therefore, was so spoken of), had been very successful in his trade; he had been economical, prudent, and grasping; he had loaned money, taken mortgages, foreclosed them, and collected the "last dollar;" he had still kept his shop in operation, long after it ceased to be necessary to his support; he had placed his son at the trade (though we must be just enough to say he had first given him a complete education, as the word is understood), and suffered no opportunity to escape him to make or save even the smallest sum. By dint of hard work, close collections, enormous interest, and a quick, sharp, and grasping intellect, he had succeeded in amassing a fortune equaled by few, and in acquiring the questionable reputation of a noted money-lender. It was from this man that Allen had thought of borrowing a thousand dollars; for which he at last determined to mortgage the cottage, the result of years of labour.

"And what if you should die out there? What would become of me?" peevishly asked his father, when he saw that his son was resolved upon going.

"And what if I should die here, father?" But the old man did not reply, and he continued. "No fear of that, however; and if I should, you will find pictures in the wardrobe in the studio sufficient in value to pay any little debt that may come against me, and perhaps some left. But it is useless to anticipate any such event; I shall guard against it carefully on your account, father."

"O! yes!" the old man began, "I have no doubt."

But why should we further lift the veil to lay bare a scene which was of every-day occurrence—a scene where imbecility and whining peevishness were met by patience, and kindness, and unflinching forbearance? Suffice it that at last the old man was silenced, if not satisfied; and Allen was at liberty to retire to his studio—there to gaze for hours upon the fresh portrait and think of the lovely original.

## CHAPTER X.

"If money go before all ways do he open."—MERRY WIVES OF WINDSOR.

"And give to dust that is a little gift."

More land than gold he wanted."—THELMA AND CATHARINA.

THE fact that John Talbot was the father of Cara may have had some influence upon Allen's mind; but, at all events, the frequent intercourse he held with the Colonel during the ten days following the last-mentioned, made a very sensible impression, and gave him a much better opinion of him than he had been prepared to entertain. Talbot, too, thought highly of Vernon, and treated him with uniform kindness and confidence. It is true, he had no perception of the intimate and confidential relation established between Allen and his daughter; perhaps, had he seen it, he might not have treated him so kindly. As it was, he seemed to be actuated by a desire to wipe out from the son's memory all the impressions made there by the father; and he was not the less anxious to do so, because he sometimes felt that his own course towards that father might have been a little more lenient. Not that he felt he had done wrong; far from it—he only felt that ancient friendship might have softened the rigour of a prosecution, into which, to do him justice, he had been hurried by zealous lawyers. Even this he did not always feel, and his kindness to Allen was sometimes attributable to a much less worthy motive. The old man, like, perhaps, nearly all who have been successful in his course of life, was vain; and he was flattered by the deference arising from the relation above spoken of in a great measure, with which Allen treated him.

Allen was often at his house—every day indeed—something always accruing to give him an excuse to return oftener than would otherwise have been expected. First came consultations about hanging the "Sunset," then a visit to see how it looked in its new frame, and whether the style of the frame made a change of light desirable; then another visit to see how that light affected it. Afterwards the portrait was to be hung, after several visits to change slight points of the costume to please first Cara then her father. By the time this was completed, he had become an habitual visitor, and scarcely a day passed over without his being at the house. Sometimes he stayed to dinner, and sometimes to tea, and once or twice he had gone out with Cara. He had closed his studio, and laid down his pencil, so that he had leisure at command.

During all this time, Thorpe, as might have been expected, was not idle. He was occupied in the process of enlisting volunteers almost all the time, and in attending to his own interests among them—securing his footing in such a manner as to hold an office of prominence among the first troops raised. But he found time, also, to be very often at Colonel Talbot's, and he generally so timed his visits as to meet Allen there. When he did so,

his manner was cordial, cheerful and friendly, showing nothing of the deadly passion which was every day growing in his heart, as he saw his hold on Cara gradually loosening. He had fully resolved that he would not lose that hold; and he was not incapable of making his success sure by a *coup de main*. This he reserved, however, for a future day, shrinking, with the feeling of every merely unscrupulous man, from any "superfluous sin." He strove, on every occasion (and often succeeded), to make the intercourse between Cara and Vernon merely that of casual acquaintances. He sought the society of Allen, too, as much as he did that of Cara, and even sometimes affected to advise with him upon important affairs, insinuating himself gradually into his confidence by a well-affected identity of feelings, and a skilfully counterfeited sympathy in enthusiasm. Vernon was inexperienced and unsuspicious, lying then, as it were, almost at the mercy of any one thoroughly acquainted with life. Even the hints which Cara sometimes gave him—~~but~~ she was beginning to fear Thorpe—were not sufficient to arm him against cool calculation, eloquence, and delicate management. At the end of ten days, therefore, from the day last mentioned in this veritable history, Allen Vernon was so far in the meshes of Thorpe, that he thought the latter one of the most agreeable and trustworthy men he had ever known.

At this time, Major Bryce received his commission as a Quarter-Master, with the rank of Major in the service of the United States, and immediately notified Allen of the fact, informing him likewise that he was awaiting orders which might make it necessary for him to leave home on a day's warning. He, therefore, wished Vernon to prepare to go with him, and to hold himself in readiness. The arrangement was completed, and Vernon was engaged as a clerk in his office at a very respectable salary, with the understanding that he should be at liberty to follow his parents as a painter at leisure.

"O!" said Mary, tragically, when the Major and Vernon had adjusted their affairs in her presence, "I feel as if I were frightened! Do you not feel serious upon setting out on so hazardous an expedition? See!—how I tremble!" And she held up her fat hand to him, which, of course, he took in his. As he did so, her grasp closed convulsively on his fingers, and she seemed to make a great effort to command herself.

"You are more excited," said Allen, smiling, "than the occasion justifies. The expedition may not be hazardous: indeed, peace may be made before we leave the States."

"O! how I wish it may!" she exclaimed, throwing her eyes up to the ceiling. "But why do you go?" she asked tenderly.

"I go for various reasons," he said; "the chief of which is, that I have no adequate motive for staying."

"No adequate motive for staying!" she said, drawing back from him, as if overwhelmed with astonishment. "Is it possible that you think your friends here do not wish you to stay?"

"I do not know that they do," said Vernon, almost badgered to death.

"Am not I a friend of yours?" she asked, solemnly, laying the aforesaid fat hand on his arm. "Do you not think me a friend?"

"I hope you are," said Allen, wondering what she meant.

"Well," said she, "let me persuade you to stay—let me assure you that you have an adequate reason for staying. Why should you wander far away, among soldiers and such people, to be killed, perhaps?" and she covered her face with her hands, as if to shut out some dreadful image, or, perhaps, to make him believe she was weeping.

"You forget," said he, "it is too late to retreat now—"

"I will speak to father!" she exclaimed. "he will not insist upon your going, I know."

"But," said Vernon, hastily, "I do not wish to retreat. Why do you not try to prevent his going—your father's safety is certainly more dear to you than mine?"

"This was a home-thrust, but her tragicals saved her."

"O, I have entreated him to stay, again and again! but he will not listen to me a moment." (We are sorry to contradict a lady; but the fact was, she had never even thought of her father refusing to go.)

What this scene might have led to, we cannot conjecture; but it was cut short by the entrance of Maria Thorpe, who was not aware that Vernon was in the house. As soon as she perceived it she retreated; but the diversion was sufficient to enable Allen to rise and take his hat, beginning an apology for an abrupt departure.

"I must set about my preparations," said he, "for I cannot tell when we may be ordered away."

"You will go, then?" said she, despairingly.

"I have no alternative now," said he, and he was gone, leaving her almost in hysterics; from which, however, she soon recovered.

Allen walked down the street, and again entered the shop where we saw him once before, this time not looking up at "Uriah Manning," in the gilt letters over the door. As he entered without ceremony, then, he met the same young man whom he saw before—not at work, however, but leaning listlessly against a piece of furniture.

"Good morning, Hugh," said Vernon familiarly. "Why are you not in uniform? I heard you were elected a lieutenant."

"So I was," said Hugh, laughing; "but my uniform is not made yet."

"I suppose, now," said Allen, "you will scarcely be willing to finish my job, and I must look for some one else?"

"Why," answered Hugh, "I thought I had finished it."

"So you did," replied Allen, "in part; but I find I have not room enough for all my pictures in the wardrobe, but must have a rack put up in the closet, and use that."

"That is the work of a carpenter," said Hugh; "but since I did part of

*He was dressed in a suit of dingy snuff-coloured broadcloth, and wore a black fur hat, from which the fur had disappeared in many places through long wearing. He wore no spectacles—money-lenders seldom do—and his feet were encased in a pair of slippers, which had likewise seen long service.*

the job I will finish it. I want something to do, anyhow, doing nothing doesn't suit me. I have been used to work too long."

"Can you do it to-morrow?"

"Yes—in the morning."

"Very well. Now, where is your father?—I want to see him."

Hugh led the way through the shop into a kind of counting-room, divided from it by a heavy board partition, and introduced him to his father. The latter was a small, spare, sharp-visaged man, of apparently fifty years of age. His hair was a little mixed with gray, and his face somewhat wrinkled by time. But he was still vigorous and active—his form answering to the mind which animated it, keen, quick, eager and grasping. His eyes were small and dark, and when they turned upon a man, there was, besides their furtive look, an expression of cold scrutiny, as if he was calculating what *per cent.* was the largest he would be able to squeeze out of him. He was dressed in a suit of dingy snuff-coloured broadcloth, and wore a black fur hat, from which the fur had disappeared in many places through long wearing. He wore no spectacles—money-lenders seldom do—and his feet were encased in a pair of slippers, which had likewise seen long service. He was sitting on a low chair, running over an account-book, which lay for convenience upon an old-fashioned low iron safe, instead of the prim, high desk on the other side of the room. But he laid down his pen as Vernon entered, and handed him the chair, taking the safe as a seat for himself.

"Vernon, Vernon?" said he, repeating the name in a quick, inquisitive tone; "the son of Vernon, formerly of the firm of Talbot and Vernon?"

"The same, sir," replied Allen, quietly; "I hope the name will not be any obstacle to our business."

"Names make but little difference to me," said Manning, "unless they are at the bottom of a note. I can remember the time when 'Talbot and Vernon' were the best names in the city for an indorser."

"Well," said Allen, taking advantage of this turn of the conversation, "it is upon some such business that I come. I want to borrow a thousand dollars, and I have been led to believe that I can negotiate the loan with you."

"A thousand dollars?" said the old man, musingly. But Allen continued—

"And I propose to give you a mortgage upon a house, and a list of lots—"

"For how long?" interrupted Manning.

"I would like the note drawn at twelve months, or even longer, if possible; for I may be detained a few months longer."

"Why? are you going to this war, too?" exclaimed the miser.

"I shall be with the army," replied Allen, "and this money I wish to borrow for the use of my father while I am gone."

"And you propose to give a mortgage?"

"Yes," interposed Vernon, "upon property worth three times the sum—the house in which my father lives."

"The money-market is tight," said Manning, as if speaking to himself, "I shall have to charge you ten per cent."

"Very well," said Allen, in a tone which almost made the old man regret that he had not asked twelve.

"But," continued Manning, "you must give me personal security—I do not like mortgages—I have lost by them; real estate is too fluctuating in value."

"I do not know whether I can give personal security," said Allen. "But the property is ample, let its value fluctuate as it may."

"Very well," said Manning, as if his mind were made up; "if it is ample it will secure another man as well as me; and I would prefer a good name on the note to three mortgages."

"How do you mean?"

"I mean," said the old man, "you can give me the personal security, and mortgage the property to your security, to indemnify him."

"But that is double trouble," said Allen.

"I cannot help it," said the money-lender, and he took up his pen.

Allen thought a moment of all whom he might be able to get to do this favour for him.

"How would John Talbot do?" he asked, after a pause.

"Perfectly well, sir," said Manning; "it would be the old names of Talbot and Vernon—only Vernon would come first this time."

"Draw up the note then," said Allen, "as you wish it, and I will see him."

It was done, and taking it Allen left him.

Five minutes' walk brought him to Talbot's, and a few moments afterwards he found himself seated beside Cara in the little withdrawing-room, where he had first told her of his love.

"I have just completed my arrangements with Major Bryce," said he, "and now I want to see your father on a matter of business."

"You are not going to tell him—?"

"O! no!" said her lover; "don't be alarmed—I have not had permission to say all I wish to you, much less to him. The twenty days are little more than half gone."

"True," said she; "I had forgotten. But when do you leave us?"

"Whenever the Major is ordered away," said he. "If it should be before the expiration of the twenty days, you must take off the prohibition."

"Perhaps I will," said she, gaily; "but I hope there will be no necessity for that."

"I hope there will," said he, quietly.

"Why so?"

"Because I will be sooner at liberty to speak what I wish."

"Why," said she, laughing, "you have said it a thousand times already!"

"Yes; but then I have no answer yet, my dear Cara."

"That you cannot have until the time I fixed," said she, gravely.

"I suppose I must submit," said he, rising; "but I must see your father now."

"Then you did not come to see me?" said she.

"Oh yes I did!" he said, eagerly; "if you had not been here, I would not have thought of coming to see him."

"Very well," said she, gaily; "you will find him in the library;" and she accompanied him to the hall, which he crossed and entered the library. So the "Colonel" called it, though the only books there were such as pertained in some way to his business.

Vernon found him sitting in a large arm-chair, with several letters lying open before him, which he had apparently been reading, and over the contents of which he seemed to be pondering. He raised his head as Allen entered, and pushing a chair towards him, bowed gravely, and said, "Good morning."

Some men seem to have an instinctive knowledge when a favour is about to be asked of them; and their manners contract accordingly, like the leaves of the sensitive plant, at the approach of a stranger. Allen thought it was so with Talbot, but he did not pause; for, once resolved, he never changed his mind except upon good reasons.

"I called this morning, Colonel," said he, after returning Talbot's greeting, "to ask a favour of you."

"A favour, eh?" said the Colonel. "I will be glad to do it if I can."

"It is this," said Allen, finding it unaccountably hard to announce it; "I have engaged with Major Bryce to go with him to Mexico. I shall be gone, probably, little more than a year, and I want to make provision for my father during my absence." He went on to state the facts as they were, concluding by offering to secure him against loss, as stated before. Talbot listened coolly; and when he was through, calmly took the note Allen presented, and read it over.

"I will execute the mortgage immediately," said Allen.

"I shall be very glad, my young friend," said Talbot, after a pause, "if I find myself able to do this for you without violating my rules. My rule is this," he continued, a little pompously; "I have done business successfully for more than thirty years—boy and man—and I have never departed from it—I never put my name to any paper for money without seeing clearly that I will have the money at command from my business."

"But," said Allen, "you will not have to pay this; it is only —"

"I understand," interrupted Talbot; "but my rule is, to be prepared to pay it at all events—we can never tell what may happen."

"Very true," said Vernon, "but still—"

"Hear me out," again interrupted the Colonel. "I fear that my funds are all invested for the year to come; but still I may find that a thousand dollars may be spared. I will examine my books when I go to the warehouse, and give you an answer to-morrow, which I hope may be favourable. I shall leave home to-morrow for several weeks, so it had better be done in the morning."

"And the mortgage," said Vernon, "I will have—"

"Never mind the mortgage," said the Colonel, "I do not want it in any event."

Soon afterwards Vernon took leave, highly impressed with the Colonel's good intentions, promising to call again for his answer at twelve o'clock on the morrow.

## CHAPTER XI.

"Who cannot be crushed by a plot?"—ALL'S WELL THAT ENDS WELL.

"This is the fruit of craft."

Like him that shoots up high—looks for the shaft,  
And finds it in his forehead.—MIDDELTON.

"Has Mr. Vernon been here this morning, Cara?" said Colonel Talbot, entering the drawing-room a little before ten o'clock on the following morning.

"He never comes so early as this, father," said Cara. "Did he make an engagement to meet you here so early?" and she looked down at the loose, white dress she wore, as if it would be scarcely seemly to be seen by Allen.

"No, not so early," answered her father; "but I thought perhaps he might come. I cannot wait for him, however."

"Why," said Cara, perceiving that he was dressed, apparently for travelling, "you are not going till afternoon?"

"I have received letters this morning, my dear," he said, "which make it necessary for me to go by the morning train. I shall have to stop and see him as I go to the station." Kissing his daughter hastily, he hurried out of the room, and, soon afterwards, she saw him get into a carriage and drive away for the railroad station.

A little before the same hour, Vernon was sitting in his studio, retouching a last work, when the door opened, and Hugh Talbot entered.

"Good morning, Mr. Vernon," said he; "I have brought the rack: shall I put it up immediately?" He turned and brought in a kind of frame with skeleton shelves, evidently made to support pictures. In this he designed to deposit his paintings until his return.

"Yes," Vernon replied; and rising, opened a small closet on the south side of the room, very near the south-eastern corner. In order to open the door, he had to move a small table, which stood under the front window, and, upon which, among paints, brushes, crayons, and other articles of his pursuits, were writing materials. The opening disclosed was, perhaps, four feet wide and three feet deep, and around three sides of it were ranged pins, apparently for the purpose of hanging clothes.

"I want the rack so placed," said Allen, "as to admit of a painting being

slid in and lodged thus," showing him with a piece of prepared canvass on the upright frame.

"Exactly," said Hugh, "I understand."

"Let me help you to place it before I leave you," said Allen, "for I shall not probably return before you will have finished it."

They accordingly lifted the frame within the closet, where a nail or two fixed it temporarily, and Vernon left him. Hugh went whistling about his work, and soon had the pins knocked off and sawed down, to clear his way. While he was thus occupied, a loud knock at the door announced a visitor, and without hesitation Hugh called out—

"Come in!"

"Is Mr. Vernon at home—Mr. Allen Vernon?" asked Colonel Talbot, in a voice of considerable importance.

"No, sir," said Hugh, and went on with his work.

"Then I shall have to leave it here for him," said the Colonel hastily.

"Leave what?" said Hugh, bluntly.

"I will write a note for him," said the Colonel, his eye lighting on the paper, and catching at any escape from leaving a message with such a "plebeian" as this bluff mechanic. He accordingly sat down by the table, and taking a sheet of paper, wrote as follows:—

"Thursday Morning, 10 o'clock.

"DEAR MR. V.—On examining the state of my affairs, I find it impossible to accommodate you. With the security of this valuable property, however, I doubt not you can easily have it done. I am called away so as not to be able to redeem the appointment. Hoping you may find no difficulty in so doing, I remain,

"Your most humble servant and friend,

"J. TALBOT."

He then took a note from his pocket-book (the same which Vernon had signed and left with him), and laid them both together open on the table.

"Tell Mr. Vernon I left that for him," said he to Hugh.

"Didn't you sign your name to it?" said Hugh, quietly.

"Yes, certainly," said the Colonel, "what's that to you?"

"Oh nothing," said Hugh; "only if you did, what's the use of my telling him? I suppose he can read?"

The Colonel did not deign to reply, but, with a measured and stately tread, left the room, with Hugh's laugh ringing in his offended ears. Hugh laid down his tools, ceased laughing, and looked out of the window at his retreating figure.

"The pompous old aristocrat!" he exclaimed, "to leave his messages with me, as if I were his servant!" And his mind recurred to his recent elevation to the post of second-lieutenant. He stood musing over the thousand pleasant images this thought brought up so teasingly, until Talbot's carriage was out of sight. Just as he was turning from the window, the gate opened again, and Hugh saw Thorpe enter.

"Humph!" said he to himself; "there comes another of them—as great an aristocrat as old Talbot at heart, only a demagogue to boot. I'll not subject myself to another insult, any how." Muttering these words, he stepped into the closet, with the purpose of letting Thorpe go away without seeing him, if he came in; and pulled the door of the closet as nearly to as he could get it, just as Thorpe, having knocked and received no answer, opened the door and entered.

As usual, when he entered a room, Thorpe's eye took in the whole with one sweeping glance.

"Not at home," he muttered; and taking up a pen, he sat down in the chair which Talbot had left but a few minutes before, with the purpose of leaving a note. He had actually written "Thursday Morning, 10 o'clock," when his eye fell upon Talbot's note.

"Ha!" he exclaimed, taking it up, "what's here?"

He read first the note signed by Vernon, and then Talbot's card two or three times. His hand sank back upon the table, and his eyes fixed for a moment upon a spot on the table. He then coolly took up the pen again, and looking from one to the other, wrote under "Allen Vernon" the name of "J. Talbot." He then compared them closely and muttered to himself—

"This is lucky, indeed! Old Manning himself, sharp as he is, will never detect that—and, then, I have him and—her."

He smiled placidly as if complimenting himself, as indeed he was, and coolly doubled up Talbot's note and placed it in his coat pocket. He then resumed the pen and wrote again—

"Dear Mr. V. On making the examination of my affairs, I find I can do you the favour.

Your friend,

"J. TALBOT."

"He never saw much of his writing," he again muttered; "and besides that is a very fair imitation." He took the paper again from his pocket and compared them. Smiling again, he replaced it in his pocket and rose from the table.

"It was a lucky thought to learn the old man's hand," he said, "and now securs me his daughter—and his wealth afterwards."

As he went out and shut the door after him, the door of the closet slowly opened, and Hugh stepped forth.

"Not so lucky, perhaps, as you think, you shameless villain!" he said, advancing to the table and reading the note. "The scoundrel!" he again exclaimed; and he too fell into a fit of thought. But he had not the fault of talking to himself—the weakness of many very deep men, whether in villainy or learning of another sort—and we cannot therefore exactly tell what he thought. His actions must therefore speak for him.

(To be continued.)

PRACTICAL ILLUSTRATIONS OF POPULAR  
FALLACIES.

No. XXV.—HONOUR AMONG THIEVES.

WHAT is honour? There seems to us something extremely doubtful and fallacious in this word; and particularly when we hear that it is to be found among thieves. Honour, a name that we give to high and holy things, coupled with the most base and degraded! How is this? We are afraid the world has not yet discovered how to call things by their proper names; that we call some things honourable, which in reality are dishonourable; and that if we had true notions of honour, we should not expect to find it among thieves. We too often put that vague and uncertain thing called "honour" in the place of religion, morality, and virtue, and seem to imagine that a highly educated man can trust himself to its sole guidance, while an imperfectly taught person would be unable to attain what is called a proper sense of honour. This point is curiously put in one of the imaginary conversations of Walter Savage Landor; the speakers are William Penn and the celebrated Lord Peterborough. "Lax morals," Penn says, "may appear for a time opportune and convenient to thee; but wouldst thou wish thy son or thy daughter, if thou hadst one, to experience the utility of them? or wouldst thou choose a domestic, in town or country, as being the wiser or the honester for thinking like thyself?" Peterborough—"It would bring him to the gallows within the year: for such fellows can have no sense of honour to direct them." Penn—"A sense of honour, it appears to me, is that exquisite perception, whereby a man apprehendeth how he may do the most injury to others for the longest time; how he may be most acceptable to society at the least expense or pains. My own sense of it, on the contrary, I would desire to be such as may direct me how to do to others what shall both content and improve them, not concealing my own infirmities, nor exposing them. Among you, a lofty spirit must ever be an inflammable one; and Courage hath not room for Patience at the side of her. Ye pardon everything done against your God, and nothing done against yourselves, which maketh me sometimes doubt whether those who are called liberal may not be peradventure the most illiberal of mankind." Here Lord Peterborough distinctly states that the same mode of thinking in which he indulged would infallibly bring his servant to the gallows in a week, while with him it led to high military commands. The same mode of thinking which made him a great soldier, would make the other a great robber. The possession of, what he calls, the sense of honour preserving him from the evil consequences of his thoughts; the absence of that sense of honour leading his servant through the same thoughts into crimes deserving the gallows. "Special pleading and forgery," says Mr. Bentham, "both spring from the art of writing; with this only difference between them, the one leads to the Bench, the other to the gallows." The special pleader, of course, being animated by a high sense of honour, while the forger is destitute of that guide. What, then, is honour? What is this thing which exercises such a powerful influence over society, which, while it animates the noblest spirits, and preserves them from evil, is found also among thieves? The answer of Penn teaches us that it is something which men estimate, not by any fixed standard common to all men, but by some arbitrary law which they lay down for their own guidance. In every community will be found smaller aggregations of individuals; each of these having interests common to all the individuals of such aggregations, but opposed to the interests of the remainder of the community. These aggregations make laws for their guidance towards each other, without reference to the rest of the community; and these may be called the laws of honour. There will, therefore, be one law of honour for soldiers, another for thieves; one for courtiers, another for courtisans; one for knight and noble, another for the low-born burgesse. Let us go back for an instant to the palmy days of chivalry for an illustration. In those times,

honour was the great object sought,—honour from the body of knights,—from those within the pale of chivalry; those without that pale were deemed incapable of either conferring or taking away honour. The knights lived for the world of knights, and despised and contemned all who had not attained that dignity. Thus a knight was bound to keep his word pledged to a fellow knight; but he might break his word, and his oath too, to a low-born burgesse: just as the profligate man of fashion of the present day feels bound to pay his gaming debts to his gambling associates, even to the uttermost farthing, lest he should be dishonoured; yet he feels no loss of honour in cheating his tradesmen of their honest due, and defrauding them of the goods for which they have had to pay.

Bearing in mind, then, the fact that the so-called laws of honour are made for different sections of the community, we can understand how it has grown into a proverb, that there is "honour among thieves." Thieves, smugglers, poachers, gamblers,—any aggregation of persons within the general community, having interests at variance with that community,—form their own code of laws of honour, to break which is to become dishonoured among thieves, smugglers, poachers, and gamblers. And they have their own code of morality founded upon these laws. Thieves, for instance, banish the commandment which says "Thou shalt not steal," from their code. They do not recognize the policy of it; for they themselves having rarely anything to be stolen, the idea of theft is not odious to them; and not having in their community any very great pretensions to probity, they agree, by a tacit convention, to undervalue that virtue. Like the Arabs of the desert, "whose hand is against every man, and every man's hand against them," they seem to think they have a right to obtain, by violence or by fraud, a share in the wealth and fertility of the world. And as the Arabs, in the midst of their plundering propensities, are remarkable for their honesty towards the members of their own tribe, in accordance with the old Scottish proverb, that "hawks will not peck out hawks' een," so thieves will rarely be found to rob each other. There must, in fact, be a kind of honour among thieves; for not even a society of thieves could exist without some such bond. But the honour which is valued in such society is not intended to be useful to mankind at large, but only to the thieves themselves. The virtues which they cultivate are not cultivated as virtues, but according to their utility in their profession: thus patience, though it is much valued by them, is not so valued that they may be the better able to endure the ills and crosses of life, but that they may lie in wait for their prey: ingenuity is applauded when exercised in working upon the feelings of some compassionate benefactor, or in devising some cunning device for securing their booty: valour is most esteemed when they have to defend themselves against the officers of justice: fidelity is only useful in screening their companions in some scheme of mischief: honour is given to those who are most successful in villany, or who die game without betraying their associates. It is, then, true that there is "honour among thieves;" but it is a fallacy to suppose that this kind of "honour" is to be regarded with approbation. The expression, "honour," with its very doubtful signification, proves to us, that in ethical and moral matters and relations, it is only a very fine line that divides right from wrong; and that the false application of a right principle leads us into the gravest errors. Let us take for example the term "fidelity," a quality that gives the highest "honour among thieves;" and by its possession creates that sympathy and applause of which every man, in whatever situation he may be placed, is desirous. Without a certain amount of fidelity towards each other, no society could exist among thieves; consequently this fidelity is greatly prized among them. But then it is fidelity to criminal engagements: the principle is right, but the application of it is wrong. And yet the world, generally misled by the right principle, and overlooking its false application, praises this fidelity, even though it be to a criminal engagement; holds up the thief maintaining it to public sympathy; and denounces the man who breaks these criminal engagements as mean-spirited, and devoid of honour. *Fidelity to criminal engagements is repugnance*; and we erect a barrier against repentance when we thus uphold this false notion of honour. When we offer reward for the discovery of crime, the state opens the door to this repentance; but to censure a man for accepting such offer, or to commend him for the refusal of it, is to shut the door in his face, reject his repentance, prevent his return to a better course of life, and increase the danger to the community at large from the community of thieves. Besides, if we analyse this thief fidelity, we shall discover that it does not arise from sympathy towards one another. From those kindly feelings which are deserving respect in whatever station of life they may be manifested, but from their antipathy to government, law, order,—to all the common bonds by which society is held together. There is, indeed, no portion of the community in which so many unexampled and disgusting proofs of heartlessness are to be found: in the depravity of a life of crime it is almost impossible that kindly sympathies should spring up; quite impossible that true honour should exist. Hence we have continually the most frightful examples of the breach of that very fidelity which they laud so highly; proving that the proverb "honour among thieves" has no real foundation.

The evils arising from this mistaken notion of honour, combined with the antipathy to law and government, are nowhere more fearfully exemplified than in unhappy Ireland. The most frightful crimes are perpetrated in open day, in the presence often of hundreds, to whom the criminals are well known; and yet not one of the bystanders will lift a hand to prevent the crime, or give one tithe of evidence to bring the offenders to justice. They may, and often do, hate and detest the crime itself,—their sympathies may be entirely with the wretched victim,—but their antipathy to law and government is too strong for their sympathies, and, under a false notion of honour, they screen the offenders from the power of the law, and the punishment due to their crimes. This fidelity of accomplices towards each other, and of ac-

cessories to criminals, although it may be called "honour among thieves," is in reality one of the greatest evils that afflict Ireland; it puts her without the pale of the law; it fosters a spirit of crime and revenge; it encourages a brutal ferocity; and undermines every bond of society. Neither life nor property can be secure where this kind of "honour among thieves" is held up as deserving of imitation.

Let us now turn to some of the other classes of society in which a similar principle is carried out, and with similarly injurious results. It is not true of every individual man, but it is of aggregations of men, that wherever they are possessed of so much power as to be in a degree independent of the good or ill opinion of other aggregations of men, that they make one moral rule or code of honour for their conduct among themselves, and another and a totally different code of honour for their conduct towards all other persons. We have already alluded to the knights of old, from whom we derive the principal features of the modern code of honour; they were, as a class, so far removed from the other classes of society, that it was easy for them to frame a code of honour without any reference to other people: it was full of courtesy towards each other, and of contempt for the rest of the world. Honour was with them a blood-stained deity; and plunder was the appropriate sacrifice on its altar. Military glory, success in arms, were their darling passions; and the plunder of the weak was their constant employment. So habituated were they to ravage and plunder, that the church was at length obliged to interfere; and what was called the "Truce of God" was invented, which restricted them from plundering, except on one day in the week; but this was not suiting the very active propensities of the knights, the church was obliged to give way, and extend the time for their rapacious plundering, until at length they received the sanction of the church to "rifle, rob, and plunder" for five days and six nights in the week. It was amongst such a society as this that the code of honour was framed; we need not, then, feel much surprised at tracing back the origin of the proverb "honour among thieves" to the palmy days of chivalry. The lax state of morals which then existed made it convenient to the knights to consider many things as honourable, or, at least, not dishonourable, which we of the present day should deem highly disgraceful. Society itself has changed, and no longer consists of men of the two classes of nobles and vassals,—one, to whom honour was due; the other, with whom it was unnecessary to keep faith. And the feelings upon which the old code of honour was founded have undergone a corresponding change. The sympathies of the people, for example, are no longer on the side of the bold offender, who, relying on his personal strength or skill in arms, insulted and oppressed the weaker and less skillful. Physical force has given way to moral power. The change that has taken place in what was deemed honourable satisfaction, the practice of duelling, particularly here in England, affords strong evidence of the improvement in the modern code of honour. Formerly, a gentleman high in station could oppress and insult one in humble life with impunity: he had guarded against any personal consequences, by decreeing that it was not honourable to allow one of an inferior station the privilege of duelling; in fact, that as the inferior had no honour, an insult could be felt by him: honour dwelt only among a certain class; and amongst that class it is now become a general feeling, that a duel is about the worst possible way of giving or receiving satisfaction for an affront, or for maintaining one's honour. A man who would be continually thrusting his duelling-pistol in your face, is avoided as a pest to society; he is no longer considered as a person of high honour, but a disturber of the general peace. If two very turbulent persons of this description quarrel with each other, the world is now inclined to recommend them to adopt the Japanese code of honour, and that one should set the example of blowing out his own brains, which the other, as a point of honour, was bound to follow; and thus rid the world of two quarrelsome blockheads at once. We have, indeed, now contrived to change places with honour and dishonour on this subject. It is no longer considered honourable to offer an insult that can only be maintained by the pistol: public opinion ranges itself on the side of the insulted, and attacks the swaggering bully with opprobrium. It is no longer considered dishonourable to apologise for an offence committed in the heat of the moment, and thus avoid the necessity of a hostile encounter. Public opinion supports this mode of reparation. The world has found out that the habit of appealing to force multiplied insults, and aggravated the evils it was supposed to correct. It did require a bold and manly courage to oppose the prejudices of society on this point,—the prejudices which had become fixed in our minds. Even the philosophic Mr. Bentham had originally some prejudices in favour of duelling; but he outlived them, as he states in his letter to the Duke of Wellington, occasioned by the "Iron Duke's" duel with Lord Wmehalsca. "For my own part, in former days I thought I saw some benefits from it to mankind, and committed the mention of them to writing, and, if I misrecalled not, to the press. On further consideration, I have arrived at the persuasion, that they amount to little, if anything; and that, at any rate, they are, in a prodigious degree, outweighed by the mischievous effects." If such an original thinker as Mr. Bentham was puzzled for a time, it only proves that he did not start from the right point to arrive speedily at just conclusions; but it also proves that whatever be the basis on which we build our reasoning, whether from the principles of religion, or the principles of utility, we arrive at last at the same conclusion as to the injurious effects of duelling, and the code of honour which enforces the practice. "Ill-advised man!" is the commencement of this letter to the Duke; and after stating what we have above quoted, he goes on,—“mere insensibility to danger of pain and death is a virtue which man possesses in joint tenancy with the bull, the bear, and their challenger—the dog. Now, then, if to personal and physical, you add moral courage, I will tell you what to do. Go to the House of Lords; stand up there in your place, confess your error, declare your repentance; say you have violated your duty to your sovereign and

your country; and promise, that on no future occasion whatsoever, under no provocation whatsoever, in either character, that of *giver* or that of *acceptor* of a challenge, will you repeat the offence." We do not mean to attribute all that has subsequently been done to get rid of duelling, to that letter; but since then there has been a gradual diminution of the practice, until now in England it is scarcely ever heard of. A few years since, a couple of bullies from a gambling-house went out to fight a duel, with their dissolute companions forming a ring round them to witness the affair, as if it were a prize-fight. This made duelling vulgar—a kind of "honour among thieves"—and made gentlemen more anxious to avoid being mixed up in such a questionable affair than hasty to rush into them. The reformed Parliament being something more of a people's House than theretofore, with less of chivalry perhaps, but more of sound sense, set its face against the practice; and men boldly refused to go out at the call of every one who imagined himself insulted,—apologising, if they felt they were wrong, and justifying themselves when in the right. Even in the military and naval services it is no longer considered as a necessary test of courage that a duel must be fought. The false code of honour suited to the feudal period, and an uncivilized state of society is replaced by a better,—by one which inculcates sound principles, and not mere physical daring. The old code, engendered of pride and vanity, has sunk under the world's censure; but "who would banish from existence a true sense of honour, and a noble thirst of fame? And how would society lose all its tone, and its true ring, if we were to withdraw from it all those precious metals?"

## THE COUNTRY SQUIRE.

A country Squire, of greater wealth than wit,  
(For fools are often bless'd with fortune's smile),  
Had built a splendid house, and furnish'd it

In splendid style.

"One thing is wanting," said a friend,  
"for, though  
The rooms are fine, the furniture pro-

fuse,  
You lack a library, dear Sir, for show,  
If not for use."

"'Tis true, but, zounds!" replied the Squire with glee,  
"The lumber-room in yonder Northern wing

(I wonder I ne'er thought of it) will be  
The very thing.

"I'll have it fitted up without delay  
With shelves and presses of the newest mode,  
And rarest wood, befitting every way

A Squire's abode.

"And when the whole is ready, I'll de-

spatch  
My coachman—a most knowing fellow—  
down,

To buy me, by admeasurement, a batch  
Of books in town."

But ere the library was half supplied  
With all its pomp of cabinet and shell,  
The bonny Squire repented him, and

cried  
Unto himself.—

"This room is much more roomy than I  
thought,  
Ten thousand volumes hardly would

suffice  
To fill it, and would cost, however bought,  
A plaguey price.

"Now, as I only want them for their looks,  
It might, on second thought, be just as  
good,  
And cost me next to nothing, if the books

Were made of wood.

"It shall be so. I'll give the shaven deal  
A coat of paint—a colourable dress,  
To look like calf or vellum, and conceal

Its nakedness.

"And gilt and letter'd with the author's  
name,  
Whatever is most excellent and rare

Shall be, or seem to be ('tis all the same),  
Assembled there."

The work was done; the simulated boards  
Of wit and wisdom round the chamber

stood,  
In binding some, and some, of course, in  
boards,  
Where all were wood.

From bulky folios down to slender twelves,  
The choicest toms in many an even  
row,

Display'd their letter'd backs upon the  
shelves,  
A goodly show.

With such a stock, which seemingly sur-  
pass'd  
The best collection ever form'd in Spain,

What wonder if the owner grew at last  
Supremely vain?

What wonder, as he paced from shelf to  
shelf,  
And count'd their titles, that the Squire

began,  
Despite his ignorance, to think himself  
A learned man?

Let every amateur, who merely looks  
To backs and bindings, take the hint,  
and sell  
His costly library—for painted books

Would serve as well  
From the Spanish of Yriarte.

PHENOMENON DEPENDING ON THE DIFFERENT REFRACTIBILITY OF LIGHT.—If you hold your finger in a perpendicular direction very near your eye, that is to say, at the distance of a few inches at most, and look at a candle in such a manner that the edge of your finger shall appear to be very near the flame, you will see the border of the flame coloured red. If you then move the edge of your finger before the flame, so as to suffer only the other border of it to be seen, this border will appear tinged with blue, while the edge of your finger will be coloured red. If the same experiment be tried with an opaque body surrounded by a luminous medium, such, for example, as the upright bar of a sash window, the colours will appear in a contrary order. When a thread of light only remains between your finger and the bar, the edge of your finger will be tinged red, and the edge next the bar will be bordered with blue; but when you bring the edge of your finger near the second edge of the bar, so that it shall be entirely concealed, this second edge will be tinged red, and the edge of the finger would doubtless appear to be coloured blue, were it possible that this dark colour could be seen in an obscure and brown ground.—*Hutton's Mathematical Recreations.*

WORTH KNOWING.—It is said that a small piece of resin, dipped in the water which is placed in a vessel on a stove (not an open fireplace), will add a peculiar odour to the room, which will afford great relief to persons troubled with a cough. The heat of the stove is sufficient to throw off the aroma of the resin, and gives the same relief that is afforded by the combustion of the resin. This is preferable to combustion, because the evaporation is more durable. The same resin may be used for weeks.

## ONWARD!

**PANAMA RAILROAD.**—The Panama Railroad was regularly opened for travel on the 15th of March, and passenger trains pass daily over from the Atlantic terminus to the Bujo Soldado. A new city, called Aspinwall, has been founded at the gulf terminus of the road to Navy Bay.

**NATIONAL EXHIBITION IN DENMARK.**—From Denmark it is stated that the capital is about to be endowed with a Crystal Palace, after the designs of Professor Hetsch. This edifice is to occupy a surface of 1,800 square metres,—and is destined for Exhibitions of the Fine Arts and the Industry of the three Scandinavian kingdoms. The funds are provided by an association of Danish, Swedish, and Norwegian capitalists.

**VAPOUR DISPELLING APPARATUS.**—Mr. G. Murrell, of Queen's-road, West, Chelsea, has registered an invention called the "Anti-Mephitical Ventilator, or Vapour Dispelling Apparatus," which possesses the several advantages of curing smoky chimneys, purifying recesses where impure air is likely to be generated; also possessing the peculiar advantage of a reversible action, causing a circulation of pure air through any apartment underground. It has gained the approval of several men of science.

**GREAT EXHIBITION OF INDUSTRY IN IRELAND.**—The Munster Exhibition is to open early in the summer, and will be inspected by the Lord Lieutenant, who has become the patron. A sum of £15,000 has been contributed, and the alterations and additions which are being made to the Corn Exchange are progressing, and will shortly be complete. This building, which the trustees have placed at the disposal of the managing committee (with the grounds attached) incloses an area of five acres. The northern hall is 85 feet by 86 feet, leading to a gallery 320 feet long by 30 feet wide, lighted from above.

**KING'S COLLEGE HOSPITAL.**—The task of removing the old buildings in Carey-street and Grange-court from the site of the proposed new hospital proceeds rapidly. The first stone of the new building will be laid by the Earl of Ellesmere, the President of the institution. The new hospital will occupy the extensive site, bounded by Portugal-street, Carey-street, Grange-court, and St. Clement's-lane, of which site the now disused burial-ground of St. Clement's parish will form a part. The new corporation have powers under their Act of Parliament to purchase the houses at the end of Houghton-street, which will be pulled down, so as to open out a direct communication with King's College, and to create a new thoroughfare between the Strand and Lincoln's-inn Fields, thus effecting a great public improvement.

**THE PORTLAND BREAKWATER.**—This great work still progresses. Upwards of 60 tiers of piles, according to the *Sherborne Journal*, are now erected, each being 30 feet apart. The timbers, after pickling till black in a tank, are fitted at the lower end with a large iron screw, weighing 60 pounds, and each pile being now ready for use, is towed off by a boat, the bottom being secured so as not to sink until it gets to the required spot. When arrived there it is let go, the bottom part, of course, sinks, and the pile stands perpendicularly in its appointed place. It is then screwed into the ground from the top by the workmen. A large chimney has just been completed, which communicates with the blacksmiths' shops, where the screws and other iron-works are made. The present contractor, Mr. Leacher, has 1,000 feet to construct. Great advantage is already derived by the shipping which put into the roads from the part already constructed.

**SHUTTING BRICK HOUSES.**—A house, three stories high, has been safely removed 10 feet 6 inches backwards, at the instance of the commissioners for widening the streets of an American town. As possibly the plan might be of use in some of the towns of old England, where the old and narrow thoroughfares are choked by the traffic of our free-trade age, we subjoin the *modus operandi*. Concave cast-iron plates are prepared, the foundation of the wall cut away, and two plates facing each other inserted, with cannon balls between them. On these plates and balls, placed under all the walls, the whole building rests. Three screws are applied, and the whole building is rolled upon them any distance. These plates and balls are removed one by one, and the bricks replaced. It is estimated that the block weighed 7,000 tons. It was rolled on one hundred and twenty balls, and was removed, after the plates were set, in about two hours' time. —*Boston Paper*.

**ECONOMICAL INCREASE OF POWER AND SPEED.**—An exhibition of a mechanical application to hydraulic and steam-engines, invented by Mr. J. Nye, has lately taken place in the presence of several eminent engineers who were specially invited. Mr. Braidwood and staff, with a picked engine from the West of England Fire-office, also attended to test the invention as applied to pumps, with the following results:—Twenty-five men at the West of England engine, throwing respectively 1½ inch and 1¼ inch columns of water, are said to have been beaten by eighteen men at Nye's patent engine. The invention was also shown as applied to a steam-engine of six horses' power, and with a piston working a 6-inch stroke, which is said to have produced a 15-inch throw of the crank in the same time and with less power than would be required to produce a 3-inch throw of the crank upon the old principle. The invention applied to a pile-driving engine, is said to be capable of yielding seven blows of the monkey, struck with the same power and in the same time that the machines hitherto constructed perform one blow.

## POETICAL QUOTATIONS.

## BANISHMENT.

Flies may do this, when I from this must fly;  
They are free men, but I am banished.

*Shakspeare's Romeo and Juliet.*

I've stooped my neck under your injuries,  
And sigh'd my English breath in foreign clouds,  
Eating the bitter bread of banishment;  
While you have fed upon my signories;  
Dispark'd my parks, and fell'd my forest woods;  
From mine own windows torn my household-coat,  
Raz'd out my impress; leaving me no sign,  
Save men's opinions, and my living blood,  
To show the world I am a gentleman.—*Shakspeare's Richard III.*

Banish me?

Banish your dotage; banish usury,  
That makes the senate ugly.—*Shakspeare's Timon.*

## BATTLE.

Therewith they 'gan, both furions and fell,  
To thunder blows, and fiercely to assaile  
Each other, bent his enemy to quell,  
That with their force they perst both plate and maille,  
And made wide furrows in their fleshes fraile,  
That it would pity any living eye.  
Large floods of blood adown their sides did raile,  
But floods of blood could not them satisfie;  
Both hongred after death; both chose to win or die.

*Spenser's Faery Queen*

• Much work for tears in many an English mother,  
Whose sons lie scatter'd on the bleeding ground;  
Many a widow's husband grovelling lies,  
Coldly embracing the discolour'd earth;  
And victory, with little loss, doth play  
Upon the dancing banners of the French.—*Shakspeare's King John.*  
A thousand hearts are great within my bosom;  
Advance our standards, set upon our foes;  
Our ancient word of courage, fair Saint George,  
Inspire us with the spleen of fiery dragons!  
Upon them! Victory sits on our helms.—*Shakspeare's Richard III.*

The cannons have their bowels full of wrath;  
And ready mounted are they to spit forth  
Their iron indignation 'gainst your walls. —*Shakspeare's King John.*

Methought, he bore him in the thickest troop,  
As doth a lion in a herd of neat;  
Or as a bear, encompass'd round with dogs;  
Who having pinch'd a few, and made them cry,  
The rest stand all aloof, and bark at him.—*Shakspeare's Hamlet.*

And now, their mightiest quell'd, the battle sweeten'd,  
With many an inter'd god; deformed rout  
Enter'd and foul disorder; all the ground  
With shiver'd armour strown, and on a heap  
Chariot and charioteer lay overturn'd  
And fiery flaming steeds.—*Milton's Paradise Lost.*

The shout

Of battle now began, and rushing sound  
Of onset ended soon each milder thought.—*Ibid.*  
Now night her course began, and over heaven  
Inducing darkness, grateful truce, imposed  
Her silence on the odious din of war;  
Under her cloudy covert hath retir'd  
Victor and vanquished.—*Ibid.*

Each at the head

Levell'd his deadly aim; their fatal hands  
No second stroke intended.—*Ibid.*

'T is not the least disparagement  
To be defeated by th' event,  
Nor to be beaten by main force,  
That does not make a man the worse,  
But to turn tail, and run away,  
And without blows give up the day,  
Or to surrender ere th' assault,  
That 's no man's fortune but his fault.—*Butler's Hudibras.*

Hark!—the death-denoouncing trumpet sounds  
The fatal charge, and shouts proclaim the onset—  
Destruction rushes dreadful to the field,  
And bathes itself in blood; havoc let loose  
Now undistinguish'd, rages all around;  
While ruin, seated on her dreary throne,  
Sees the plain strew'd with subjects truly her's,  
Breathless and cold.—*Howard's Scanderbeg.*

My *first* was shouted in the battle's strife,  
When war, with all its bloody deeds, was  
rife.  
My *second*, amid his weeping friends was  
found,  
When he who cried my *first* lay 'neath the  
ground.  
For he was slain before the fight was o'er,  
And my *whole* sped the tidings that—he  
was no more!

### MENTAL RECREATIONS.

*A curious trick upon the cards, called the ten duplicates.*

TAKE twenty cards, and after any one has shuffled them, lay them down by pairs upon the table, with their faces uppermost.

Then desire several persons to fix their minds on different pairs, and remember of what cards they are composed.

You then take up all the cards in the same order you laid them down; and place them again, one by one, on the board, according to the order of the letters in the following table; beginning with the last card, which you will place at the beginning of the first row, the next card you will place so as to stand in the middle of the third row, the third card the second in the first row, the fourth card the fourth in the same row, the fifth in the middle of this row, the sixth at the end of the second row, and so on.

|   |   |   |   |   |
|---|---|---|---|---|
| M | U | T | U | S |
| D | E | D | I | T |
| N | O | M | E | N |
| R | O | R | I | S |

Then, by asking each person which row, or rows, the cards he chose are in, you will be able to point them out, by only remembering the words of the above sentence, and the order of the letters of which they are composed.

Thus, for example, if he say they are in the first row, you know that they must be the second and fourth cards, because the letter U occurs twice in that line.

If he say one is in the second row, and the other in the fourth, they must be the fourth cards of those rows; as is obvious from the recurrence of the letter I; and so of any other pair.

### ENIGMATICAL BOUQUET OF WILD FLOWERS

1. A cunning thief and an article of dress; 2. a colour and a vessel; 3. a quadruped and a gay young lady; 4. one of the elements and an emblem of modesty; 5. a useful animal and part of a lady's dress; 6. a fop and the forest king; 7. a domestic animal and a beautiful colour; 8. to emulate, an interjection, and to prevent; 9. terra firma and to rival; 10. an auxiliary verb.

### TRANSFIGURED PLAYING CARDS.

THE FIVE OF DIAMONDS—"THE HIGHEST WALKS OF SOCIETY."

### TRANSPPOSITIONS.

I.  
An insect of the smallest size,  
If you transpose it rightly,  
Will make what all men ought to prize,  
Though valued by them slightly.

II.  
What skins of oranges are call'd,  
If you transpose, will show  
The power that seems most like to death  
Of any that we know.

III.  
Direct, or reverse, you may read me, ye fair,  
The one way a number, the other a snare.

### CONUNDRUMS.

1. Why is the narrative of the death of Socrates like the upper room of a house?
2. If you give a kiss and take a kiss, what does it make?
3. Why is a man sailing up the Tigris, like one putting his father into a sack?
4. What do we, when, to increase the effect, we diminish the cause?
5. Why is a dog, biting his tail, like a good economist?
6. Why is a feeble old man like a nail driven up to the head in a post?
7. Why is it advisable to cultivate the friendship of a knock-kneed man?
8. Why are blind men like Plato, Socrates, and Seneca?
9. Why is a man who is making cent. per cent. in trade like Ireland?
10. Why are gourmandisers particularly averse to annual parliaments?
11. Why is a lover like a crow?
12. Why is a town in Essex like a noisy dog?
13. What is that which is too much for one; enough for two; but worse than nothing for three?
14. What word is that, which, when a letter is taken from it, makes you sick?
15. Why does the eye resemble a severe schoolmaster?
16. What makes all women alike?
17. Why is a room, full of married folks, like an empty room?

### CHARADE.

Take the name of a thing that your body contains,  
Then scan all your thoughts, and puzzle your brains,  
And add to it a thing, which in valleys is plenty,  
But go to the hills, and you'll find it right scanty;  
And those two together, when you have made known  
To the world, you'll discover a rich trading town.

### ANSWERS TO THE PASTIME OF LAST EVENING.

Page 477.

CHARADES.—1. MISTAKE. 2. INTemperance.

ENIGMAS.—1. CIVIC. 2. TIME.

PICTORIAL CHARADE.—SOL-ACE.

## OUR CORNER CUPBOARD!

THESE six—the proud, the niggard, the dissatisfied, the passionate, the suspicious, and those who live upon others' means—are for ever unhappy.

THE heart is a small thing, but desires great matters. It is not sufficient for a kite's dinner, yet the whole world is not sufficient for it.

"I HOLD it to be a fact," says Pascal, "that if all persons knew what they said of each other, there would not be four friends in the world."

THE following knotty question claims the attention of one or all of our debating societies:—"If a man had a tiger by the tail, which would be the best for his personal safety—to hold on, or let go?"

COMPARISON OF SPEED.—The ordinary rate of speed per second

|  |         |
|--|---------|
| Of a man chased by a ballist, is . . . . .     | 12 feet |
| Of a dog with a kettle to its tail . . . . .   | 16 ..   |
| Of an oyster at full gallop . . . . .          | 20 ..   |
| Of a snail at a jog trot . . . . .             | 21 ..   |
| Of a Greenwich prisoner's wooden-leg . . . . . | 30 ..   |
| Of a gouty alderman at a [de] canter . . . . . | 38 ..   |
| Of a libel going the circuit . . . . .         | 40 ..   |

"You didn't go to Cork to-day, Paddy?" "Och, no," said Paddy, "I heard a gentleman say there would be an eclipse on the moon here to night, and I staid to see it."

## WATCHES.

"He who a watch would keep,  
This he must do:  
Pocket his watch,  
And watch his pocket too."

A SCHOOLMASTER asked one of his boys, in a cold winter morning, what was Latin for cold. The boy hesitating a little, the master said, "A hot sirrah, can't you tell?" "Yes, sir," says the boy, "I have it at my back ends."

## SHYRES OF ENGLAND.

"Essex full of good hoswyls,  
Middlesex full of stryves,  
Kentshire hot as fyre,  
Somerset full of dyre and myre."

A GENTLEMAN, passing along a causeway between two waters, asked an Irishman whom he overtook, if people were not lost there sometimes, seeing that there was no rail to keep them from falling in? "Lost?" answered Pat, "I never knew any body lost here in my life: there have been some drowned; but then, they were always found again."

"I SAY, Bill, what have you done with that horse of yourn?" "Sold him." "What did you sell him for?" "Why, he moved so slow at the last of it, that I got prosecuted half a dozen times for violating the law against standing in the street. The policeman at one time sighted him by a building five times, and couldn't see him move."

## EPITAPH ON SIR C. WREN.

Lay heavy on him, earth, for he  
Laid many a heavy load on thee

A WRETCHED artist, who thought himself an excellent painter, was talking pompously about decorating the ceiling of his saloon;—"I am whitewashing it, and in a short time I shall begin painting." "I think you had better," replied one of his audience, "paint it first, and then whitewash it."

## MILITIA RETURN

E. M. feels quite unfit to serve,  
Being short of strength as well as nerve,  
To take up arms he's most unwilling,  
Though he should need but little drilling,  
For as to March's, let me see,  
He's gone through nearly Thirty-three.

ON one occasion, when John Kemble played Hamlet in the country, the gentleman who acted Guildenstern was, or imagined himself to be, a capital musician. Hamlet asks him, "Will you play upon this pipe?" "My lord, I cannot." "I do beseech you?" "Well, if your lordship insists on it, I shall do as well as I can;" and, to the confusion of Hamlet, and the great amusement of the audience, he played "God save the King."

THE clerk of a country club, who was a schoolmaster, being called on to give a toast, produced the following:—"Addition to the friends of Old England, Subtraction to her wants, Multiplication of her blessings, Division among her foes, and Reduction of her debts and taxes."

Those who in quarrels interpose,  
Must often wipe a bloody nose."—Butler.

## A HINT TO GAMESTERS.

Accept this advice, you who sit down to play,  
The best throw of the dice, is to throw them away.

"SHOULDER ARMS!" exclaimed the captain, in a voice intended to resemble thunder. But the execution of the order was anything but simultaneous; and one man, it was observed, was standing still at ease. Upon being challenged by the captain, why he had not shouldered along with the rest, "What the devil's at the haate?" quoth he, "cauna ye wait till a body tak a snuff?"

## OUR MEMORANDUM BOOK!

WEEDS EXPENSIVE LUXURIES.—The common groundsel ripens about 52 seeds in each head of flowers; and produces about 10 heads, or 2,080 seeds. The dandelion ripens about 135 seeds in each head, of which it produces about 20, or 2,700 seeds. The sow-thistle ripens about 220 seeds in each head, and produces about 40, thus yielding 11,010 seeds per plant. The annual spurge forms about 180 seed-vessels, each containing three seeds, and therefore produces about 510 seeds per plant. These are, as we have said, very low averages. Now, according to this calculation:—

|                                 |        |
|---------------------------------|--------|
| 1 Groundsel producing . . . . . | 2,080  |
| 1 Dandelion . . . . .           | 2,700  |
| 1 Sow-thistle . . . . .         | 11,010 |
| 1 Spurge . . . . .              | 510    |
| = 16,860 plants                 |        |

which will cover just about three acres and a half of land, at three feet apart. To hoe land costs about, we will say, 6s. per acre; so that the allowing for such weeds to produce their seed may involve an expense of a guinea. In other words, a man throws away 5s. 3d. a time as often as he neglects to bend his back to pull up a young weed before it begins to fulfil the first law of nature.

THE REAL GENTLEMAN.—Not he who displays the latest fashion dresses in extravagance, with gold rings and chains to display. Not he who talks the loudest, and makes constant use of profane language and vulgar words. Not he who is proud and overbearing—who oppresses the poor, and looks with contempt on honest industry. Nor he who cannot control his passions, and humble himself as a child. No; none of these are real gentlemen. It is he who is kind and obliging—who is ready to do you a favour with no hope of reward—who assists those who are in need—who is more careful of his heart than the dress of his person—who is humble and sociable—not irascible or revengeful—who always speaks the truth without resorting to profane or indecent words. Such a man is a gentleman, wherever he may be found. Rich or poor, high or low, he is entitled to the appellation.

CANADIAN METHOD OF HUNTING WILD BEES.—The Canadians adopt an ingenious plan for discovering the trees that are stored with honey. They collect a number of bees off the flowers in the forest and confine them in a small box, at the bottom of which is a piece of honeycomb, and in the lid a square of glass, large enough to admit the light into every part. When the bees seem satiated with honey, two or three are allowed to escape, and the direction in which they fly is attentively watched until they become lost in the distance. The hunter then proceeds towards the spot where they disappear, and liberating one or more of the little captives, he also marks their course. This process is repeated, and the other bees, instead of following the same direction as their predecessors, take the direct opposite course, by which the hunter is convinced he has overshot the object of his pursuit. It is a well-known fact, that if you take a bee from a flower situated at any given distance south of the tree to which the bee belongs, and carry it to the closest confinement to an equal distance on the north side of the tree, he will, when liberated, fly in a circle for a moment, and then make his course direct for his sweet home, without deviating in the least to the right hand or the left. Thus the hunter is very soon able to detect the tree which contains the honey; then, by placing on a heated stick a piece of honeycomb, the odour, when melting, is so strong and alluring, as to entice the bee to come down from their citadel. When the tree is cut down, the quantity of honey found in its excavated trunk seldom fails to compensate the hunter for his vigilance.

HISTORY OF FAIRS.—Fair among the old Romans were holidays, on which there was an intermission of labour and pleadings. Among the Christians, upon an extraordinary solemnity, particularly the anniversary dedication of a church, tradesmen were wont to bring and sell their ware even in the churchyards, which continued especially upon the festivals of the dedicate. This custom was kept up till the reign of Henry VI. Thus we find a great many fairs kept at these festivals of dedications; as at Westminster on St. Peter's day, at London on St. Bartholomew's, Durham on St. Cuthbert's day. But the great numbers of people being often the occasion of riots and disturbances, the privilege of holding a fair was granted by royal charter. At first they were only allowed in towns and places of strength, or where there was some bishop or governor of condition to keep them in order. In process of time there were several circumstances of favour added, people having the protection of a holiday, and being allowed freedom from arrests, upon the score of any difference not arising upon the spot. They had likewise a jurisdiction allowed them to do justice to those that came thither; and therefore the most inconsiderable fair with us has, or had, a count belonging to it, which takes cognizance of all manner of causes and disorders growing and committed upon the place, called *pie powder* or *pedis preteritanti*. Some fairs are free, others charged with tolls and impositions. At free fairs, traders, whether natives or foreigners, are allowed to enter the kingdom, and are under the royal protection in coming and returning. They and their agents, with their goods, also their persons and goods, are exempt from all duties and impositions, tolls and servitudes; and such merchants going or coming from the fair cannot be arrested, or their goods stopped. The prince only has the power to establish fairs of any kind. These fairs make a considerable article in the commerce of Europe, especially those of the Mediterranean, or inland parts, as Germany. The most famous are those of Frankfurt and Lepsie; the fairs of Novis, in the Milanese; that of Riga, Archangel; of St. Germain, at Paris; of Lyons; of Guibray, in Normandy; and of Beauclair, in Languedoc; those of Porto-Bello, Vera Cruz, and the Havannah, are the most considerable in America.

**SPASMS IN THE STOMACH, FLATULENCY, AND INDIGESTION, CURED BY HOLLOWAY'S PILLS.**—Extract of a letter from Mr. Dalwood, of Goodwood, near Sydney, New South Wales, dated Sept. 14th, 1819:—"To Professor Holloway.—Sir,—Having had experimental knowledge of the good effect produced by your valuable Pills, I consider it my duty to make it known that two years ago my daughter, then sixteen years old, had suffered for a long time with cramps in the stomach, flatulency, and indigestion. I tried various remedies without benefit; but a few doses of your wonderful Pills have restored her to perfect health, and she is entirely free from any symptom of her former complaint."—Sold by all Druggists, and at Professor Holloway's Establishment, 214, Strand, London.

"Costly thy habit as thy purse can buy,  
But not expressed in fancy—Rich, not gaudy;  
For the apparel oft proclaims the man."—*Hamlet.*

**EVERY WELL-DRESSED MAN KNOWS** how difficult it is to find a tailor who thoroughly understands the peculiarities of each figure, and can suit its requirements with a well-cut, neatly-fitting garment, at which man and taste, being equally guarded, the eye of the observer is pleased with its graceful effect, while the comfort of the wearer is secured. Hence it is that so few feel "at home" during the first day's wear of any new garment, and so many are apparently disposed to appear in clothes, however costly, that never can become adapted to their forms. To remedy so manifest a deformity in costume, FREDERICK FOX adopts this means of making known that he has practically studied both form and fashion in their most comprehensive meaning, and in the course of an extensive private connection has elicited every conceivable development during the past thirteen years, always adapting the garment, whether coat, waistcoat, or trousers, to the exigencies of its individual wearer, and the purposes it is intended to serve, thus invariably attaining elegance of fit with that regard for economy which the purist of the age dictates.—F. FOX, practical tailor, 73, Cornhill, same side of the way as the Royal Exchange.

SECOND ISSUE OF 5,000.

For the MILLION.—Now publishing, price 1d., post free for 2 stamps.

**THE FIRST ANNUAL REPORT OF THE LONDON SUBURBAN AND HOME COUNTIES PERMANENT BENEFIT BUILDING SOCIETY,** 16 pages, 32mo.

"A thoroughly well-planned Building Society, and the Report decidedly the best treatise ever published on the subject."—"A new era has opened upon us; this deserves and will certainly obtain public support."—*Daily News*.  
Order of the Secretary, Mr. W. L. HARVEY, 7, Goddard-street, Doctors' Commons.

**PEOPLE'S EDITION OF THE PARLOUR LITERATURE OF ALL NATIONS.**

Now ready, bound in one thick Volume, price 6s., elegantly illuminated as a Memorial of the Great Exhibition.

**THE PARLOUR MAGAZINE OF THE LITERATURE OF ALL NATIONS.** Printed in the Crystal Palace, Hyde Park, at Machine No 153, and 164, Class 6.

We have no doubt that this volume of the PARLOUR MAGAZINE will be treasured by many future generations. People flocked to the Crystal Palace after its close, and eagerly bought up, at enormous prices, articles that had been exhibited there, that they might possess some memento of the Exhibition. We supply not only a work exhibited there, but one actually produced by machinery within its walls, and in the view of millions of spectators. The value of our book will therefore increase with the advance of years, until it will be regarded as a curiosity and a treasure.—These volumes contain translations of literary Treasures from the

London: HOULSTON & STONEMAN, 65, Paternoster Row.

**TO THE LADIES.**—Mrs. PULLAN succeeds Mrs. WARREN as EDITRESS OF THE NEEDLE-WORK Department of THE FAMILY FRIEND. Beautiful Patterns in every Number.  
London: HOULSTON & STONEMAN.—Price 2d.

**GLENFIELD PATENT STARCH.—NOW USED IN THE ROYAL LAUNDRY.**—The Ladies are respectfully requested to make a trial of the GLENFIELD PATENT DOUBLE-REFINED POWDER STARCH, which, for domestic use, now stands unrivalled. Sold by nearly all the Oil and Colourmen and Chemists in London, and throughout the Kingdom. Agents wanted: apply to Mr. R. Wotherspoon, 46, Duple-street, Glasgow.  
London Depot: Wotherspoon, Mearns, & Co., 40, King William-street, City.

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers, or Twelve Monthly Parts, which comprise one Volume. At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The price is Two SHILLINGS. The outlay will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully embossed, and illuminated with silver, by a new invention introduced by LEIGHTON, SON, and HOUSE. It is an ornament for the drawing-room table—Order of any Bookseller.

Overture by Peace, with piano & organ.

## THREATENED DEMOLITION OF THE CRYSTAL PALACE.

IN consequence of many thousands of petitions in the United Kingdom having been unable to obtain a copy of the

**GREAT EXHIBITION CHART,** printed in colours, and presented by the Proprietors of the WEEKLY DISPATCH, to their Subscribers and the Public, in the months of January and February last, A RE-ISSUE has been determined upon, to take place on SUNDAY, THE 16th OF MAY.

The Chart, which has undergone a careful revision, shows, by simple diagrams, the number of persons that visited the Exhibition daily, the amount of money taken at the various entrances, the quantity of refreshments consumed, the names of the Royal Commissioners, an account of the origin of the Palace, and its dimensions in feet.

In order that every individual in the country may possess this statistical index of curious and interesting results, to mark the demolition of the building, and to serve as a memento of its existence, the Chart will be delivered GRATIS, to every Subscriber and Purchaser of the DISPATCH on the day stated.

The DISPATCH is published at Four o'clock every Saturday morning, in time for the first Railway Trains leaving London, and for the Morning Mail.

Early orders should be given to any Newsdealer in Town and Country, or to Mr. R. J. Wood, No 139, Fleet-street.

N.B.—The News Agents will have a copy of the Chart with every DISPATCH of May 16th.

Now Published, Price 1s.,

**FAMILY PASTIME. Volume II.** Comprising a first-rate selection of Original and other Enigmas, Charades, Conundrums, Riddles, Games, &c. &c.; together with a CHRISTMAS TALE, with all the Solutions, complete.

The Editor has deemed it advisable to publish the Solutions together with the Enigmas, bound in an elegant style.

London: Houlston & Stoneman; and all Booksellers.

WALKS ABROAD, AND EVENINGS AT HOME.

Now ready, price 2d., a New and Elegant Monthly Periodical, entitled,

## WALKS ABROAD, AND EVENINGS AT HOME.

CONTENTS OF THE FIRST NUMBER.

A Fine Steel Engraving. By Topham, after Leo Illustrated Title Page. By G. Gilbert. Summerfeld; or, Life on a Farm. By D. K. Lee. Views of the Microscope and Telescope. The Awakening of the Birds. With a Fine Engraving. A Botanical Advertisement. The Adventures of Prince Frothy in the World of Insect Wonders. By the Editor. With Three Fine Engravings. Natural Phenomena: Rapids. With a Fine Engraving. Autobiographies of Animals: Dictated by Themselves. No. 1.—The Chipmunk; or, Wild Man of the Woods. With a Portrait. Poetry, and a Miscellany.

London: 69, Fleet-street; and all Booksellers.

MOURNING BONNETS. WEDDING BONNETS.

All at the lowest possible prices, for cash only.

BETHEL WARE.

Manufacturer, 217, Tottenham Court-road, London.

### Editor's Note-Book.

**DOMESTIC HINTS, No. 6.**—If the position of a ladder will not admit of opposite windows, then a current of air must be admitted by means of a flue from the outside.

The beneficial effects of charcoal in stopping putrefaction are now well ascertained; fish or meat may be restored by boiling charcoal with them. "Morning's milk," says an eminent German philosopher, "commonly yields some hundredths more cream than the evening's, at the same temperature." That milked at noon furnishes the least; it would therefore be of advantage, in making butter and cheese, to employ the morning's milk, and to keep the evening's for domestic use. It is useful for the house-keeper to know that bread contains 80 nutritious parts in 100; meal, 34 in 100; French beans, 92 idem; common beans, 89 idem; peas, 93 idem; lentils, 91 idem; chickpeas, and turnips, the most aqueous of all the vegetables compared, produce only eight pounds of solid matter in 100 pounds; carrots and spinach produce 14 in the same quantity; whilst 100 pounds of potatoes contain 35 pounds of dry substance. From a general estimate it results, that one pound of good bread is equal to two pounds and a half or three pounds of potatoes; that 75 pounds of bread and 30 of meat, may be substituted for 300 pounds of potatoes. The other substances bear the following proportions: four parts of cabbage to one of potatoes; three parts of turnips to one idem; two parts of carrots and spinach to one idem; and about three parts and a half of potatoes to one of rice, lentils, beans, French beans, and dry peas. To test whether flour is genuine, people in the trade generally knead a small quantity by way of experiment; if good, the flour immediately forms an adhesive, elastic paste, which will readily assume any form that may be given to it, without danger of breaking. Pure and unadulterated flour may likewise be easily distinguished by other methods: seize a handful briskly and squeeze it half a minute; it preserves the form of the cavity of the hand in one piece, although it may be rudely placed on the table; not so that which contains foreign substances, it breaks in pieces more or less; that mixed with whitening being the most adhesive, but still dividing and falling down in a little time. A considerable increase on home-made bread, even equal to one-fifth, may be produced by using bran water for kneading the dough. The proportion is three pounds of bran for every twenty-eight pounds of flour, to be boiled for an hour, and then strained through a hair-sieve. Excellent paste for fruit or meat pies may be made with two thirds of wheat flour, one third of the flour of boiled potatoes, and some butter or dripping; the whole being brought to a proper consistence with warm water, and a small quantity of yeast added when lightness is desired. This will also make very pleasant cakes for breakfast, and may be made with or without spices, fruits, &c. There are few articles in families more subject to waste, both in paring, boiling, and being actually thrown away, than potatoes, and there are few cooks but what boil twice as many potatoes every day as are wanted, and fewer still that do not throw the residue away as totally unfit in any shape for the next day's meal; yet if they would take the trouble to heat up the despised cold potatoes with an equal quantity of flour, they would find them produce a much lighter dumpling or pudding than they can make with flour alone; and by the aid of a few spoonfuls of good gravy, they will provide a cheap and agreeable appendage to the dinner-table.

**FLUCTUATIONS OF THE BAROMETER.**—J. Wells.—The following remarks are useful to be remembered.

**The Fall of the Barometer.**—In very hot weather the fall of the mercury denotes thunder. Except in very hot weather, the sudden falling of the barometer denotes thaw. If wet weather happens soon after the fall of the barometer, expect but little of it. In wet weather if the barometer falls, expect much wet. In fair weather, if the barometer falls much and remains low, expect much wet in a few days, and probably wind. N.B. The barometer sinks lowest of all for wind and rain together, next to that for wind (except it be an east or north-east wind). **The Rise of the Barometer.**—In winter the rise of the barometer presages frost. In frosty weather the rise of the barometer presages snow. If fair weather happens soon after the rise of the barometer, expect but

little of it. In wet weather, if the mercury rises high and remains so, expect continued fine weather in a day or two. In wet weather, if the mercury rises suddenly very high, fine weather will not last long. N.B. The barometer rises highest of all for north and east winds; for all other winds it sinks. **The Barometer Unsettled.**—If the motion of the mercury be unsettled, expect unsettled weather. If it stand at much rain, and rise to changeable, expect fair weather of short continuance. If it stand at fair, and fall to changeable, expect foul weather. N.B. Its motion upwards indicates the approach of fine weather; its motion downwards indicates the approach of foul weather.

**SLANDER.**—A correspondent, who subscribes himself a victim to slander, inquires what steps can be taken to punish the defamer of his character. Unhappily for the world, there are so many persons who prey upon the feelings and happiness of others, that the vice of slander is by no means uncommon, and when it is exposed, does not meet with the reprobation it deserves. The love of depreciating the character of our neighbour can have only one ground of defence—a bad one indeed—that a calumniator thinks the good qualities of mind and body of which he endeavours to deprive others, will by the means be transferred to himself by this withering of the reputation of another. But in such a bad stock as the calumniator's, only bitter and sour fruit will grow. How strongly the poet speaks:

"Slander,

Whose edge is sharper than the sword; whose tongue  
Out-venoms all the worms of Nile, whose breath  
Rides on the posting wind, and doth belie  
All corners of the world."

In truth, we can only recommend to our correspondent the exercise of those rare virtues, patience and forbearance, not admitting, however, an occasion may serve, to meet the slander with

A SLOUT D. NIAL.

**THE ENGLISH BIBLE.** J. Lynch.—Selden, in his Table-Talk, says, "The English translation of the Bible is the best translation in the world, and renders the sense of the original best, taking in for the English translation the Bishops' Bible as well as King James's. The translators in this monarch's time devised an excellent plan. That part of the Bible was given to him who was most experienced in such a tongue, and then they met together, one reading the translation, and the others holding in their hands some Bible, either of the learned tongues, or French, Spanish, Italian, &c. If they found any fault, they spoke; if not, they read on."

**ORIGIN OF THE WORD "HONEYMOON."** W.—This expression is derived from the Teutonic. Among the Teutones was a favourite drink called *metheglin*. It was made of honey. The same beverage was in use among the Saxons, as well as another, *morat*, which was also made of honey, but flavoured with mulberries. The honeyed drinks were used in great abundance at festivals. Among the nobility the marriage was celebrated a whole lunar month, which was called a moon, during which the guests were supplied with the honey drink. Hence this month of feasting was called *anah moon*, or honey-moon, which means a festival.

**THE CHEMICAL BAROMETER.** W.S.—Take a long narrow bottle, such as an old-fashioned Eau-de-Cologne bottle, and put into it two and a half drachms of camphor, and eleven drachms of spirits of wine; when the camphor is dissolved, which it will readily do by slight agitation, add the following mixture:—Take water, nine drachms; nitrate of potash (saltpetre), thirty-eight grains; and muriate of ammonia (sal ammoniac), thirty-eight grains. Dissolve these salts in the water prior to mixing with the camphorated spirit; then shake the whole well together. Cork the bottle well, and wax the top, but afterwards make a very small aperture in the cork with a red-hot needle. The bottle may then be hung up, or placed in any stationary position. By observing the different appearance which the materials assume, as the

weather changes, it becomes an excellent prognosticator of a coming storm or of a sunny sky.

**COMMUNICATIONS RECEIVED.**—J. SIMPSON (we do not pretend to give medical advice, but in the case mentioned, the complaint may probably proceed from a want of occupation. Armstrong, in his "Art of Preserving Health," says—

"Toll and be strong. By toll the flaccid nerves  
Grow firm, and gain a more compact tone;  
The greener juices are by toll subdued.  
Mellow'd, and subtilized; the vapid old  
Expell'd; and all the rancour of the blood."

**ESSENCE** (benzoin generally constitutes the chief ingredient in the composition of fumigating pastilles, to which may be added any variety of odoriferous substances. The following recipe may be relied upon. Take Benzoin 1 drachm, cascarilla, half a drachm, myrrh, 1 scruple, oil of nut and cloves, of each, 10 drops; nitrate of potash, half a drachm; charcoal, 4 drachms; mucilage of gum tragacanth, enough). **THOMAS** (winter clothes should be laid off late in the spring, and put on early in autumn). **LEWA** (slugging was established in churches A.D. 67). **"The Marseillaise Hymn** is the popular name, erroneously applied, of the national anthem of France). **G. MAYSON** (many thanks for the papers). **L. L.** (the contributions are unsent to our pages). **LEXONOMAS** (a ream of writing, &c., paper consists of 20 quires, but a printer's ream is 24 quires, or 616 sheets). **AWA'VAREY** (treasure trove means in law, money or other treasure found hidden and the owner unknown, in which case it belongs to the Crown. Trove is from the French word *trouver*, to find). **A SURFUSAN** (Dr Adair has recommended to obtain sleep, bathing the feet in a narrow tub, so deep as to reach the knees, gradually increasing the heat by adding hot water, till a gentle sweat is produced. The legs must then be wiped quite dry, and a pair of worsted stockings put on).

**QUESTION** (the discovery of spirits of wine was made about the middle of the twelfth century by the alchemists. These persons treasured up the process as a secret for a long time, and it was not for ages after that it became generally known).—**M.** (alum is not used in bread on account of its quantity, but to disguise a bad quality of flour).—**HUMAS** (locks were known in Egypt upwards of four thousand years since).—**ESQUIER** (the union of England and Scotland took place May 10, 1707. That of Great Britain with Ireland in 1801).—**A WORKING MAN** (for a laquer, take seed, dragon's blood, annatto, gamboge, of each four ounces; saffron, one ounce, rectified spirits of wine).—**JUNJUS** (to make a good black ink, take bruised galls, one pound; green vitriol, eight ounces, gum arabic, four ounces; water, two gallons).—**E** (the signification of the Court of Cassation in France, is the annulling of any act or decision, if the forms prescribed by law have been neglected, or justice has been perverted).—**T. W. G.** (the cotton-gin is a machine to separate the seeds from cotton).—**J. WILSON** (the term *half-pence* is probably derived from the circumstance, that until the time of Edward I., the penny was struck with a cross so deeply sunk into it, that it might, if required, be easily broken and parted into halves and quarters; hence also the term of *farthings* or quadrants).—**S. C.** (a good tooth-powder may be made of orris-root, four ounces; cuttle fish-bones, two ounces; cream of tartar, one ounce; oil of cloves, sixteen drops).—**H. SIMMS** (how to live long is a question beyond the reach of human wisdom; but how to preserve health during the length of days allotted to man by his Creator, may be accomplished with due care and attention. Pope says—

"Reason's whole pleasure, all the joys of sense;  
Lie in these words—health, peace, and competency  
But health consists in Temperance alone;  
And peace, oh Virtue! Peace is all thy own!"

**JAMES** (an offensive breath may be relieved by washing the mouth every morning with some antiseptic powder, as charcoal, or tincture, as that of myrrh or Peruvian bark. Chewing a piece of mastic is also a good corrective). **EDWIN HILL** (we cannot, of course, estimate builder's work. Our correspondent must apply to a duly qualified person).

"The intervals between conversation were employed (by Thornhill) in tracking my daughters' piquet."

## THE VICAR OF WAKEFIELD.

(Continued from page 484)

### CHAPTER VIII.

AN AMOUR WHICH PROMISES LITTLE GOOD FORTUNE, YET MAY BE PRODUCTIVE OF MUCH.

THE next morning we were again visited by Mr. Burchell, though I began, for certain reasons, to be displeased with the frequency of his return; but I could not refuse him my company and my fireside. It is true, his labour more than requited his entertainment; for he wrought among us with vigour, and either in the meadow or at the hay-rick put himself foremost. Besides, he had always something amusing to say that lessened our toil, and was at once so out-of-the-way, and yet so sensible, that I loved, laughed at, and pitied him. My only dislike arose from an attachment he discovered to my daughter: he would, in a jesting manner, call her his little mistress; and when he bought each of the girls a set of ribbons, hers was the finest. I knew not how, but he every day seemed to become more amiable, his wit to improve, and his simplicity to assume the superior airs of wisdom.

Our family dined in the field, and we sat, or rather reclined, round a temperate repast, our cloth spread upon the hay, while Mr. Burchell gave cheer-

fulness to the feast. To heighten our satisfaction, two blackbirds answered each other from opposite hedges, the familiar red-breast came and pecked the crumbs from our hands, and every sound seemed but the echo of tranquillity.

"I never sit thus," says Sophia, "but I think of the two lovers so sweetly described by Mr. Gay, who were struck dead in each other's arms. There is something so pathetic in the description, that I have read it an hundred times with new rapture."

"In my opinion," cried my son, "the finest strokes in that description are much below those in the *Acis* and *Galatea* of Ovid. The Roman poet understands the use of *contrast* better; and upon that figure artfully managed, all strength in the pathetic depends."

"It is remarkable," cried Mr. Burchell, "that both the poets you mention have equally contributed to introduce a false taste into their respective countries, by loading all their lines with epithet. Men of little genius found them most easily imitated in their defects; and English poetry, like that in the latter empire of Rome, is nothing at present but a combination of luxuriant images, without plot or connexion; a string of epithets that improve the sound, without carrying on the sense. But perhaps, madam, while I thus reprehend others, you'll think it right that I should give them an opportunity to retaliate; and, indeed I have made this remark only to have an opportunity of introducing to the company a ballad, which, whatever may be its other defects, is, I think, at least free from those I have mentioned."

## A BALLAD.

"Tow, gentle Hermit of the dale,  
And guide my lonely way,  
To where you taper ethers the vale  
With hospitable ray.

"For here forlorn and lost I tread,  
With fainting steps and slow;  
Where wilds, immemorably spread,  
Seem length'ning as I go.

"Forbear, my son," the Hermit cries,  
"To tempt the dangerous glen;  
For yonder fall's less phantoms rise  
To lure thee to thy doom.

"Here to the houseless child of wand  
My door is open still,  
And though my portion is but scant,  
I give it with good will.

"Then turn to-night, and freely share  
Whate'er my cell bestows,  
My rushy couch and frugal fare,  
My blessing and repose.

"No flocks that range the valley free  
To slaughter I condemn;  
Taught by that Power that pities me,  
I learn to pity them.

"But from the mountain's grassy side  
A gulliblest I bring,  
A cup with herbs and roots supplied,  
And water from the spring.

"Then, patient, turn, thy cares forgo;  
All earth-born cares are wrong;  
Man wants but little here below,  
Not wants that little long.

Soft as the dew from Heaven descends,  
His gentle accents fall,  
The modest stranger lowly bends,  
And follows to the cell.

I'm in a wilderness obscure  
The lonely mansion lay,  
A refuge to the neighbouring poor  
And strangers led astray.

No stores beneath his humble thatch  
Required a master's care;  
The wicket, opening with a latch,  
Received the harmless pair.

And now, when busy crowds retire  
To take their evening rest,  
The Hermit summons his little fire,  
And cheer'd his pensive guest.

And spread his vegetable store,  
And gave proof'd, and smiled;  
And skil'd in legendary lore,  
The lag'ring hours beguiled.

Around in sympathetic mirth  
He ticks the kitten's trills,  
The cricket chirrups in the hearth,  
The crackling target's rills.

But nothing could a charm impart  
To soothe the stranger's woe;  
For grief was heavy on his heart,  
And tears bore on to flow.

His rising eyes the Hermit saw,  
With nowling care observ'd  
"And whence, unhappy youth," he said,  
"The queens of thy heart?"

"From better lot than I am doom'd,  
Believe me that thou dost;  
On love for friendship unattain'd,  
On unrequited love."

"Alas! the joys that bloom in bloom  
Are trifling and decay;  
And those who prize the pretty bloom,  
More trifling still they say.

"And what is friendship but a name,  
A charm that lulls to sleep;  
A shade that follows gently home,  
But leaves the wretch to weep."

"And love is still an empty sound,  
The modern fair-one's test,  
On earth unseen, or only found  
To warm the turtle's nest."

While this ballad was reading, Sophia seemed to mix an air of tenderness with her upbraidings. But our tranquillity was soon disturbed by the report of a gun just by us, and immediately after a man was seen hurrying through the hedge, to take up the game he had killed. This sportsman was the Squire's chaplain, who had shot one of the blackbirds that so agreeably entertained us. So loud a report, and so near, startled my daughters; and I could perceive that Sophia in the fright had thrown herself into Mr. Burchell's arms for protection. The gentleman came up, and asked pardon for having disturbed us, affirming that he was ignorant of our being so near. He therefore sat down by my youngest daughter, and, sportsmanlike, offered her what he had killed that morning. She was going to refuse, but a private look from her mother soon induced her to correct the mistake, and accept his present, though with some reluctance. My wife, as usual, discovered her pride in a whisper, observing, that Sophia had made a conquest of the chaplain, as well as her sister had of the Squire. I suspected, however, with more probability, that her affections were placed upon a different object.

"For shame, fond youth, thy sorrows hush,  
And spurn the art," he said;  
But while he spoke, a rising blush  
This fore-born guest betray'd.

Surprised he sees new beauties rise,  
Swift smiling to the view;  
Like colours o'er the morning skies,  
As bright, as transient too.

The bashful look, the rising blush,  
Alternate spread alarm;  
The lovely stranger starts and blush'd  
A maid in all her charms.

"And ah! forgive a stranger's tale,  
A wretch forlorn," she cried,  
"Whose feet unhallow'd thus invade  
Where Heaven and you reside."

"But let a maid thy pity share,  
Whom love has taught to strive;  
Who seeks for rest, but finds despair  
Companion of her way."

"My father led beside the Tyne,  
A wealthy lord was he;  
And all his wealth was mark'd as mine,  
He had but only me.

"To win me from his tender arms,  
Unnumber'd suitors came;  
Who promised me for imputed charms,  
And fast, or feign'd a flame.

"Each hour a mercenary crowd  
With richest proffers strove;  
Among the rest young Edwin how'd,  
But never took'd of love.

"In humble, simplest habit clad,  
No wealth nor power had he;  
Wisdom and worth were all he had;  
But these were all to me.

"And when, beside me in the dale,  
He carol'd lays of love,  
His breath lent fragrance to the gale,  
And music to the grove.

"The blossom opening to the day,  
The dew of Heaven refin'd,  
Could nought of purity display  
To equal his mind.

"The dew, the blossom on the tree,  
With charms inconstant shine  
Then charms were his, but woe to me,  
Their constancy was mine.

"For still I tried each sickle art,  
Impetuous and vain;  
And while his passion touch'd my heart,  
I triumph'd in his pain.

"Till quite dejected with my scorn,  
He left me to my pride;  
And sought a solitude forlorn,  
In secret, where he died.

"But men the sorrow, mine the fault,  
And well my life shall pay;  
I seek the solitude he sought,  
And stretch me where he lay.

"And there, sad, desperate, and  
I lay me down and die;  
'Twas so, on me that Edwin died,  
And so for him will I."

"Fond art, Heaven! the Hermit cried,  
And did not he love thee best?  
The wretched fate on him I read  
'Twas Edwin's self that press'd."

"Tum, Asah! a ever do  
My charms, I can't see  
Thy own, thy best friend Edwin knew,  
Rejoice to have me there."

"Thus I have told thee to my art,  
And ever ease I own  
And shall we never part,  
My life! my life's to thee!"

"No, never from this hour to part,  
We'll live and love so true,  
The sigh that rends the constant heart,  
Shall break the Edwin's too."

The chaplain's errand was to inform us, that Mr. Thornhill had provided music and refreshments, and intended that night giving the young ladies a ball by moonlight, on the grass-plot before our door. "Nor can I deny," continued he, "but I have an interest in being first to deliver this message, as I expect for my reward to be honoured with Miss Sophia's hand as a partner." To this my girl replied, that she should have no objection, if she could do it with honour: "But here," continued she, "is a gentleman," looking at Mr. Burchell, "who has been my companion in the task for the day, and it is fit he should have in its amusements."

Mr. Burchell returned her a compliment for her intentions; but resigned her up to the chaplain, adding, that he was to go that night five miles, being invited to a harvest supper. His refusal appeared to me a little extraordinary; nor could I conceive how so sensible a girl as my youngest, could thus prefer a man of bad fortune to one whose expectations were much greater. But as men are not capable of distinguishing merit in women, so the ladies often form the truest judgments of us. The two sexes seem placed as spies upon each other, and are furnished with different abilities, adapted for mutual inspection.

## CHAPTER IX.

TWO LADIES OF GREAT DISTINCTION INTRODUCED—SUPERIOR FINERY  
FIVE SEEMS TO CONTRIBUTE SUPERIOR BREEDING.

Mr. Burchell had scarcely taken leave, and Sophia had consented to dance with the chaplain, when my little ones came running out to tell us that the Squire was come with a crowd of company. Upon our return in, we found our landlord, with a couple of under gentlemen and two young ladies, apishly dressed, whom he introduced as women of very great distinction and fashion from town. We hoped not to have chairs enough for the whole company; but Mr. Thornhill immediately proposed, that every gentleman should sit in a lady's lap. This I positively objected to, notwithstanding a look of disapprobation from my wife. There was therefore if patched to borrow a couple of chairs; and as we were in want of ladies to make up a set of country dances, the two gentlemen went with him in quest of a couple of partners. Chairs and partners were soon provided. The gentlemen returned with my eldest daughter's very daughter, flaming with red topknots; but an unlucky circumstance was not averted to them, the Miss Flamboroughs were reckoned the very best dancers in the parish, and understood the jig and round-about to perfection, yet they were totally unacquainted with country dances. This at first discomposed us; however, after a little bowing and chaffing, they at last went merrily on. Our music consisted of two fiddlers, with a pipe and tabor. The moon shone bright. Mr. Thornhill and my child daughter led up the hall, to the great delight of the spectators; for the neighbours, hearing what was going forward, came flocking about us. My girl moved with a much grace and variety, that my wife could not avoid discovering the pride of her heart, by avowing me, that though the little child did it so cleverly, all the steps were stolen from herself. The ladies of the town strove hard to be equally gay, but without success. They swam, sprawled, haggish and fished; but all would not do; the gazers indeed owned that it was fine; but neighbour Flamborough observed, that Miss Livy's feet seemed as pat to the music as it echo. After the dance had continued about an hour, the two ladies, who were apprehensive of catching cold, moved to hie up the hall. One of them, I thought, expressed her sentiments on a very coarse manner, when she observed, that by the time she was all of a muck of sweat. Upon our return to the house, we found a very elegant cold supper, which Mr. Thornhill had ordered to be brought with him. The conversation at this time was more varied than before. The two ladies threw my girls quite into the shade, for we could talk of nothing but high life, and high-lived company; with other terms of praise, such as picture, taste, Shakspeare, and the musical notes. There they once or twice manifested us sensibly by their manner of talking, but that appeared to me the surest symptom of their distinction (though I am so informed that swearing is perfectly unbecoming). Then they, however, threw a veil over any grossness in their conversation. My daughters seemed to regard their superior accomplishments with envy, and what appeared amiss was ascribed to tip-top quality and high life. But the condescension of the ladies was still superior to their other accomplishments. One of them observed, that had Miss Olivia seen a little more of the world, it would greatly improve her. To which the other added, that a single winter in town would make her little Sophia quite another thing. My wife warmly assented to both; adding, that there was nothing she more ardently wished than to give her girls a single winter's polishing. To this I could not help replying, that their breeding was already superior to their fortune; and that greater refinement would only serve to make their poverty ridiculous, and give them a taste for pleasure they had no right to possess.

"And what pleasures," cried Mr. Thornhill, "do they not deserve to possess, who have so much in their power to bestow? As for my part," continued he, "my fortune is pretty large; love, liberty, and pleasure are my maxims; but, excuse me, if a settlement of half my estate could give my charming Olivia pleasure, it should be hers; and the only favour I would ask in return, would be to add myself to the benefit."

I was not such a stranger to the world as to be ignorant that this was the fashionable cant to disguise the insolence of the basest proposal; but I made an effort to suppress my resentment.

"Sir," cried I, "the family which you now condescend to favour with your company, has been bred with as nice a sense of honour as you. Any attempts to injure that, may be attended with very dangerous consequences."

Honour, sir, is our only possession at present; and of that last treasure we must be particularly careful."

I was soon sorry for the warmth with which I had spoken this, when the young gentleman, grasping my hand, swore he commended my spirit, though he disapproved my suspicions.

"As to your present hint," continued he, "I protest nothing was farther from my heart than such a thought. No, by all that's tempting, the virtue that will stand a regular siege was never to my taste; for all my amours are carried by a coup-de-main."

The two ladies, who affected to be ignorant of the rest, seemed highly displeased with this last stroke of freedom, and began a very discreet and serious dialogue upon virtue: in this my wife, the chaplain, and I, soon joined; and the 'Squire himself was at last brought to confess a sense of sorrow for his former excesses. We talked of the pleasures of temperance, and of the sunshine in the mind unpolled with guilt. I was so well pleased, that my little ones were kept up beyond the usual time to be edified by so much good conversation. Mr. Thornhill even went beyond me, and demanded if I had any objection to giving prayers. I joyfully embraced the proposal; and in this manner the night was passed in a most comfortable way, till at last the company began to think of returning. The ladies seemed very unwilling to part with my daughters, for whom they had conceived a particular affection, and joined in a request to have the pleasure of their company home. The 'Squire seconded the proposal, and my wife added her entreaties; the girls too looked upon me as if they wished to go. In this perplexity I made two or three excuses, which my daughters as readily removed; so that at last I was obliged to give a peremptory refusal; for which we had nothing but sullen looks and short answers the whole day ensuing.

## CHAPTER X.

THE FAMILY ENDEAVOURS TO COPE WITH THEIR DEFTERS - THE MISERIES OF THE POOR WHEN THEY ATTEMPT TO APPEAR ABOVE THEIR CIRCUMSTANCES.

I now began to find, that all my long and painful lectures upon temperance, simplicity, and contentment, were entirely disregarded. The distinctions lately paid us by our betters awaked that pride which I had laid asleep, but not removed. Our windows, again, as formerly, were filled with washes for the neck and face. The sun was dreaded as an enemy to the skin without doors, and the fire as a spoiler of the complexion within. My wife observed that rain, too early would hurt her daughters' eyes, that walking after dinner would redder their noses, and she convinced me that the hands never looked so white as when they did nothing. First, and therefore of finishing George's shirt, we now had them new-moulding their old pairs, or dourishing upon content. The poor Mrs. Flamboroughs, their former companions, were cast off as mean and vulgar, and the whole conversation now upon high life and high lived company, with picture, taste, Shakspeare, and the musical glass.

But we could have borne all this, had not a fortune telling gipsy come to raise us into perfect sublimity. The tawny rhyll no longer appeared, than my girls, even running to me for a shilling a-piece to cross her hand with silver. To say the truth, I was tired of being always wet, and could not help gratifying their request, because I loved to see them happy. I gave each of them a shilling; though for the honour of the family it must be observed, that they never went without money themselves, as my wife always let them have a guinea each, to keep in their pockets, but with strict injunctions never to change it. After they had been closeted up with the fortune-teller for some time, I knew by their looks, upon their returning, that they had been promised something great.

"Well, my girls, how have you sped? Tell me, Livy, has the fortune-teller given thee a penny worth?"

"I protest, papa," says the girl, "I believe she deals with somebody that's not right; for she positively declared, that I am to be married to a 'Squire in less than a twelvemonth!"

"Well, now Sophy, my child," said I, "and what sort of a husband are you to have?"

"Sir," replied she, "I am to have a Lord soon after my sister has married the 'Squire."

"How," cried I, "is that all you are to have for your two shillings? Only a Lord and a 'Squire for two shillings! You fools, I could have promised you a Prince and a Nabob for half the money."

This curiosity of theirs, however, was attended with very serious effects: we now began to think ourselves designed by the stars to something exalted, and already anticipated our future grandeur.

It has been a thousand times observed, and I must observe it once more, that the hours we pass with happy prospects in view, are more pleasing than those crowned with fruition. In the first case we cook the dish to our own appetite; in the latter, nature cooks it for us. It is impossible to repeat the train of agreeable reveries we called up for our entertainment. We looked upon our fortunes as once more rising; and as the whole parish asserted that the 'Squire was in love with my daughter, she was actually so with him; for they persuaded her into the passion. In this agreeable interval, my wife had the most lucky dreams in the world, which she took care to tell us every morning with great solemnity and exactness. It was one night a coffin and cross-bones, the sign of an approaching wedding; at another time she imagined her daughters' pockets filled with farthings, a certain sign of their being shortly stuffed with gold. The girls themselves had their omens. They felt strange kisses on their lips; they saw rings in the candle, purses bounced from the fire, and true-love knots lurked in the bottom of every tea-cup.

Towards the end of the week we received a card from the town-ladies; in which, with their compliments, they hoped to see all our family at church the Sunday following. All Saturday morning I could perceive, in consequence of this, my wife and daughters in close conference together, and now and then glancing at me with looks that betrayed a latent plot. To be sincere, I had strong suspicions that some absurd proposal was preparing for appearing with splendour the next day. In the evening they began their operations in a very regular manner, and my wife undertook to conduct the siege. After tea, when I seemed in spirits, she began thus:

"I fancy, Charles, my dear, we shall have a great deal of good company at our church to-morrow."

"Perhaps we may, my dear," returned I, "though you need be under no uneasiness about that, you shall have a sermon whether there be or not."

"That is what I expect," returned she; "but I think, my dear, we ought to appear there as decently as possible, for who knows what may happen?"

"Your precautions," replied I, "are highly commendable. A decent behaviour and appearance in church is what charms me. We should be devout and humble, cheerful and serene."

"Yes," cried she, "I know that; but I mean we should go there in as proper a manner as possible; not altogether like the scrubs about us."

"You are quite right, my dear," returned I, "and I was going to make the very same proposal. The proper manner of going is, to go there as early as possible, to have time for meditation before the service begins."

"Pooh! Charles," interrupted she, "all that is very true; but not what I would be at. I mean, we should go there genteelly. You know the church is two miles off, and I protest I don't like to see my daughters trudging up to their pew all blowed and red with walking, and looking for all the world as if they had been winners at a snook race. Now, my dear, my proposal is this: There are our two plough-horses, the colt that has been in our family these nine years, and his companion Blackberry, that has scarcely done an earthly thing for this month past. They are both grown fat and lazy. Why should not they do something as well as we? And let me tell you, when Moses has trimmed them a little, they will cut a very tolerable figure."

To this proposal I objected, that walking would be twenty times more genteel than such a paltry conveyance, as Blackberry was well-eyed, and the colt wanted a tail, that they had never been broken to the rein, but had an hundred vees oricks; and that we had but one saddle and pillion in the whole house. All these objections, however, were overruled; so that I was obliged to comply. The next morning I perceived them not a little busy in collecting such materials as might be necessary for the expedition; but as I found it would be a business of time, I walked on to the church before, and they promised speedily to follow. I waited near an hour in the reading-desk for their arrival; but not finding them come as expected, I was obliged to begin, and went through the service, not without some uneasiness at finding them absent. This was increased when all was finished, and no appearance of the family. I therefore walked back by the house-way, which was five miles round, though the foot way was but two, and when I got about half-way home, perceived the procession marching slowly forwards towards the church; my son, my wife, and the two little ones, exalted on one horse, and my two daughters upon the other. I demanded the cause of their delay; but I soon found by their looks they had met with a thousand misfortunes on the road. The horses had at first refused to move from the door, till Mr. Burchell was kind enough to beat them forward for about two hundred yards with his cudgel. Next the traps of my wife's pillion broke down, and they were obliged to stop to repair them before they could proceed. After that, one of the horses took it into his head to stand still, and neither blows nor entreaties could prevail with him to proceed. He was just recovering from this dismal situation when I found them; but perceiving everything safe, I own the present mortification did not much displease me, as it would give many opportunities of future triumph, and teach my daughters more humility.

## CHAPTER XI.

THE FAMILY STILL RESOLVE TO HOLD UP THEIR HEADS.

MICHAELMAS-EVE happening on the next day, we were invited to barn-dances, and play tricks at neighbour Flamborough's. Our late mortifications had humbled us a little, or it is probable we might have rejected such an invitation with contempt; however, we suffered ourselves to be happy. Our home-baked goose and dumplings were fine, and the lamb's wool, even in the opinion of my wife, who was a connoisseur, was excellent. It is true, his manner of telling stories was not quite so well. They were very long, and very dull, and all about himself, and we had laughed at them ten times before; however, we were kind enough to laugh at them once more.

Mr. Burchell, who was of the party, was always fond of seeing some innocent amusement going forward, and set the boys and girls to blind man's buff. My wife too was persuaded to join in the diversion, and it gave me pleasure to think she was not yet too old. In the meantime, my neighbour and I looked on, laughed at every flat, and praised our own dexterity when we were young. Hot coxles succeeded next, questions and commands followed that, and last of all, they sat down to hunt the shippie. As every person may not be acquainted with this primeval pastime, it may be necessary to observe, that the company at this play plant themselves in a ring upon the ground, all, except one who stands in the middle, whose business it is to catch a shoe which the company shove about under their hams from one to another, something like a weaver's shuttle. As it is impossible, in this case, for the lady who is up to face all the company at once, the great beauty of

the play lies in hitting her a thump with the heel of the shoe on that side least capable of making a defence. It was in this manner that my eldest daughter was hemmed in, and thumped about, all blowed, in spirits, and bawling for "fair play, fair play," with a voice that might deafen a ballad-singer, when, confusion on confusion! who should enter the room but our two great acquaintances from town, Lady Blaney and Miss Carolina Wilhelmina Amelia Skeggs! Description would but beggar, therefore it is unnecessary to describe this new mortification. Death! To be seen by ladies of such high breeding in such vulgar attitudes! Nothing better could ensue from such a vulgar play of Mr. Flamborough's proposing. We seemed struck to the ground for some time, as if actually petrified with amazement.

The two ladies had been at our house to see us, and finding us from home came after us hither, as they were uneasy to know what accident could have kept us from church the day before. Olivia undertook to be our prolocutor, and delivered the whole in a summary way, only saying, "We were thrown from our horses." At which account the ladies were greatly concerned; but being told the family received no hurt, they were extremely glad; but being informed that we were almost killed by the fright, they were very sorry; but hearing that we had a very good night, they were extremely glad again. Nothing could exceed their complaisance to my daughters; their professions the last evening were warm, but now they were ardent. They protested a desire of having a more lasting acquaintance. Lady Blaney was particularly attached to Olivia; Miss Carolina Wilhelmina Amelia Skeggs (I love to give the whole name) took a greater fancy to her sister. They supported the conversation between themselves, while my daughters sat silent, admiring their exalted breeding. But as every reader, however boresome himself, is fond of high-level dialogue, with anecdotes of Lords, Ladies, and Knights of the Garter, I must beg leave to give him the concluding part of the present conversation.

"All that I know of the matter," cried Miss Skeggs, "is this, that it may be true, or it may not be true; but this I can assure your Ladyship, that the whole rout was in a maze; his Lordship turned all manner of colours, my Lady fell into a sound, but Sir Tonkyn, drawing his sword, swore he was hers to the last drop of his blood."

"Well," replied our Peeress, "this I can say, that the Duchess never told me a syllable of the matter, and I believe her Grace would keep nothing a secret from me. This you may depend upon as fact, that the next morning my Lord Duke cried out three times to his valet-de-chambre, 'Jernigan, Jernigan, Jernigan! bring me my garters.'"

But previously I should have mentioned the very impolite behaviour of Mr. Burchell, who, during this discourse, sat with his face turned to the fire, and at the conclusion of every sentence would cry out *fudge*, an expression which displeased us all, and in some measure damped the rising spirit of the conversation.

"*Excuses, my dear Skeggs*," continued our Peeress, "there is nothing of this in the copy of verses that Dr. Burdock made upon the occasion."—*Fudge!*

"I am surprised at that," cried Miss Skeggs; "for he seldom leaves anything out, as he writes only for his own amusement. But can your Ladyship favour me with a sight of them?"—*Fudge!*

"My dear creature," replied our Peeress, "do you think I carry such things about me? Though they are very fine to be sure, and I think myself something of a judge; at least I know what pleases myself. Indeed I was ever an admirer of all Dr. Burdock's little pieces, for, except what he does, and our dear Countess at Hanover-square, there's nothing comes out but the most lowest stuff in nature; not a bit of high life among them."—*Fudge!*

"Your Ladyship should except," says another, "your own things in the *Lady's Magazine*. I hope you'll say there's nothing low-lived there? But I suppose we are to have no more from that quarter?"—*Fudge!*

"Why, my dear," says the Lady, "you know my reader and companion has left me, to be married to Captain Roach, and as my poor eyes won't suffer me to write myself, I have been for some time looking out for another. A proper person is no easy matter to find, and to be sure thirty pounds a year is a small stipend for a well-bred girl of character, that can read, write and behave in company; as for the clits about town, there is no bearing them about one."—*Fudge!*

"That I know," cried Miss Skeggs, "by experience. For of the three companions I had this last half year, one of them refused to do plain-work an hour in a day, another thought twenty-five guineas a year too small a salary, and I was obliged to send away the third, because I suspected an intrigue with the chaplain. Virtue, my dear Lady Blaney, virtue is worth any price, but where is that to be found?"—*Fudge!*

My wife had been for a long time all attention to this discourse; but was particularly struck with the latter part of it. Thirty pounds and twenty-five guineas a year, made fifty-six pounds five shillings, English money, all which was in a manner going a-begging, and might easily be secured in the family. She for a moment studied my looks for approbation; and, to own a truth, I was of opinion, that two such places would fit our two daughters exactly. Besides, if the 'Squire had any real affection for my eldest daughter, this would be the way to make her every way qualified for her fortune. My wife therefore was resolved that we should not be deprived of such advantages for want of assurance, and undertook to harangue for the family.

"I hope," cried she, "your Ladyships will pardon my present presumption. It is true, we have no right to pretend to such favours; but yet it is natural for me to wish putting my children forward in the world. And I will be bold to say my two girls have had a pretty good education and capacity, at least the country can't show better. They can read, write, and cast accounts; they

understand their needle, broadstitch, cross and change, and all manner of plain-work; they can pink, point, and frill, and know something of music; they can do up small clothes; work upon catgut; my eldest can cut paper, and my youngest has a very pretty manner of telling fortunes upon the cards."—*Fudge!*

When she had delivered this pretty piece of eloquence, the two ladies looked at each other a few minutes in silence, with an air of doubt and importance. At last Miss Carolina Wilhelmina Amelia Skeggs condescended to observe, that the young ladies, from the opinion she could form of them from so slight an acquaintance, seemed very fit for such employments: "But a thing of this kind, madam," cried she, addressing my spouse, "requires a thorough examination into characters, and a more perfect knowledge of each other. Not, madam," continued she, "that I in the least suspect the young ladies' virtue, prudence, and discretion; but there is a form in these things, madam, there is a form."

My wife approved her suspicions very much, observing that she was very apt to be suspicious herself; but referred her to all the neighbours for a character; but this our Peeress declined as unnecessary, alleging that her cousin Thornhill's recommendation would be sufficient; and upon this we rested our petition.

(To be continued.)

## THE EYES OF ANIMALS.

HUMAN beings have six muscles to each eye, that they may with facility move it on either side, but horses, cows, sheep, and other quadrupeds, which habitually incline their heads to the earth in search of food, have a muscle by which the eyeballs are suspended and supported, and which we do not need. This is a wonderful adaptation to the circumstances in which the creature is placed. For example, the eyes of amphibious animals partly agree with those of the fish and the quadruped. The cat and the tiger, which prowls by night, have a peculiar power of expanding the pupil. The eyes of fish have no apparatus to moisten them, as it would be obviously unnecessary. The eye is adapted to the properties of light, so that it refracts the light, and brings it to a focus on the retina. Our best and most perfect glasses are by no means equal to the human eye. Gnats and flies have a great number of eyes; they can see on every side, without any movement of the organs of vision. Fish have a crystalline, almost round, to fit the eyes to the strong refraction of light in the element in which they live; and though they have no eyelids, their cornea is horny, to defend their sight. The mole has two very small eyes, hid under its velvet coat; these are admirably suited to his mode of living, chiefly under ground. The adaptation of the faculties of animals to their mode of life is wonderful, and we think strikingly displays the wisdom of the Creator. Spiders have four, six, or even eight eyes; they are transparent, like so many gems. They can very readily see on all sides. The lizard, called the chameleon, can move one eye while the other is still, he can fix one on the fly, and the other on the ground. He can glance at all that is behind and before him at once. Lord Brougham remarks of the eyes of birds, that "they require to have them sometimes as flat as possible for protection; and, at other times, as round as possible, that they may see the small objects, flies, and other insects, which they are chasing through the air, and which they pursue with the most unerring certainty. This could only be accomplished by giving them a power of suddenly changing the form of their eyes. Accordingly, there is a set of hard scales, placed on the outer coat of their eye, round the place where the light enters; and over these scales are drawn the muscles, or fibres, by which motion is communicated; so that, by acting with these muscles, the bird can press the scales, and squeeze the natural magnifier of the eye into a round shape when it wishes to follow an insect through the air; and can relax the scales, in order to flatten the eye again, when it would see a distant object, or move nimbly through leaves and twigs.

"This power of altering the shape of the eye is possessed by birds of prey in a very remarkable degree. They can see the smallest objects close to them, and can yet discern larger bodies at vast distances; as a cat stretched upon the plain, or a dying fish afloat upon the water." The eyelid is designed to moisten the eye, and to keep it clean; and, to quote further from the same writer, "a singular provision is made for keeping the surface of the bird's eye clean—for wiping, as it were, the glass of the instrument—and also for protecting it, while rapidly flying through the air, and through thickets, without hindering the sight. Birds are, for these purposes, furnished with a third eyelid; a fine membrane, or skin, which is constantly moved very rapidly over the eye-ball, by two muscles placed in the back of the eye. One of the muscles ends in a loop, the other in a string, which goes through the loop, and is fixed in the corner of the membrane, to pull it backward and forward. If you wish to draw any thing toward any place with the least force, you must pull directly in the line between the thing and the place; but if you wish to draw it as quickly as possible, and do not regard the loss of force, you must pull it obliquely, by drawing it in two directions at once. Tie a string to a stone, and draw it straight toward you with one hand; then make a loop on another string, and running the first through it, draw one string in each hand, not toward you, but sideways, till both strings are stretched in a straight line; you will see how much swifter the stone moves than it did before, when pulled straight forward. Now this is proved, by mathematical reasoning, to be the necessary consequence of force applied obliquely; there is a loss of power, but a great increase of velocity. The velocity is the thing required to be gained in the third eyelid; and the contrivance is exactly that of a string and a loop, moved each by a muscle, as the two strings are by the hands in the case we have been supposing."

SIR BENJAMIN BRODIE, BART.

We are indebted to the valuable pages of the *Lancet* for the following:

MR. ALEXANDER BRODIE, of St. James's, Piccadilly, married a daughter of Peter Swan, Esq., M.D. By this marriage he had two children, a son and a daughter. His son, afterwards the Rev. Peter Bellinger Brodie, rector of Winterslow, in the county of Wilts, married Sarah, the daughter of Benjamin Collins, Esq., of Milford near Salisbury. Six children were the fruits of this marriage, and the third son, BENJAMIN COLLINS BRODIE, is the distinguished subject of the present biographical sketch. The Rev. Mr. Brodie was a magistrate and deputy-lieutenant of the county, and possessed of considerable local influence. He devoted himself personally, however, to the education of his children, and the future surgeon was trained under the parental roof. To the habits of steady industry and study, acquired under his father's tuition, Sir Benjamin attributes many of those qualities which have attended him through life, and which have contributed so materially to his success. He left Winterslow in the year 1801, having resolved on the profession of surgery, and came to London to pursue the necessary studies.

He made his *debut* as a private surgeon in a lodging at No. 18, Sackville-street, Piccadilly, nearly opposite to the house occupied by Sir Everard Home, and he continues to reside in the same locality. His assistant-surgeonship at St. George's Hospital lasted fourteen years; but he became full surgeon in 1822, on the death of Mr. Griffiths. He continued to hold this appointment until the year 1840; when he retired, after a connection with the Hospital, as assistant and full surgeon, of 32 years' duration.

Mr. Brodie became for several years the favourite pupil and assistant of Sir Everard Home (pronounced Hume). He was not only his assistant at the Hospital, but assisted him in private practice, and in his anatomical investigations. Home was the brother-in-law of John Hunter. Mr. Brodie eventually took the place of Home as a surgeon in the public eye, and he may thus be considered as in some respects the professional representative both of Denman and of John Hunter, if we may be allowed to trace a professional genealogy so far.

It was from Sir Joseph Banks he obtained, through Dr. Bancroft, who had travelled in Guiana, the supply of the Woorara poison, with which he performed his experiments. After Bichat, these experiments were the first of any importance which had been made since the time of Haller, and they attracted great attention. For the Croonian Lecture, delivered in 1810, and published in the "Philosophical Transactions," he received, the following year, the Copley Medal, which is the highest honour the Royal Society has to bestow; and when Mr. Brodie obtained it, he was only twenty-eight years of age.

Mr. Brodie pursued his career of experiment for several years. The results of his labours are published chiefly in his several papers in the "Philosophical Transactions." They consist of the Croonian Lecture, already referred to, in which it is proved that the action of the heart does not depend entirely upon the cerebral and spinal centres, but can be kept up after these have been destroyed, or their functions suspended, by the continuance of artificial respiration. The facts of this important paper are invaluable; as, however, the nervous system had not at that time been

divided into its cerebral and spinal portions, and their different functions allotted to each, it would be highly interesting to repeat the experiments, with a view to ascertain the precise share of the ablation of the brain, and the medulla oblongata, upon the results.

The most celebrated physiological investigation in which Sir Benjamin ever engaged, is that respecting the influence of the Nervous Centres upon the Generation of Animal Heat. He found that an animal, with the nervous centres removed, or their functions suspended by narcotic poison, lost its power of generating animal heat, even though the action of the lungs was kept up by artificial respiration, and that the power of generating caloric returned with the returning vigour of the nervous centres.

Among the works of Sir Benjamin Brodie, his classical treatise on the "Pathology and Surgery of Diseases of the Joints," and his volume on certain "Local Nervous Affections," will ever hold a high place in surgery; for they mark an era in this department of the profession.

Sir Benjamin Brodie was not in full practice till 1825. At the present time, he is sixty-six years old. He could not be said to take the place of the first surgeon of London until the retirement of Sir Astley Cooper, in 1828. Cooper, as the nephew of Cline, and as the senior of Brodie, took a lead, which it was impossible for any man to pass. But when Cooper resigned the surgical sceptre, there was no one who could pretend to dispute it with Sir Benjamin. Since that time universal consent has given him the first place in the profession.

On the 21st of May, 1816, Mr. Brodie married Ann, the third daughter of Mr. Serjeant Sellon, the present Lady Brodie; by her he has issue, two sons and one daughter. The eldest son, Mr. Benjamin Collins Brodie, who succeeds him in the baronetcy, has greatly distinguished himself in experimental chemistry. The youngest son is the Rev. William Brodie.

Mr. Brodie was made a baronet by William IV., upon his promotion to the Serjeant-surgeoncy, on the death of his old master, Sir Everard Home, in 1832, but the patent of the baronetcy is dated August 21st, 1834.

We cannot enumerate all the professional contributions of Sir Benjamin. His various labours show him to have been one of the most incessant indefatigable workers of his time. If his practice had been the most moderate, his other works would have given him a great reputation; but our respect for his genius and industry becomes unbounded when we consider that the multifarious duties of an immense practice have occupied him from an early period of his professional career. Those who know Sir Benjamin, know him to have been most punctilious in the discharge of his hospital duties towards the sick. We have already referred to his connection with Mr. Wilson as an anatomical teacher. He gave a formal course on Surgery at St. George's Hospital, from 1801 to 1830—a period of twenty-two years. From 1813, to within a year or two since, he never missed, save for one year, to give a course of Clinical Lectures, the last course he ever delivered having been published in the *Lancet*, in 1848. He has been one of the largest contributors to the "Transactions" of the Royal Medico-Chirurgical Society, and scarcely any other man has done so much as a contributor to the periodical medical press. His formal treatises on various important subjects of surgery are continually meeting us in new and revised editions. They read as freshly now as when they were first issued from the press, and he may be said to be almost the only living author of a quarter of a century ago, still maintaining his ground. In the never-ceasing flow of medical and surgical knowledge, work after work of the great men of a day are engulfed, it is only those possessing the most sterling talent, the most perfect portrait of nature, which can maintain themselves upon the crest of the wave.

The important posts Sir Benjamin has held, would be enough to occupy the long life of any man of moderate industry and ability. We have seen him as Croonian Lecturer. In 1819 he was appointed Professor of Anatomy and Surgery to the Royal College of Surgeons; in 1837 he delivered the Hunterian Oration; in 1839 and 1840 he filled the chair at the Medico-Chirurgical Society; last year he was President of the Western Medical Society. For a long series of years he fulfilled the duties of Examiner of the College of Surgeons, and Member of the Council, having only retired from the examinership a few years since. He has also filled the offices of Vice-president and President of the College. He was an *ex officio* member of the Board of Examiners, as Serjeant-Surgeon, but at his wish the Council petitioned her Majesty to abrogate this privilege, and on his retirement it was abolished. At the Royal Society he has been a constant worker, as member of the council, and formerly as member of the Physiological Committee. He has been the surgical attendant of three sovereigns, from George IV. to Victoria inclusive, and no man has charged him that his duties to rich or poor have been ill performed. When we reflect upon all these various works, we must confess the author to be a great man in our profession, and capable of greatness in any walk of life. It is not for us, and during his lifetime, to enter into a critical analysis of his labours; but we have, on the most cursory glance at his career, evidence that he has done quite enough for a deserved and enduring fame. There are some few gifted minds of our generation who have devoted themselves to particular subjects with splendid success; but who amongst us has covered an equal space of ground with the monuments of his labours? Yet Sir Benjamin refers to what he has done in the most modest terms. The ancient Master said, "Time is short, and Art is long; occasion fleeting, experience fallacious, and judgment difficult." These golden words are re-echoed by the subject of our sketch in the preface to one of his works, that on the "Diseases of the Joints." "One principal result of my labours has been, to convince me that life is not long enough for these difficult researches; that the utmost which can be accomplished by the zeal and industry of one individual, is to make such progress in the study of pathology, as may enable those who come after him to carry their inquiries a little further."

## CAROLINE AND CATHARINA.

(Continued from page 460.)

"Have you finished, Hugh?" inquired Allen, as he entered the dwelling.

"Just got through," said the other, opening the door of the closet.

"O yes," said Allen, examining the work, "quite right, Hugh."

"There's a note on the table for you," said Hugh. "Colonel Talbot commanded me to tell you so; and, being a colonel, of course, he has the right to expect obedience."

"From a lieutenant!" said Vernon, laughing and taking up the note. "Ah!" he read and on reading it, "this is kind indeed! If you are coming home, Hugh, I will accompany you; I want to see your father a moment or two."

As they stepped out upon the walk in front of the door, Hugh's family turned, and he entered the house.

"Let me see if I have all my tools," said he, and having done so, he set the affected to look in it, then turning again he hastily reached up the paper substituted by Thorpe for Talbot's card, and doubling it he thrust it into his pocket. Rejoining Vernon, who was waiting for him without, he walked away with him towards his father's.

They found Uriah in almost precisely the same position as on Allen's former visit, and bearing the same impassible, money-broker exterior. He did not rise as Vernon entered; but, as if deeming his errand, drew a large key from his pocket, and inserted it in the safe.

"I have come to complete our arrangements," said Allen, presenting the note and taking a seat. The old man looked closely at the note a moment, and then opened his safe without a word.

"I suppose you would prefer gold," said he, after looking to his coffee a few moments.

"It will make but little difference," said Allen.

"Better have gold, though," said Manning, and he proceeded to count it out. His son, who had stood in the door checking, observing him until this moment, now turned away, apparently satisfied.

In the meantime Thorpe held his way up the street on his way to Colonel Talbot's—recognizing each acquaintance with a smile on a face as he passed them, but still pursuing his train of thought under an exterior perfectly *degage*.

"This is lucky, indeed," he thought. "All my schemes were crumbling and falling to pieces—even Mary's liberal country and Vernon's inexperience would not save me—and here comes a chance which puts the whole game into my own hands!" and with a placid and self-satisfied smile he pursued his way.

There are very few men who can master sufficient self-command to appear perfectly calm, after committing a crime, it requires very great intellectual powers to conceal from the observation of even the dull and unobservant, the agitation which must attend its commission. But when Thorpe entered the drawing-room and took his seat beside Cara, even those best acquainted with him would not have observed the slightest deviation from his usual bearing and tone.

Cara laid down the book she had been reading, and made room for him on the sofa beside her. He took the book up and examined it—a publication then making some noise.

"This is said to be a very fine composition," said he, "what do you find of it?"

"Very beautiful, indeed," said Cara, quietly, "but very strange. I was just reading a passage here. Let me read it to you."

She took the book, and in her sweet, musical tones began to read a very fine description; coming to the bottom of the page and attempting to turn over, she found the leaves had not been cut. Casting her eye on the table she seemed vexed—as one who has not been under the same circumstances.

"I had a paper-knife here a moment ago," said she.

"Here," said Thorpe, feeling in his pocket and drawing out a paper-knife. "Let me cut it for you." As he took the book a paper fell from his pocket, out of which he had drawn it with his knife, and unconsciously it rolled down upon the floor. The leaf was cut, Cara finished the passage and laid down the book.

"A very strange book," said Thorpe.

"And a very beautiful one, too," said Cara.

Thorpe was not one of the class of lovers who weary their mistresses by interminable visits; and after a short half-hour's conversation he took his leave. Cara went with him to the door, and as she returned her eye fell upon the lost paper. She took it up, and after turning it over two or three times, opened it and read it.

"What could Morris be doing with this?" she said. "That day morning, 10 o'clock. Dear Mr. V. That must be Vernon—and only written an hour ago." She stood still gazing upon the paper and casting about for the explanation of Thorpe's possession of it.

"I don't understand it," she said at last. "I'll keep it—at any rate, till further comes home, or till I see Allen," and opening a box that stood on the table she threw it in and locked the box.

## CHAPTER XII.

"Farewell! God knows when we shall meet again."—ROMEO AND JULIET

THERE is no nation on earth whose people make their arrangements with so much indifference and rapidity, for a long journey, as the people of the

United States. A journey of a thousand miles calls for no more preparation here, than one of one hundred in an older country; and an absence of six or twelve months is viewed as no unusual or even serious matter. A man crams a few shirts, and a coat, and a pair of pantaloons, into a carpet bag, kisses his wife, or not, as it happens (depending upon whether she is upstairs or below when he starts), drives his dog back into the yard, and sets off on a "jaunt" of two or three thousand miles, with the most complete unconscionableness that he is doing anything at all extraordinary. His friends, seeing him carrying a carpet bag, hail him and ask where he is going. He replies, "Going South" or "Going West," as the case may be, and they turn away, forgetting it in five seconds.

People who belong to older countries do not understand this trait in our character, because it is peculiar to us. They would have a regular "scene" — a *drachma*, a *peripeteia*, and *dolorous farewells*—on setting out upon a journey from London to Berwick-upon-Tweed. And an American "steps down to New Orleans from latitude forty-five, takes a run out to Portchartrain," and returns home, without being asked five questions about all the wonders he has seen. If his land where he lives, in Maine or Virginia, does not suit him, if two years in succession do not yield good crops—if he becomes dissatisfied with his situation, or listens to the account of the West by some one who has seen it, he (in his own words), "pulls up his stakes," and sets out to seek them down again, twelve or fifteen hundred miles farther west. This, too, with all the coolness with which a party of hunters would "pull up the stakes" and remove their camp from an exposed situation, some sheltered nook a mile down the valley.

I recollect reading some years ago an article (I think in the *Edinburgh Review*), upon the Oregon Boundary Question, then in course of negotiation and settlement. The writer of the article seemed to think it a matter of very little consequence to us, and thought we were expending a large amount of patriotism very unproductively. And why? *Because*, said this sapient reviewer, it is impossible that that country should ever be colonized from "the States"—it must be filled up with an European population; and the same difficulties which will prevent its colonization from the eastern side of the continent, will also be found an impassable barrier to the government, and prevent its forming a part of this Republic! And yet, overlooking all the barriers, "impassable" as they are, traversing these deserts, and sitting at night on mountains, and plains, and rivers, and sands, and hunger, and thirst, and wild beast, and savage, one hundred thousand men are now, after the lapse of barely five years from that time, skiving about among the rocks of California for gold, and knocking at the door of the Union with two States governments complete! Europeans do not understand us—they have no standard by which to estimate us. What would they think, for example, of an enterprise lately set on foot by a private individual, to penetrate, with sixty men, into the heart of a country which all the Spanish cavalry, led on by their inordinately thirst for gold, were never able to enter? A little band of men starting on the Atlantic coast, at Corpus Christi in Texas, and travelling fifteen hundred miles into the heart of an utterly unexplored country, supposed to be inhabited by a wild, fierce race of fire-worshippers—kindred of the hapless Aztec—perhaps the fountain from which flowed that unfortunate race!

Does any one, who knows the American character, suppose that the race of gold hunters, quite as adventurous and far better prepared than the old Spaniard, will be long hampered by the narrow line called the Gila River? Can a rivulet curb a people of disappointed miners, with arms in their hands, when the other bank of it promises wealth, and the very essence of their character is encroachment? It is idle to suppose it for a moment. Sonora is already within their grasp; and is it farther from there to Mexico than it is from Washington to California?

The breaking out of this spirit, in 1846, was a grand prophecy of even so to be brought about by this same facility of emigration. Not a state that was called upon, especially the West, where the emigrating people live, failed to raise, at the first intimation of the flag, large numbers more of volunteers than were called for. Not a regiment but was full to overflowing, and hundreds ready to fill it, could they only be permitted. Not a man that went upon that campaign and came back, would not go again and again, with the same alacrity which would mark his step were he on his way home from a long absence. Mexico was invaded by hundreds of thousands of men, raised from among the people by voluntary, even enthusiastic enlistment; and, all along the line of march, may now be found thousands of those men who never came home; not because they were compelled to stay away, but because they found localities and farms upon which to live. Aye, even in the towns of Mexico and all the Texas, along the Rio Grande, there are many who now live on the population, rise to high posts by superior intelligence, and will play, they or their descendants, an important part in future events. The march of our armies into Mexico, was an emigration as well as an invasion, and the rush towards the gold-mines of the West, will yet be found to take the form of acclimatization as well as of an emigration. Twenty-five years—no short quarter of a century—will see our boundary line dropped towards the equator many degrees, and the Panuco will be nearer the line than the Gila, the city of Mexico itself nearer to it than Santa Fé.

The regiment to which our friends attached themselves, was no exception to the general rule. Companies were raised and reported to the State authorities in a single day. Any tree, under which the crowd might assemble, served for a recruiting office, and the crown of a man's hat was a table upon which to write the names of volunteers. Thorpe took the lead in the enlistment of the company to which our friend Hugh Manning belonged, and in the election of officers refused all preferment. It soon became understood that he was looking forward to a higher station; and his company were devoted to him, even more than to their captain—a staunch old soldier, who

had "seen service" in his youth, and was now leaving a large family "to join the ranks of war" in his age. Hugh was elected a second-lieutenant, the other officers were filled, and everything was in readiness to march to the place of rendezvous.

"This is stood thus—nobody who had "volunteered" doing anything but attend the daily "drill," and complaining of the delay, until about ten days after the transactions of the last chapter. At last came an order to march, and leave-takings and exchange of tokens, final arrangements for absence, and notices of places where to muster, occupied the following day.

It was Thursday evening of the third week in May. The battles of Palo Alto and Resaca de la Palma had been fought and won—the streets of almost every town in the United States were filled by men in uniform, the crowds of excited citizens; and the scene of our story was not one of the exceptions. The following morning was fixed for departure, and the last visits, (alas! for some of them the last, indeed!) were being made. Major Bryce had received orders to pass immediately to New Orleans, there to await further instructions. And Vernon was to set out with him early on the following morning. He was to join the Major at his own house at six in the morning, and they were to depart by the mail coach.

"All ready for a move in the morning, I suppose, Vernon?" said Thorpe, as they met in the street just at dusk.

"Yes," said Allen; "we start at six—good bye!"

"Why do you not go with us? Ah! yes; I had forgotten; you go to New Orleans, I believe?"

"Yes, good bye."

"I hope we shall meet further on, if not there."

"I hope so; good bye, good bye, until then, at least." They shook hands and hurried on, each in his own direction. Thorpe to a last muster and roll-call before marching, and Vernon to Colonel Talbot's to bid him farewell.

"I began to think," said Cara, as he seated himself beside her, and took her hand, "that you were not coming to bid me good-bye at all."

"And would that have offended you?" he asked.

"Oh! of course not!" she answered; but as she spoke her head drooped upon his shoulder.

"Are you sorry that I should leave you?" he whispered.

"When will you return?" she asked, suddenly.

"At the end of twelve months, perhaps, and it may be longer."

"You must come, when if you can," she murmured; and raising her head with a smile, she continued—"Be sure, if you stay longer, I may forget you."

"I am not afraid," said Allen. "But if you should not have forgotten me, when I return will you then be gone?"

"You have never told me yet whether," said she.

"True," said he; "the twenty days, just up to night—I can tell you now what you know already."

"I know nothing," said she, sitting up, and withdrawing her hand. "Come, now, tell me."

He caught her in his arms, and pressed his lips to hers.

"That is the only reply of you shall have," said he.

"Oh! such rudeness!" she cried; "and without even telling me he loves me!" and she pressed to her face, and affected to be angry. But his earnest, passionate look disarmed her playfulness in a moment.

"Forgive me," she said, seriously. "I was only trying to conceal my grief by an affection of good spirits. I feel really miserable on your departure; and the only way you can cheer me," resuming her smile, "is to take advantage of the expiration of the twenty days."

"I have just been trying to do so," said he. "I need not tell you that I love you; and I know you love me in return. But you are young, and your feelings may change."

"Never!" she exclaimed.

"You think so now," he continued, "and I hope so, but yet one of you age can never speak with certainty without trial and experience. You may not love me so well, perhaps, after a few months' absence, and it would be both cruel and suicidal for me to take advantage of a passion which may not last to—"

"Stop!" she said; "I know what you would say—you think if you leave me for a year, and I love you when you return, you can then rely upon my affection—not otherwise."

"Not that!" he broke in eagerly—"not that. I mean that I do not wish to do anything which the lapse of time, with the changes which it may bring, will stamp as hasty or dishonourable. When I return you will be older, you will have had time to confirm your feelings and assure yourself of their permanence or evanescence; and then—"

"And then?" she asked, smiling.

"Then," said he earnestly, "if you do not change you will be mine—will you not?"

"I am already engaged to be married to another," said she.

"What!" he exclaimed; "engaged to be married to another!" He withdrew his arm and recoiled from her.

"Even so," said she, retaining his hand, however, and leaning her arm on his shoulder, while she smiled in his face. "You are surprised," she continued; but let me explain. The reason why, when you took me so much by surprise three weeks ago, I forbade you to say more about this for twenty days—a command which, by the way, you have but indifferently obeyed—was this: by the wish of my father, a short time ago, I suffered him to tell Morris Thorpe that my hand would be his on my arriving at the age of eighteen; but with this reservation and condition—provided I saw nobody in the meantime whom I liked better. Morris was pleasant, agreeable, and devoted; I liked him better than any one else then, because he flattered me

most and best. But time passed on, and I met you. I will not conceal now, that I loved you almost from the first; and that, when you took me by surprise in that room, I had a hard struggle to avoid avowing it fully. Duty prevailed at last, though, as I have said, after a hard struggle. I thought then, as you do now, that this might be but a whim—a temporary feeling excited by your face, your form, or your talents; and upon such a flimsy foundation—do not blush, you are handsome enough without that, to make a fool of me—upon such a flimsy foundation, I did not wish to do wrong to, or injure the feelings of one whom I had esteemed so long and so well, as I had Morris. I desired to wait for twenty days, to examine my own heart, to sound the depths of my own feelings, so as to be able to act advisedly. You may think this cool calculation was hardly compatible with warm, genuine affection; but if love ever leads us to disregard the rights and feelings of others, even in the smallest thing, I desire never to feel it. I wished to save Morris' feelings, though I loved you none the less, but rather more; for she who cannot respect the feelings of others, has no feelings of her own worth asking for. You did not obey me very implicitly, Allen; but my stipulation excused me from answering; and to own the truth, that object gained, your warm expressions were not distasteful—were, rather, very pleasant to my ears. The twenty days are now past." She paused.

"And now," said Allen, "you are ready to tell me that when I return you will be mine?"

"If you wish it?" said she.

"You do not doubt that?" he exclaimed.

"O, no!" said she; "though, in justice, I ought to doubt you as much as you do me—ought I not?"

"I do not doubt you, Cara," said Allen, earnestly. "It would be almost blasphemy to doubt, now!"

"Well," said Cara, "I do not like blasphemy, so pray do not become one. But do you not think I ought to tell Morris how my feelings have changed before he leaves me?"

"By all means," said Allen.

"I know you would say so," said Cara. "If I had been positively forced I would have told him long ago—or at least, before now. You know the old verse,—

It is sad to be a true friend,  
And sad to be a true lover,  
For good to be up with the old days,  
Before you can say with the new."

In Morris was a very precisely a "love" of mine, old or new, and I now feel that he never could have been."

"He will be here to night, I suppose?"

"He said he would join me at supper, at nine—some business detains him until near that hour."

"You will explain to him then, will you not?" Allen inquired anxiously.

"He will march to-morrow morning at five o'clock."

"I know," replied Cara. "I will explain to-night."

"And then, I trust, you will be mine only!"

But love's conversation, especially upon the eve of a separation, are seldom more true to say one but themselves; and besides, we have no right to suppose their intercourse, further than is absolutely necessary to our story. Let it suffice them, that they passed the hour succeeding in that kind of conversation which all who have passed their second decade will be able to imagine. It is very tender, of course, and full of projects, but not the less happy to them. As the hour approached at which they might expect to be interrupted, Allen rose to bid her farewell. It seems strange that lovers would rather have their promise to them ely at six o'clock than remain together till twelve and be witnesses to their *adieu*. So it is, at all events; and Allen rose to take leave.

"You will not forget me, Cara?" said he, affectionately.

"O no!" she answered, but trembling too. "O no! how could I?"

And she then, he left into his arms and struggled to retain her composure. But few steps were heard in the hall—they always are at such moments, unfortunately—and he released her gradually, and held her from him, gazing earnestly into her eyes, now filled with tears.

"Farewell! then," said he, and turned away.

"I'll not forget," she said, and as he passed through the door she retreated hastily into her private parlour.

"Will you not stay to supper with us?" asked Cara's mother, to whom we owe an apology for keeping her in the back-ground.

"Unfortunately," said Allen, "I have an engagement," and hurried on.

But a few minutes elapsed before Thorpe entered, and proceeded immediately and familiarly to seek Cara. She was, however, too much indisposed to appear immediately, and Morris and two gentlemen who were with him, (of one of whom, Mr. Clayton, the reader will hear more in the sequel,) had to content them ely with the company of Mrs. Talbot and Mary Bryce, who was there also. This was dull enough; for the elder lady was never famous for the brilliancy of her conversation, and the younger, after casting her eyes eagerly around the empty room on entering, threw herself upon a sofa and became emulous of Mrs. Talbot's taciturnity. At the end of half an hour, however, Cara appeared, fresh and beautiful as ever, but looking much more grave than usual. It immediately occurred to Mrs. Bryce that it was a very serious matter to part with dear friends for a long time; and the expression of her face straightway changed from the sulky to the funeral. She was soon relieved from her arduous exertions, however, and probably saved the trouble of forcing actual tears by the announcement of supper—the idea of good eating operating on her like magic.

At the supper-table, several attempts were made to get up something like gaiety, but without success. Thorpe was the only person who appeared

"Two horsemen might have been seen riding slowly along a wide and dusty road, which led across an immense plain some fifty miles from Saltillo. They were both young, and both evidently Americans."

really unconcerned; and after a time even he began to fall into the prevailing tone. It is a very common thing in life—what we have looked forward to as a very pleasant meeting, has often turned out cold, spiritless and wearisome, and, moreover, a poor devil has been dragged almost by force to a dinner or a ball, which he nevertheless enjoyed exceedingly. The former was the case with this supper; it had been anticipated by all there as a pleasant reunion of a few friends, meeting the last time for many months—and instead of this it was found dull, stupid, almost lachrymose—after Mary had disposed of a pound or two of the vands at least.

They returned to the drawing-room almost like a funeral procession; and very soon afterwards signs of dissolution began to be seen. Thorpe had brought Mary there—for it did not yet suit his purpose to throw off the mask with her—and he now began to fear he would be hurried away without having an opportunity of saying a word to Cara in private. One of the gentlemen understood him, however, and drew the general attention another way; thus giving him the opportunity he had been seeking for an hour.

"I shall have to take Mary home," he then said hastily, "will you not see me a moment on my way back?"

"I cannot," said Cara, in the same tone, "I am too much indisposed. But here is a note for you, which you can read afterwards." She slipped a paper into his hand, and turned away. Soon afterwards a general shaking of hands took place, Mary at last succeeding in forcing a few tears, though she bade nobody farewell, except those who were not going away.

"You will not see me, then?" said Thorpe, as he took Cara's hand. "I cannot," she replied, and he was gone. Another scene had to be enacted at Major Bryce's door, where Morris kissed Mary innumerable times, and hoped to get away at each embrace. He tore himself away at last, and finally was at liberty to open Cara's note. It ran thus:

"Dear Mr. Thorpe,—I shall have no opportunity to speak privately to you to-night and I am compelled to write. It would not be right in me to allow you to go away under a false impression. You have been accustomed to consider me your future wife; but this arrangement was subject to a contingency, which has now intervened. This being the fact, of course the engagement (if there was one) exists no longer. Forgive me, but believe me, Sincerely your friend,

"CARA TAYLOR."

"If there was one!" he repeated, crumpling the paper in his hand, and striding across the room. "There was, and, by heavens! there shall be again." The next morning they were all "off to the wars."

### CHAPTER XIII.

"Death and danger dog the heels of worth."—TWO GENTLEMEN OF VERONA.  
"Away! away! and on we dash."—MAZEPPA.

PASSING over a space of about eight months, more or less, we must ask the reader to accompany us to the seat of war.

During that period, the troops called out by the President had been raised, organized, equipped and formed in divisions—they had marched into the enemy's country, crossed immense deserts, and fought many battles—they had met the enemy upon his own soil, while their own base of operations was more than a thousand miles distant, and had overrun immense provinces. The battle of Monterey had thrown the Mexican forces back more than three hundred miles within their territory, and the advances upon Victoria and Saltillo had driven them to take refuge beyond the immense deserts of *Agua Calientes* in San Luis Potosi. The army of the Centre had crossed the Rio Grande, marched through the length of Coahuila, taken possession of Parras, and returned at the summons of General Taylor to Agua Nueva, twenty-five miles south of Saltillo. The Army of the West had crossed the plains from Independence, taken possession of Santa Fe and the whole State of New Mexico—General Kearny had passed on to California—and Colonel Doniphan was already on his hazardous and romantic march to Chihuahua, where he expected to find General Wool. General Scott had been ordered to Mexico in the November previous, and was now concentrating his forces for the attack upon Vera Cruz, and the march to Mexico. Santa Anna had returned to Mexico in the fall, and was collecting and disciplining the only army worthy of the name, that Mexico raised after the route of *Resaca de la Palma*. There was a lull in the storm, during which each party seemed to nerve himself for a final and fatal struggle. Santa Anna had intercepted General Scott's despatches to General Taylor, detailing in full his plan of operations, and disclosing his plan of attack. But the Mexican General knew the weakness in numerical strength of General Taylor's army; and he calculated that he could sweep the valley of the Rio Grande, and yet return to Vera Cruz in time to meet the attack there. He was therefore straining every nerve, at San Luis, to drill and equip his army, with the view of making a rapid advance and a thoroughly victorious march.

Late in the afternoon of a warm day, in the early part of February, two horsemen might have been seen riding slowly along a wide and dusty road, which led across an immense plain some fifty miles from Saltillo. They were both young, and both evidently Americans. One of them, the shorter and heavier, wore the plain uniform of a lieutenant in the infantry—the costume of the other indicated no special rank or corps; but was rather a mixture of each, the wearer having selected such articles from the uniforms of each army, as were most comfortable and convenient. He wore a plain dragoon jacket, with its yellow stripes somewhat tarnished—a pair of the heavy white cotton pants worn by the infantry, and a pair of red-topped boots over them. His head was covered by a broad palm hat (*sombrero*), and his collar was confined by a plain black cravat. He was above the medium height, and somewhat slender; yet the ease and grace with which he sat his horse, and the dexterity with which he managed him, gave evidence of both strength and activity. His light brown whiskers, and curling moustachios, concealed the lower part of his face; and its upper features were

nearly hidden by the broad *sombrero*. But a calm, clear, and flashing eye of dark brown, and a straight, finely cut nose, with the nostril well opened, were visible between these two concealments; and the smooth, round throat, though embrowned by the sun, redeemed the promise of manly beauty, given by the perfectly-shaped though sun-burned hand.

His companion was as unlike him in form and feature, as in dress. Rather below than above the medium height, he was broad in the shoulders, deep in the chest, and long in the arm. His limbs were muscular, brawny, and large; and his features, though far from ugly, answered to this outline. A heavy black beard grew all over the lower part of his face, and even down upon his throat; while the infantry cap he wore gave so little protection from the sun, that the upper features were scarcely two shades lighter. Altogether, his was a form and a face we would have selected as a fair specimen of the army, which was then lying some thirty miles from them, at *Agua Nueva*.

Differing in other respects, they were armed and equipped at almost every point alike. Each wore a heavy cavalry sabre, such as is worn by dragoon officers, with light, well-polished scabbard, and long, crooked blade. The hilts were studded with brass, and hung dangling against the saddle behind the riders. Each wore a pair of pistols, one of which was a revolver; and each had stuck in his belt a long, heavy knife—a provision for almost any emergency, from a hand-to-hand fight to an attack upon the tough fare of the soldier. Each carried a *serape*, or Spanish blanket, tied on behind his saddle, and a large gourd tied to the saddle-bow—one of those singularly-shaped things, which look as if two gourds had grown together at the necks, pushing out another neck from the other end of the smaller one. Each, to complete his equipment, carried a haversack, in which there seemed to be no great store of provisions. The only material difference in their accoutrements was a light rifle, carried by the taller of the two, and a small flask and bullet pouch hung around his neck and under his right arm. They were riding the small horses of the country—those hardy and active animals, as necessary and appropriate to this country as the camel to Arabia. They had been riding without water since morning, without rest, except an hour at noon for refreshment; yet these animals showed no signs of fatigue, but stepped as lightly and as proudly as when mounted in the morning.

As evening approached, the plain over which they had been riding began to diminish in width—the two ridges of mountains upon each hand began to close in, and what in the morning had been a deep blue, scarcely distinguishable from the sky, now began to assume the sterile gray colour of granite rocks, relieved here and there by a grove of pines, a patch of grass, or a long line of moss, where the waters ran over the naked rocks in the rainy season. Every few hundred yards they followed the road around some bold spur of the mountains, jutting out into the plain, and covered with a stunted growth of tree and cactus. Gradually increasing in thickness, as they neared the upper end of the valley, the stunted trees began to appear upon the level plain; and a little farther on, a thick undergrowth, like the heather found farther east, almost closed the view from the road.

It was now that a speck of dust, which had been following them since their start at noon, began to close upon them; and soon after another speck appeared far behind, larger than the first, and gradually gaining on it. A few minutes more, and, had not the undergrowth been too thick to allow it, the horsemen might have seen two other horsemen riding their horses at an easy gallop, and standing erect in the stirrups, instead of sitting upon the saddle as Americans do. They were Mexicans, armed in the fashion of the cavalry of that nation, only without the lance, and wearing no uniform, except the national one: slashed pantaloons, numerous buttons, and exceedingly scanty jacket—the shirt appearing in large folds between the two garments, which, on a Mexican, never meet. They were equipped with *serape*, gourd, and spurs, like the Americans, and rode horses of the same breed.

As they rode easily on, the second cloud of dust rapidly closed upon them; and as they reached the covered ground, where they could no longer see a great distance before them, they suddenly pulled up, and turned to meet the new comers, as if they were of the same party. Six dark, fierce-looking fellows rode forward and halted at a sign from one of the first two. Turning a little from the road, they assembled together near a large cactus, and a hurried consultation ensued. Soon afterwards they all came out again into the road. One of those who had ridden before, a tall, swarthy fellow, with fine, though fierce features, assumed the command, and the six again started on, though very slowly. The other two left the road, one on each hand, and rode for half an hour in a swift gallop; then, slackening up, they slowly and stealthily approached the road.

In the meantime the Americans rode easily forward, talking occasionally of some feature of the grand landscape, but the greater part of the time absorbed in the contemplation of one of those stupendous views so often met in Mexico—where mountains of great height and a rugged grandeur come sharply down upon a dead level, as if they had been dropped there from a great height and had sunk deep into the desert. They had been riding since morning, as we have said, almost without rest; and the whole distance, more than twenty leagues, they had been passing over a flat but dry plain—upon the dazzling surface of which no green thing was visible, except different varieties of the cactus, and an occasional stunted tree; while between these, as far as the eye could reach along the endless level, the parched ground showed a surface nearly white, bounded only by the hazy, silvery sheen of the sun upon the sandy ground in the far horizon. Upon each hand, however, in the morning almost beyond view, but closing up like the movement of the wheeling wings of an army towards evening, stretched ranges of mountains of almost equal heights, and almost equally precipitous. They looked like high walls of green and gray, presenting, at the distance of a few miles, an apparently unbroken surface. But as they gradually came nearer, the lonely riders could make out occasional lines of shadow

deeper than the rest; and within these, though they could not see them, were long, winding, wild ravines, cut in tortuous lines, sheer down into the mountains by ever-running springs and roaring cataracts. In these dark retreats were cool grottoes and pleasant groves hanging over precipices hundreds of feet high; crystal mountain-springs, the waters of which were dried by the parched throat of the earth, long before they reached the plain; high pine forests of great extent, sublime in their loneliness; and moss-covered rocks, upon which no foot but that of the mountain-goat had ever trod. As they came still nearer, these ravines yawned out like the mouths of haunted caverns; and it needed but little stretch of fancy to people the lowering darkness beyond with demons and evil spirits.

Immediately in front of our travellers, at the distance of five or six miles, the two ranges of mountains seemed suddenly to have met and recoiled like strangers in a dark place—leaving a gap, apparently some thirty yards in width, cut almost down to the plain; and over this gap two high peaks, with perpendicular and craggy sides, stood, as if gazing down into a fathomless abyss.

"This, I suppose," said the taller of the horsemen, "is the Pass of Pinones?"

"If we are right in our reckoning," replied his companion, "which I doubt. We must find water soon, at any rate." As he spoke, he disengaged his gourd from the saddle-bow, and held it to his lips. "There goes the last drop of that—and warm as new milk, too."

"We shall not find any water, I think," said the first speaker, "until we pass the mountains there; on the other side there is a small stream."

"Yes; and brackish as the brine in the bottom of a mackerel barrel," said the shorter, with a look of great disgust.

"True; but, Hugh, you ought to recollect that we cannot expect all the blessings of a fine country well-watered, in this parched desert."

"Certainly not," said Hugh, "but still there is good water in Mexico."

"Assuredly," said his companion; "and there may be good water within four miles of us now, endless as seems the sand."

"What good will it do us if we cannot find it?"

"It's a pleasant idea, at the least," said the other.

"And only an idea—there's the misfortune," said the less patient of the couple, spurring his horse forward as he spoke. "We have been making reconnaissances for several days," said he; "and now I am for making another—on our own business this time, too."

As he spoke he turned a little from the path, and galloping hastily to the top of one of the spurs which touched the road, cast a rapid glance upon the plain around him. He gazed forward for a minute, and then turned to trace the road over which they had come. A long line of dust, settling gradually back into the road, from which there was not breeze enough to carry it, attracted his attention immediately. It could not be the dust raised by himself and his companion, for they had ridden slowly; and by the distance over which the dust extended, he knew that they who raised it must have ridden rapidly. Another circumstance caught his eye—for men on dangerous expeditions like theirs have their faculties always on the stretch—the line of dust suddenly ceased about two miles in their rear; much more suddenly than the ground would account for. He bent his eyes eagerly on the spot, but the gleaming sun blinded him.

"What are you looking at so steadily?" said his companion, riding gently up beside him. But his eyes, too, caught the cloud, and became fixed.

"There is something wrong there, Manning," said he, unslinging a field-glass from his shoulder, and levelling it at the spot.

"Let us get down," said Hugh Manning, "we are too conspicuous here." But Vernon still gazed through the glass.

"The mountain is behind us," said he, quietly; "they cannot see us."

As he spoke, the sun suddenly dipped behind the western ridge, and the line of his light ran rapidly up the sides of the opposite *sierra*, as if hastening to the sky. All objects immediately became more distinct on the plain, and the dust was no longer visible.

"Quick!" exclaimed Vernon, striking the spurs into his horse so suddenly as to make him bound at once into the plain, half-way down the slope. "Quick!" he repeated, "ride out of sight; the sun is gone, and they may see us."

"But who are they?" asked Hugh, as they both dismounted, and returned on foot to the hillock.

"Eight Mexicans," said Allen; "pursuing us, too. Do you see that—see those two fellows; they are going to outflank us!"

The whole party were now plainly in view through the clear atmosphere of those elevated regions; and every movement was closely watched by those who were in pursuit.

"Shall we fight or run?" asked Hugh, feeling for his knife and loosening his pistols.

"Both," said Vernon; "run while it will avail, and fight only when something is to be gained."

"But our horses!" suggested Hugh.

"And theirs!" said Allen. "We are as fresh as they, and our horses are the same. If we can get away by running, it is certainly our duty to do so—the information we carry we must take into camp; besides, to stop and wait for a fight would be foolish."

"Come, then," said Hugh, "let us be off."

They had mounted their horses, after looking at their trappings to see them secure, during the conversation; and now galloping lightly down the hill, they regained the road, and sprang away with a speed scarcely to have been expected from their jaded horses.

(To be continued.)

## PRACTICAL ILLUSTRATIONS OF POPULAR FALLACIES.

No. XXVI.—NOTHING VENTURE, NOTHING HAVE.

THIS is the common apology for rashness in all transactions. "Nothing venture, nothing have," says the speculator, when he enters upon some undertaking which may considerably increase his wealth, or, on the other hand, may consummate his total ruin; which, to use another proverbial expression, may make him "a man or a mouse." The odds are rather extreme between these two positions. But in the present day men are in such a hurry to get rich, that rash ventures take the place of steady industry and perseverance, and men attempt to obtain in a few weeks or months what formerly required years of application and integrity to effect. Hence we have had, particularly of late years, a furious mania for wealth every now and then; men rashly ventured that they might have, and lost that which they had previously got. The annals of Capel-court would give us a curious insight into the numbers of those who, during the railway mania, were determined to have, however great might be their venture, but who found that they took nothing, and lost much. This sentence was then continually in men's mouths, "Nothing venture, nothing have," and the consequences were, that although some of those who really had nothing managed to climb up the ladder, yet that more who had something to venture speedily reduced their noble to nimpence, and were brought down to cheese-parings, like the mouse. The desire for gain out of the ordinary course of trade, and of extraordinary profits with little trouble, or application, seduces men into these venturous speculations, and they venture upon them without calculating the cost of their venture. The most rash are generally those who have the least to lose; and it increases the risk of those who have something to venture, that, besides the ordinary losses which may accrue in any speculation, they have to contend with mere reckless gamblers who go in to win, but who cannot pay if the tide should turn against them. Many a man who has obtained a competency forgets, when he is entering on a speculation that may be capable of consuming all he possesses, that he is staking ease and comfort against beggary and disgrace.

It may be true, that in all matters of commerce something must be ventured in order to secure a profit: a man who locks up his money in a chest without using it, may keep it, but the bare possession will be of no value to him. But the risks of ordinary traffic are capable of being reduced to a certainty, your venture may be calculated, and, if you are content with a somewhat smaller profit, be to a great extent insured. As far as this goes the proverb is true, that if you venture nothing you will gain nothing. But this is not the sense in which the words are commonly used. They are generally applied by some one who wishes you to enter upon some undertaking in which the profits are described as enormously large, but in which the risks are also enormous. Something as full of peril

As to o'walk a current-caring loud  
On the unsteadfast footing of a spear,

where you may possibly get over with safety, but if you fall in, "good night." The excitement of this kind of gambling transaction in trade is as attractive to some men as the gambling at cards, dice, and betting is to others. Like the gentleman who is recorded to have said that the greatest pleasure in life was winning money at cards; and the next greatest pleasure, losing. So these nothing-venture-nothing-have traders seem to think the greatest pleasure in life is making money by some daring speculation; and the next greatest, losing. In all trade there must be speculation to a certain extent; it is the very essence of commerce; but reckless gambling in matters of trade is as injurious as in horse-racing, the hazard-table, or cards. And one species of gambling frequently leads to the other. The same spirit, avarice, animates both; the same principle, "nothing venture, nothing have," directs both.

We pride ourselves here in England on the change that has taken place in the higher classes as regards their general *morale*; and their gambling propensities in particular. Where vice does exist, it does not make that unblushing parade of itself which it did a century ago. No prime minister in these days would venture to lead a woman of notoriously bad character through the crush-room of the Opera, in the presence of the Queen, as the Duke of Grafton did Nancy Parsons; no first lord of the Admiralty would permit his mistress to do the honours of his house, as in the days of Lord Sandwich; we do not see our parliamentary leaders wasting their energies in drunken orgies, or in the excitements of the gaming-table, as in the days of Pitt and Fox, when even men like Wilberforce were seduced within the tempting vortex, when sums so large were staked between private gentlemen, that they did not always remember which had won fifty thousand pounds. "At one period of the play," says Lord Carlisle, who rose in the end a winner of £13,000, speaking of a night of play between himself, Lord Ilchester, and Fox, who was then only eighteen years old, and who won £5,000 the same night; "At one period of the play, I remember, there was a balance in favour of one of those gentlemen (Lord Ilchester or Fox), but of which, I protest I do not remember, of about fifty thousand." Where are the winners?—where are those who act upon our proverb, "nothing venture, nothing have," and venture deeply? Does their venture prosper? See this same Lord Carlisle, who did venture thus deeply, sunk into despondency at the age of twenty-seven:—"I have undone myself," he writes to a friend, after a series of losses, "and it is to no purpose to conceal from you my abominable madness and folly, though perhaps the particulars may not be known to the rest of the world. . . . I do protest to you, that I am so tired of my present manner of passing my time—however I may be kept in countenance by any number of those of my own rank and superior fortune—that I never reflect on it without shame. If they will employ me in any part of the world, I will accept the employment; let it tear me, as it will, from everything dear to me in this country. . . . If any of our expectations should be gratified in the winter, I cannot expect anything sufficient to balance the expenses of living in London. If I accept anything, I must attend Parliament—must live in London. If I am not treated with consideration, I can live here—if that can be called living, which is wasting the best years of my life in obscurity—without society to dispel the gloom of a northern climate—left to myself, to brood over my follies and indiscretions—to see my children deprived of education by those follies and indiscretions—to be forgotten—to lose my temper—to be neglected—to become cross and morose to those whom I have most reason to love! Except that the welfare and interest of others depend upon my existence, I should not wish that existence to be of long duration." He had ventured all the advantages of birth, youth, talent, fortune, and had gained nothing but bitterness.

Although we occasionally hear of dissipated young men in the higher ranks of society indulging in the penurious habit of gambling, venturing deeply, and gaining a loss, yet the vice is by no means so prevalent in the higher classes as it was formerly. In the last century, a fashionable party was scarcely thought complete without its Faro-table; and lords and ladies, in their own houses, held what was called the Bank, which gave them a decided advantage over the other players, and secured their company under the guise of amusing them. They did not, however, altogether escape the suspicion of foul play, and it became a kind of fashion "to hire a professional gamester at five or ten guineas a night, to set up a table for the evening, as we should hire Lablache for a concert, or Weipert for a ball." Then came the establishment of clubs, in which men associated themselves for the purpose of gaming, like Watiers, for instance, of which all the principal members were ruined, and the club was broken up through the forced expatriation of its supporters. Dr. Butler, formerly Master of the Temple, in one of his published sermons, thus speaks of these associations, and the detestable vice they were intended to encourage. "To this sordid habit the gamester joins a disposition to fraud, and that of the meanest cast. To those who soberly and fairly appreciate the real nature of human actions, nothing appears more inconsistent than that societies of men, who have incorporated themselves for the express purpose of gaming, should disclaim fraud, or affect to drive from their assemblies those among their associates whose crimes would reflect disgrace on them. Surely this, to a considerate mind, is as solemn and refined a banter as can well be exhibited: for when we take into view the vast latitude allowed by the most upright gamesters, when we reflect that according to their precious casuistry, every advantage may be legitimately taken of the young, the unwary, and the inebriated, which superior coolness, skill, address, and activity can supply, we must look upon pretences to honesty as a most shameless aggravation of their crimes. Even if it were possible that, in his own practice, a man might be a fair gamester, yet, for the result of the extended frauds committed by his fellows, he stands deeply accountable to God, his country, and his conscience. To a system necessarily implicated with fraud; to associations of men, a large majority of whom subsist by fraud; to habits calculated to poison the source and principle of all integrity, he gives efficacy, countenance, and concurrence. Even his virtues he suffers to be subsidiary to the cause of vice. He sees, with calmness, depredation committed daily and hourly in his company, perhaps under his very roof. Yet men of this description declaim (so desperately deceitful is the heart of man) against the very knaves they cherish and protect, and whom, perhaps, with some poor sophistical refuge for a worn-out conscience, they even imitate."

It required something more than denunciations from the pulpit to put down this vice, or to prevent men from associating together for gambling purposes. Mr. Crookford was the great reformer, for he succeeded, after a time, in teaching the fashionable world, that however deeply they might venture, they would gain nothing. Within the deserted walls of Western he

first set up his Hazard bank; and then commenced building that magnificent Club which bore his name, which sprung up like a fairy palace, adorned with every art that could captivate the senses, every luxury that could enervate the mind. As in humbler life the gaudy fittings of the gin-shop attract the populace, so the den of vice of the higher classes was adorned with a meretricious taste to appeal to the same sensual feelings under a higher state of cultivation and development. And although the purposes for which these gilded saloons and festal chambers were intended were fully known, the fashionable world flocked in crowds to the decoy; the first men of the day gave the sanction of their names to the undertaking; even the Duke of Wellington, although no gambler, was among the original subscribers; and not to be a member of Crookford's was tantamount to an exclusion from the fashionable circle. "Nothing venture, nothing have," became the recognized motto of the club; but most of the members found those words truly meant, "He who enters here leaves hope behind." Scion after scion of the aristocracy was totally ruined in this luxurious pandemonium. We may form some idea of the enormous sums lost by them, when we hear that Mr. Crookford retired in a few years, having realised upwards of a million of money; and, besides this, having numbers of the aristocracy still indebted to him, it is said, to the amount of half a million more, but which he never expected to receive. He obtained all he could; and like the lawyer who was accused of taking a less fee than the dignity of the profession required, consoled himself with the thought that he took all the rascal had got, and what could he do more? There are many queer stories told of some of the gamblers at these clubs:—One old gentleman obtained the nickname of Neptune, because he once flung himself into the sea in a fit of despair, at being, as he thought, ruined: he was fished out in time, found he was not quite ruined, and his cold-bath did not wash away his propensity, for he played on during the remainder of his life. Another gentleman had the sobriquet of "*Le Wellington des Joueurs*" affixed to him, for his skill; but we are told that even he was not infallible, for "he once lost three thousand four hundred pounds at Whist, by not remembering that the seven of hearts was in." He played at Hazard for the highest stakes that any one could be got to play with him, and at one time was supposed to have won nearly a hundred thousand pounds; but it all went, along with a great deal more, at Crookford's.

We have called Crookford the great reformer in these matters. He had regularly cleaned out the aristocratic frequenters of his club, and retired, as it has been said, "much as an Indian chief retires from a hunting country, when there is not game enough left for his tribe." Upon his retirement, the great establishment dwindled away, and shortly ceased to exist as a Club. But during its existence, it had to a very great extent destroyed the practice of gaming in private houses between gentleman and gentleman. A variety of similar, but inferior, establishments to this of Crookford's, sprang up, and became such a general nuisance, that the law interfered to put them down. So that the result of Mr. Crookford's establishment was the enriching of the founder by the ruin of many families of the aristocracy, the increase of public gaming until it became a public nuisance, and the ultimate suppression of these public gaming-houses. Thus the facilities afforded by Crookford's establishment did much towards destroying the habit of private gambling; and by drawing the attention of the authorities to the evils of public gambling, put down the larger portion of the haunts which ruined so many thousands. But the evil is not eradicated; we hear still of many disgraceful transactions of this kind amongst a few of the aristocracy, and more particularly among the military caste. Yet we believe we are warranted in saying that a very great diminution of the practice of gambling has taken place among the higher aristocracy; that a ban has been placed upon it; that it is now never openly encouraged, but is obliged to hide itself in holes and corners, and is confined to small cliques and coteries, amongst which it is disreputable to be known to be mixed up.

Amongst another class of society, however, it is become a fearful and a rapidly-extending evil. We know not to what extent cards and dice are used among the tradesmen and the working-classes, but the practice of betting on horse-races is become so general, that it requires to be interfered with by the Legislature and the Police, as much as the "hells" or as the lotteries of old. We have the authority of a Committee of the House of Commons for stating, that the gambling spirit which was fostered and encouraged by the old lotteries was productive of the most fearful evils to society. "Nothing venture, nothing have" has brought many a family to starvation and ruin. Let us take the case given in evidence by the Rev. Mr. Gurney, as showing the extent this kind of gambling will carry persons who, had it not been for the facilities and temptations held out by the then existing lotteries (and which facilities, though, perhaps, not quite such great temptations as are afforded by the present numerous betting-offices), might have lived with comfort and respectability, but who, from these kind of speculations, have been reduced to the most abject state of poverty and distress. "I knew," Mr. Gurney states, "a widow, in a good line of business as a silk-dyer, which, I suppose, brought her in about £400 a year clear. She kept a very good house, and I was in habits of intimacy with the family. The foreman she had was in the habit of insuring in the lottery. He was led astray by an acquaintance, and he and his mistress insured to the amount of £300 or £400 in a night, although the foreman had only £80 a year wages. It appeared, on his decease, he had insured immense sums of money within the last year of his life. I found that he had expended upwards of a hundred guineas in the lottery, purchasing one ticket at £16, and insuring away the rest. It came up a blank at last; and I verily believe the disappointment was the cause of his death. He died insolvent, and I acted as his executor, and paid three or four shillings in the pound to his creditors. He had received a great many bills for his mistress, which he had never accounted for, and was the ruin of her also; she was not able to pay three shillings in the pound. She

was obliged to go into an almshouse, and died there in four or five months. They would send all the plate she possessed to raise money to carry on an insurance, which had begun, perhaps, at a low rate. The gentleman who drew the foreman into this practice was himself ruined by it. His wife had an annuity of £400 settled on her; he sold her life interest, and she was obliged to live afterwards upon charity; while her husband, who had formerly kept his carriage, and lived in a good house in Queen-square, spent the last hours of his miserable existence within the rules of the Fleet Prison." Hundreds of similar cases might be cited; among which we find wives robbing their husbands, children their parents, servants their masters; suicides were common, and almost every crime that can be imagined has been occasioned, either directly or indirectly, through the baneful influence of lotteries. This is the never-failing commentary on the text, "Nothing venture, nothing have." Lotteries have been abolished; but the same desire to get money by sudden and illegitimate means, finds food in the numerous "betting offices" which have of late sprung up in every street and alley of this great metropolis, which attract alike the great capitalist and the poor working man. All are for having their venture; and all subject to plunder. The knavery and rascality which has become so mingled with horse-racing, as to drive men of character and respectability from the turf, finds many dupes and victims among the merchants, the tradesmen, the artisans, and, more particularly, the "fast young men" of the present day. It would be a curious and instructive document, if some member of parliament were to move for a return from each of the public officers, of the numbers of young men who had lost their situations through embarrassments brought on by betting—by venturing their little nothings, and finding that they got nothing but disgrace. But one of the worst features of the present facilities for gambling afforded by these "betting offices," is, that tradesmen begin to reckon on them as a source of revenue, and give up their time to the mysteries of "making a book," instead of attending to their legitimate business. They place their dependence on a set of men who were characterized by Nimrod, in his celebrated paper on the Turf, as "the most unprincipled set of thieves and harpies that ever disgraced civilized society." And they foolishly expect they are to gain money in their dealings with them. No man can long retain his honesty when he enters upon such a destructive career: the association with knavery and fraud will soon spread its contamination over him; and the gambling tradesman will swell the list of fraudulent bankrupts. How many of these "betting offices," we should be glad to know, could stand one unfavourable "event"; how many miserable dupes would find the doors of the office, where they had staked their money, closed upon them when they called for payment; the keeper "levanted," and the cash-box gone. The most knowing hands are said to be able to "make a book" that is sure to win, whatever may be the event; this must be at the expense of the dupes whom they draw around them. The whole system is knavery on one side, and folly on the other; and it does not require much knowledge of the betting-ring to be able to calculate pretty safely which will win. "Nothing venture;" that is the portion of the text to stick to in such matters; for as sure as you do venture anything, even though you may gain a trifle to begin with, you will soon find that, in the end, you will "nothing have."

## LANGSYNE.

LANGSYNE!—how doth the word come back  
With magic meaning to the heart,  
As Memory recalls the sunny track,  
From which Hope's dreams were loath to part!

No joy like by-past joy appears:  
For what is gone we grieve and pine.  
We're like spun out a thousand years,  
It could not match Langsyne!

Langsyne!—the days of childhood warm,  
When, tottering by a mother's knee,  
Each sight and sound had power to charm,  
And hope was high, and thought was free.

Langsyne!—the merry schoolboy days—  
How sweetly then life's sun did shine;  
Oh! for the glorious pranks and plays,  
The raptures of Langsyne!

Langsyne!—yes, in the sound I hear  
The rustling of the summer grove,  
And view those angel features near,  
Which first awoke the heart to love.

How sweet it is, in pensive mood,  
At window midnight to recline,  
And fill the mental solitude,  
With spectres from Langsyne!

Langsyne!—ah, where are they who shared  
With us its pleasures bright and blithe?  
Kindly with some bark fortune fared;  
And some have bowed beneath the scythe

Of death; while others, scatter'd far  
O'er foreign lands at fate repine,  
Oh! wandering forth, 'neath twilight's star,  
To muse on dear Langsyne!

Langsyne!—the Mart can never be  
Again so full of guileless truth—  
Langsyne!—the eyes no more shall see,  
Ah, no! the rainbow hopes of youth.  
Langsyne! with thee resides a spell  
To raise the spirit, and refine.  
Farwell!—there can be no farewell  
To thee, loved, lost Langsyne!

DENTA.

**MUSIC.**—The exquisite sensations which sweet sounds excite are generally said to be by reason of association. A strain which delighted us in early life, whenever it again meets the ear, will, in some measure, restore to the heart the sunshine and the fresh-breathing verdure of youth. A song, which we first heard from the lips that we loved, will ever after thrill through the heart with joy or sadness, according as the passion has been fortunate or unsuccessful. The chain of association is struck, the electric touch is felt through the whole frame, and thoughts that had long slumbered in the breast start at the magic sound into a sudden and vivid existence. Such is the powerful influence of music, that we have known men steeped in sorrow, and of apparently iron frame, who, at the sound of some uniform melody, have shed tears, and have felt the full force of music like children.

## ONWARD!

**GUTTA PERCHA IN DISEASES OF THE SKIN.**—Dr. Graves of Dublin, has used, since last November, a saturated solution of gutta percha in chloroform, as a topical application in various diseases of the skin. The success of this novel remedy has been very remarkable.

**DOMESTIC USE OF GAS FOR HEATING.**—Mr. F. Goddard, C.E., of Ipswich, has, it is said, constructed a small portable asbestos gas stove, for heating apartments, of great simplicity as well as portability, the apparatus being contained in a box 12 inches by 9 inches, and 3½ inches deep; also a protected gas-burner for gas cooking stoves, in which the holes are not liable to be choked up.

**LIGHTNING CONDUCTING.**—A discovery akin to that of Mr. G. Little, which has been made public, is said to have been made by Mr. Roger Brown, of Sheffield; namely, that magnetized steel has pre-eminent power to attract the lightning when used in conductors instead of the ordinary article. By this means, and by multiplying the number of points in the head of the conductor, its attractive power is said to be tripled in intensity, its influence extending to some distance round the spot where it is fixed.

**SECURITY OF RAILWAYS.**—It is proposed to provide locomotive drivers with a looking-glass, by means of which, while looking, as they must do, straight ahead, they might at a glance see if anything were wrong with the train, by signal from the guard or otherwise. This is not a new suggestion, however, and we doubt there are hindrances in the way of its practical adoption, such as steam for instance, and soot, which might obscure the face of a mirror precisely at the moment it was wanted.—An ingenious plan of a self-adjusting train-signal, to be applied to each carriage, and linked, by help of what is called pin and star clutch-boxes, projecting as the buffers do, has been suggested by Mr. H. Dircks, of Moorgate-street.

**ELECTRO-TELEGRAPHIC PROGRESS.**—There seems to be a prospect of extensive advancement in electro-telegraphic communication. Steamers are capable of plying between Newfoundland and Galway in five days, and in connection with this possibility, New York and London are to be brought within five days' time distance, by means of about 48 miles only of submarine telegraph across the St. Lawrence, &c., on the one hand, and on the other, by the Irish telegraph from Galway and across the Irish channel, which it is said will be laid down and completed, in the current year. A submarine Irish, indeed, it is said, will be laid down during the present month, between Donaghadee and Port Patrick, a route 44½ miles shorter than between Kingstown and Holyhead. Two distinct lines of four wires are to be thrown across the channel, and Downing-street and Dublin Castle are to be united in instantaneous communication. The laying down, too, of the Belgian Telegraph from our eastern shore, is to be gone into without delay as the wire is ready. The line is to run from Dover as far as Nieuport.

The advantages offered by the Submarine Telegraph are now about to be greatly extended, both on the continent of Europe and in this country, by the establishment of two Companies under very influential direction, whose object will be the placing of London, Liverpool, and Manchester in direct and instantaneous communication with all the capitals and important commercial towns of France, Belgium, Holland, Prussia and other parts of Germany. To effect this, besides the Belgian, a second cable will be laid down between France and England. Arrangements have also been made, independent of the Newfoundland scheme, for the collection in Boston and New York of telegraphic messages from all parts of the United States, from whence they can be brought to Liverpool by the mail packets, and thence transmitted through these lines to all parts of Europe. But even this is not all; a well-known American telegraphist is now earnestly engaged in promoting the project of extending the telegraph westward to the Pacific, and is sanguine of being able to have it in operation to San Francisco within eighteen months, provided Congress shall make a favourable response to his memorial asking for right of way through the wilderness, and protection to his wires. He seeks no pecuniary aid, but simply proposes to supersede the present system of forts, at long distances, with large garrisons, by establishing stockades twenty miles apart, each of twenty dragoons. He proposes that two or three soldiers shall ride daily each way from each stockade, so as to transport a daily express letter mail across the continent, while at the same time protecting and comforting emigrants and settlers along the public domain. The distance between Missouri and San Francisco is about 2,300 miles. They do things, as well as speak of doing them, on an immense scale, in America. 3,000 miles of telegraph, in an unbroken chain, between New York and New Orleans, were actually completed on the 9th ult. The *New York Times* of the 10th says:—"Last evening the New Orleans telegraphic operators had a chat, for the first time, wire to wire, with their contemporaries in Hanover-street. New York despatches were forwarded and answers received from New Orleans dated one hour after they were received. Thus a message started from this office, traversed 3,000 miles, and arrived at its destination 60 minutes after it started." Mr. Henry Evans, of New Bedford, U.S., has invented a submarine telegraph wire-rope, of hemp yarns, of any thickness required, the yarns being saturated in a composition that is durable and impervious to water. The four strands of which it is composed are made at the same time. A copper, steel, or iron wire, of any required size, is completely bedded in the centre of each strand, and one also in the heart of the rope, making five wires in all. The cavity of the rope is filled solid with yarns, and then a thick coating of the same is put over the outside, making the rope perfectly round. The whole is then covered with iron or copper rods. The machinery is capable of making a rope of any length without splicing. It may be made to weigh from one to twenty tons per mile.—*Bellid.*

## STATISTICS.

**THE HUMAN FAMILY.**—From a curious statistical digest just published, it appears that the human family numbers 700,000,000; and its annual loss by death is 18,000,000, which produces 624,400 tons of animal matter, which, in turn, generates by decomposition 9,000,000,000 cubic feet of gases, which are cleared away from the atmosphere by vegetable matter decomposing and assimilating them for their own uses. This is an interesting subject for philosophy.

**LEIPZIG FAIR STATISTICS.**—The catalogue of the Easter book-fair at Leipzig contains 4,527 works as published, and 1,163 to be published. This is an increase of 700 volumes compared to the Michaelmas fair, and of 800 more than the last Easter fair. The number of publishers by whom the works have been brought out is 903. One house at Vienna has produced 113, and the Messrs. Brockhaus 95.

**AMERICAN RAILWAY STATISTICS.**—The Railroads of Massachusetts are 1,267 miles long; cost 58,000,000 dollars; have paid in dividends the last year, 2,159,000 dollars, or less than 4 per cent. Sixty-eight persons have been accidentally killed by them, and 30 other persons injured. The earnings have been 7,333,000 dollars, and expenses 4,000,000 dollars; and the average rate of speed for passenger-trains is 23 miles per hour.

**CONSUMPTION OF SPIRITS IN SCOTLAND.**—There has just been printed in a Parliamentary paper some accounts with respect to spirits in Scotland. In 1840 the quantity of spirits made in Scotland from unmalted grain numbered 2,298,692 gallons; and from malt only, 6,522,568 gallons. The revenue derived from malt only in that year, used for making spirits, was £236,903 8s. 7d. There were 117 distillers manufacturing malt spirits, and 10 distillers making spirits from malt and grain at different periods. In 1851 there were 4,315,151 gallons made from unmalted grain in Scotland, and 5,723,513 from malt only. The revenue derived from malt used in making spirits was £214,513 8s. 10d. The total number of distillers in Scotland in the same year was 161.

**STATISTICS OF AMERICAN COMMERCE.**—The annual statement of the tonnage employed in the foreign commerce of New York, has just made its appearance, for the year 1851. We learn from it that the number of arrivals were 3,843, of which 2,353 were American vessels, and the balance foreign. The total number of seamen was 55,835. This does not include the coasting-trade. The increase over former years is very decided, and exhibits, in a striking light, the growing prosperity of the nation at large. But this is not all. The business of 1851, as compared with that of former years, displays a marked advance made by American ships in their competition for the carrying trade. This will appear from the following Table, giving a comparative statement of the foreign commerce of New York from 1846 to 1851 inclusive:

| Calendar Year. | No. of Arrivals. | Tons, American. | Tons, Foreign. | Total Tons. |
|----------------|------------------|-----------------|----------------|-------------|
| 1846 - - -     | 2,292            | 496,761         | 185,404        | 682,165     |
| 1847 - - -     | 3,147            | 605,482½        | 333,537        | 939,019½    |
| 1848 - - -     | 3,060            | 657,794½        | 367,321½       | 1,025,116½  |
| 1849 - - -     | 3,227            | 734,908½        | 414,096        | 1,148,104½  |
| 1850 - - -     | 3,333            | 807,500½        | 411,766½       | 1,219,337   |
| 1851 - - -     | 3,840            | 1,144,485       | 479,566½       | 1,624,051½  |

**STATISTICS OF STRIKES IN BRITAIN.**—In 1836, the operatives of Preston, to the number of 8,000, struck work for thirteen weeks; and the loss, in a mere monetary point of view, to the town and trade of Preston was calculated at no less a sum than £107,196, whilst from 20,000 to 30,000 individuals were reduced at once to starvation. In the same year, the cotton-spinners of Glasgow struck for a period of seventeen weeks. The total loss to Glasgow amounted to £194,500. In 1834, the result of the combination of colliers in Lanarkshire, and the two adjoining counties, was equivalent to a tax on the inhabitants of £189,000, for a period of eighteen months, besides a loss to the colliers themselves, their employers, and others, during a strike of six months, of £189,000. In this strike, it is also calculated that between 40,000 and 50,000 human beings were rendered destitute. Trade strikes have always proved injurious to the country in which they have occurred; and it is to the interest of every labouring man to avoid combinations of this character.

**STATISTICS OF MUSCULAR POWER.**—Man has the power of imitating almost every motion but that of flight. To effect these, he has, in maturity and health, 60 bones in his head, 60 in his thighs and legs, 62 in his arms and hands, and 67 in his trunk. He has also 434 muscles. His heart makes 64 pulsations in a minute; and therefore 3,840 in an hour, 92,160 in a day. There are also three complete circulations of his blood in the short space of an hour. In respect to the comparative speed of animated beings, and of impelled bodies, it may be remarked that size and construction seem to have little influence, nor has comparative strength, though one body giving any quantity of motion to another is said to lose so much of its own. The sloth is by no means a small animal, and yet it can travel only fifty paces in a day; a worm crawls only five inches in fifty seconds; but a lady-bird can fly twenty millions of times its own length in less than an hour. An elk can run a mile and a half in seven minutes; an antelope a mile in a minute; the wild mule of Tartary has a speed even greater than that; an eagle can fly eighteen leagues in an hour; and a Canary falcon can even reach 260 leagues in the short space of sixteen hours. A violent wind travels sixty miles in an hour; sound, 1,142 English feet in a second.—*Bucke.*

## CHARADE.

My first may to a lady be a comfort or a bore.  
 My second, where you are, you may for comfort shut the door.  
 My whole will be a welcome guest  
 Where tea and tattle yield their zest.

## PARLOUR PASTIME.

*The Universal Traveller; or, a new way of playing at Jack of all Trades.*

THE traveller quits the room; all the rest fix respectively on the country they wish to represent, somewhat in this fashion;—A Turkish lady twists a handkerchief for her turban, and with a stick appears to be smoking a pipe as she reclines on a cushion. A German student may be represented with mock knapsack, book, turned-down collar, and singing a Rhine song; a German lady should be knitting with feet on a stove. A Laplander, warmly wrapped, should be shown by appearing to drive rein-deer, which may be represented by chairs turned down, and a hearth-rug over his knees. A Gipsy's tent may be easily contrived, and other countries similarly personated; and when all are ready, the traveller comes into the room, and endeavours to guess what nation each represents by their appearance, occupation, &c.

## CHARADES.

I.  
 My first in woods or forests green  
 In all its beauty may be seen;  
 And also where the crackling blaze  
 Its cheerful ruddy light displays.  
 My second, deep beneath the ground,  
 By gloomy toil is sought and found;  
 Then wrought with skill in various forms—  
 The warrior's arm, or maid adorns.  
 See yonder vessel, how she drives!  
 Fast o'er the foaming sea,  
 She nears the land—alas! I fear,  
 My whole she'll quickly be.

II.  
 My first is to a yoke attached,  
 And borne from door to door;  
 If you my second wish to find,  
 The zodiac explore.  
 Now take an atlas, mark the page  
 That gives the Atlantic Ocean;  
 And if you search with diligence,  
 You'll find us, I've a notion.

## TRANSFIGURED PLAYING CARDS.

THE ACE OF DIAMONDS—"A ROUGH DIAMOND."

## PARADOXES.

I.  
 How can a mechanic file a square hole with a round file, and fill up an oval hole with a round stopper?

II.  
 Mathematicians affirm that, of all bodies contained under the same superficies, a sphere is the most capacious; but surely they have never considered the amazing capaciousness of a body whose name is now required, and of which it may be truly affirmed, that supposing its greatest length nine inches, greatest breadth four inches, and greatest depth three inches, yet under these dimensions it contains a solid foot.

## PROBLEM.

Divide into two equal parts eight gallons of wine, contained in a cask, with a five-gallon measure and a three-gallon measure.

## CONUNDRUMS.

1. Why is an impertinent fellow like a waterman?
2. Why is your father's mother like the tallest soldier in the foot-guards?
3. Why is a beggar like a barrister?
4. What precious stone is like a door?
5. Why is a peach-stone like a regiment?
6. Why is an angry person like a loaf?
7. Why is London like the letter E?
8. Why is a wedding ring like eternity?
9. Why is the human mind like sealing-wax?
10. What burns to keep a secret?
11. Why is a thinking man like a mirror?
12. Why is a sycophant like the hands of a clock?
13. What is that which ties two people together, and touches only one?
14. Logs I have none, and yet I go and stand;  
 And when I go I lie, witness my hand.

ENIGMATICAL BOUQUET OF WILD FLOWERS.—1. FOX-GLOVE. 2. BLUE-BELL. 3. HARE-BELL. 4. WATER-LILY. 5. COWSLIP. 6. DANDELION. 7. DOG-ROSE. 8. VIOLET. 9. GROUND IVY. 10. MAY.

TRANSPOSITIONS.—1. MITE, TIME. 2. FEELS, SLEEP. 3. TEN, NET.

## CONUNDRUMS.

1. Because it is an Attic story.
2. A re-bus.
3. Because he is going to Bag-dad.
4. We snuff the candle.
5. Because it makes both ends meet.
6. Because he is in-arm.
7. Because a friend in-kneed is a friend indeed.
8. Because they feel-loss-of-eyes (philosophize).
9. Because his capital is doubling (Dublin).
10. Because they cannot put up with short commons.
11. Because he has an attachment to carry on (carriage).
12. Because it's barking.
13. A secret.
14. Music.
15. Because it always has a pupil under the lash.
16. The dark.
17. Because there is not a single person in it.

CHARADE.—LIVER-POOL.

## OUR CORNER CUPBOARD!

**HOW TO GET RID OF YOUR CORNS.**—Rub them over with toasted cheese, and let three or four hungry mice nibble them for a night or two.

"Your horse has a tremendous long bit," said a friend to Theodore Hook. "Yes," said he, "it is a *bit* too long."

**TACT.**—The art of wheedling a rich old relation, winning an heiress, or dismissing duns with the payment of fair promises.

**TASTE.**—The art of discerning the precise shades of difference constituting a bad or well-dressed man, woman, or dinner.

It was told Lord Chesterfield, that Mrs. M——, a tarmagant and scold, was married to a gamester; on which his lordship said, "that cards and brimstone made the best matches."

A GENTLEMAN, just married, telling Foote he had that morning laid out three thousand pounds in jewels for his *dear wife*,—"She is truly your *dear* wife," replied the wit.

FELIX MCCARTHY, of the Kerry militia, was generally late on parade,— "Ah, Felix," said the sergeant, "you are always late." "Be asy, sergeant Sullivan," was his reply; "sure some one must be late."

A PRINTER observing two bailiffs pursuing an ingenious but distressed author, remarked, "that it was a new edition of 'The Pursuits of Literature,' *unbound, but hot-pressed*."

In the newspaper account of an inquest held on the body of a glutton, who died by devouring part of a goose, the verdict, *suffocation*, was printed with more truth than was intended, *stuffed*.

COLONEL M——, of the Perthshire cavalry, was complaining, that, from the ignorance and inattention of his officers, he was obliged to do the whole duty of the regiment. "I am," said he, "my own captain, my own lieutenant, my own cornet,"—"and *trumpeter*, I presume," said a lady present.

THE equivocality of many of the names of places in Scotland, has given occasion to a very amusing saying regarding a clergyman. "He was born in the parish of *Dull*, brought up at the school of *Dunse*, (*quasi* Dunce,) and finally settled minister in the parish of *Drone*!"

ONE meeting an acquaintance, who was a printer by profession, inquired of him, "If it was true Mr. ——— had put a period to his existence?" "No, no," replied the typographer, "he had only put a colon, for he is now in a fair way of recovery."

LIE LEWIS, shooting on a field, the proprietor attacked him violently: "I allow no person," said he, "to kill game on my manor but myself, and I'll shoot you, if you come here again." "What," said the other, "I suppose you mean to make game of me?"

**ADAMS.**—A ledger kept by ladies for the entry of compliments, in rhyme, paid on demand to their beautiful hair, complexions fair, the dimpled chin, the smiles that win, the ruby lips, where the bee sips, &c., &c.; the whole amount being transferred to their private account from the public stock.

SYDNEY SMITH, preaching a charity sermon, frequently repeated the assertion, that of all nations, Englishmen were most distinguished for generosity and the love of their species. The collection happened to be inferior to his expectations, and he said, that he had evidently made a great mistake, and that his expression should have been, that they were distinguished for the love of their specie.

## THE NOSE.

'Tis very odd that poets should suppose  
There is no poetry about the nose.  
When plain as is the nose upon your face,  
A noseless face would lack poetic grace.  
Noses have sympathy; a lover knows  
Noses are always *touch'd*, when lips are kissing;  
And who would dare to kiss where nose was missing?  
Why, what would be the fragrance of a rose,  
And where would be our moral means of telling  
Whether a vile or wholesome odour flows  
Around us, if we owned no sense of smelling?  
I know a nose, a nose no other knows,—  
'Neath starry eyes, o'er ruby lips it grows;  
Beauty is in its form, and music in its blows!

**BUSINESS TECHNICALS.**—The language of Price-Currents, in commercial newspapers, is often amusing, and it is not uncommon to see announcements somewhat like the following:—Railroad Stocks, though *languid*, are beginning to *look up*. Feathers are *heavy*, but Lead is growing *light*. Spirits are *low*, in prospect of a new law, but Cordials are *rising*. Oranges are *flat*, but Figs are becoming more *firm*. Dry Goods are a *drag*, and Domesticates are *slack*. Lumber is *short*, and holders are more *stiff*. Flour is *dead*, but Hops are *quick*. Nails are *dull*, and all Provisions *dished* for the present. Cattle, neat, are *brisk*, and Swine *easy*. Coal is *fair*, and Wood has a *better feeling* since the cold set in. Wool is *lively*, and Cotton *beginning to move*. Molasses *sticks* in first hands; Candles are *tending upwards*. Fish are *steady*, and Hump in *less demand*. Hides, salted, are *smarter*, but Indigo holders look *blue*. Hops are *less active*, and Crash is *more quiet*. Soap, common, rubs *hard*; Ashes abundant and *fine*. Teas, black, hold their *grounds*, but Greens are quite *flat*. Hay is *down*, and Hoops are getting *tight*. Limes are unusually *slack*, and Spice is *scarce*. Specie is *below par*, but Brass still commands a *premium*.

## OUR MEMORANDUM BOOK!

**TACT.**—One of the most important applications to which the philosophy of mind may be subservient, is the sagacious exercise of the power of analysis, in avoiding subjects of conversation, and even words and actions, from which suspicion could extract any simple that forms a part in its own unhappy combinations; more particularly, in guarding against any remark which could suggest to another a train of ideas, the reverse of that which policy would dictate or humanity prompt.

There is a lesson in each flower,  
A story in each stream and bowet;  
In every herb on which you tread  
Are written words, which rightly read,  
Will lead you from earth's fragrant sod,  
To hope, and holiness in God!

**POWER.**—The passion for power is one of the most universal; nor is it to be regarded as a crime in all its forms. Sweeping censures on a natural sentiment cast blame on the Creator. This principle shows itself in the very dawn of our existence. The child never exalts and rejoices more than when it becomes conscious of power by overcoming difficulties and compassing new ends. All our desires and appetites lead aid and energy to this passion, for all find it a source of gratification in proportion to the growth of our strength and influence. We ought to add, that this principle is fed from nobler sources. Power is the chief element of all the commanding qualities of our nature. It enters into all the higher virtues; such as magnanimity, fortitude, and constancy. It enters into intellectual eminence. It is power of thought and utterance which immortalizes the products of genius. Is it strange that an attribute, through which all our passions reach their objects, and which characterizes whatever is great or admirable in man, should awaken intense desire, and be sought as one of the chief goods of life?

## MOTTOES FOR SUN-DIALS.

By the Rev. W. Lisle Bowker.

MORNING SUN.—*Tempus volat.*

Oh! early passenger, look up—be wise,  
And think how, night and day, TIME ONWARD FLIES.

NOON.—*Dum tempus habemus, operamur bonum.*

Life steals away—this hour, oh man, is lent thee,  
Patient to "WORK THE WORK OF HIM WHO SENT THEE."

SETTING SUN.—*Redibo, tu nunquam.*

Haste, traveller, the sun is sinking now—  
He shall return again—but never thou.

**THE ATMOSPHERE.**—The pressure of the atmosphere upon bodies is at the rate of 2,232 pounds weight upon every square foot, or upwards of 15 pounds upon every square inch. The question arises:—What benefit does the creation derive from so enormous a pressure? It is by this pressure that the force of the circulating juices, or the elastic force of the air contained in the blood of animals, or in the sap of plants, is prevented from too much distending their arterial vessels. Winds may be said to be caused from an imperfect equilibrium of the atmosphere, which equilibrium is from the tendency to maintain an equal pressure. A column of air, whose base is a square inch, and the height that of the whole atmosphere, weighs 15 pounds; and the weight of air is to that of mercury as 1 is to 10,800; whence it follows that if the weight of the atmosphere be sufficient to raise a column of mercury to the height of 30 inches, the height of the aerial column must be 10,800 times as much, and consequently a little more than five miles. But as the air is capable of expansion, it renders this calculation extremely erroneous, and therefore, philosophers have had recourse to another method, in order to determine the height of the atmosphere; namely, by a calculation of the height from which the light of the sun is refracted, so as to become visible to us, before he himself is seen in the heavens. By this method it was determined, that at the height of 45 miles, the atmosphere had no power of refraction; and consequently, beyond that distance was either a mere vacuum, or the next thing too it, and not to be regarded. In a word, it appears that the absolute height of the atmosphere is not yet determined. The beginning and ending of twilight, indeed, show that the height at which the atmosphere begins to refract the rays of the sun, is about 45 miles. But if meteors be bodies of real fire, how could that fire be continued at so great a height as many of them are seen, without air to support it? That is one of the objections raised against the foregoing calculation of the real height of the atmosphere.

**THE FARMER'S CREED.**—We believe in small farms and thorough cultivation. The soil loves to eat, as well as its owners, and ought therefore to be nurtured. We believe in large crops, which leave the land better than they found it—making both the farm and farmer rich at once. We believe in going to the bottom of things, and therefore in deep ploughing, and enough of it—all the better if with a subsoil plough. We believe that the best fertility of any soil is the spirit of industry, enterprise, and intelligence—without this, lime and gypsum, bones and green manure, marl or plaster, will be of little use. We believe in good fences, good barns, good farm-houses, good stock, and good orchards. We believe in a clean kitchen, a neat wife in it, a clean cupboard, dairy, and conscience. We firmly disbelieve in farmers that will not improve; in farms that grow poor every year; in starved cattle; in farmer's boys turning into clerks and merchants; in farmer's daughters unwilling to work; and in all farmers who are ashamed of their vocation.

**HOLLOWAY'S OINTMENT and PILLS**  
I have effected a wonderful CURE OF LAMENESS OF FIVE YEARS' DURATION.—Extract of a letter from Mr. Drandairil, of Turks' Island, Bahamas, dated August 3, 1851.—"To Professor Holloway.—Sir, I suffered during five years from lameness, occasioned by a severe cold, which confined me to my room for two years and a half, during which period I tried various remedies, but derived no benefit whatever from them. I was then recommended to try your excellent medicines, and from their use I have experienced the greatest relief. They have proved most efficacious in my case, as I am now enabled to walk without assistance, and am entirely free from pain."—Sold by all Druggists, and at PROFESSOR HOLLOWAY'S Establishment, 254, Strand, London.

"Costly thy habit as thy purse can buy,  
But not express'd in fancy—rich, not gaudy;  
For the apparel of proclians the man."—*Hamlet*.

**EVERY WELL-DRESSED MAN KNOWS**

How difficult it is to find a tailor who thoroughly understands the peculiarities of each figure, and can suit its requirements with a well-cut gentlemanly fitting garment, in which ease and taste, being equally regarded, the eye of the observer is pleased with its graceful effect, while the comfort of the wearer is secured. Hence it is that so few feel "at home" during the first day's wear of any new garment, and so many are apparently doomed to appear in clothes, however costly, that never can become adapted to their forms. To remedy so manifest a deformity in costume, FREDERICK FOX adopts this means of making known that he has practically studied both form and fashion in their most comprehensive meaning, and in the course of an extensive private connexion has clothed every conceivable development during the past thirteen years, always adapting the garment, whether coat, waistcoat, or trousers, to the exigencies of its individual wearer, and the purpose it is intended to serve, thus invariably attaining elegance of fit with that regard for economy which the spirit of the age dictates.—F. FOX, practical tailor, 73, Cornhill, same side of the way as the Royal Exchange.

SECOND ISSUE OF 5,000.

For the MILLION.—Now publishing, price 1d., post free for 2 stamps.

**THE FIRST ANNUAL REPORT OF THE LONDON SUBURBAN AND HOME COUNTIES PERMANENT BENEFIT BUILDING SOCIETY,** 16 pages, 32mo.

"A thoroughly well-planned Building Society, and the Report decidedly the best treatise ever published."—*Times*.

"A new era has opened upon us; this deserves and will certainly obtain public support."—*Daily News*.

Order of the Secretary, Mr. W. L. HARVEY, 3, Goddard-street, Doctors' Commons.

**PEOPLE'S EDITION OF THE PARLOUR LITERATURE OF ALL NATIONS.**

Now ready, Bound in one thick Volume, price 6s., elegantly ornamented as a Memento of the Great Exhibition.

**THE PARLOUR MAGAZINE**  
OF THE LITERATURE OF ALL NATIONS, Printed in the Crystal Palace, Hyde Park, at Machines No 158, and 167, Class 6.

We have no doubt that this volume of the PARLOUR MAGAZINE will be treasured by many future generations. People flocked to the Crystal Palace after its close, and eagerly bought up, at enormous prices, articles that had been exhibited there, that they might possess some memento of the Exhibition. We supply not only a work exhibited therein, but one actually produced by machinery within its walls, and in the view of millions of spectators. The value of our book will therefore increase with the advance of years, until it will be regarded as a curiosity and a treasure.—These volumes contain translations of Literary Treasures from the—

London: Houlston & STONEMAN, 65, Paternoster Row.

**TO THE LADIES.**—MRS. PULLAN succeeds Mrs. WARREN as EDITRESS OF THE NEEDLEWORK Department of THE FAMILY FRIEND. Beautiful Patterns in every Number.  
London: Houlston & STONEMAN.—Price 2d.

**GLENFIELD PATENT STARCH.—NOW USED IN THE ROYAL LAUNDRY.**—The Ladies are respectfully requested to make a trial of the GLENFIELD PATENT DOUBLE-REFINED POWDER STARCH, which, for domestic use, now stands unrivalled. Sold by nearly all the Oil and Colourmen and Chandlers in London, and throughout the Kingdom. Agents wanted: apply to Mr. R. WOTHERSPON, 40, Dunlop-street, Glasgow.  
London Depot: WOTHERSPON, Mackay, & Co., 49, King William-street, City.

**THE HOME COMPANION PORTFOLIO.**

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers or the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold Fifty-two Numbers, or Twelve Monthly Parts, which comprise one Volume. At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The price is Two SHILLINGS. The outlay will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully embossed, and illuminated with silver, by a new invention introduced by LEITCH, SON, and HODGE. It is an ornament for the drawing-room table—Order of any Bookseller.

**HANDSOME PRESENT.**

**THE FIRST FOUR VOLUMES OF THE FAMILY FRIEND,** price 2s. 6d. each, elegantly bound, form a complete First Series, with a general index to the contents of the four volumes, arranged in one alphabetical order, and comprising about Three Thousand Five Hundred references to matters of every-day interest and utility.—Sold by all Booksellers.

London: Houlston & STONEMAN, 65, Paternoster-row.

**NEW MEDICAL DICTIONARY FOR THE PEOPLE.** In Monthly Parts, price 6d. each, to be completed in 12. Parts I., II., III., IV., V., are published.

**THE DICTIONARY OF DOMESTIC MEDICINE AND HOUSEHOLD SURGERY.** By SPENCER THOMSON, M.D., L.R.C.S., Edinburgh. Illustrated.

This work is intended to be a concise and ready book of reference in cases of emergency, either of severe illness or accident, in the absence of immediate medical assistance, and a safe guide in the domestic management of slight ailments, and of the sick-room generally.

Also, a compendium of those sanitary principles on which the attainment and preservation of health depend. It is the book of the intelligent mechanic, of the inexperienced mother, of the elegyman, and of the emigrant.

"It is the most clear and copious; and if continued as it has begun, will prove the most valuable periodical of the year."—*Fair's Magazine*.

"For families and for the clergy it will be a valuable guide."—*Oxford Herald*.

"Intended for all classes, and giving promise of undoubted excellence."—*Newcastle Guardian*.

"We doubt whether any Medical Dictionary contains the same amount of correct and practical information. It is a work of very great value."—*Glasgow Examiner*.

"It is the best work of the kind yet attempted."—*Durham Chronicle*.

"Dr. Thomson proceeds with his labours in the most satisfactory manner, and as the work progresses its usefulness becomes more and more apparent."—*Hampshire Independent*.

"We cannot name a work in which families may find such valuable information at so trifling a price."—*Cornish Telegraph*.

"This work, when complete, will be the best of its kind extant, and ought to be found in every family library."—*Portsmouth Guardian*.

"It is one of the very best works of its class."—*Bradford Observer*.

"There can be no doubt of the utility and talent of the work."—*Bucks Herald*.

"The work may be safely referred to as an invaluable guide."—*Ipwich Express*.

"Ought to be in the hands of everybody."—*Kend Obs*.

"We certainly look upon this as an invaluable work, and no family should be without it."—*Cambs Independent*.

LONDON: GROOMBRIDGE & SON.

MAKING BONNETS. WEDGWOOD BONNETS. All at the lowest possible prices, for cash only.

BETHEL WARE. Manufacturer, 217, Tottenham Court-road, London.

### Editor's Note-Book.

#### DOMESTIC HINTS, No. 7.

**Boiling.**—The most stupid of culinary processes is not often performed in perfection; it does not require quite so much nicety and attendance as roasting; to skim your pot well, and keep it really boiling (the slower the better) all the while—to know how long is required for doing the job, &c., and to take it up at the critical moment when it is done enough—comprehends almost the whole art and mystery. This, however, demands a patient and perpetual vigilance, of which few persons are unhappily capable. The cook must take especial care that the water really boils all the while she is cooking, or she will be deceived in the time; and make up a sufficient fire (a frugal cook will manage with much less fire for boiling than she uses for roasting) at first, to last all the time, without much mending or stirring, and thereby save much trouble. When the pot is coming to a boil, there will always, from the cleanest meat and clearest water, rise a scum to the top of it; proceeding partly from the foulness of the meat, and partly from the water: this must be carefully taken off, as soon as it rises. On this depends the good appearance of all boiled things, an essential matter. When you have skimmed well, put in some cold water, which will throw up the rest of the scum. The oftener it is skimmed, and the cleaner the top of the water is kept, the cleaner will be the meat. If let alone, it soon boils down and sticks to the meat; which, instead of looking delicately white and nice, will have that coarse and filthy appearance we have too often to complain of, and the butcher and poultry are blamed for the carelessness of the cook in not skimming her pot with due diligence. Many put in milk, to make what they boil look white; but this does more harm than good: others wrap it up in a cloth; but these are needless precautions. If the scum be attentively removed, meat will have a much more delicate colour and finer flavour than it has when muffled up. This may give rather more trouble—but those who wish to excel in their art, must only consider how the processes of it can be most perfectly performed. A cook who has a proper pride and pleasure in her business, will make this her maxim and rule on all occasions. Put your meat into cold water, in the proportion of about a quart of water to a pound of meat; it should be covered with water during the whole of the process of boiling, but not drowned in it; the less water, provided the meat be covered with it, the more savoury will be the meat, and the better will be the broth in every respect. The water should be heated gradually, according to the thickness, &c., of the article boiled; for instance, a leg of mutton of ten pounds weight should be placed over a moderate fire, which will gradually make the water hot, without causing it to boil for about forty minutes; if the water boils much sooner, the meat will be hardened, and shrink up as if it was scorched—by keeping the water a certain time heating without boiling, its fibres are dilated, and it yields a quantity of scum, which must be taken off as soon as it rises, for the reasons already mentioned. "If a vessel containing water be placed over a steady fire, the water will grow continually hotter, till it reaches the limit of boiling; after which, the regular accessions of heat are wholly spent in converting it into steam; the water remains at the same pitch of temperature, however fiercely it boils. The only difference is, that with a strong fire it sooner comes to boil, and more quickly boils away, and is converted into steam." Such are the opinions stated by Buchanan in his "Economy of Fuel." There was placed a thermometer in water at that state which cooks call gentle simmering—the heat was 212°, &c. the same degree as the strongest boiling. Two mutton chops were covered with cold water, and one boiled fiercely, and the other simmered gently, for three quarters of an hour; the flavour of the chop which was simmered was decidedly superior to that which was boiled; the liquor which boiled fast, was in like proportion more savoury, and, when cold, had much more fat on its surface; this explains why quick boiling renders meat hard, &c.—because its juices are extracted in a greater degree.

**PAPIER-MACHÉ.** W. JAMES.—A name given by the French to an artificial substance, applied to many useful and elegant purposes. It is made of the waste cuttings of paper, boiled in water, and beaten to a pulp in a mortar. It is afterwards mixed with size to give tenacity to the paste, and when brought to the proper consistency it is

pressed in moulds of an infinite variety of forms; and thus made into tea-boards, trays, snuff-boxes, cigar-cases, &c. which are afterwards coated with pigments, varnished and ornamented.

**PRESERVATION OF HEALTH.** G. S.—Our correspondent should refer to the various rules we have given in the HOME COMPANION on this important subject. Sir William Paulet, who died in the reign of Queen Elizabeth, at the age of ninety-seven, gave the following answer to a person who had inquired how he had preserved his health:

"Late supping I forbear:  
Wine and excesses I forswear:  
My neck and feet I keep from cold:  
No marvel then, though I be old  
I am a willow, not an oak;  
I bend, but never hurt with stroke."

**THE TRUE WAY TO RISE IN THE WORLD.** J. T.—It is only by glodding active habits of industry that we can hope to win our way through life. The race may be arduous but it is one which will well repay the competitor. Barrow justly says, "A noble heart will disdain to subsist like a drone upon honey gathered by others' labour; like a vermin to slich its food out of the public granary; or like a shark to prey upon the lesser fry; but will rather outdo his private obligations to other men's debt and toll, by considerable service and beneficence to the public; for there is no calling of any sort, from the sceptre to the spade, the management whereof with any good success, any credit, any satisfaction, doth not demand much work of the head, or of the hands, or of both." Milton, who, during an active life in the most troublesome times, was unceasing in the cultivation of his understanding, thus describes his own habits:—"Those morning haunts are where they should be, home, not sleeping or concocting the surfeits of an irregular feast, but up and stirring; in winter, often ere the sound of any bell awake men to labour or devotion; in summer as oft with the bird that first rouses, or not much tardier, to read good authors, or cause them to be read till the attention be weary, or memory have its full draught; then with useful and generous labours preserving the body's health and hardiness, to render light, to clear, and not lumpy obedience to the mind, to the cause of religion and our country's liberty." Any man who does not profit by such noble examples is an enemy to the public weal, and is consequently

BLIND TO HIS OWN INTEREST.

**GAME OF DRAUGHTS.** J. MEER.—The nine laws for regulating the game of draughts are as follows:—1. Each player takes the first move alternately, whether the last game be won or drawn. 2. Any action which prevents the adversary from having a full view of the men is not allowed. 3. The player who touches a man must play him. 4. In case of standing the huff, which means omitting to take a man when an opportunity for so doing occurred, the other party may either take the man, or insist upon his man, which has been so omitted by his adversary, being taken. 5. If either party, when it is his turn to move, hesitate above three minutes, the other may call upon him to play; and if, after that, he delay above five minutes longer, then he loses the game. 6. In the losing game, the player can insist upon his adversary taking all the men, in case opportunities should present themselves for their being so taken. 7. Persons not playing, are not to advise, or in any manner interfere with the game of either party. 8. To prevent unnecessary delay, if one colour have no pieces, but two kings on the board, and the other no piece but one king, the latter can call upon the former to win the game in twenty moves; if he does not finish it within that number of moves, the game to be relinquished as drawn. 9. If there are three kings to two on the board, the subsequent moves are not to exceed forty.

**COMMUNICATIONS RECEIVED.**—W. PATRICK W. (We shall be glad to receive the papers.) MATHEW (Laughing gas is the appellation given to nitrous oxide, and is made by putting three or four drachms of nitrate of ammonia, in

crystals, into a small glass vessel, which being held over a spirit lamp, the crystals will melt, and the gas be evolved. Having thus produced the gas, it is to be passed into a large bladder having a stop-cock; and the person who wishes to experience its effects, should first exhale the atmospheric air from the lungs, and the cock being placed to his mouth, it is turned, and he at once inhales the gas.) CIVIS (Blaze-lane, Bucklersbury, is the vulgar appellation for St. Oystin's.) H. GARYSON (We have not space for directions on carving. Mr. Kitchener observes, that a prudent carver will cut fair, and regulate his help by the number he has to divide them amongst, taking into this reckoning the quantum of appetite the several guests are presumed to possess. For other particulars we refer our correspondent to the "Cook's Oracle.") TIMOTHY (The greatest and surest preserver of health is cleanliness.) JESSIE (To make cold cream, take oil of almonds, one pound; white wax, four ounces; melt, put into a warm mortar, add by degrees, rose water, one pint; it should be very light and white.) IMAZUKAN (The word comma is derived from the Greek, and properly designates a segment, section, or part cut off from a complete sentence. Semicolon is derived from the Latin *semi*, which means half, and the Greek *kolon*, which signifies a member.) EMPYROS (The celebrated riddle of the Sphinx in classic story was this, "What animal walks on four legs in the morning, on two at noon, and on the three in the evening?" The answer is *Man*, who, in infancy or the morning of life, walks or creeps on his hands and feet; at the noon of life he walks erect; and, in the evening of his days, or in old age, supports his limbs on a staff.) SYRISO (Climax consists in an artful exaggeration of all the circumstances of some object or action, which we wish to place in a strong light.) S. J. (Vignette is a French term, used to designate the descriptive or ornamental picture sometimes placed on the title-page of a book, sometimes at the head of a chapter, &c.) RUSTICUS (We can offer no suggestions respecting the golden lands of Australia, beyond advising our correspondent not to leave a comfortable certainty for the chances to which all are liable, of ill-success and misery. He should remember:

"Tis better to be lowly born,  
And range with humble livers in content,  
Than to be pecked up in a glittering grief,  
Or wear a golden sorrow.")

W. THOMAS (begin with some elementary works. Dr. Gregory's "Outlines of Chemistry," will be found very useful.) C. E. S. H. (will appear in an early Number.) G. C. (the first Number is now sold.) HENRICUS (the quotation from Hudibras is correct.) WAO (The extract is from Scott's "Fortunes of Nigel.") J. BARBARA (We do not know of any work on the subject.) EYON (We are strong lovers of peace, and have therefore no desire to waste the time of our correspondent, nor our own. Butler's opinion of an argument is worth remembering:

"This jargon, heathenish invention,  
Is good for nothing but contention;  
For as in sword and buckler fight,  
All blows do on the target light;  
So when men argue, the greatest part  
Of the contest falls on terms of art,  
Until the fustian stuff be spent,  
And then they fall to th' argument.")

H. M. (Cherries, pippins, and the apple called golden rosettes, were first planted in England in 1553, at Tenham, near Milton, in Kent, in a piece of ground about 166 acres in extent, called the Breunet, by Richard Harris, hunter to King Henry VIII.) D. JANKINS (Dr. Pretty, an English physician, appears to have found a very simple means of arresting the hicough. It is sufficient to squeeze the wrist, preferably that of the right hand, with a piece of string, or with the forefinger and thumb of the other hand.)

*"I instantly knew the voice of my poor ruined child Olivia. I flew to her rescue, while the woman was dragging her along by the hair, and I caught the dear forlorn wretch in my arms."*

## THE VICAR OF WAKEFIELD.

(Continued from page 500.)

### CHAPTER XII.

**FORTUNE SEEMS RESOLVED TO HUMBLE THE FAMILY OF WAKEFIELD.—MORTIFICATIONS ARE OFTEN MORE PAINFUL THAN REAL CALAMITIES.**

WHEN we were returned home, the night was dedicated to schemes of future conquest. Deborah exerted much sagacity in conjecturing which of the two girls was likely to have the best place, and most opportunities of seeing good company. The only obstacle to our preferment was in obtaining the Squire's recommendation; but he had already shown us too many instances of his friendship to doubt of it now. Even in bed my wife kept up the usual theme:

"Well, faith, my dear Charles, between ourselves, I think we have made an excellent day's work of it."

"Pretty well," cried I, not knowing what to say.

"What! only pretty well?" returned she. "I think it is very well. Suppose the girls should come to make acquaintances of taste in town. This I am assured of, that London is the only place in the world for all manner of husbands. Besides, my dear Charles, stranger things happen every day: and as ladies of quality are so taken with my daughters, what will not men of quality be? *Entre nous*, I protest I like my lady Blarney vastly; so very

obliging. However, Miss Carolina Wilhelmina Amelia Skeggs has my warm heart. But yet, when they came to talk of places in town, you saw at once how I nailed them. Tell me, my dear, don't you think I did for my children there?"

"Ay," returned I, not knowing well what to think of the matter, "Heaven grant they may be both the better for it this day three months."

This was one of those observations I usually made to impress my wife with an opinion of my sagacity; for if the girls succeeded, then it was a plan well fulfilled; but if anything unfortunate ensued, then it might be looked upon as a prophecy. All this conversation, however, was only preparatory to another scheme; and indeed I dreaded as much. This was nothing less than that, as we were now to hold up our heads a little higher in the world, it would be proper to sell the colt, which was grown old, at a neighboring fair, and buy us a horse that would carry single or double upon an occasion, and make a pretty appearance at church, or upon a visit. This at first I opposed stoutly; but it was as stoutly defended. However, as I weakened, my antagonists gained strength, till at last it was resolved to part with him.

As the fair happened on the following day, I had intentions of going myself; but my wife persuaded me I had got a cold, and nothing could prevail upon her to permit me from home.

"No, my dear," said she, "our son Moses is a discreet boy, and can buy and sell to a very good advantage; you know all our great bargains are of his purchasing. He always stands out and higgles, and actually throes them till he gets a bargain."

As I had some opinion of my son's prudence, I was willing enough to

entrusted him with this commission; and the next morning I perceived his sisters, sitting in their room, Moses for the fair; trimming his hair; brushing his buckles, and looking his hat with pins. The business of the toilet being over, we had at last the satisfaction of seeing him mounted upon the colt, with a deal box before him to bring home groceries in. (See engraving, page 481.) He had on a coat made of that cloth they call thunder and lightning, which though grown too short, was much too good to be thrown away. His waistcoat was of gosling green, and his sisters had tied his hair with a broad black ribband. We all followed him several paces from the door, bawling after him, "Good luck, good luck!" till we could see him no longer.

He was scarcely gone, when Mr. Thornhill's butler came to congratulate us upon our good fortune, saying, that he overheard his young master mention our names with great commendation.

Good fortune seemed resolved not to come alone. Another footman from the same family followed, with a card for my daughters, importing, that the two ladies had received such pleasing accounts from Mr. Thornhill of us all, that, after a few previous inquiries, they hoped to be perfectly satisfied.

"Ay," cried my wife, "I now see it is no easy matter to get into the families of the great; but when one once gets in, then, as Moses says, one may go to sleep."

To this piece of humour, for she intended it for wit, my daughters assented with a loud laugh of pleasure. In short, such was her satisfaction at this message, that she actually put her hand in her pocket, and gave the messenger seven-pence halfpenny.

This was to be our visiting day. The next that came was Mr. Burchell, who had been at the fair. He brought my little ones a pennyworth of gingerbread each, which my wife undertook to keep for them, and give them by letters at a time. He brought my daughters also a couple of boxes, in which they might keep wafers, snuff, watches, or even money, when they got it. My wife was usually fond of a wassel with her purse, as being the most lucky;—but this by-the-bye. We had still a regard for Mr. Burchell, though his late rude behaviour was in some measure displeasing; nor could we now avoid communicating our happiness to him, and taking his advice; although we seldom followed advice, we were all ready enough to ask it. When he read the note from the two ladies, he, though he had observed that an affair of this sort demanded the utmost discretion, this air of diffidence highly displeased my wife.

"I never doubted, sir," cried she, "your readiness to be against my daughters and me. You have more discretion than is wanted. However, I fancy when we come to ask advice, we will apply to persons who seem to have made use of it themselves."

"Whatever my own conduct may have been, madam," replied he, "is not the present question; though as I have made no use of it myself, I should in conscience give it to those that will."

As I was apprehensive this answer might draw on a repetition, making up by abuse what it wanted in wit, I changed the subject, by beginning to wonder what could keep our son so long at the fair, as it was now almost night-fall.

"Never mind our son," cried my wife, "depend upon it he knows what he is about. I'll warrant we'll never see him sell his best of a rainy day. I have seen him buy such bargains as would amaze one. I'll tell you a good story about that, that will make you split your sides with laughing.—Just as I live, yonder comes Moses, without a horse, and the box at his back!"

As she spoke, Moses came slowly on foot, and sweating under the deal box, which he had strapped round his shoulders like a pedlar.

"Welcome, welcome, Moses; well, my boy, what have you brought us from the fair?"

"I have brought you myself," cried Moses, with a sly look, and resting the box on the dresser.

"Ah, Moses," cried my wife, "that we know; but where is the horse?"

"I have sold him," cried Moses, "for three pounds, five shillings, and twopence."

"Well done, my good boy," returned she; "I knew you would touch them off. Between ourselves, three pounds, five shillings, and twopence, is no bad day's work. Come, let us have it then."

"I have brought back no money," cried Moses again. "I have laid it all out in a bargain, and here it is," pulling out a bundle from his breast: "here they are; a gross of green spectacles, with silver rims and shagreen cases."

"A gross of green spectacles!" repeated my wife, in a faint voice. "And you have parted with the colt, and brought us back nothing but a gross of paltry green spectacles?"

"Dear mother," cried the boy, "why won't you listen to reason? I had them a dead bargain; or I should not have bought them. The silver rims alone will sell for double the money."

"A fig for the silver rims," cried my wife in a passion: "I dare swear they won't sell for above half the money, at the rate of broken silver, five shillings an ounce."

"You need be under no uneasiness," cried I; "about selling the rims; for they are not worth sixpence! for I perceive they are only copper varnished over."

"What!" cried my wife, "not silver! the rims not silver?"

"No," cried I, "no more silver than your saucepan."

"And so," returned she, "we have parted with the colt, and have only got a gross of green spectacles, with copper rims and shagreen cases! A murrain take such trumpery. The blockhead has been imposed upon, and should have known his company better."

"I know, my dear," cried I, "you are wrong; he should not have known his company."

"Marry, hang the idiot," returned she, "bring me some stuff; if I had them, I would throw them in the fire."

"There again you are wrong, my dear," cried I; "for though they be copper, we will keep them by us, as copper spectacles, you know, are better than nothing."

By this time the unfortunate Moses was undeceived. He now saw that he had been imposed upon by a provoling sharper, who observing his figure, had marked him for an easy prey. I therefore asked the circumstances of his deception. He sold the horse, it seems, and walked the fair in search of another. A reverend-looking man brought him to a tent, under pretence of having one to sell.

"Here," continued Moses, "we met another man, very well dressed, who desired to borrow twenty pounds upon these, saying that he wanted money, and would dispose of them for a third of the value. The first gentleman, who pretended to be my friend, whispered me to buy them, and cautioned me not to let so good an offer pass. I sent for Mr. Flamborough, and they talked him up as finely as they did me, and so at last we were persuaded to buy the two gross between us."

## CHAPTER XIII.

MR. BURCHELL IS FOUND TO BE AN ENEMY. FOR HE HAS THE CONFIDENCE TO GIVE DISAGREEABLE ADVICE.

Our family had now made several attempts to be fine; but some unforeseen disaster demolished each as soon as projected. I endeavoured to take the advantage of every disappointment, to improve their good sense in proportion as they were frustrated in ambition.

"You see, my children," cried I, "how little is to be got by attempts to impose upon the world, in coping with our betters. Such as are poor, and will associate with none but the rich, are hated by those they avoid, and despised by those they follow. Unequal combinations are always disadvantages to the weaker side; the rich having the pleasure, and the poor the inconveniences that result from them. But come, Dick, my boy, and repeat the fable that you were reading to-day, for the good of the company."

"Once upon a time," cried the child, "a Giant and a Dwarf were friends, and kept together. They made a bargain that they would never forsake each other, but go and seek adventures. The first battle they fought was with two Saracens; and the Dwarf, who was very courageous, dealt one of the champions a most angry blow. It did the Saracen very little injury, who lifting up his sword, fairly struck off the poor Dwarf's arm. He was now in a woful plight; but the Giant coming to his assistance, in a short time left the two Saracens dead on the plain, and the Dwarf cut off the dead man's head out of spite. They then travelled on to another adventure. This was against three bloody-minded giants, who were carrying away a damsel in distress. The Dwarf was not quite so fierce now as before; but, for all that, struck the first blow, which was returned by another that knocked out his eye; but the Giant was soon up with them, and had they not fled, would certainly have killed them every one. They were all very joyful for this victory, and the damsel, who was relieved, fell in love with the Giant, and married him. They now travelled far, and farther than I can tell, till they met with a company of robbers. The Giant, for the first time, was foremost now; but the Dwarf was not far behind. The battle was stout and long. Whether the Giant came, all fell before him; but the Dwarf had like to have been killed more than once. At last the victory declared for the two adventurers; but the Dwarf lost his leg. The Dwarf was now without an arm, a leg, and an eye, while the Giant was without a single wound. Upon which he cried out to his little companion, 'My little hero, this is glorious sport! let us get one victory more, and then we shall have honour for ever.' 'No,' cries the Dwarf, who was by this time grown wiser; 'no, I declare off; I'll fight no more: for I find in every battle that you get all the honour and rewards, but all the blows fall upon me.'"

I was going to moralize this fable, when our attention was called off to a warm dispute between my wife and Mr. Burchell, upon my daughters' intended expedition to town. My wife very strenuously insisted upon the advantages that would result from it; Mr. Burchell, on the contrary, dissuaded her with great ardour, and I stood neuter. His present dissuasions seemed but the second part of those which were received with so ill a grace in the morning. The dispute grew high, while poor Deborah, instead of reasoning stronger, talked louder, and at last was obliged to take shelter from a defeat in clamour. The conclusion of her harangue, however, was highly displeasing to us all. She knew, she said, of some who had their own secret reasons for what they advised; but, for her part, she wished such to stay away from her house for the future.

"Madam," cried Burchell, with looks of great composure, which tended to inflame her more, "as for secret reasons, you are right: I have secret reasons, which I forbear to mention, because you are not able to answer those of which I make no secret: but I find my visits here are become troublesome; I'll take my leave, therefore, now, and perhaps come once more to take a final farewell when I am quitting the country."

Thus saying, he took up his hat, nor could the attempts of Sophia, whose looks seemed to upbraid his precipitancy, prevent his going.

When gone, we all regarded each other for some minutes with confusion. My wife, who knew herself to be the cause, strove to hide her concern with a forced smile, and an air of assurance, which I was willing to approve.

"How, woman," cried I to her, "is it thus we treat strangers? Is it thus we return their kindness? Be assured, my dear, that there were the kindest words; and to me the most unpleasant, that ever escaped your lips."

"Why would he provoke me, then?" replied she; "but I know the motives of his advice perfectly well! He would prevent my girls from going."

to town, that he may have the pleasure of my youngest daughter's company here at home. But whatever happens, she shall choose better company than such low-lived fellows as he."

"Low-lived, my dear, do you call him?" cried I; "it is very possible we may mistake this man's character, for he seems upon some occasions the most finished gentleman I ever knew.—Tell me, Sophia, my girl, has he ever given you any secret instances of his attachment?"

"His conversation with me, sir," replied my daughter, "has ever been sensible, modest, and pleasing. As to aught else, no—never! Once, indeed, I remember to have heard him say, he never knew a woman who could find merit in a man that seemed poor."

"Such, my dear," cried I, "is the common cant of all the unfortunate or idle. But I hope you have been taught to judge properly of such men, and that it would be even madness to expect happiness from one who has been so very bad an economist of his own. Your mother and I have now better prospects for you. The next winter, which you will probably spend in town, will give you opportunities of making a more prudent choice."

What Sophia's reflections were upon this occasion, I cannot pretend to determine; but I was not displeased, at the bottom, that we were rid of a guest from whom I had much to fear. Our breach of hospitality went to my conscience a little; but I quickly silenced that monitor by two or three specious reasons, which served to satisfy and reconcile me to myself. The pain which conscience gives the man who has already done wrong, is soon got over. Conscience is a coward; and those faults it has not strength enough to prevent; it seldom has justice enough to accuse.

## CHAPTER XIV.

## FRESH MORTIFICATIONS, OR A DEMONSTRATION THAT SEEMING CALAMITIES MAY BE REAL BLESSINGS.

THE journey of my daughters to town was now resolved upon, Mr. Thornhill having kindly promised to inspect their conduct himself, and inform us by letter of their behaviour. But it was thought indispensably necessary that their appearance should equal the greatness of their expectations, which could not be done without expense. We debated therefore in full council what were the easiest methods of raising money, or, more properly speaking, what we could most conveniently sell. The deliberation was soon finished; it was found that our remaining horse was utterly useless for the plough, without his companion, and equally unfit for the road, as wanting an eye; it was therefore determined that we should dispose of him for the purposes above mentioned, at the neighbouring fair; and, to prevent imposition, that I should go with him myself. Though this was one of the first mercantile transactions of my life, yet I had no doubt about acquitting myself with reputation. The opinion a man forms of his own prudence is measured by that of the company he keeps; and as mine was mostly in the family way, I had conceived no unfavourable sentiments of my worldly wisdom. My wife, however, next morning, at parting, after I had got some paces from the door, called me back, to advise me, in a whisper, to have all my eyes about me.

I had, in the usual form, when I came to the fair, put my horse through all his paces; but for some time had no bidders. At last a chapman approached, and after he had for a good while examined the horse round, finding him blind of one eye, he would have nothing to say to him: a second came up, but observing he had a spavin, declared he would not take him for the driving home: a third perceived he had a windgall, and would bid no money: a fourth knew by his eye that he had the bots: a fifth wondered what a plague I could do at the fair with a blind, spavined, galled hack, that was only fit to be cut up for a dog-kennel. By this time I began to have a most hearty contempt for the poor animal myself, and was almost ashamed at the approach of every customer; for though I did not entirely believe all the fellows told me, yet I reflected that the number of witnesses was a strong presumption they were right; and St. Gregory, upon "Good Works," professes himself to be of the same opinion.

I was in this mortifying situation, when a brother clergymen, an old acquaintance, who had also business at the fair, came up, and shaking me by the hand, proposed adjourning to a public-house, and taking a glass of whatever we could get. I readily closed with the offer, and entering an alehouse we were shown into a little back-room, where there was only a venerable old man, who sat wholly intent over a large book, which he was reading. I never in my life saw a figure that prepossessed me more favourably. His locks of silver gray venerably shaded his temples, and his green old age seemed to be the result of health and benevolence. However, his presence did not interrupt our conversation: my friend and I discoursed on the various turns of fortune we had met; the Whistonian controversy, my last pamphlet, the archdeacon's reply, and the hard measure that was dealt me. But our attention was in a short time taken off by the appearance of a youth, who, entering the room, respectfully said something softly to the old stranger.

"Make no apologies, my child," said the old man, "to do good is a duty we owe to all our fellow-creatures; take this, I wish it were more; but five pounds will relieve your distress, and you are welcome."

The modest youth shed tears of gratitude, and yet his gratitude was scarcely equal to mine. I could have hugged the good old man in my arms, his benevolence pleased me so. He continued to read, and we resumed our conversation, until my companion, after some time, recollecting that he had business to transact in the fair, promised to be soon back; adding, that he always desired to have as much of Dr. Primrose's company as possible. The old gentleman, hearing my name mentioned, seemed to look at me with attention for some time, and when my friend was gone, most respectfully demanded if I was in any way related to the great Primrose, that courageous

monogamist, who had been the bulwark of the church. Never did my heart feel sincerer rapture than at that moment.

"Sir," cried I, "the applause of so good a man, as I am sure you are, adds to that happiness in my breast which your benevolence has already excited. You behold before you, sir, that Dr. Primrose, the monogamist, whom you have been pleased to call great. You here see that unfortunate divine, who has so long, and it would ill become me to say, successfully, fought against the deuterogamy of the age."

"Sir," cried the stranger, struck with awe, "I fear I have been too familiar; but you'll forgive my curiosity, sir: I beg pardon."

"Sir," cried I, grasping his hand, "you are so far from displeasing me by your familiarity, that I must beg you'll accept my friendship, as you already have my esteem."

"Then with gratitude I accept the offer," cried he, squeezing me by the hand, "thou glorious pillar of unshaken orthodoxy! and do I behold—"

I here interrupted what he was going to say; for though, as an author, I could digest no small share of flattery, yet now my modesty would permit no more. However, no lovers in romance ever cemented a more instantaneous friendship. We talked upon several subjects: at first I thought he seemed rather devout than learned, and began to think he despised all human doctrines as dross. Yet this no way lessened him in my esteem; for I had for some time begun privately to harbour such an opinion myself. I therefore took occasion to observe, that the world in general began to be blameably indifferent as to doctrinal matters, and followed human speculations too much.

"Ay, sir," replied he, as if he had reserved all his learning to that moment, "ay, sir, the world is in its dotage, and yet the cosmogony or creation of the world has puzzled philosophers of all ages.—What a medley of opinions have they not broached upon the creation of the world!—Banchoniaton, Manetho, Berosus, and Ocellus Lucanus, have all attempted it in vain. The latter has these words, *Anarchon ara kai aetelaton to pas*, which imply that all things have neither beginning nor end. Manetho also, who lived about the time of Nebuchadon-Asser,—Asser being a Syriac word usually applied as a surname to the kings of that country, as Teglai Phael-Asser, Nabon-Asser,—he, I say, formed a conjecture equally absurd; for as we usually say, *ek to biblion kubernetes*, which implies that books will never teach the world; so he attempted to investigate.—But, sir, I ask pardon, I am straying from the question."

That he actually was; nor could I for my life see how the creation of the world had anything to do with the business I was talking of; but it was sufficient to show me that he was a man of letters, and I now revered him the more. I was resolved therefore to bring him to the touchstone; but he was too mild and too gentle to contend for victory. Whenever I made an observation that looked like a challenge to controversy, he would smile, shake his head, and say nothing; by which I understood he could say much, if he thought proper. The subject, therefore, inensibly changed from the business of antiquity to that which brought us both to the fair: mine, I told him, was to sell a horse, and very luckily indeed, his was to buy one for one of his tenants. My horse was soon produced; and, in half an hour, struck a bargain. Nothing now remained but to pay me, and he accordingly pulled out a thirty-pound note, and bid me change it. Not being in a capacity of complying with this demand, he ordered his footman to be called up, who made his appearance in a very genteel livery.

"Here, Abraham," cried he, "go and get gold for this; you'll do it at neighbour Jackson's, or anywhere."

While the fellow was gone, he entertained me with a pathetic harangue on the great scarcity of silver, which I undertook to improve by deploring also the great scarcity of gold; so that by the time Abraham returned, we had both agreed that money was never so hard to be come at as now. Abraham returned to inform us, that he had been over the whole fair and could not get change, though he had offered half-a-crown for doing it. This was a very great disappointment to us all; but the old gentleman, having paused a little, asked me if I knew one Solomon Flamborough in my part of the country. Upon replying that he was my next-door neighbour,

"If that be the case, then," returned he, "I believe we shall deal. You shall have a draft upon him, payable at sight; and let me tell you, he is as warm a man as any within five miles round him. Honest Solomon and I have been acquainted for many years together: I remember I always beat him at three jumps; but he could hop on one leg farther than I."

A draft upon my neighbour was to me the same as money; for I was sufficiently convinced of his ability. The draft was signed, and put into my hands; and Mr. Jenkinson, the old gentleman, his man Abraham, and my horse, old Blackberry, trotted off very well pleased with each other.

After a short interval, being left to reflection, I began to recollect that I had done wrong in taking a draft from a stranger, and so prudently resolved upon following the purchaser, and having back my horse. But this was now too late: I therefore made directly homewards, resolving to get the draft changed into money at my friend's as fast as possible. I found my honest neighbour smoking his pipe at his own door, and informing him that I had a small bill upon him, he read it twice over.

"You can read the name, I suppose," cried I "Ephraim Jenkinson?"

"Yes," returned he, "the name is written plain enough, and I know the gentleman too,—the greatest rascal under the canopy of heaven. This is the very same rogue who sold us the spectacles. Was he not a venerable-looking man, with gray hair, and no flaps to his pocket-holes? And did he not talk a long string of learning about Greek and cosmogony, and the world?"

To this I replied with a groan.

"Ah," continued he, "he has but that one piece of learning in the world, and he always talks it away whenever he finds a scholar in company; but I know the rogue, and will catch him yet."

Though I was already sufficiently mortified, my greatest struggle was to come,—in facing my wife and daughters. No truant was ever more afraid of returning to school, there to behold the master's visage, than I was of going home. I was determined, however, to anticipate their fury, by first falling into a passion myself.

But, alas! upon entering, I found the family no way disposed for battle. My wife and girls were all in tears, Mr. Thornhill having been there that day to inform them that their journey to town was entirely over. The two ladies, having heard reports of us from some malicious person about us, were that day set out for London. He could neither discover the tendency, nor the author of these; but whatever they might be, or whoever might have broached them, he continued to assure our family of his friendship and protection. I found, therefore, that they bore my disappointment with great resignation, as it was eclipsed in the greatness of their own. But what perplexed us most, was to think who could be so base as to asperse the character of a family so harmless as ours, too humble to excite envy, and too inoffensive to create disgust.

## CHAPTER XV.

### ALL MR. BURCHELL'S VILLAINY AT ONCE DETECTED.—THE FOLLY OF BEING OVERWISE.

THAT evening, and a part of the following day, was employed in fruitless attempts to discover our enemies: scarcely a family in the neighbourhood but incurred our suspicions, and each of us had reasons for our opinions best known to ourselves. As we were in this perplexity, one of our little boys, who had been playing abroad, brought in a letter-case, which he found on the green. It was quickly known to belong to Mr. Burchell, with whom it had been seen, and, upon examination, contained some hints upon different subjects; but what particularly engaged our attention was a sealed note, superscribed, "The copy of a letter to be sent to the two ladies at Thornhill Castle." It instantly occurred that he was the base informer, and we deliberated whether the note should not be broken open. I was against it; but Sophia, who said she was sure that of all men he would be the last to be guilty of so much baseness, insisted upon its being read. In this she was seconded by the rest of the family, and at their joint solicitation I read as follows:

"LADIES,

"THE bearer will sufficiently satisfy you as to the person from whom this comes: one at least the friend of innocence, and ready to prevent its being seduced. I am informed, for a truth, that you have some intention of bringing two young ladies to town, whom I have some knowledge of, under the character of companions. As I would neither have simplicity imposed upon, nor virtue contaminated, I must offer it as my opinion, that the impropriety of such a step will be attended with dangerous consequences. It has never been my way to treat the infamous or the lewd with severity; nor should I now have taken this method of explaining myself, or reproving folly, did it not aim at guilt. Take, therefore, the admonition of a friend, and seriously reflect on the consequences of introducing infamy and vice into retreats where peace and innocence have hitherto resided."

Our doubts were now at an end. There seemed, indeed, something applicable to both sides in this letter, and its censures might as well be referred to those to whom it was written, as to us; but the malicious meaning was obvious, and we went no farther. My wife had scarcely patience to hear me to the end, but railed at the writer with unrestrained resentment. Olivia was equally severe, and Sophia seemed perfectly amazed at his baseness. As for my part, it appeared to me one of the vilest instances of unprovoked ingratitude I had met with; nor could I account for it in any other manner than by imputing it to his desire of detaining my youngest daughter in the country, to have the more frequent opportunities of an interview. In this manner we all sat ruminating upon schemes of vengeance, when our other little boy came running in to tell us that Mr. Burchell was approaching at the other end of the field. It is easier to conceive than describe the complicated sensations which are felt from the pain of a recent injury, and the pleasure of approaching vengeance. Though our intentions were only to upbraid him with his ingratitude, yet it was resolved to do it in a manner that would be perfectly cutting. For this purpose we agreed to meet him with our usual smiles; to chat in the beginning with more than ordinary kindness; to amuse him a little; and then, in the midst of the flattering calm, to burst upon him like an earthquake, and overwhelm him with a sense of his own baseness. This being resolved upon, my wife undertook to manage the business herself, as she really had some talents for such an undertaking. We saw him approach; he entered, drew a chair, and sat down.

"A fine day, Mr. Burchell."

"A very fine day, Doctor; though I fancy we shall have some rain by the shooting of my corns."

"The shooting of your horns!" cried my wife in a loud fit of laughter, and then asked pardon for being fond of a joke.

"Dear Madam," replied he, "I pardon you with all my heart, for I protest I should not have thought it a joke had you not told me."

"Perhaps not, Sir," cried my wife, winking at us; "and yet I dare say you can tell how many jokes go to an ounce?"

"I fancy, Madam," returned Burchell, "you have been reading a jest-book this morning, that steeple of jokes is so very good a conceit; and yet, Madam, I had rather see half an ounce of understanding."

"I believe you might," cried my wife, still smiling at us, though the laugh was against her; "and yet I have seen some men pretend to understand that have very little."

"And no doubt," replied her antagonist, "you have known ladies set up for wit that had none."

I quickly began to find that my wife was likely to gain but little at this business; so I resolved to treat him in a style of more severity myself.

"Both wit and understanding," cried I, "are trifles without integrity; it is that which gives value to every character. The ignorant peasant without fault, is greater than the philosopher with many; for what is genius or courage without a heart? An honest man is the noblest work of God."

"I always held that hackneyed maxim of Pope," returned Mr. Burchell, "as very unworthy a man of genius, and a base desertion of his own superiority. As the reputation of books is raised, not by their freedom from defect, but the greatness of their beauties; so should that of men be prized, not for their exemption from fault, but the size of those virtues they are possessed of. The scholar may want prudence, the statesman may have pride, and the champion ferocity; but shall we prefer to these the low mechanic, who laboriously plods through life without censure or applause? We might as well prefer the tame correct paintings of the Flemish school, to the erroneous but sublime animations of the Roman pencil."

"Sir," replied I, "your present observation is just, when there are shining virtues and minute defects; but when it appears that great vices are opposed in the same mind to as extraordinary virtues, such a character deserves contempt."

"Perhaps," cried he, "there may be some such monsters as you describe, of great vices joined to great virtues; yet in my progress through life, I never yet found one instance of their existence; on the contrary, I have ever perceived, that where the mind was capacious, the affections were good. And indeed Providence seems kindly our friend in this particular, thus to debilitate the understanding where the heart is corrupt, and diminish the power, where there is the will to do mischief. This rule seems to extend even to other animals: the little vermin race are ever treacherous, cruel and cowardly, whilst those endowed with strength and power, are generous, brave, and gentle."

"These observations sound well," returned I, "and yet it would be easy this moment to point out a man," and I fixed my eye steadfastly upon him, "whose head and heart form a most detestable contrast. Ay, Sir," continued I, raising my voice, "and I am glad to have this opportunity of detecting him in the midst of his fancied security. Do you know this, Sir, this pocket-book?"

"Yes, Sir," returned he, with a face of impenetrable assurance, "that pocket-book is mine, and I am glad you have found it."

"And do you know," cried I, "this letter? Nay, never falter, man; but look me full in the face: I say, do you know this letter?"

"That letter," returned he; "yea, it was I that wrote that letter."

"And how could you," said I, "so basely, so ungratefully presume to write this letter?"

"And how came you," replied he, with looks of unparalleled effrontery, "so basely to presume to break open this letter? Don't you know, now, I could hang you all for this? All that I have to do is to swear at the next Justice's, that you have been guilty of breaking open the lock of my pocket-book and so hang you all up at this door."

This piece of unexpected insolence raised me to such a pitch, that I could scarcely govern my passion,—

"Ungrateful wretch! begone, and no longer pollute my dwelling with thy baseness! begone, and never let me see thee again! Go from my door, and the only punishment I wish thee, is an alarmed conscience, which will be a sufficient tormenter!"

So saying, I threw him his pocket-book, which he took up with a smile, and shutting the elapsa with the utmost composure, left us quite astonished at the serenity of his assurance. My wife was particularly enraged that nothing could make him angry, or make him seem ashamed of his villainies.

"My dear," cried I, willing to calm those passions that had been raised too high among us, "we are not to be surprised that bad men want shame; they only blush at being detected in doing good, but glory in their vices."

Guilt and Shame, says the allegory, were at first companions, and in the beginning of their journey, inseparably kept together. But their union was soon found to be disagreeable and inconvenient to both: Guilt gave Shame frequent uneasiness, and Shame often betrayed the secret conspiracies of Guilt. After long disagreement, therefore, they at last consented to part for ever. Guilt boldly walked forward alone, to overtake Fate, that went before in the shape of an executioner; but Shame being naturally timorous, returned back to keep company with Virtue, which in the beginning of their journey they had left behind. Thus, my children, after men have travelled through a few stages in vice, Shame forsakes them, and returns back to wait upon the few virtues they have still remainings."

(To be continued.)

AMBITION'S FATE.—In the historic page, you, of course, find hundreds of men celebrated in their victories: amongst others, Alexander, Philip, Cæsar, Hannibal, Pompey, Anthony, Pyrrhus, Sylla, Selenus, and, in your own time, Napoleon. But it is equally true, that in the page you find it recorded, that in all campaigns, the conduct of all and each of these individuals was governed by ambition, not patriotism—personal aggrandisement, not the good of their subjects or fellow-countrymen. And what was their several rewards? Alexander and Hannibal, a cup of poison; Anthony died the death of a suicide; Pyrrhus was killed by a brick, thrown by a Spartan woman; Sylla was killed by vermin; Philip, Cæsar, Pompey, and Selenus, were assassinated; and Napoleon died on the rock of St. Helena, an exile from his country.

SIR JAMES MACKINTOSH.

THIS distinguished statesman was born in the parish of Dore, in the county of Inverness, in the year 1766. His father was John Mackintosh, Esq., of Kellachie, who, during the first years of a long military life, served in the German war in the same regiment with Major Mercer, well known as the author of a small volume of elegant poetry.

When young Mackintosh was thought old enough to be placed under male tuition, he was sent to the school of Fortrose, in Ross-shire, where talents were elicited and observed, which gave encouragement to his friends to determine upon his receiving a university education. Accordingly he was placed in King's College, Old Aberdeen, where he passed through the usual course of study and discipline with the greatest credit. From Aberdeen he repaired to the University of Edinburgh, in which he spent three years, chiefly in medical studies, preparatory to taking up the degree of doctor of medicine, and applying himself to a regular practice in that profession. Robertson and Smith, Clark and Brown, were then in the zenith of their fame at Edinburgh; and in addition to the study of medicine, he was won by their celebrity to an attention to their several works, and his early and profound study of them laid the foundation for that mature knowledge of men and things for which this able man has so long been renowned. His mind became soon and seriously directed towards general literature; moral, political, and speculative philosophy; in fact, almost every subject in preference to that which he had first taken up, and which at no period of his life he very diligently cultivated. He received his medical degree in the year 1787, just at the time that he began to resolve on abandoning the profession, and devote his life to more miscellaneous investigations and pursuits.

On visiting London, in the year 1789, he was induced, by the excitement of the public mind on the subject of a Regency, to write and print a defence of the claims of the Prince of Wales to the unfettered and unrestricted exercise of the functions of Regent. This was his first essay as an author. The work, however, passed into oblivion almost from the press; and the author, foiled in this effort to obtain political celebrity, repaired to the continent to renew his medical studies, and prepare himself for some settled plan of life and action.

The period of his arriving in France gave a decision to his political creed and character, at the same time that it diverted his attention from the further study of medicine. The Revolution had commenced, and as yet had given no symptom of its proceeding beyond a struggle for rational and constitutional freedom. Mr. Mackintosh was impressed in favour of the early system of the first movers in that great affair, and soon set about his famous "Vindication" of the men and their principles, which acquired for him the friendship of Mr. Fox, and an early celebrity among the Whigs of England. The chief object of the pamphlet was to counteract the effect of Mr. Burke's "Reflections;" and although that gentleman was naturally displeased at any opposition to his favourite views, the work was written with a spirit and talent which even he was constrained to admire, and which gained for Mr. Mackintosh the friendship of that renowned philosopher and statesman.

Anxious for some regular plan of disposing of his time Mr. Mackintosh,

in 1792, entered himself as a student of Lincoln's-Inn, was soon called to the bar by that society, and commenced the practice of the law. Scarcely had he entered upon this new career, than a severe domestic affliction befel him, in the loss of his wife, to whom he had been married but about three years. She was a Miss Stuart, of Edinburgh, and her death left him a mourning husband with the care of three daughters. This heavy calamity rendered as great a variety in his pursuits as possible requisite for his excitement and relief; and among them he betook himself to the study of the law of nations, in which he is supposed singularly to have excelled. Having digested the subject, and the plan of a course of lectures upon it, he applied to the benchers of Lincoln's-Inn to allow him to deliver them in their hall. The spirit of party at that time ran remarkably high, and threw considerable obstacles in the way of his purpose. A political motive and design were ascribed to the proposal, and some few Tory zealots insinuated that he only aimed to establish the revolutionary principles in this country, which had resulted in such dreadful excesses among the French. A complete refutation of the calumny was given in the publication of the Introductory Lecture, which he printed under the title of "A Discourse on the Law of Nature and Nations."

This publication answered the writer's purpose in every respect. The ability and acuteness it displayed, ensured him the attendance, on his Lectures, of a large number of the wisest men of the age and nation; while the air of candour and truth that pervaded it gave the lie to every charge of a revolutionary purpose, and every apprehension of an injurious effect. Not only did Mr. Fox and his friends lavish their praises upon the author, and prepare to listen with favour to his lectures; but even Mr. Pitt, then, a bencher of Lincoln's-Inn, repelled the charges of his assailants, and spoke of the discourse in terms of decided and warm approbation.

In the year 1798, Mr. Mackintosh entered into a second marriage with the daughter of J. B. Allen, Esq., of Cressilly, in the county of Pembroke. The fruits of this marriage were two daughters and one son.

The prosecution of M. Peltier, in 1803, for a libel against Bonaparte, then first consul of France, and the ally of this country, must be well remembered. The trial took place, at the instigation of Bonaparte, in the Court of King's Bench, and is a memorable event, if it were only on account of the distinguished men employed in it. Mr. Perceval, afterwards first minister of state, was then attorney-general, and conducted the prosecution; and Mr. Abbott, (late Lord Tenterden, and chief-justice in that court,) was second counsel on the same side. Against this array of talent and power, Mr. Mackintosh appeared as the single counsel in Peltier's defence; nor had the defendant any reason to regret the choice he had made. It gave the zealous and ingenious young lawyer an admirable opportunity for introducing with effect his favourite topics—the bright prospect held out by the dawn of the French revolution—the disappointment of the hope it inspired by the horrors in which it terminated—the adventurous and ambitious career which Bonaparte was pursuing—and the military despotism which was likely to be established upon the minds of Gallic liberty. On these and other points Mr. Mackintosh spoke with an energy and excellence far surpassing every hope that had previously been formed of his professional powers, and which established his fame as an advocate and orator of the highest rank.

From this period, if not some time before, he was viewed by the ministry as an individual who might be employed, with advantage to his country, in some important office of her wide dominions. The recordership of Bombay was offered to him, and, after some hesitation, he accepted the appointment, and spent nine years in the service of that presidency with great ability and effect. To his communications in the *Asiatic Register* we are indebted for several valuable facts relating to the island, its government, and its inhabitants—the latter were computed by him, with greater probable accuracy than by any other writer of that time, to be about one hundred and fifty thousand. We believe that Dr. Buchanan was materially indebted to his researches, for assistance in his voluminous works on India. A severe illness obliged him to return to England in the year 1811; when he might have been employed in some high station at home, had not his principles prevented the union it would have required with the friends of the late Mr. Pitt, who were then in power, with Mr. Perceval at their head.

Sir James Mackintosh—for he was now a knight—entered the House of Commons, as representative for the county of Naism, in Scotland, in July, 1813. His first parliamentary efforts, we must confess, somewhat disappointed even his most sanguine friends. But if he failed to please on this occasion, Sir James amply redeemed his reputation in the following year, when he delivered one of the most eloquent speeches, on the escape of Bonaparte from Elba, ever heard in parliament.

His great parliamentary effort was directed to the amendment of the criminal code—a task begun by the lamented Sir Samuel Romilly, and taken up as a solemn bequest by his friend and representative. His first motion on the Criminal Laws, relative to the capital punishment of felony, was introduced by a speech very superior, both in point of style and argument; and he was supported in his call for a committee by several very able members, particularly Mr. Wilberforce, Mr. Buxton, and Mr. Scarlett. The result was a signal triumph over the ministers who opposed the motion, by a majority of nineteen—147 voting in his favour, and 128 against him.

We have not room to follow this great senator through all the subjects on which his ardour and eloquence were expended: In the following years, the Admiralty privileges—the Church of Scotland—the affairs of Naples—the Congress of Laybach—the condition of Sicily—the Catholics of Ireland—the oppression of the Greeks—the Juries of Scotland—the conduct of the Scottish Lord Advocate—the government of New South Wales—together with his chief subject, the Criminal Code—called forth his talents, and gave occasion for the House to witness the ardent perseverance of his spirit in defence of general liberty, union, and happiness. Other measures were

sely advocated by him, though with less immediate success; he lived long enough, however, to see many of them called into action. The measure of Catholic Emancipation he rejoiced to see carried, though it was by his enemies; and the important measure of Parliamentary Reform, which was brought forward by his political friends, he advocated with all his powers, and saw nearly passed into a law before he closed his eyes upon all sublunary scenes.

In the year 1822 Sir James was elected, in preference to Sir Walter Scott, the rival candidate, Lord Rector of the University of Glasgow; and was re-elected without difficulty the following year.

The eminent literary talents of Sir James Mackintosh require no eulogium. The portrait published of his "History of England from the Reformation to the Death of Queen Mary"—his "Biographical Sketch of Sir Thomas More"—and the numerous historical articles he wrote for the *Edinburgh Review*, show the accuracy of his critical abilities, the justness of his views on political subjects, the comprehensive powers of his understanding, and the candour and liberality of his character. But it was not to historical inquiries that his mind had been singly or even chiefly directed. Few, if any, surpassed him in the extent, variety, and correctness of his knowledge in every department of moral and political science. His continuation of Mr. Stewart's "Dissertation on Ethics" is a magnificent monument of multifarious and extensive reading, nice discrimination, candid judgment, and profound speculation on subjects the most difficult and most interesting to mankind. As a politician, Sir James Mackintosh always appeared amongst the foremost to vindicate the rights, to extend the knowledge, and to promote the happiness of the people. As a barrister, he was distinguished by one of the most splendid discourses ever delivered in an English court of justice. As a judge, his decisions were remarkable for their soundness and discretion, and their accordance with the various systems of national law he was called upon to administer. As a parliamentary orator, the vehemence of his argument was tempered by the gravity befitting one who had filled a judicial situation; but he was at all times the eloquent and copious expounder of liberal opinions, the advocate of humanity, and the enemy of cruelty, persecution, and oppression. His eloquence was of that warm description which is congenial with the truth and diffusion of generous sentiments. He had great disadvantages to contend against as a speaker. Amongst the most prominent was a harsh voice, a strong provincial accent, and an uncouth delivery. But the warmth of his feelings, the power of his language, and not unfrequently the depth of his reflections, enabled him to triumph over every defect; and though it was late in life when he entered the House of Commons, he acquired a reputation, a popularity within its walls, such as many have not been able to acquire under circumstances much more favourable. Yet it may be said with truth, that his mind was better fitted for philosophical investigation than for active political warfare. The natural bent of his understanding led him on all subjects to the investigation of principles, and the habit of philosophical arrangements he had acquired, aided by a strong and retentive memory, left him at all times in full possession of the extensive knowledge he had treasured up. His temper was calm and placid, his conversation that of a man of letters, rich and varied, and fraught with anecdotes. His disposition was obliging, perhaps to a fault, and led him often to sacrifice to others the time that had better been bestowed on the prosecution of those studies in which he was so eminently qualified to excel. No man was less habitually attentive to his private interests; and though he passed his life in a state far removed from affluence, no temptation ever induced him to abandon the principles or desert the political friends of his youth. In the domestic circle, he was a man of warm and amiable affections; and in Christian society he shone as the advocate of whatever was sacred and hallowed. Whatever he believed to be instrumental in advancing the cause of truth and goodness, that he highly prized and conscientiously supported.

His last illness was but short. The attack of which he died may be said to have originated in an accident. In the year 1832, Sir James, while at dinner, attempted to swallow a portion of the breast of a boiled chicken; but the morsel remained in his throat, and gave rise to several distressing symptoms in deglutition and respiration. At the end of two days the obstruction was removed by an emetic, and it was found to consist of the flesh of the chicken, with a portion of thin bone, upwards of an inch in length, embedded in its centre, and projecting at one side in a sharp point. The effects of the accident completely unsettled his general health. He afterwards laboured under increasing debility, and occasional attacks of severe pains in his head, shoulders, and limbs. A few days before death the pains suddenly ceased. Febrile symptoms set in, and the head became affected. Although this change was not, and in a great measure subdued, by the treatment prescribed by the medical gentlemen in attendance, the consequent debility was too great for his constitution to resist, already oppressed by the weight of sixty-six years.

At the present moment great efforts are being made to raise a fund for the purpose of erecting a monument to this eminent British statesman and lawyer. A preliminary meeting has been held at Lansdowne House, attended by some of the most distinguished literary men of the present day, under whose auspices, it is hoped, a suitable testimonial will be erected, to record the virtues and genius of Sir James Mackintosh.

**ANTICIPATED PLEASURE.**—Pleasure owes its greatest zest to anticipation. The promise of a shilling fiddle will keep a schoolboy in happiness for a year. The fun connected with its possession will expire in an hour. Now that is true of schoolboys is equally true of men. All they differ in is the price of their fiddle.

## CAROLINE AND CATHARINA.

(Continued from page 505.)

### CHAPTER XIV.

"Bootless speed;  
When cowardice pursues, and valour flies."—MIDSUMMER NIGHT'S DREAM.  
"The night is coming on fast."—FESTUS.

OUR friends, whom we thus met again in a strange land, had been actuated by the restless spirit, engendered in a body by long inaction; and, at their own request, had been allowed to accompany a reconnoitring party, set out five days previous to the day upon which we again find them riding along over a wide plain. They had been separated from their companions, by an accident which does not concern us, and had stumbled, while following unintelligible directions (the only directions they ever gets in Mexico), upon the information, which they supposed their companions had not acquired—namely, the presence in that quarter of a large body of well-appointed cavalry, afterwards ascertained to be the advance guard of Santa Anna's force, under General Mina. With this information, which they erroneously supposed they were alone in the possession of, they had, for three days, been endeavouring to make their way to Agua Nueva, a place keeping numerous parties of the enemy, they surrounded themselves with, to trust the speed of their horses, when they discovered the danger of their position.

"Their horses must be much faster than I suppose mine," said Allen, as they rode forward at a quick pace, "if they have us beating."

"What puzzles me," said Hugh, "is why they have not come up with us, and attacked us on the plain."

"There's nothing to puzzle you in that," answered Vernon; "there they could only attack us openly."

"Yes; but they are four to one, and whatever that proportion may be between two armies, here, where the numbers are eight and two, they might be pretty sure of victory, even in an open plain."

"True," said Allen; "but I suppose each one of these fellows values his whole skin, and they want to capture us without damage to themselves."

"That they shall not do, anyhow," said Hugh coolly; and he examined each of his weapons successively.

"Well," said Allen, with a smile, after watching the scrutiny, "are they all in order?"

"Perfectly," said Hugh; "powder as dry as my throat."

"The latter, I suppose, wouldn't object to a little moisture?"

"Perhaps not," said Hugh; "nor be very particular about the kind of moisture, either."

They rode on thus for several miles, talking lightly, as if they were in no danger, and each rather holding in the spirit of his horse than urging him forward.

"What do you think was the object of those two fellows?" asked Hugh, making a gesture to indicate the Mexicans.

"To get ahead of us, I presume," said Allen, "and begin the work to be finished by their friends as they came up."

"Let us ride up this hill and get a view of the road." As he spoke he pushed his horse up the hill, followed by Allen. They turned round on the summit, and gazed along the road over which they had just passed.

"There they are!" exclaimed Vernon. "There! just in the shadow of that large bush, beyond the second point."

"I see them. What are they about?"

"Consulting, I suppose, about what is to be done," said Allen, "when they ought to be doing it with all their might."

As he spoke, the cluster of men, scarcely more than a mile from them, suddenly rode out into open view, and they could distinctly see one of them point his sword towards them. A moment afterwards they all took the road at a pace which promised speedily to overtake the chase.

"Let us be off," said Allen; and plunging down the hill, on the other side, they set off at the top of their speed.

"We have nothing to trust but our heels now, I see," said Hugh; "and if they fail, we must fight."

"The race is not always to the swift, nor the battle to the strong," said Allen, striking his spurs into his horse's flank as they again reached the level road. But, as he spoke, his horse sprang forward, came down upon a cactus leaf, which lay in the road, and slipping, fell full upon his head, doubling his neck literally under his body, and throwing his rider far over his head. He struggled once or twice, and then his limbs stretched out, and he was still. Hugh checked up his horse so suddenly as almost to share the fate of his companion; and before Allen could rise, he was beside him.

"Are you hurt?" he asked, anxiously; "are you hurt?"

"My arm is broken, I believe," said Allen. "Get on your horse, Hugh, and ride on. I will lay in the chaparral here till you bring assistance. Three or four hours will bring you to Agua Nueva."

"No, no!" said Hugh. "You get up behind me—"

"That won't do," said Allen, hastily; "it would only insure the loss of both our lives; and besides, I could not ride now."

"I'll not leave you, at all events," said Hugh. As he spoke he drew a knife from his pocket, and cut a large branch from a bush, and approached his horse. Fixing the branch securely in the crupper, he gave the animal a sharp blow with the flat of his sword, and started him off at a gallop. The bush fell against his legs, and frightened him into a swift pace. Hugh watched him until he disappeared along the road, plunging and running with maddened speed. Then, returning to his companion,

Allen threw himself upon the ground, and Hugh kept continuing to

"In front of the house of Bonaro and his daughter Catharina was a kind of arbour, so disposed as completely to conceal the walls from any eye on the opposite side of the ravine."

stopping, from time to time, to gaze forward and listen. He proceeded thus some two hundred yards, when he suddenly came in view of a large fire, built on the side of the road, and burning as if recently supplied; but not a soul was to be seen near it—not even a sentinel. The fire illuminated the chaparral for several yards around it, and threw the glare of its light along the road, almost to the spot where he stood. He lay flat upon the ground, and attempted thus to penetrate the darkness; but though he could see a long distance into the chaparral, no sign was to be seen of any living thing about it.

"The stupid fools," he muttered to himself, "I wonder if they think any American is ass enough to venture up into that light."

He lay still, seeing through the stratagem at once, and kept his eyes fixed upon the illuminated space.

"They must have smoked our trick, and are lying there to shoot us as we pass. Well, they are determined to have light enough, anyhow, though that defeats its own object—it burns too brightly to be mistaken for a long-deserted fire."

As he lay thus silently canvassing the stratagem, his ear caught a slight noise just without the circle of light, and about one hundred yards from him. Soon afterwards the bushes slowly parted, and although the fire was now burning low, his posture enabled him to see a dark form pushing through. He halted, and turning his head, listened attentively for several minutes, and then came forward into the light. It was the same Mexican who led the pursuing party. He stopped, and listened again, inclining his ear to the ground. Apparently satisfied, he walked quickly towards the fire, and threw on it a bundle of furze branches. Having done so, he stepped quickly back, and again all was still and silent as before.

Hugh waited to see no more. He rose quietly and cautiously to his feet, and walked stealthily back to his companion.

"We must leave the road," said he; "the cut-throats are waiting for us in the chaparral, and they will soon be seeking us. Let us go back a short distance, and then take off to the left."

"Why not to the right?" said Vernon, as he rose painfully from the ground; "we can reach the pass sooner in that way."

"Because the *hombre* I saw was on the right," said Hugh, "and they would certainly not be on both sides; we thus lessen the chances of being discovered."

"You think they would not be fools enough to arrange themselves so as to fire into each other?"

"I hope not," said Hugh, leading the way back.

They walked perhaps a quarter of a mile on the road, and then turned off to the left, pursuing a course as nearly perpendicular with the road as possible. Pushing their way cautiously among the chaparral, and occasionally coming in contact with the needles of a heavy cactus, they walked on for nearly a mile. At the end of that distance, they found themselves

rapidly ascending the plateau which descends gradually from all these ridges to the plains. The thick undergrowth, however, still continued so as entirely to shut them from view without; and now and then they found mingled with it a trunk of the so-called palm. Hugh tried to get a view to the rear, by climbing a tree, Allen lying down again in excruciating pain upon the ground.

"We must go further up," said Hugh, descending; and they again resumed their walk. After walking nearly another mile their progress was suddenly stopped by a deep ravine, which cut obliquely across their path; and on looking over the side, they found it strongly illuminated, though from whence they could not discover. At the same moment they were hailed by a sharp female voice in front.

"*Quien va la?*" was called out in shrill though musical notes, and at the same moment they caught a view of a female figure wrapped in a light cloak, standing a few yards before them, in an attitude denoting surprise and fear.

## CHAPTER XV.

"Therein be them full fair did entertain,  
Not with such forged shows, as fitter been  
For courting fools, that courtesies would faine,  
But with entire affection and appearance plaine."—*FABRIC QUEENE.*  
"Grace was in all her steps, heav'n in her eye,  
In every gesture, dignity and love."—*PARADISE LOST.*

"Amigos," answered Allen, whose Spanish was much more ready than Hugh's.

"Americanos?" asked the woman.

"Si, Senora," answered Allen; "but still friends, and in distress."

"Soldados?" she again asked.

"Si, Senora," broke in Hugh, "*y oficiales*. The Mexican women all respect officers," he continued aside to Allen.

"I hope you not claim officers yourself, therefore?" said the woman, in English quite as pure as was Hugh's Spanish.

"We do not, indeed," replied Allen. "We were endeavouring to escape from a party of cavalry who were pursuing us, when my horse fell with me, and broke my arm. They are pursuing us yet, and we are unable to fight them; so you see our distress is real."

As he spoke, he advanced towards her, and threw his sword at her feet.

"See!" said he, "we throw ourselves upon your mercy."

She looked at him timidly by the light which now streamed upon him from below, and still seemed half inclined to fly. She was reassured, however, and was almost immediately joined by another—a venerable-looking old man, with long, white hair, and a calm, grave, and almost melancholy countenance. He was dressed entirely in black,—wearing, instead of the

national blanket, a loose flowing robe, and instead of the usual *sombrero*, a cap nearly in the shape of a priest's mitre.

"What is it, Catharina?" he asked, as he slowly climbed the bank.

"All right," said Hugh; "that voice is as good as the sight of a squadron of Harney's dragons."

There is much, very much, in the tones of a voice almost as much as in the lines of a face; and this voice was full and strong, though soft, kind, and musical, with, perhaps, the slightest possible touch of trepidation.

"Two Americans," said Allen, advancing immediately, "claim your hospitality. We are in distress, and your face and voice deceive me much, if we are turned away without relief."

"Relief is due to every fellow being in distress," said the old man, in English, "of whatever nation he may be."

Allen briefly told the story of his accident, and asked for shelter until he could find the means of returning to his friends.

"I was educated in the United States," said the old man musingly, "and have been kindly treated there, where I needed kindness."

"Then," said Hugh, "you will not refuse us what we ask?"

"What I have, you shall have," said he. "I cannot promise you very good entertainment; but such as our retreat affords I will cheerfully give. You seem to be suffering, sir?"

"I am, extremely," said Allen faintly. "I fear my friend has bound my broken arm too closely."

"Catharina," said he, turning to the female, who had stood looking on with an air of interest, "run down and prepare the couch in the south room, this gentleman will need it."

As she turned to obey her father, for such he was, Hugh, who had been watching her with some interest, caught a side view of as fine a face as is perhaps ever met among that race. He was particularly startled by seeing that she had hair of a light auburn—a colour as rare among this people almost as among the Indian tribes. A high forehead, a straight nose, and a small mouth and chin were all he could see; and yet even this partial view remained before him after she had disappeared, like the shape of the sun when the eyes are withdrawn from it. The old man stood a moment gazing down the mountain.

"That fire, I presume, marks the place where your enemies are?" said he. Hugh turned, and could now see a fire some three miles from them and apparently far below the level on which they stood.

"Yes," he replied, "eight men are waiting there to murder us."

The old man sighed as he turned away, as if incurring over the horrors of war. But his attention, as well as that of Hugh, was immediately attracted to Allen. The arm of the latter had become so painful as to be intolerable. He had sunk upon the ground, as the reaction from excitement withdrew his strength, and was now insensible.

"Let us carry him down," said the old man; and taking him carefully up, they bore him down the rapid descent.

As they turned a kind of shoulder in the rocks, some twenty feet below the surface upon which they had been standing, a singular and wild scene broke upon the view. Immediately in front of them stood a long house, the perpendicular rock of the ravine forming the back wall, from which the thatched roof slanted to the front. The house was narrow and low, almost entirely covering the ledge upon which it was built, and itself concealed from view from above, by long and tangled masses of moss, and overhanging bushes and vines. In front of the house was built a kind of arbour, so disposed as completely to conceal the walls from any eye on the opposite side of the ravine; and the vines which grew upon the roof were trained to wind along the rough cedar posts and hang gracefully over the ledge among the long festoons of silvery moss. The building itself was of stone, roughly hewn, and cemented together with something which looked like clay—the sharp corners of the rocks standing out so as to give the house almost the appearance of a mere pile of stones. It was scarcely two steps from the front wall to the edge of the rock; and, falling over that edge, one would have gone down hundreds of feet before reaching the bottom.

The fire which our friends had first seen was now burning low; and served only to illuminate the inside of the arbour at the end of which it was built, and a few feet beyond. Over the abyss of the ravine brooded the most impenetrable darkness, and from this spot even the sky looked dim and far, as one sees it from the bottom of a well. The old man led the way into the arbour and along its full length. At the other end, after passing three doors, he pushed open a fourth and stepped in.

Catharina stood within, arranging a soft couch, over which was spread a coverlet of the snowiest whiteness; and on a thin projecting stone, almost like a small mantel piece, stood a small silver lamp, the chain of which dangled almost to the floor. The walls were hung with a light wavy fabric of pale pink colour, which now looked nearly white; and the floor which was the natural rock, had been by some process worked almost perfectly smooth and level. The ceiling was white and blue alternately, in strips of the same fabric with the hangings, so arranged as to meet upon the level rafters and thus conceal the mode of fastening. The only visible furniture in the room was the low bedstead, a divan set against the wall, covered with cushions of the prevailing pink hue, and a large chest, carefully covered with an oiled canvas cloth; in front of the divan, intended for the feet, was laid a kind of mat, formed of the fibre of the *maquay* plant. Over the head of the bed was hung a crucifix, and from a loop in the hanging depended a small rosary of gold and ivory beads. Opposite to this hung a picture of the Virgin, painted in oil, in which the painter had caught the heavenly and rapt look upward, so often seen in Catholic paintings. Upon the divan lay a Bible, and from the end of the ribbon, which served as a marker, hung a small gold pencil, the head set with an emerald of great size.

It was Catharina's room which she was thus giving to a stranger, and she looked in all respects the appropriate mistress of the place. She had thrown off the light cloak which she wore at first, and now appeared in a loose, white dress, slightly tied at the waist, and betraying the undulations of her form at every movement. She was exceedingly fair; a complexion probably heightened by the pale hues about her; and as the light of the lamp fell upon her face, Hugh thought it glanced from her smooth skin, as from polished marble. She was above the medium height, and her straight and graceful carriage made her seem even taller than she was. Her hair, as we have said, was light auburn, and now hung in rich, waving masses entirely unconfined, except by a narrow band across her forehead, over a neck white and smooth as alabaster, and shoulders round and polished. Her arms were bare to the elbow, showing the clearest skin and most perfect contour. Her eyes were large and of the softest blue; while around her full, red lips played a smile of winning softness. As they bore Allen in, however, this smile gave way to an expression of grave concern; and as her eyes met Hugh's the latter thought her expression that of an angel come to comfort him in distress. Hugh was not constitutionally very poetical; but all the romance in his nature was now called forth, tinging his manner, affecting a voice not naturally unamused, and softening features always prepossessing.

"Has he fainted?" she asked, as they laid him on the bed.

"Yes; bring some water," said her father.

She drew the hangings aside and revealed a recess within, where, upon a smooth stone projecting from the natural wall, stood a silver pitcher and several goblets of the same material. She filled one of these with water from the pitcher, and dropping the curtain again the recess was entirely concealed.

"Sprinkle it in his face," said her father, "while I remove this jacket," and he proceeded to do so, giving directions to Hugh now and then to assist him.

Catharina sprinkled a few drops in Allen's face, after which she moistened her fingers in the goblet, and rubbed them gently over his forehead and temples.

"Give him a few drops to drink—get some fresh," said her father.

Handing the goblet to Hugh she got another and passed out at the door and around the corner of the house. Here was a small, silvery fountain trickling out from among the rocks, and running across and over the ledge, reaching the bottom of the ravine only in light spray. She held the goblet under the jet and ran back into the room, where now the old man was removing the bandages from Allen's arm. She held the goblet to his lips, and he soon began to give signs of returning animation.

"He has not had any water since early this morning," said Hugh.

"Early yesterday morning," said Catharina; "it is nearly sunrise."

"His voice was soft, gentle, and low,—an excellent thing in woman!" and the apparent sharpness which alarm had given it was no longer perceptible.

"I had forgotten," said Hugh, gazing earnestly at her.

"You had better assist," said she, pointing with a quiet smile at Allen. "My arm is not broken."

"True," said Hugh; "I hope it never will be—nor your heart either."

"The *caballeros* of Monterey say I have none to be broken," said she.

"They are mistaken, I am sure," said Hugh earnestly; but the old man called him to the side of his friend, and Catharina passed out into the open air.

"These bandages," said the old man, "have been tied far too tight—and over-exertion has thrown your friend into a fever. Fortunately, my poor skill is sufficient to dress the arm properly, and I hope to manage the fever, too. But he will not be well enough to be removed, perhaps, for a month or more."

"If he is only safe," said Hugh, "that will make no difference."

"That I think he will be," said the other. "We are living here during the troubles, having been driven from Monterey by the approach of your army, and we see none except one female servant, and, once in a week, a man in my service, who brings us supplies from Saltillo."

"When does his visit occur?" asked Hugh.

"I expected him last night," said he; "and his not coming was the cause of our being up so early. The fire you saw was a beacon to him, in case he had lost his way on the mountain."

"Can he be trusted?"

"We need not trust him at all," said the other. "He only stays an hour or two and returns to Agua Nueva for the night."

"Where are we, Hugh?" asked Allen, attempting to rise.

"You must not rise," said Hugh, laying his hand on his breast. "We are among friends, and safe for the present."

"I remember now," said Allen, sinking back.

"You must try to sleep," said the old man. "Let us remove his clothes, sir, and then leave him; nothing will do him so much good as sleep."

Allen submitted quietly; and almost before they had undressed him, he was in a deep, torpid sleep. Hugh and the old man passed out, and the latter drew the heavy door gently too.

(To be continued.)

THE mind never unbends itself so agreeably as in the conversation of a well-chosen friend. There is, indeed, no blessing of life that is, in any way, comparable to the enjoyment of a discreet and virtuous friend. It eases and unloads the mind, clears and improves the understanding, engenders thoughts and knowledge, animates virtue and good resolution, soothes and allays the passions, and finds employment for most of the vacant hours of life.

**SYMPATHY.**—To find one who hath passed through life without sorrow, you must find one incapable of love or hatred, of hope or fear—one that hath no memory of the past and no thought of the future—one that hath no sympathy with humanity, and no feeling in common with the rest of the species.

## SUPPLEMENTARY NUMBER TO THE "HOME COMPANION."

PRICE ONE PENNY.

With No. XXXIV. will be published a carefully prepared Sheet (uniform with the "HOME COMPANION"), with Illustrations, of RULES, HINTS, CAUTIONS, and DIRECTIONS, that will assist in preventing, checking, or curing Disease. By A DISTINGUISHED HOSPITAL SURGEON.

### EXTRACT FROM THE EDITOR'S INTRODUCTION:

"My object is to furnish such rules, hints, cautions, and directions, that, if followed, will assist in preventing, checking, or curing disease; alleviating pain; and perhaps preventing death or serious permanent injury, likely to result from accidents, imprudence, or wilfulness. We know that medical aid cannot always be commanded at once, especially in country towns or villages; and for want of proper directions, many a life or limb may be lost, or rendered permanently useless. Therefore, to obviate such disastrous results, I have compiled the following pages, which will furnish ample directions for all the common emergencies, diseases, and accidents, that are likely to come under the notice of an individual during their career in life; and, in order to make the directions more explicit, I have occasionally introduced neat little woodcuts. It should be borne in mind by every one that reads these pages, that I do not attempt to instruct them in the treatment of serious diseases or accidents. Books will not supply this information; it is only to be acquired by practice and thought. My object is, 1st, To enable people generally to distinguish a disease or accident of a serious kind from one that requires only a simple remedy, so that professional aid may be sought immediately; 2nd, To enable all persons to treat simple diseases or accidents; and 3rd, To enable any one to act in emergent cases, until such time as medical aid can be procured."

## THE HOME COMPANION:

A WEEKLY MAGAZINE.

## THE SOCIETY OF ARTS AND THE MECHANICS' INSTITUTES.

THE extension and improvement of the various societies that have been formed for the diffusion of information among the people, under whatever names they may be called,—such as Scientific and Literary Societies, Mechanics' Institutes, and Athenæums,—is a most grave and interesting question, that well deserves to be thoroughly discussed and understood. Hitherto these societies have been left to their own unassisted efforts, without any organized system for their development. In small towns they generally spring up from the efforts of two or three energetic individuals, are carried on for a short time with vigour; and, the novelty over, dwindle down into comparative inactivity. The real advantages of these institutions do not seem to be yet fully appreciated; the class for whom they were particularly intended have not so fully availed themselves of their benefits as might have been expected; the artisans and working classes, particularly in the smaller towns, have been rather shy of them, and they have received their principal support from a more wealthy class, for whose convenience a larger amount of their funds has been devoted to the expenses of the common reading-room department, than is consistent with the real objects of these institutions, and lectures, aiming more at amusement than sound practical instruction, have become common among them. The reason of this is obvious: the directors, in order to gain support from the higher classes in these small towns, who look upon themselves as above the need of instruction, have been compelled to study what will attract them, more than what is most to the advantage of the humbler classes of society, or than what in reality would be the most beneficial for the very classes whose taste they now cater for. At present, scarcely anything like a systematic course of lectures, fully examining and explaining any given branch of science or literature exists. On the contrary, the object seems to be to crowd as great a variety of subjects as possible into a course of lectures, without the slightest regard to their congruity with each other. Thus we have a lecture on the atomic theory, followed by one on the writings of Charles Dickens, and that succeeded by a grave treatise on probabilities, and followed by one on Dibdin's songs. A strange medley, if intended for instruction; but supplying, as these institutions do, the only thing in the shape of public amusement in many country towns, the variety may be charming enough, if it is not very instructive.

Still with all their imperfections these institutions have done much good; they have afforded the means of thought to many,—they have excited in many the desire for information and knowledge,—they have placed the means of gratifying their desire within the reach of many who otherwise might have remained in enforced ignorance. And even taking them at the very lowest, they have opened an innocent source of gratification and amusement. It is, however, most desirable that a higher tone should be

given to them, and new life, as it were, infused into them. Those who have taken the deepest interest in their formation and extension, and the first to see the deficiencies under which they labour, and are most anxious to devise some systematic measures of improvement to be adopted. With this view, Mr. Harry Chester,—who was one of the originators, and, since the commencement of the Society, has been the President of the Highgate Literary and Scientific Institution,—wrote a letter in November last to Mr. Grove, the Secretary of the Society of Arts, with the view of calling the attention of the Society to the question, and to invite them to join in making an effort to develop existing institutions of this class, to create new ones, and to affiliate them on the Society of Arts. In speaking of the present state of these institutions, he says: "There is now scarcely a town or considerable village which has not its institution under some form and name; but, with very rare exceptions, the institutions are generally in a languishing condition, both as to funds and as to usefulness. I do not mean to assert that they are of no use; but merely that they are not half as useful as they might be. The Exhibition has given us some very significant hints that it is not only the education of our poor children that needs to be improved; high and low, rich and poor, old and young, have all an education question to be solved; have all a very real and urgent need of knowledge, and of knowledge of that kind which a literary and scientific institution, if fully developed, is well calculated to assist in affording." The three principal defects in existing institutions he thinks, are:—First. They are not sufficiently practical in their aims. Secondly. They are isolated, and have no means of combining with other institutions for the public good. Thirdly. They have no connection with the great central associations which pursue, under national auspices, the objects of literature, science and art. Under each of these heads he gives some excellent suggestions, which we may again refer to; he sums up, however, with propounding the means for giving combined action to the different institutions: "What we want, however, is a central office in London, to which we could apply for advice, information, and assistance. Such an office might form an extensive staff of lecturers; men eminent in their special subjects, might collect illustrative specimens and diagrams, and, on application, supply the local institutions with lecturers and lectures on almost any subject." And he suggests that the Society of Arts should take up the matter, as, "above all others, the Society of Arts appears to be a Society with which institutions might unite, by affiliation, with mutual advantage."

This letter was at once taken into serious consideration by the Council of the Society of Arts, and a committee, with the Marquis of Lansdowne at its head, was appointed to frame a course of proceeding with reference to the objects recommended by Mr. Chester. A series of questions were drawn up, and sent to a very large number of the institutions; and a very considerable proportion of these having expressed their cordial approval of the general idea of a combination of many local institutions in union with the Metropolitan Society of Arts, it was determined by the Council of that Society, that a Conference should be held between the representatives of Institutions and the Society, with the view of agreeing upon the best modes of proceeding in reference to the wants and wishes of the institutions, and to the Society's means of meeting them.

This conference met on Tuesday, the 18th of May, under the Presidency of the Marquis of Lansdowne; and we give names of the noblemen, public men, and other gentlemen, connected with literature, science, and art, who attended and sanctioned the proceedings of the day, both by their speeches and their presence, as an indication of the deep interest that is felt by men of all ranks and parties in the progress and improvement of these Societies. The peers present were the Marquis of Lansdowne, Earl of Carlisle, Earl of Harrowby, Earl Granville, and the Bishop of Oxford. Of members of the House of Commons, there were Lord Ebrington, the Right Hon. Milner Gibson, the Right Hon. H. Tufnell, Mr. Ewart, Mr. Hume, Mr. Moffatt, and Mr. Strutt. Among the gentlemen connected with literature, science, and art, were the Very Rev. Dr. Milman, Dean of St. Paul's, Sir Charles Eastlake, P.R.A., Sir David Brewster, Sir C. Lyell, Sir J. Bolleau, Dr. Lyon Playfair, Professor Mosely, Professor Soley, Mr. Babbage, Rev. Dr. Booth, Mr. Harry Chester, Mr. Cole, C.B., Mr. C. Wentworth Dilke, Mr. Leonard Horner, Mr. Hullah, Mr. Charles Knight, and Mr. Tooke.

The proceedings of this conference must be regarded merely as the preliminary step to a great contemplated improvement. The resolutions proposed and unanimously agreed to were mere general resolutions confirmatory of the expected advantages of the union, and the general principles on which it should be formed. The first resolution, which was moved by Earl Granville, and seconded by Mr. Strutt, was as follows:—"That the success of literary and scientific institutions, and mechanics institutes, in the cultivation of literature, science, and art, and in the diffusion of useful knowledge, might be powerfully promoted by the combination of many institutions in union with the Society of Arts, on the basis of perfect security to the continued independence of the institutions, and the freedom of their self-government." The immense number of these institutions scattered throughout the kingdom, and their influence upon adult education, cannot fail to be greatly improved by union and combination among themselves; and this combination can only be effected by having some central society as the medium of communication, and certainly no better choice could have been made than the Society of Arts, which is fairly entitled to the honour of being considered as the parent of most of the various literary, scientific, and artistic associations which have sprung up in this country. We are told that at present the literary and scientific institutions, and the mechanics' institutes, number upwards of 70,000 members, and that 850 of these societies have responded to the queries sent out by the Society of Arts, and expressed their desire for

such union. We need no further proof of the desirability of such union. The great object must be to carry it out upon principles which shall allow the most perfect freedom of action to the individual institutions; and this principle, we are bound to say, is recognised by the Society of Arts in its widest extent. The Marquis of Lansdowne, in the speech in which he opened the proceedings of the meeting, distinctly and emphatically disclaimed, on the part of the Society of Arts, the slightest desire to impose anything like control over the regulations of any society. "The basis of such a combination," he says, "must be the perfect independence of every individual member; and all that is sought on one side to be obtained, and on the other to be granted, is the true and useful communication of knowledge." Earl Granville also said, "That there was not the slightest intention on the part of the Society of Arts, to constitute themselves a governing body; their only aim, on the contrary, was to be a medium of communication, and to act ministerially. The want of union among those local institutions had been greatly felt in different parts of the country. It was no part of the scheme, however, that these different societies should be in any manner interfered with by the parent society. The object was to enable the local societies to do by co-operation what they could not do so well, if at all, if left to their individual exertion." In fact, every sentence which fell from every member of the Society of Arts, during the whole conference, distinctly and fully repudiated all idea of interference with the internal management of local societies. We put this part of the case as clearly as we possibly can, because it was perhaps natural enough that a degree of jealousy should exist in the minds of some of the provincial societies, that they might become swamped by the influence of the Society of Arts; that any degree of interference on the part of that Society would endanger their independence of action, and that an attempt might be made to enforce one particular mode of proceeding upon all the local societies, without regard to the difference of objects, and wants in different localities. In fact, the notion of centralization might have been raised into a bugbear to deter the local societies from entering into this union. The Marquis of Lansdowne touched upon this point with his usual clearness and perspicuity: he says, "There have been great doubts, great conflicts, and great difficulties with regard, perhaps, to one of the greatest of all public social questions—the centralization of power. I believe that as to the utility of the centralization of knowledge no doubt can be entertained. I therefore believe that by putting those societies, scattered as they are in different parts of the country, into communication with the parent society here, great good will be effected, and no inconvenience will be suffered; that there may be created here a fund of information and of knowledge, upon which all the societies may be constantly and usefully drawing, without affecting their own independent action; and that, whereas all institutions in this country have been from time to time accused of a desire to fortify and support themselves, pecuniarily speaking, out of the consolidated fund, you will here create a consolidated fund of knowledge, upon which all parties may draw, without the least risk of its becoming bankrupt." The explanations that were given—the mode of proceeding that was shadowed out—the whole bearing of those connected with the Society of Arts, completely removed every vestige of this jealousy from the minds of the representatives of the different institutions, and satisfied them that the only object which the Society of Arts proposed to themselves, by aiding this movement, was the increased utility of these institutions, and the extension of sound knowledge and practical information among the self-educating adult population.

The next point to which we purpose alluding, is that connected with the mode in which it is proposed to remunerate the Society of Arts for the trouble that will be imposed on them in conducting the affairs of the proposed union. The resolution referring to this subject was necessarily, in the present state of the movement, conceived in mere general terms. It was moved by Mr. Milner Gibson, and seconded by Mr. Hume, "That the pecuniary conditions of union should be calculated to protect the Society from loss, and to afford to the institutions the full value of the payments which they may make." At the meeting, however, which took place on the following day, several suggestions were made, which gave some indication of the amount of compensation which the Society of Arts thought necessary, as well as the mode in which they thought it most convenient it should be paid. There were many grave objections urged to anything like a sliding scale of payments, varying according to the members of each institution; and these objections seemed to convince the far greater portion of the delegates present of the inconveniences that would arise from such a mode of payment. The mode which the Society of Arts themselves thought the most convenient was at once a proof that they did not seek to draw largely from the funds of the institutions, and that they were prepared to give more than they took. Their suggestion was, that the president, or other analogous officer of the institution, should become a member of the Society of Arts, the annual subscription to which is two guineas. It was thought that in most instances the president himself would pay this subscription, without drawing upon the funds of the local institution, and thus that the various local institutions would derive all the benefits of the union, without any tax upon their funds. The representatives, however, seemed to think that few things are worth having that are not worth paying for, and a very general feeling was manifested, that whatever the subscriptions might ultimately be, the institutions themselves ought to pay them. In many instances it was urged, that the President was a mere honorary officer, selected for his local influence to give the weight of his name to the institution, but who took no active part in its proceedings. That in some cases he would not be the person they would select to represent their interests at the meetings of the Society of Arts, and that they should prefer some other member of their society to be chosen for that purpose. There was this difficulty, however, which would arise from the choice of any other person than the president; in most cases the president is a permanent officer,

and he, once elected a member of the Society of Arts, would continue a member without the necessity of going to a ballot every year for his re-election, which, as the Society of Arts is a chartered body, would be absolutely necessary, if the local institutions were continually changing their delegates. Great inconveniences would arise thus. It was suggested, however, that these might be avoided, and satisfaction given to the institutions, by, in addition to the president, or other analogous officer, becoming a regular member of the Society of Arts, the institutions were allowed to nominate a representative to such special meetings of the Society as were appointed for the transaction of any business connected with the union. Some such plan as this, we have no doubt, will be finally determined on. In the mean time we may take it as an indication of the expenses to be incurred by the local institutions through joining the union, and we have no hesitation in saying that the proposals of the Society of Arts are characterized by extreme liberality, and that the advantages which the various institutions will derive from this union are infinitely greater in value than the pecuniary compensation required.

We have not left ourselves space to enter into the various points embraced in the memoranda of replies upon which the third resolution was based; and we only refer to it at present for the purpose of noticing some of the suggestions which fell from Mr. Tuffnell in seconding the resolution. These suggestions had reference to the supply of parliamentary papers, reports of committees, with the evidence taken before them, and other proceedings which are ordered by the Houses of Parliament to be printed, and which are generally known as "Blue Books." These contain an immense mass of information from the very highest sources, and would become most extensively useful if circulated among the different literary and scientific institutions. Mr. Tuffnell strongly recommends that petitions should be sent to Parliament praying that these publications may be forwarded to the different mechanics' institutes and other societies. We would go still further than this, and ask that every Government publication should be thus supplied to these institutions. There are many works of high scientific character printed at the public expense, the diffusion of these among the different societies would be productive of much advantage, and may be fairly claimed from any government as part of the educational expenditure of the kingdom. No time should be lost in preparing petitions to this effect, and urging their members to enforce them.

What was, properly speaking, the fourth resolution, was, in fact, the second that was moved to suit the convenience of the Bishop of Oxford, to whom it was entrusted. It was to the effect, "That this meeting is of opinion that literary and scientific institutions and mechanics' institutes are calculated to promote the interests of religion and morality, by the cultivation of literature, science, and art, and by the diffusion of useful knowledge; and that this meeting earnestly invites all classes to unite in supporting and improving such institutions, and extending their powers of doing good." Such a resolution as this, moved and seconded by such men as the Bishop of Oxford and the Earl of Harrowby, will go a great way to remove many of the prejudices which still exist, unfortunately, in the minds of some people as to these institutions; for we fear there are still some to be found who disapprove openly of these institutions, and others who have some "secret, unexpressed suspicions that there is something like contradiction or opposition between religion and the highest development of literature, science, and art." We trust that these persons will come round to the opinions so earnestly delivered by the Bishop of Oxford, "that the highest development of the whole man depended upon the equal application of all his several powers, and it was because he believed that the alliance of science, literature, and art, carried out with religious feeling and religious restraint, would be in the highest degree advantageous: that he rejoiced to be honoured that day—he would not say in convincing one single man—but in being the instrument of gathering together the expressions of your common sympathies in support of an almost self-evident proposition."

This scheme is now fairly launched, and that, too, under the highest auspices in the land. At the close of the conference, a deputation waited on Prince Albert, who has taken a lively interest in the proceedings, and who expressed his entire satisfaction and concurrence with the movement. We have no doubt, but that by it a great impetus will be given to these societies in particular, and to the general improvement and self-education of the adult population in all succeeding times. We cannot conclude this part of the subject better than in the words of Lord Carlisle, in his speech after the dinner, of which the conference partook together:—"We are all aware that in a neighbouring country—in the great capital of France—there was last week celebrated what was termed a great national festival in their field of Mars, the splendour of which was insured by all that great military preparation, consummate artistic skill, complete despotic power, and a pomp imperial in all but the name could confer upon it. It must have been as rich and brilliant a scene to the eye as could well be conceived; but we can tell our gay and gallant neighbours that we do not envy them their gleaming standards, or their golden eagles, while we offer an asylum to the literature and genius which they have cast forth,—while we make a home for the liberties which they have annulled,—while we pursue what we conceive to be the more legitimate ends, and the more worthy way of empire,—the intellectual, the social, the moral, and the religious improvement of the whole bulk of our people. Such are the ends we would pursue when we lay the foundation of another edifice devoted to popular instruction and enlightenment. We hope it may lead to the successful cultivation of another portion of the great peaceful field; and around the altar that we presume to erect, we do not seek to plant military standards, or to see the glare of burning steel—we seek to crown it with fruits and flowers, the beautiful creation of Nature."

## ONWARD!

**IMPROVED VERTICAL BORING LATHE.**—Messrs. Gale and Fenson, of Upper Thames-street, have patented a new description of hand boring and drilling lathe. The drill crank works in a sliding frame, moving up or down in a guide rod, at the top of which is a screw to regulate the distance according to thickness of material operated on. The pressure screw acts above the crank in the usual manner, and below the upper arm of the bracket is a small fly-wheel, which regulates and facilitates the motion.

**CHEAP INTERNATIONAL POSTAGE.**—The Society for promoting a system of Cheap International Postage has not laboured in vain. Already, we are given to understand, the Government has taken the matter up,—and the authorities at St. Martin-le Grand are engaged in considering the details of a plan with a view to its adoption, if considered feasible. The main features of the scheme now under discussion are—a great reduction of the present oceanic rates, and their equalization for all countries falling into a certain class.

**BATHS AND WASHHOUSES.**—From accounts of the model establishment in Goulston-square, Whitechapel, recently printed, it appears that for 1851 there is a surplus of £281 14s. 4d., besides £80 odd expended in reducing the annual assessment of Whitechapel parish from £500 to £200. The number of bathers was 156,311, of whom 14,397 were women, and 286 children. In 1849, the number of female bathers was only 4,695. The Committee are now issuing to subscribers and the public, tickets for gratuitous distribution to poor families.

**IMPROVED LUBRICATOR FOR MACHINERY.**—A patent has recently been obtained by M. B. Coquatrix for a lubricator, consisting of a box containing the oil, from the bottom of which a tube descends directly on to the bearings, and on the top of this tube a boss is cast, with a screw thread turned in it, into which a thumb key, with a conical point, is screwed, so that the annular aperture formed in the tube by the insertion of the key can be instantly closed, when the machinery is at rest. By raising the key by unscrewing, the conical point serves to regulate the supply from one to as many drops per minute as may be required. In fitting on this lubricator, it is only necessary to take off the old and insert the patent one instead.

**REPRODUCTIVE EMPLOYMENT OF PAUPERS.**—A very numerous attended meeting has been held in the Town-hall, Manchester, "for the purpose of taking into consideration the propriety of presenting a petition to Parliament in favour of such an alteration in the laws for the relief of the poor as will enforce the general adoption, as far as practicable, of reproductive employment of the destitute, in lieu of total idleness, or useless taskwork, with the view of reducing the heavy burden of poor-rates, and abating the demoralising consequences resulting from the present system." The Mayor presided, and the principal speakers were clergymen, who met the arguments usually urged in favour of idleness in workhouses, and carried the sense of the meeting, in various appropriate resolutions, entirely along with them, notwithstanding the endeavours of a few speakers to uphold the present state of things.

**NEW MODE OF CONSTRUCTION FOR RAILWAYS.**—Mr. Henson, of the London and North-Western, has patented a mode of construction for rails, by which greater stability, with an equal amount of elasticity, is said to be given, and a saving caused of the serious expense on the old system of laying the rails on rigid bearings, as well as of the wear and tear and injury to locomotive and rolling stock. This rail is of a conical form, expanding at the base. In place of going crosswise, like a bar-bridge, from one sleeper to another, Mr. Henson's rail is supported throughout its length upon a longitudinal sleeper, connected at intervals by wrought-iron tie-rods on transverse timbers. The advantages of Mr. Henson's invention are described to be "fewness of parts, great reduction in cost of maintenance, and unquestionable safety to passengers."

**A NEW MATERIAL FOR ILLUMINATING LIGHT-HOUSES.**—Dr. Gesner, of New Brunswick, discovered some time since, in one of his geological surveys, a large deposit of bituminous matter, not unlike asphaltum in its appearance and quality. This substance he has employed for the purpose of making gas-lights, which he finds very easily done. He has also successfully applied it to the purpose of making a brilliant light in lighthouses upon the coast. The lighthouse at Meagher's Beach has been placed by government under his charge. He has illuminated it at a charge of £19 per annum, making a saving of £50 per annum. The doctor proposes to furnish the other houses in the same manner, so that a saving of £15,000 a year would be effected by this means. He also states that he can erect lights along the shore, without expensive houses, by raising poles and placing the lights upon them.—*American paper.*

**SOMETHING OF A BRIDGE.**—The *Buffalo Commercial Advertiser* says:—"A bridge is now in course of completion on the Buffalo and New York City Railroad, where it crosses the Genesee River, near Portageville, which, when completed, will be 230 feet high and 500 feet span. Stone piers, set on the rock are carried up 30 feet high from the bed of the river, a few rods above the upper falls. From the top of the piers the woodwork rises 200 feet; and, so perfect is the model of the bridge, which may be seen on the ground,—that not the slightest tremor or motion is apprehended under the heaviest train of cars that may ever have occasion to pass over it. Over 80 tons of iron will be consumed for bolts alone in the construction of this mammoth piece of mechanism. The timber from 160 acres has been purchased. It is calculated that 210 acres will afford timber enough to complete the bridge."

## POETICAL QUOTATIONS.

## BATTLE.

Even like an arrow on the wind he rode  
His winged courser, and with noble daring  
Swept with his chivalrous escort past our front,  
Even at the stormy edge of chafing battle.—*Sir A. Hunt's Julian.*

When Greeks join'd Greeks, then was the tug of war;  
The labour'd battle sweat, and conquest bled.—*Lee's Alexander*

A thousand glorious actions that might claim  
Triumphant laurels, and immortal fame,  
Confused in clouds of glorious actions lie,  
And troops of heroes undistinguish'd die.—*Addison's Campaign.*

It was a goodly sight,  
To see the embattled pomp, as with the step  
Of stateliness the barbed steeds came on,  
To see the pennons foling their long waves  
Before the gale, and banners, broad and bright,  
Tossing their blazonry.—*Southey.*

Then more fierce  
The conflict grew; the din of arms—the yell  
Of savage rage—the shriek of agony—  
The groan of death, commingled in one sound  
Of undistinguish'd horrors; while the sun,  
Retiring slow beneath the plain's far verge,  
Shed o'er the quiet hills his fading light.—*Southey's Madoc.*

Yet more! yet more! how fair array'd  
They file from out the hawthorn shade,  
And sweep so gallant by!  
With all their banners bravely spread,  
And all their armour flashing high,  
Saint George might waken from the dead,  
To see fair England's standard fly.—*Scott's Marion.*

In the world's broad field of battle,  
In the bivouac of life,  
Be not like dumb driven cattle!  
Be a hero in the strife!—*Longfellow.*

Then said the mother to her son,  
And pointed to his shield—  
"Come with it, when the battle's done,  
Or on it, from the field."—*R. Montgomery.*

## BEARD.

It has no bush below;  
Marry a little wool, as much as an unripe  
Peach doth wear:  
Just enough to speak him drawing towards a man.  
*Suckling's Goblins.*

His tawny beard was th' equal grace  
Both of his wisdom and his face;  
In cut and dye so like a tile,  
A sudden view it would beguile;  
The upper part thereof was whey;  
The nether, orange mix'd with gray.—*Butler's Hudibras.*

## BEAUTY.

Her looks were like beams of the morning sun,  
Forth-looking through the windows of the east,  
When first the fleecy cattle have begun  
Upon the pearled grass to make their feast.—*Spenser.*

The fairness of her face no tongue can tell,  
For she the daughters of all women's race,  
And angels eke, in beautie doth excel,  
Sparkled on her from God's own glorious face,  
And more increas'd by her own goodly grace,  
That it doth far exceed all human thought,  
Ne can on earth compared be to aught.  
—*Spenser's Hymne of Heavenly Beautie.*

Beauty's a slipp'ry good, which decreaseth  
Whilst it is increasing: resembling the  
Medlar, which, in the moment of his full  
Ripeness, is known to be in rottenness.  
Whilst you look in the glass, it waxeth old  
With time; if on the sun, parched with heat; if  
On the wind, blasted with cold. A great care  
To keep it, a short space to enjoy it,  
A sudden time to lose it.—*Lilly's Sappho.*

Beauty, sweet love, is like the morning dew,  
Whose short refresh upon the tender green,  
Cheers for a time, but till the sun doth show;  
And straight is gone, as it had never been.—*Daniel.*

## CHARADE.

My first, a messenger of gladness;  
My last, an instrument of sadness;  
My whole looked down upon my last and  
smiled—  
Upon a wretch disconsolate and wild.  
But when my whole looked down and smiled  
no more,  
That wretch's frenzy and his pain were o'er.

## MENTAL RECREATIONS.

*A Quantity of Eggs being broken, to find how many there were, without remembering the Number.*

An old woman, carrying eggs to market in a basket, met an unruly fellow, who broke them. Being taken before a magistrate, he was ordered to pay for them, provided the woman could tell how many she had; but she could only remember, that in counting them into the basket by twos, by threes, by fours, by fives, and by sixes, there always remained one; but in counting them in by sevens, there were none remaining. Now, in this case, how was the number to be ascertained?

## TRANSPPOSITIONS.

I.  
WHATEVER you do to guess my whole,  
You'll never guess it right;  
And, when transposed, if now not seen,  
Yet still 'tis felt in sight.  
Behead, transpose, then let it be.  
Or you the answer ne'er will see.

II.  
My whole's of no consequence,  
Light as the air;  
Yet it's eaten with gusto,  
As soon will appear.  
Curtail and transpose,  
And a fair one now see,  
Who, when I am whole,  
Is sure to do me.

III.  
My whole in London's gay saloons  
In various forms is seen;  
In silks and satins,—even stone—  
In colours all, I ween.  
Behead, transpose, now go to church,  
And me you'll surely hear;  
And, often, too, at cottage hearth,  
When eventide draws near.

## TRANSFIGURED PLAYING CARDS.

THE ACE OF HEARTS—"A HEARTY DINNER."

## CONUNDRUMS.

1. Why is London milk like a Bank of England note?
2. When does a criminal appear to the worst advantage?
3. When ought a rogue to be the richest man in England?
4. When is a horse not worth a shilling?
5. Why are women's stays the greatest speculators in the City of Mortality?
6. Why ought the use of candles to be forbidden in religious assemblies?
7. Why is a postman in danger of losing his way?
8. Why are the Goodwin Sands like a staunch teetotaler?
9. What flower most resembles a bull's mouth?
10. What would be likely to give the best report of a fire?
11. What part of a locomotive train ought to have the most careful attention?
12. When are clouds in danger of being turned over?
13. When is a plant to be dreaded more than a mad dog?
14. When is a horse in danger of taking cold?
15. Why cannot the Chelsea Pensioners hold a general meeting?
16. Why is an eagle sometimes placed in the choir of a church?
17. What was most plentiful in Noah's ark?
18. When is a newspaper like a delicate child?
19. When did Queen Victoria take the greatest interest in the potato crops?

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 509.

## PICTORIAL CHARADE.—MUFFIN.

CHARADES.—1. ASH-OER. 2. CAN-ARIES.

PARADOXES.—1. A piece of pliable metal being doubled, by applying a round file to the double edge, and filing a half-square gap, on opening the metal a square will appear. Again, if two corners and an edge, at the end of a miser's iron chest be filed away, with a round, or any other, file, there may be an exact square hole left. And further, if a cylindrical body be cut obliquely, the plane of the section will be an oval; and consequently a round body, situated obliquely in an oval hole will completely fill it. 2. A shoe.

PROBLEM.—Fill the five-gallon measure out of the cask; fill the three-gallon measure out of the five-gallon measure; return the contents of the three-gallon measure into the cask; pour the two gallons which remained in the five-gallon measure into the three-gallon measure; again fill the five-gallon measure out of the cask, and fill up the three-gallon measure out of the five-gallon measure. There will then be left four gallons in the five-gallon measure.

CONUNDRUMS.—1. He puts in his ear? 2. Because he is a granny-dear. 3. Because he bleeds. 4. A gate. 5. It has a kernel. 6. He is crusty. 7. It is the capital of England. 8. It has no end. 9. It is capable of receiving any impression. 10. Cooling-wax. 11. Because he reflects. 12. He is time-serving. 13. A wedding-ring. 14. A clock that does not keep time.

## OUR CORNER CUPBOARD!

A LADY asked her physician whether snuff was injurious to the brain? "No," said he, "for nobody who has any brains ever takes snuff."

ONE asked his friend, why he married so little a wife? "Why," said he, "I thought you had known, that of all evils we should choose the least."

A QUACK doctor, in one of his bills, said he could bring living witnesses to prove the efficacy of his nostrum, "which is more," says he, "than others in my line can do."

It being proved, on a trial at Guildhall, that a man's name was really *Inch*, who pretended that it was *Linch*. "I see," said the judge, "the old proverb is verified in this man, who being allowed an *Inch*, has taken an *L*."

This is a good world to live in,  
To lend, to spend, and to give in;  
But to get, or to borrow, or keep what's one's own,  
'Tis the very worst world that ever was known.

"WHY are you like a crazy jnan, my dear?" asked a wife. "Don't know," replied the husband, scratching his head. "Why," replied the wife, hitching up closer to him, and putting on one of her sweetest smiles, "I'm your other self, and you are beside yourself."

AN auctioneer, at a sale of antiquities, put up a helmet, with the following candid observation:—"This, ladies and gentlemen, is a helmet of Romulus the Roman Founder; but whether he was a brass or iron-founder, I cannot tell."

WHEN Foote was at Salt Hill, he dined at the Castle; and when Partridge produced the bill, which was rather exorbitant, Foote asked him his name. "Partridge, an't please you," said he. "Partridge!" returned Foote; "it should be Woodcock, by the length of your bill."

A FELLOW coming from the top of the Alleghanies to New York, in winter, was asked whether it was as cold there as in the city. He had probably been at some march of intellect school, for he glanced at a thermometer. "Horribly cold," said he, "for they have no thermometers there, and, of course, it gets just as cold as it pleases."

FROM AN OLD ALMANAC.—*Tempus Fugit.*

War begets poverty—poverty peace;  
Peace makes riches flow—fate ne'er doth cease;  
Riches produces pride—pride is war's ground;  
War begets poverty—and so the world goes round."

A BOAT ascending the Ohio river was hailed by another boat, when the following dialogue ensued:—"What boat is that?" "The Cherrystone." "Whence came you?" "From Redstone." "Where are you bound to?" "Limestone." "Who is your captain?" "Thomas Stone." "What are you loaded with?" "Millstones and Grindstones." "You are a hard set to be sure; take care you don't go to the bottom. Farewell."

MR. PRYSE GORDON relates, in his curious *Autobiography*, that a sailor having thought proper to enclose the parish churchyard of Deskford, near Cullen, in order to keep it decent, his executor placed a tombstone over him after death, on which was the following epitaph:

"Hic jacet Joannes Anderson, Aberdoniensis."

Here his latinity failed him, and the sequel was in English,

"Who built this churchyard dyke at his own expenses."

BURNS was one day in a gentleman's library. The collection was very fine; but the owner happened to be a man not the most able in the world to appreciate the contents. After some conversation with Burns, he expressed himself as being particularly anxious about the bindings of his books: he liked to see books with a handsome exterior. Next morning, the wicked poet was found to have left the following couplet on the library table:

Free through these books, ye maggots, make your winding;  
But, for the owner's sake, oh spare the binding!

A PRISONER being brought up to Bow-street, the following dialogue passed between him and the sitting magistrate:—"How do you live?" "Pretty well, sir; generally a joint and pudding at dinner." "I mean, sir, how do you get your bread?" "I beg your worship's pardon; sometimes at the baker's, and sometimes at the chandler's shop." "You may be as witty as you please, sir; but I mean simply to ask you, how do you do?" "Tolerably well, I thank your worship; I hope your worship is well."

A GENTLEMAN walking in the fields with a lady, picked a blue bell, and taking out his pencil, wrote the following lines, which with the flower, he presented to the lady:

This pretty flower of heavenly hue,  
Must surely be allied to you;  
For you, dear girl, are heavenly too.

To WHICH the lady replied:

If, sir, your attachment be true,  
I'm sorry that I look so blue.

## OUR MEMORANDUM BOOK!

WAR BETWEEN ENGLAND AND FRANCE.—1141, one year.—1161, twenty-five years.—1311, fifteen years.—1224, nine years.—1294, five years.—1339, twenty-one years.—1368, fifty-two years.—1422, forty-nine years.—1492, one month.—1512, two years.—1521, five years.—1549, one year.—1557, two years.—1562, two years.—1627, two years.—1666, one year.—1680, ten years.—1702, eleven years.—1744, four years.—1756, seven years.—1776, seven years.—1793, nine years.—1803, eleven years. And, lastly, 1815, when this calculation was made, and the war then subsisting fourteen years; making, within a period of 700 years, 266 years of desolating war!

"How various his employments when the world  
Calls idle; and, as idly, is return,  
Esteems that he is an idler too!  
Friends, books, and pen, and perhaps his pen,  
Delightful industry enjoy'd at home,  
And Nature, in her cultivated bow,  
Dread'd to his taste, inviting him abroad—  
Can he want occupation who has these?  
Will he be idle, who has much to enjoy?"

COWPER.

SPIDER'S THREAD.—In the introduction to entomology, by Kirby and Spence, there is a very curious description of the process by which the spider weaves its web. After describing the four spinners, as they are termed, from which the visible threads proceed, the writer goes on to mention that these are the machinery through which, by a process more singular than that of "rope-spinning, the thread is drawn. Each spinner is pierced, like the plate of a wire-drawer, with a multitude of holes, so numerous and exquisitely fine, that a space often not bigger than a pin's point includes above a thousand. Through each of these holes proceeds a thread of an inconceivable tenuity, which, immediately after issuing from the orifice, unites with all the other threads, from the same spinner, into one. Hence from each spinner proceeds a compound thread; and these four threads, at the distance of about one-tenth of an inch from the apex of the spinner, again unite, and form the thread we are accustomed to see, which the spider uses in forming its web. Thus, a spider's web, even spun by the smallest species, and when so fine that it is almost imperceptible to our senses, is not, as we suppose, a single line, but a rope composed of at least four thousand strands. But to feel all the wonders of this fact, we must follow Leuwenhoek in one of his calculations on the subject. This renowned microscopic observer found, by an accurate estimation, that the threads of the minutest spiders, some of which are not larger than a grain of sand, are so fine, that four millions of them would not exceed in thickness one of the hairs of his beard. Now we know that each of these threads is composed of above four thousand still finer. It follows, therefore, that above 16,000 millions of the finest threads which issue from such spiders are not, altogether, thicker than a human hair. It has long been a question among philosophers, whether it is possible to render the labours of the spider subservient to the benefit of mankind. In the earlier part of last century, Bon, of Languedoc, fabricated a pair of stockings and a pair of gloves from the threads of spiders. They were nearly as strong as silk, and of a beautiful gray colour. The predacious habits of these animals, however, would seem to oppose an effectual barrier to their being bred up in sufficient numbers to render such a manufactory at all productive. The following arguments against the probability of any permanent or real advantage resulting from this attempt, were published by Reaumur, whom the Royal Academy had deputed to inquire into the matter. The natural fierceness of spiders renders them unfit to be bred and kept together. Four or five thousand being distributed in cells, fifty in some, one or two hundred in others, the big ones soon killed and eat the smaller ones, so that in a short time there were scarcely above one or two left in each cell; and to this inclination of devouring their own species is attributed the scarcity of spiders, when compared with the vast number of eggs they lay. Reaumur also affirms that the web of the spider is inferior in strength and lustre to that of the silk-worm, and produces less of the material fit for use. The thread of the spider's web can only bear a weight of two grains without breaking; and the bag sustains the weight of thirty-six grains; the thread of a silk-worm will bear two drachms and a half, so that five threads of the spider are necessary to form a cord equal to that of a silk-worm; and as it would be impossible to apply these so closely together as to avoid leaving any empty spaces, from which the light would not be reflected, the lustre would consequently be considerably less; this was noticed at the time the stockings were presented to the society by M. de la Hire. It was farther observed, that spiders afford less silk than silk-worms, the largest bags of the latter weighing four grains, the smaller three grains,—so that 2,304 worms produce a pound of silk. The bags of a spider weigh about one grain; when cleared of the dust and filth, they lose about two-thirds of that weight. The work of twelve spiders, therefore, only equals that of one silk-worm; and a pound of silk will require at least 27,648 spiders. But as the bags are solely the work of the females, who spin them to deposit their eggs in, there must be kept 55,296 spiders to yield one pound of silk; and this will apply to the good ones only, the spiders in gardens barely yielding a twelfth part of the silk of the domestic kinds. Two hundred and eighty of them would not produce more than one silk-worm; and 662,555 such spiders would scarcely yield a pound of silk!

ORDERS RECEIVED, BY  
MAXWELL & CO.

## ADVERTISEMENTS.

31, NICHOLAS-LANE, LONDON  
STREET, LONDON.

**IMPORTANT TO THE WORKING CLASSES.**  
**FINSBURY MUTUAL LIFE ASSURANCE.** Established, 1847. Guaranteed Fund, £10,000. Life and Endowment Policies granted, from £5 to £100, free of Policy Stamp. Policies Indisputable. Monthly Payments: Payments may be made for the whole of Life, or to cease on attaining 60, 65, or 70 years of age; the amount insured payable at Death, or on attaining either of these ages, thereby forming a Provision for Old Age.  
Prospectuses, forms, and every information supplied on application at the Office, 35, EXMOUTH-STREET, CLERKENWELL, LONDON (post-free for one stamp.) Agents required.  
W. H. PRATT, Sec.

**A BEAUTIFUL COMPLEXION AND A WHITE HAND FOR ONE SHILLING.**—**ERNADO** perfectly removes all eruptions, discolorations, &c., and silays all heat or redness of the face, imparting to it a juvenile purity and clearness. It also removes all brown hairs, and renders a chapped or rough skin fully soft, smooth, and fair. The genuine is harmless, and easy and pleasant to use. Sold everywhere.  
HERN, 76, Lower Thames-street, London, E.C. 4, 6 pence, or sent free, with directions for use, for 15 stamps; double packet, 1s. 10d., or sent free for 30 stamps.

**HOLLOWAY'S OINTMENT AND PILLS,** A MOST EXCELLENT REMEDY FOR ARTERIES AND OLD WOUNDS.—Thomas Edwards, a labourer in Portsmouth Dockyard, received a severe hurt in his thigh by a piece of timber falling on him. An abscess formed in consequence of the injury, which defied the most eminent surgeons to heal, and he was consequently pronounced incurable, and put on the superannuated list. Being now at liberty to try other remedies, he commenced using Holloway's Ointment and Pills, which have so effectually cured him that he enjoys good health, and is as well able to work as any man.—Sold by all vendors of medicines, and at Professor Holloway's Establishment, 244, Strand, London.

"Costly thy habit as thy purse can buy,  
But not express'd in fancy—rich, not gaudy;  
For the apparel oft proclaims the man."—*Hamlet.*

**EVERY WELL-DRESSED MAN KNOWS** how difficult it is to find a tailor who thoroughly understands the peculiarities of each figure, and can suit its requirements with a well-cut gentlemanly fitting garment, in which ease and taste, being equally regarded, the eye of the observer is pleased with its graceful effect, while the comfort of the wearer is secured. Hence it is that so few feel "at home" during the first day's wear of any new garment, and so many are apparently doomed to appear in clothes, however costly, that never can become adapted to their forms. To remedy so manifest a deformity in costume, **FREDERICK FOX** adopts this means of making known that he has practically studied both form and fashion in their most comprehensive meaning, and in the course of an extensive private connexion has clothed every conceivable development during the past thirteen years, always adapting the garment, whether coat, waistcoat, or trousers, to the exigencies of its individual wearer, and the purposes it is intended to serve, thus invariably attaining elegance of fit with that regard for economy which the spirit of the age dictates.—**F. FOX**, practical tailor, 73, Cornhill, same side of the way as the Royal Exchange.

SECOND ISSUE OF 5,000.

For the **MILLION**.—Now publishing, price 1d., post free for 2 stamps.

**THE FIRST ANNUAL REPORT OF THE LONDON SUBURBAN AND HOME COUNTIES' PERMANENT BENEFIT BUILDING SOCIETY,** 16 pages, 25mo.

"A thoroughly well-planned Building Society, and the Report decidedly the best treatise ever published."—*Times*.  
"A new era has opened upon us; this deserves and will certainly obtain public support."—*Daily News*.  
Order of the Secretary, Mr. W. L. HARVEY, 3, Goddard-street, Doctors' Commons.

**TO THE LADIES.**—**MRS. PULLAN** succeeds Mrs. WARREN as EDITRESS of the **NEEDLE-WORK** Department of **THE FAMILY FRIEND**. Beautiful Patterns in every Number.  
Londres: Housdrum & Broomman.—Price 2d.

**NOVELTY IN CROCHET.**—**MISS LAMBERT** can now forward by return of post to those ladies who would be first in the field her printed book, with full instructions and engravings for her new fancy work, which gained the Exhibition prize. Price, post-free, 2s. 2d.  
5, Colver Street, Strand.

**GLENFIELD PATENT STARCH.**—**NOW** **MADE IN THE ROYAL LAUNDRY.**—The Ladies can now purchase the best quality of the **GLENFIELD PATENT STARCH** at a special price. It is a pure, white, and soft starch, and is sold by nearly all the Old and Colourmen and Chemists in London, and throughout the Kingdom. Agents: apply to Mr. R. WOTHERSPOON, 4, DUNDAS-STREET, LONDON.  
London Depot: WOTHERSPOON, Mather & Co., 49, King William-street, City.

**WALKS ABROAD, AND EVENINGS AT HOME.** Now ready, price 2s. a New and Elegant Monthly Periodical, edited,

London: 69, Fleet-street; and all Booksellers.

Now Publishing.  
**NEW MEDICAL DICTIONARY FOR THE PEOPLE.** In Monthly Parts, price 6d. each, to be completed in 12. Parts I., II., III., IV., V., are published.

**THE DICTIONARY OF DOMESTIC MEDICINE AND HOUSEHOLD SURGERY.** By SPENCER THOMSON, M.D., L.R.C.S., Edinburgh. Illustrated.

This work is intended to be a concise and ready book of reference in cases of emergency, either of severe illness or accident, in the absence of immediate medical assistance, and a safe guide in the domestic management of slight ailments, and of the sick-room generally.

Also, a compendium of those sanitary principles on which the attainment and preservation of health depend. It is the book of the intelligent mechanic, of the inexperienced mother, of the clergyman, and of the emigrant.

"It is the most clear and explicit, and if continued as it has begun, will prove the most valuable periodical of the year."—*Tait's Magazine*.

"For families and for the clergy it will be a valuable guide."—*Oxford Herald*.

"Intended for all classes, and giving promise of undoubted excellence."—*Newcastle Guardian*.

"We doubt whether any Medical Dictionary contains the same amount of correct and practical information. It is a work of very great value."—*Glasgow Examiner*.

"It is the best work of the kind yet attempted."—*Durham Chronicle*.

"The Thomson proceeds with his labours in the most satisfactory manner, and as the work progresses its usefulness becomes more and more apparent."—*Hampshire Independent*.

"We cannot name a work in which families may find such valuable information at so trifling a price."—*Cornish Telegraph*.

"This work, when complete, will be the best of its kind extant, and ought to be found in every family library."—*Portsmouth Guardian*.

"It is one of the very best works of its class."—*Bradford Observer*.

"There can be no doubt of the utility and talent of the work."—*Bucks Herald*.

"The work may be safely referred to as an invaluable guide."—*Leeds Mercury*.

"Ought to be in the hands of everybody."—*Kent Observer*.

"We certainly look upon this as an invaluable work, and no family should be without it."—*Cambridge Independent*.

**PENNY MONTHLY STORY, FOR LITTLE CHILDREN.**

The Editors of the "Family Economist" have made arrangements for publishing a series of delightful little Stories for Young Children, to be called

**BUDS AND BLOSSOMS.** The Tales will be of a simple character, printed in legible type, with very pretty Engravings. They will be beautiful and attractive little books, adapted for Children of from four to seven years.

Published on the First of every Month.

**STORIES FOR SUMMER DAYS AND WINTER NIGHTS.** Second Series. These well-written and beautiful Stories for Young People will be found equally interesting to readers of older growth. They are lively, instructive, and moral; adapted to entertain and improve—to inform the mind and educate the heart. Each Story is illustrated with well-executed Engravings. They are among the best and cheapest books for Young People published.

**ALREADY PUBLISHED.**  
The Sea-Kings.  
The Children and the Sage.  
Haleyon Days.  
Blind Brother.  
Louis Duval; A Story of the French Revolution.  
The Young Emigrants.  
The Founding of the Week.  
The Boy and the Book.  
In School and out of School.  
Oscar; A Tale of Norway.  
The Young Artist.  
The Crusaders.  
The Prophet and the Lost City.  
The Ship and the Island.  
The Fairy Craft of Nature.  
The Widow's Son.

The above may be had in Fout Vols; elegantly bound, or in elegant cases, price One Shilling each—separately, price Threepence each.

**HOME AT THE HAVEN, THE SEEKER AND THE FINDER.** Just Published.  
LONDON: GROOMBRIDGE & SON.

## THE HOME COMPANION PORTFOLIO.

We strongly recommend to our Subscribers the adoption of the "HOME COMPANION PORTFOLIO," for the preservation of the Weekly Numbers of the Monthly Parts. These Portfolios are made with elastic cords at the back, to hold fifty-two Numbers, or Twelve Monthly Parts, which comprise the Volume. At the end of each year they may be taken out and bound, and the Portfolio may be employed to preserve the Numbers or Parts of the succeeding Volume. The Price is Two Shillings. The outlay will be saved by the preservation of the Numbers, which, hereafter, may be difficult to obtain. The Portfolio is beautifully illustrated, and is a most valuable work, by a new invention introduced by LINDSEY, DODD, and HOBBS. It is an ornament for the drawing-room table—Order of any Bookseller.

"Handel's 'JUDAS MACBEE'."

O lovely Peace, with Plow-ty crown'd

MOURNING BONNETS. WEDDING BONNETS.  
All at the lowest possible prices, for cash only.  
BETHEL WARR.  
Manufacturer, 217, Tottenham Court-road, London.

### Editor's Note-Book.

**DOMESTIC HINTS, No. 8.—**  
**BOILING (continued).**—Reckon the time from its first coming to a boil. The old rule of fifteen minutes to a pound of meat, we think rather too little; the lower it boils, the tenderer,

the plumper, and whiter it will be. For those who choose their food thoroughly cooked (which all will who have any regard for their stomachs), twenty minutes to a pound will not be found too much for gentle simmering by the side of the fire; allowing more or less time, according to the thickness of the joint, and the coldness of the weather; always remembering, the slower it boils the better. Without some practice it is difficult to teach any art; and cooks seem to suppose they must be right, if they put meat into a pot, and set it over the fire for a certain time—making no allowance, whether it simmers without a bubble, or boils a geyser. Fresh killed meat will take much longer time boiling than that which has been kept till it is what the butchers call ripe, and longer in cold than in warm weather; if it be frozen, it must be thawed before boiling as before roasting; if it be fresh killed, it will be tough and hard, if you stew it ever so long, and ever so gently. In cold weather, the night before you dress it, bring it into a place of which the temperature is not less than 45 degrees of Fahrenheit's thermometer. The size of the boiling pots should be adapted to what they are to contain; the larger the saucepan the more room it takes upon the fire; and a larger quantity of water requires a proportionate increase of fire to boil it. In small families, we recommend black tin saucepans, &c., as lightest and safest; if proper care is taken of them, and they are well dried after they are cleaned, they are by far the cheapest; the purchase of a new tin saucepan being little more than the expense of tinning a copper one. Take care that the covers of your boiling pots fit close, not only to prevent unnecessary evaporation of the water, but that the smoke may not insinuate itself under the edge of the lid, and give the meat a bad taste. If you let meat or poultry remain in the water after it is done enough, it will become sudden, and lose its flavour. Beef and mutton a little under done (especially very large joints which will make the better hash or broth), is not a great fault—by some people it is preferred; but lamb, pork, and veal, are uneatable, if not thoroughly boiled—but do not overdo them. A trivet, or fish-drainer, put on the bottom of the boiling pot, raising the contents about an inch and a half from the bottom, will prevent that side of the meat which comes next the bottom from being done too much, and the lower part of the meat will be as delicately done as the other part; and this will enable you to take out the contents of the pot without sticking a fork, &c., into it. If you have not a trivet, use four skewers, or a soup-plate laid the wrong side upwards. Take care of the liquor you have boiled poultry or meat in; in five minutes you may make it into excellent soup. The good housewife never boils a joint without converting the broth into some sort of soup. If the liquor be too salt, only use half the quantity, and the rest water; wash salted meat well with cold water before you put it into the boiler. **ROASTING.—Beef.**—The noble sirloin of about fifteen pounds (if much thicker the outside will be done too much before the inside is enough), will require to be before the fire about three and a half or four hours: take care to spit it evenly, that it may not be heavier on one side than the other; put a little clean dripping into the dripping-pan (tie a sheet of paper over it to preserve the fat), baste it well as soon as it is put down, and every quarter of an hour all the time it is roasting, till the last half-hour; then take off the paper and make some gravy for it, stir the fat and make it clear; to brown and froth it, sprinkle a little salt over it, baste it with butter, and dredge it with flour; let it go a few minutes longer, till the froth rises, take it up, put it on the dish, &c. Garnish it with slices of horse-radish, scraped as fine as possible with a very sharp knife. A Yorkshire pudding is an excellent accompaniment. **Ribs of Beef.**—The three first ribs, of fifteen or twenty pounds, will take three hours, or three and a half; the fourth and fifth ribs will take as long, managed in the same way as the sirloin. Rapier the fat and the thin part, or it will be done too much, before the thick part is done enough.

**OWNERS OF GLASS-MAKING.**—J. E.—The art of making glass was introduced into England from France in the year 674, for the use of churches and monasteries. Bene-

diet Biscop, who in that year founded a monastery, and attached to it an elegant church of stone, after the Roman manner, prevailed on some glass-makers in France to come over and glaze the windows. These artificers not only performed the work assigned to them, but also taught the English how to make windows, lamps, and drinking vessels. Before that period, the windows of houses and churches were filled either with linen, cloth, or lattices of wood; and even in the 13th century, glass windows in private houses were very rare.

**MUSICAL EDUCATION.**—A "LOVER OF HARMONY" desires to know the title of a work containing instructions for acquiring a knowledge of the violin, and we happen to have one recently published before us at this moment, which appears to combine the requisite qualities. It is "Dean's Violin Tutor," a very desirable guide to that instrument, and containing all the necessary exercises, scales, &c. As we have similar inquiries on the same subject, these observations will be of general application. While on this harmonious topic, we would strongly recommend all aspirants for musical distinction to confine their introductory practice to places strictly private, in order that the ears of their friends and neighbours may not be exposed to the harsh discords of first attempts. We have the misfortune to reside in the vicinity of an amateur, who is constantly wailing the goddess of song with ineffectual gasps of a trombone, which produces anything but soothing or exhilarating effect on the locality. Beyond the impression conveyed by such efforts, of strength of lung and perseverance, the unfortunate performer obtains nothing but illwill, and wishes we dare not repeat. Owen Feltham says, "Music is good or bad as the end to which it tendeth; we must therefore pronounce against it, when this

"Sweetest source of purest pleasure," is perverted into a

**BASH: ATTEMPT ON THE PUBLIC EAR.**

**TO TAKE CARE OF GOLD FISH.**—G. HUTTON.—It is a mistake to suppose that gold-fish kept in glass globes require feeding. They have the singular property of subsisting on the invisible animalculæ of the water; and though they will eat bread or vermicelli if given to them, they are much better without it. It is necessary, however, to change the water every day; as clean fresh water is indispensable to their existence, when confined in a small space. To do this, empty the globe into a large basin, pouring the fish along with the water. Wash the globe very clean inside and out, making it look perfectly bright and clear, and fill it with fresh water. Then catch the gold fish in your hand (doing it very carefully, to avoid hurting them), and instantly transfer them to the globe of clean water. Gold-fish, in winter, should always be kept in a warm room. It is not well to have more than two fish in one globe.

**IMPROVEMENT OF THE VOICE.**—ANNE H.—We do not know of any particular rules for the preservation and improvement of the voice, beyond the requisite precautions necessary for general health. Practice can alone render singing perfect. A weekly newspaper in the course of a humorous critique upon singing says, "Singers will, perhaps, smile when they find what ascetic lives are expected of them. They are enjoined the utmost moderation in eating and drinking. A too warm dinner is to be avoided for the sake of the stomach—A very cold one also, for the conservation of the tooth—a light repast neither hot nor cold is permitted. Fat is not to be chewed, but eschewed—pickles and lemonade are to be shunned. In fact, all aliment that is hot, fat, sweet, sour, or sharp—all relishing bits, are injurious to the voice." We cannot, however, recommend such a severe regimen to our fair readers.

**COMMUNICATIONS RECEIVED.**—DENTRALS (rumor stops) should be kept moderately moist with a drop or two of sweet oil; a little cream tartar, and a few drops of sweet oil rubbed well in, will give the glass a fine edge. JACOB M. (to join glass together, take a little isinglass

and melt it in spirits of wine; it will form a transparent glue, which will unite glass, so that the fracture will be almost imperceptible! The greatest care is necessary that the spirits of wine shall not boil over into the fire. CUNZONS (the original name of the Bull and Mouth was Boulogne Mouth, in allusion to the town and harbour of Boulogne; this change is indebted to cockneyism). M. (India-rubber can be dissolved in mineral oil). INDAN (the cause of a red sunset may be thus explained. The vapour of the air not being actually condensed into clouds, but only on the point of being condensed, it bends the red rays of the sun towards the horizon, where they tint the floating clouds). JUVENUS (for "lost ball" at cricket, or for the ball being stopped with the hat of one of the fieldsmen, the striker is entitled to three runs). S. C. R. (fowls which are kept for the producing of hens and chicks, and are not being fattened, should be fed regularly twice a day in the same place, which should be sheltered from wind and rain). M. (alum buckets are easily made. Make a small basket of iron wire, then take some lamp cotton, untwist it, and wind it round every portion of the basket. Then mix alum in the proportion of one pound with a quart of water, and boil it till the alum is dissolved. Pour the solution into a deep pan, and in the liquor suspend the basket, so that no part of it touch the vessel, or be exposed to the air. After being left for twenty-four hours it will be found perfectly crystallised). BRUNAR (the iguanodon is an extinct fossil, herbivorous reptile, seventy feet or so in length, discovered in the strata of the Tilgate Forest by Dr. Mantell). MANSION (paw-brokers are required to take out a license, and are allowed to charge interest at from 15 to 25 per cent., with other fees for duplicates). J. MANSION (a lunar month is the time in which the moon revolves about the earth). THOMAS (the mineral caoutchouc found in England is a variety of bitumen, which much resembles India-rubber in softness and elasticity. It is produced near Castleton in Derbyshire). IGNOAMUS (fee-simple is land which a man holds to himself and his heirs for ever, who are called tenants in fee-simple). HOUSEKEEPER (emery and oil will effectually remove rust from iron). PARMY (the great body of students in every college are what are called pensioners. They pay for their commons, chambers, tuition, &c., and with frugality and steadiness on the part of the student, £150 a year will suffice at the University). A LAWREN (the lines are good, but not of sufficient excellence to merit encouragement. Our correspondent should remember George Colman's lines:

"Then much in dramas did I look;  
Much slighted time and great Lord Coke;  
Congreve best Blackstone hollow;  
Shakspeare made 'All the Statutes' stale,  
And in my crown no 'pleas' had Hale  
To supersede Apollo.")

H. W. (the duty on tea amounts to three millions per annum). JUSTITIA (attached to Christ's Hospital there are seven exhibitions of £70 each to Pembroke College, Cambridge, and one of £80, every seventh year, to any college at Oxford, and there are other advantages attending education at this school, particularly the Times scholarship). QUARRY REPTILIVUS (the clerks of the principal short-hand writers in London are paid according to the quantity of their work, and a rapid and able hand may earn as much as £300 a year. It requires, however, some years of laborious practice to become proficient). MUGGLETON (it has been established by the experience of many individuals, that the human body is lighter than water, and consequently will float by nature; but that the art of swimming must be acquired to render that privilege useful). MARIA LUTSOME (eau-de-Cologne may be made by mixing in a bottle half an ounce each of the following: oil of sweet marjoram, oil of thyme, essence of violets, essence of carnations, and six drops of oil of cinnamon. Add to this mixture a pint of inodorous or absolute alcohol, then cork, and shake it well). J. C. (it is better to send all soiled oil paintings to experienced picture-cleaners, as a picture might be irretrievably spoiled by injudicious treatment, and few of the receipts for these purposes can be depended upon). CUNSON (candles can be made from any fatty substance, which, at ordinary temperatures is in a solid state; wax, spermaceti, and tallow being the usual substances employed). A. A. (spirit of hartshorn is made by a direct solution of the pure carbonate of ammonia).

Printed by WILLIAM TILLEN, Bell-court, London; and published for the Proprietor by JOHN BARNARD, 69, Fleet street, London.

# THE HOME COMPANION.

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 34.—Vol. I.

SATURDAY, AUGUST 21, 1852.

[PRICE ONE PENNY.]

"After reading I entered upon my exhortation, which was rather calculated at first to amuse them than to reprove." \*

## THE VICAR OF WAKEFIELD.

(Continued from page 516).

### CHAPTER XVI.

#### THE FAMILY USE ART, WHICH IS OPPOSED WITH STILL GREATER.

WHATEVER might have been Sophia's sensations, the rest of the family was easily consoled for Mr. Burchell's absence, by the company of our landlord, whose visits now became more frequent, and longer. Though he had been disappointed in procuring my daughters the amusements of the town as he designed, he took every opportunity of supplying them with those little recreations which our retirement would admit of. He usually came in the morning, and while my son and I followed our occupations abroad, he sat with the family at home, and amused them by describing the town, with every part of which he was particularly acquainted. He could repeat all the observations that were recalled in the atmosphere of the playhouses, and had all the good things of the high wits by rote, long before they made their way into the jest-books. The intervals between conversation were employed in teaching my daughters piquet (see engraving, page 497), or sometimes in setting my two little ones to box, to make them sharp, as he called it; but the hopes of having him for a son-in-law, in some measure blinded us to all his imperfections. It must be owned that my wife laid a thousand schemes to

entrap him; or, to speak more tenderly, used every art to magnify the merit of her daughter. If the cakes at tea eat short and crisp, they were made by Olivia; if the gooseberry wine was well-knit, the gooseberries were of her gathering; it was her fingers which gave the pickles their peculiar green; and in the composition of a pudding, it was her judgment that mixed the ingredients. Then the poor woman would sometimes tell the 'Squire, that she thought him and Olivia extremely of a size, and would bid both stand up to see which was tallest. These instances of cunning, which she thought impentration, yet which everybody saw through, were very pleasing to our benefactor, who gave every day some new proofs of his passion, which, though they had not arisen to proposals of marriage, yet we thought fell but little short of it; and his alowness was attributed sometimes to native bashfulness, and sometimes to his fear of offending his uncle. An occurrence, however, which happened soon after, put it beyond a doubt that he designed to become one of our family; my wife even regarded it as an absolute promise.

My wife and daughters happening to return a visit to neighbour Flam-borough's, found that family had lately got their pictures drawn by a limner, who travelled the country, and took likenesses for fifteen shillings a head. As this family and ours had long a sort of rivalry in point of taste, our spirit took the alarm at this stolen march upon us, and notwithstanding all I could say, and I paid much, it was resolved that we should have our pictures done too. Having, therefore, engaged the limner,—for what could I do?—our next deliberation was, to show the superiority of our taste in the attitudes. As for our neighbour's family, there were seven of them, and they were drawn

with seven, strange, a thing quite out of taste, no variety in life, no composition in the world. We desired to have something in a brighter style, and, after many debates, at length came to an unanimous resolution of being drawn together in one large historical family piece. This would be cheaper, since one frame would serve for all, and it would be infinitely more genteel; for all families of any taste were now drawn in the same manner. As we did not immediately recollect an historical subject to hit us, we were contented each with being drawn as independent historical figures. My wife desired to be represented as Venus, and the painter desired not to be too frugal of his diamonds in her stomach and hair. Her two little ones were to be as Cupids by her side, while I, in my gown and band, was to present her with my books on the Whistonian controversy. Olivia would be drawn as an Amazon sitting upon a bank of flowers, dressed in a green Joseph, richly laced with gold, and a whip in her hand. Sophia was to be a shepherdess, with as many sheep as the painter could put in for nothing; and Moses was to be dressed out with a hat and white feather. Our taste so much pleased the 'Squire, that he insisted on being put in as one of the family in the character of Alexander the Great, at Olivia's feet. This was considered by us all as an indication of his desire to be introduced into the family, nor could we refuse his request. The painter was therefore set to work, and as he wrought with assiduity and expedition, in less than four days the whole was completed. The piece was large, and it must be owned he did not spare his colours; for which my wife gave him great encomiums. We were all perfectly satisfied with his performance; but an unfortunate circumstance had not occurred till the picture was finished, which now struck us with dismay. It was so very large that we had no place in the house to fix it. How we all came to disregard so material a point is inconceivable; but certain it is, we had been all greatly remiss. The picture, therefore, instead of gratifying our vanity, as we hoped, leaned in a most mortifying manner against the kitchen wall, where the canvass was stretched and painted, much too large to be got through any of the doors, and the jest of all our neighbours. One compared it to Robinson Crusoe's long-boat, too large to be removed; another thought it more resembled a real bottle; some wondered how it could be got out, but still more were amazed how it ever got in.

But though it excited the ridicule of some, it effectually raised more malicious suggestions in many. The 'Squire's portrait being found united with ours, was an honour too great to escape envy. Scandalous whispers began to circulate at our expense, and our tranquillity was continually disturbed by persons who came as friends, to tell us what was said of us by enemies. These reports we always resented with becoming spirit; but scandal ever improves by opposition.

We once again, therefore, entered into a consultation upon obviating the malice of our enemies, and at last came to a resolution which had too much cunning to give me entire satisfaction. It was this: as our principal object was to discover the honour of Mr. Thornhill's addresses, my wife undertook to sound him, by pretending to ask his advice in the choice of a husband for her eldest daughter. If this was not found sufficient to induce him to a declaration, it was then resolved to tempt him with a rival. To this last step, however, I would by no means give my consent, till Olivia gave me the most solemn assurances that she would marry the person provided to rival him upon this occasion, if he did not prevent it, by taking her himself. Such was the scheme laid, which, though I did not strenuously oppose, I did not entirely approve.

The next time, therefore, that Mr. Thornhill came to see us, my girls took care to be out of the way, in order to give their mamma an opportunity of putting her scheme in execution; but they only retired to the next room, whence they could overhear the whole conversation. My wife artfully introduced it, by observing, that one of the Miss Flamboroughs was like to have a very good match of it in Mr. Spanker. To this the 'Squire assenting, she proceeded to remark, that they who had warm fortunes were always sure of getting good husbands: "But heaven help," continued she, "the girls that have none. What signifies beauty, Mr. Thornhill? or what signifies all the virtue, and all the qualifications in the world, in this age of self-interest? It is not, what is she? but what has she? is all the cry."

"Madam," returned he, "I highly approve the justice, as well as the novelty of your remarks, and if I were a king, it should be otherwise. It should then, indeed, be fine times with the girls without fortunes; our two young ladies should be the first for whom I would provide."

"Ah, sir," returned my wife, "you are pleased to be facetious; but I wish I were a queen, and then I know where my eldest daughter should look for a husband. But now that you have put it into my head seriously, Mr. Thornhill, can't you recommend me a proper husband for her? She is now nineteen years old, well grown and well educated, and, in my humble opinion, does not want for parts."

"Madam," replied he, "if I were to choose, I would find out a person possessed of every accomplishment that can make an angel happy. One with prudence, fortune, taste, and sincerity; such, madam, would be, in my opinion, the proper husband."

"Ay, sir," said she; "but do you know of any such person?"

"No, madam," returned he, "it is impossible to know any person that deserves to be her husband: she's too great a treasure for one man's possession; she's a goddess! Upon my soul, I speak what I think, she's an angel!"

"Ah, Mr. Thornhill, you only flatter my poor girl; but we have been thinking of marrying her to one of your tenants, whose mother is lately dead, and who wants a manager; you know whom I mean, farmer Williams; a warm man, Mr. Thornhill, able to give her good bread; and who has several times made her proposals (which was actually the case); but, sir," concluded she, "it should be glad to have your approbation of our choice."

"How, madam," replied he, "my approbation? My approbation of such a choice? Never. What! sacrifice so much beauty, and sense, and goodness, to a creature insensible of the blessing? Excuse me, I can never approve of such a piece of injustice! And I have my reasons."

"Indeed, sir," cried Deborah, "if you have your reasons, that's another affair; but I should be glad to know those reasons."

"Excuse me, madam," returned he, "they lie too deep for discovery, [laying his hand upon his bosom]—they remain buried, riveted here."

After he was gone, upon a general consultation, we could not tell what to make of these fine sentiments. Olivia considered them as instances of the most exalted passion; but I was not quite so sanguine: it seemed to me pretty plain, that they had more of love than matrimony in them; yet whatever they might portend, it was resolved to prosecute the scheme of farmer Williams, who, from my daughter's first appearance in the country, had paid her his addresses.

## CHAPTER XVII.

### SCARCELY ANY VIRTUE FOUND TO RESIST THE POWER OF LONG AND PLEASING TEMPTATION.

As I only studied my child's real happiness, the assiduity of Mr. Williams pleased me, as he was in easy circumstances, prudent and sincere. It required but very little encouragement to revive his former passion; so that in an evening or two he and Mr. Thornhill met at our house, and surveyed each other for some time with looks of anger; but Williams owed his landlord no rent, and little regarded his indignation. Olivia, on her side, acted the coquette to perfection, if that might be called acting which was her real character, pretending to lavish all her tenderness on her new lover. Mr. Thornhill appeared quite dejected at this preference, and with a pensive air took leave, though I own it puzzled me to find him so much in pain as he appeared to be, when he had it in his power so easily to remove the cause, by declaring an honourable passion. But whatever uneasiness he seemed to endure, it could easily be perceived that Olivia's anguish was still greater. After many of these interviews between her lovers, of which there were several, she usually retired to solitude, and there indulged her grief. It was in such a situation I found her one evening, after she had been for some time supporting a fitful gaiety.

"You now see, my child," said I, "that your confidence in Mr. Thornhill's passion was all a dream: he permits the rivalry of another, every way his inferior, though he knows it lies in his power to secure you to himself by a candid declaration."

"Yes, papa," returned she, "but he has his reason for this delay: I know he has. The sincerity of his looks and words convinces me of his real esteem. A short time, I hope, will discover the generosity of his sentiments, and convince you that my opinion of him has been more just than yours."

"Olivia, my darling," returned I, "every scheme that has been hitherto pursued to compel him to a declaration, has been proposed and planned by yourself, nor can you in the least say that I have constrained you. But you must not suppose, my dear, that I will ever be instrumental in suffering his honest rival to be the dupe of your ill-placed passion. Whatever time you require to bring your fancied admirer to an explanation, shall be granted; but at the expiration of that term, if he is still regardless, I must absolutely insist that honest Mr. Williams shall be rewarded for his fidelity. The character which I have hitherto supported in life demands this from me, and my tenderness as a parent shall never influence my integrity as a man. Name then your day; let it be as distant as you think proper; and in the mean time, take care to let Mr. Thornhill know the exact time on which I design delivering you up to another. If he really loves you, his own good sense will readily suggest that there is but one method alone to prevent his losing you for ever."

This proposal, which she could not avoid considering as perfectly just, was readily agreed to. She again renewed her most positive promise of marrying Mr. Williams, in case of the other's insensibility; and at the next opportunity, in Mr. Thornhill's presence, that day month was fixed upon for her nuptials with his rival.

Such vigorous proceedings seemed to redouble Mr. Thornhill's anxiety; but what Olivia really felt gave me some uneasiness. In this struggle between prudence and passion, her vivacity quite forsook her, and every opportunity of solitude was sought and spent in tears. One week passed away; but Mr. Thornhill made no efforts to restrain her nuptials. The succeeding week he was still assiduous, but not more open. On the third he discontinued his visits entirely; and instead of my daughter testifying any impatience, as I expected, she seemed to retain a pensive tranquillity, which I looked upon as resignation. For my own part, I was now sincerely pleased with thinking that my child was going to be secured in a continuance of competence and peace, and frequently applauded her resolution, in preferring happiness to ostentation.

It was within about four days of her intended nuptials, that my little family at night were gathered round a charming fire, telling stories of the past, and laying schemes for the future; busied in forming a thousand projects, and laughing at whatever folly came uppermost.

"Well, Moses," cried I, "we shall soon, my boy, have a wedding in the family; what is your opinion of matters and things in general?"

"My opinion, father, is, that all things go on very well; and I was just now thinking, that when sister Livy is married to farmer Williams, we shall then have the loan of his cider-press and brewing tubs for nothing."

"That we shall," cried I, "and he will sing us *Death and the Lady*, to raise our spirits into the bargain."

## THE VICAR OF WAKEFIELD.

"He has taught that song to our Dick," cried Moses, "and I think he goes through it very prettily."

"Does he so?" cried I, "then let us have it: where's little Dick? let him up with it boldly."

"My brother Dick," cried Bill, my youngest, "is just gone out with sister Livy: but Mr. Williams has taught me two songs, and I'll sing them for you, papa. Which song do you choose, the *Dying Swan*, or the *Elegy on the Death of a Mad Dog*?"

"The elegy, child, by all means," said I; "I never heard that yet; and Deborah, my life, grief you know is dry, let us have a bottle of the best gooseberry-wine, to keep up our spirits. I have wept so much at all sorts of elegies of late, that without an enlivening glass, I am sure this will overcome me; and Sophy, love, take your guitar, and thrum in with the boy a little."

### AN ELEGY ON THE DEATH OF A MAD DOG.

Good people all, of every sort,  
Give ear unto my song,  
And if you find it wondrous short,  
It cannot hold you long.

In Islington there was a man,  
Of whom the world might say,  
That still a godly race he ran  
Where'er he went to pray.

A kind and gentle heart he had,  
To comfort friends and foes;  
The naked every day he clad,  
When he put on his clothes.

And in that town a dog was found,  
As many dogs there be,  
Both mongrel, puppy, whelp, and hound,  
And curs of low degree.

This dog and man at first were friends,  
But when a pique began,  
The dog, to gain some private ends,  
Went mad, and bit the man.

Around from all the neighbouring streets,  
The wond'ring neighbours ran,  
And swore the dog had lost his wits,  
To bite so good a man.

The wound it seem'd both sore and sad  
To every Christian eye:  
And while they swore the dog was mad,  
They swore the man would die.

But soon a wonder came to light,  
That show'd the rogues they lied,—  
The man recover'd of the bite,  
The dog it was that died.

"A very good boy, Bill, upon my word, and an elegy that may be truly called tragical. Come, my children, here's Bill's health, and may he one day be a bishop."

"With all my heart," cried my wife; "and if he but preaches as well as he sings, I make no doubt of him. The most of his family, by the mother's side, could sing a good song; it was a common saying in our country, that the family of the Blenkinsops could never look straight before them, nor the Hugginsons blow out a candle; that there were none of the Grogans but could sing a song, or of the Marjorams but could tell a story."

"However that be," cried I, "the most vulgar ballad of them all generally pleases me better than the fine modern odes, and things that petrify us in a single stanza; productions that we at once detest and praise. Put the glass to your brother, Moses. The great fault of these elegiacs is, that they are in despair for griefs that give the sensible part of mankind very little pain. A lady loses her muff, her fan, or her lapdog, and so the silly poet runs home to versify the disaster."

"That may be the mode," cried Moses, "in sublimer compositions; but the Ranelagh songs that come down to us are perfectly familiar, and all cast in the same mould: Colin meets Dolly, and they hold a dialogue together; he gives her a fairing to put in her hair, and she presents him with a nosegay; and then they go together to church, where they give good advice to young nymphs and swains to get married as fast as they can."

"And very good advice too," cried I, "and I am told there is not a place in the world where advice can be given with so much propriety as there; for as it persuades us to marry, it also furnishes us with a wife: and surely that must be an excellent market, my boy, where we are told what we want, and supplied with it when wanting?"

"Yes, sir," returned Moses, "and I know but of two such markets for wives in Europe,—Ranelagh in England, and Fontarabia in Spain. The Spanish market is open once a year; but our English wives are saleable every night."

"You are right, my boy," cried his mother, "Old England is the only place in the world for husbands to get wives."

"And for wives to manage their husbands," interrupted I. "It is a proverb abroad, that if a bridge were built across the sea, all the ladies of the continent would come over to take pattern from ours; for there are no such wives in Europe as our own. But let us have one bottle more, Deborah, my life; and, Moses, give us a good song. What thanks do we not owe to Heaven for thus bestowing tranquillity, health, and competence. I think myself happier now than the greatest monarch upon earth. He has no such fire-side, nor such pleasant faces about it. Yes, Deborah, we are now growing old; but the evening of our life is likely to be happy. We are descended from ancestors that knew no stain, and we shall leave a good and virtuous race of children behind us. While we live, they will be our support and our pleasure here; and when we die, they will transmit our honour untainted to posterity. Come, my son, we wait for a song: let us have a chorus. But where is my darling Olivia? That little cherub's voice is always sweetest in the concert."

Just as I spoke, Dick came running in—

"O, papa, papa! she is gone from us, she is gone from us; my sister Livy is gone from us for ever!"

"Gone, child?"

"Yes, she is gone off with two gentlemen in a post-chaise, and one of them kissed her, and said he would die for her; and she cried very much, and was for coming back; but he persuaded her again, and she went into the chaise, and said, 'O, what will my poor papa do when he knows I am undone!'"

"Now then," cried I, "my children go and be miserable; for we shall

never enjoy one hour more. And, O may Heaven's avenging fury descend upon him and his!—thus to rob me of my child!—And sure it will be taking back my sweet innocent that I was leading up to heaven. Such sincerity as my child was possessed of!—But all our earthly happiness is now over! Go, my children, go and be miserable and sorrowful; for my heart is broken within me."

"Father," cried my son, "is this your fortitude?"

"Fortitude, child!—yes, he shall see I have fortitude! Bring me my pistols. I'll pursue the traitor: while he is on earth I'll pursue him. O, as I am, he shall find I can sting him yet. The villain! The perfidious villain!"

I had by this time reached down my pistols, when my poor wife, whose passions were not so strong as mine, caught me in her arms.

"My dearest, dearest husband!" cried she, "the Bible is the only weapon that is fit for your old hands now. Open that, my love, and read our anguish into patience, for she has wisely deceived us."

"Indeed, sir," resumed my son, after a pause, "your rage is too violent and unbecoming. You should be my mother's comforter, and you increase her pain. It ill suited you and your reverend character, thus to curse your greatest enemy: you should not have cursed him, villain as he is."

"I did not curse him, child, did I?"

"Indeed, sir, you did; you cursed him twice."

"Then may Heaven forgive me and him if I did! And now, my son, I see it was more than human benevolence that first taught us to bless our enemies! Bless be His holy name, for all the good he hath given, and for all that he hath taken away. But it is not—it is not a small distress that can wring tears from these old eyes, that have not wept for so many years. My child!—To undo my darling!—May confusion seize—Heaven forgive me, what am I about to say?—You may remember, my love, how good she was, and how charming; till this vile moment all her care was to make us happy. Had she but died!—But she is gone, the honour of our family contaminated, and I must look out for happiness in other worlds than here. But, my child, you saw them go off; perhaps he forced her away? If he forced her, she may yet be innocent."

"Ah, no, sir," cried the child, "he only kissed her, and called her his angel, and she wept very much, and leaned upon his arm, and they drove off very fast."

"She's an ungrateful creature," cried my wife, who could scarcely speak for weeping, "to use us thus. She never had the least constraint put upon her affections. The vile strumpet has basely deserted her parents without any provocation, thus to bring your gray hairs to the grave; and I must shortly follow."

In this manner that night, the first of our real misfortunes, was spent in the bitterness of complaint, and ill-supported sallies of enthusiasm. I determined, however, to find out our betrayer, wherever he was, and reproach his baseness. The next morning we missed our wretched child at breakfast, where she used to give life and cheerfulness to us all. My wife, as before, attempted to ease her heart by reproaches.

"Never," cried she, "shall that vilest stain of our family again darken these harmless doors. I will never call her daughter more. No, let the strumpet live with her vile seducer: she may bring us to shame, but she shall never more deceive us."

"Wife," said I, "do not talk thus hardly: my detestation of her guilt is as great as yours; but ever shall this house and this heart be open to a poor returning repentant sinner. The sooner she returns from her transgressions the more welcome shall she be to me. For the first time the very best may err; art may persuade, and novelty spread out its charm. The first fault is the child of simplicity, but every other the offspring of guilt. Yes, the wretched creature shall be welcome to this heart and this house, though stained with ten thousand vices. I will again hearken to the music of her voice, again will I hang fondly on her bosom, if I find but repentance there. My son, bring hither my Bible and my staff; I will pursue her, wherever she is; and though I cannot save her from shame, I may prevent the continuance of iniquity."

## CHAPTER XVIII.

### THE PURSUIT OF A FATHER TO RECLAIM A LOST CHILD TO VIRTUE.

THOUGH the child could not describe the gentleman's person who handed his sister into the post-chaise, yet my suspicions fell entirely upon our young landlord, whose character for such intrigues was but too well known. I therefore directed my steps towards Thornhill Castle, resolving to upbraid him, and, if possible, to bring back my daughter: but before I had reached his seat, I was met by one of my parishioners, who said he saw a young lady resembling my daughter, in a post-chaise with a gentleman, whom, by the description, I could only guess to be Mr. Burchell, and that they drove very fast. This information, however, did by no means satisfy me. I therefore went to the young 'Squire's, and though it was yet early, insisted upon seeing him immediately. He soon appeared with the most open familiar air, and seemed perfectly amazed at my daughter's elopement, protesting upon his honour that he was quite a stranger to it. I now therefore condemned my former suspicions, and could turn them only on Mr. Burchell, who I recollected had of late several private conferences with her: but the appearance of another witness left me no room to doubt his villainy, who avowed that he and my daughter were actually gone towards the Wells, about thirty miles off, where there was a great deal of company. Being driven to that state of mind in which we all are more ready to act precipitately than to reason right, I never debated with myself, whether these accounts might not

have been given by persons purposely placed in my way to mislead me, but resolved to pursue my daughter and her fancied deluder thither. I walked along with earnestness, and inquired of several by the way; but received no accounts, till, entering the town, I was met by a person on horseback, whom I remembered to have seen at the 'Squire's, and he assured me, that if I followed them to the races, which were but thirty miles farther, I might depend upon overtaking them; for he had seen them dance there the night before, and the whole assembly seemed charmed with my daughter's performance. Early the next day, I walked forward to the races, and about four in the afternoon I came upon the course. The company made a very brilliant appearance, all earnestly employed in one pursuit, that of pleasure; how different from mine, that of reclaiming a lost child to virtue! I thought I perceived Mr. Burchell at some distance from me; but, as if he dreaded an interview,—upon my approaching him, he mixed among a crowd, and I saw him no more. I now reflected that it would be to no purpose to continue my pursuit farther, and resolved to return home to an innocent family, who wanted my assistance. But the agitations of my mind, and the fatigues I had undergone, threw me into a fever, the symptoms of which I perceived before I came off the course. This was another unexpected stroke, as I was more than seventy miles distant from home: however, retired to a little ale-house by the road-side; and in this place, the usual seat of indigence and frugality, I laid me down patiently to wait the issue of my disorder. I languished here for nearly three weeks; but at last my constitution prevailed, though I was unprovided with money to defray the expenses of my entertainment. It is possible the anxiety from this last circumstance alone might have brought on a relapse, had I not been supplied by a traveller, who stopped to take a cursory refreshment. This person was no other than the philanthropic bookseller in St. Paul's Churchyard, who has written so many little books for children: he called himself their friend; but he was the friend of all mankind. He was no sooner alighted, but he was in haste to be gone; for he was ever on business of the utmost importance, and was at that time actually compiling materials for the history of one Mr. Thomas Trip. I immediately recollected this good-natured man's red pimpled face; for he had published for me against the Deuterogonists of the age, and from him I borrowed a few pieces, to be paid at my return. Leaving the inn, therefore, as I was yet but weak, I resolved to return home by easy journeys of ten miles a day. My health and usual tranquillity were almost restored, and I now condemned that pride which had made me refractory to the hand of correction. Man little knows what calamities are beyond his patience to bear, till he tries them: as in ascending the heights of ambition, which look bright from below, every step we rise shows us some new and gloomy prospect of hidden disappointment; so in our descent from the summits of pleasure, though the vale of misery below may appear at first dark and gloomy, yet the busy mind, still attentive to its own amusement, finds, as we descend, something to flatter and to please. Still, as we approach, the darkest objects appear to brighten, and the mental eye becomes adapted to its gloomy situation.

I now proceeded forward, and had walked about two hours, when I perceived what appeared at a distance like a waggon, which I was resolved to overtake; but when I came up with it, found it to be a strolling company's cart, that was carrying their scenes and other theatrical furniture to the next village, where they were to exhibit. The cart was attended only by the person who drove it, and one of the company, as the rest of the players were to follow the ensuing day. "Good company upon the road," says the proverb, "is the shortest cut." I therefore entered into conversation with the poor player; and as I once had some theatrical powers myself, I disserted on such topics with my usual freedom: but as I was pretty much unacquainted with the present state of the stage, I demanded who were the present theatrical writers in vogue, who the Drydens and Otways of the day?

"I fancy, sir," cried the player, "few of our modern dramatists would think themselves much honoured by being compared to the writers you mention. Dryden's and Rowe's manner, sir, are quite out of fashion; our taste has gone back a whole century; Fletcher, Ben Jonson, and all the plays of Shakspeare, are the only things that go down."

"How," cried I, "is it possible the present age can be pleased with that antiquated dialect, that obsolete humour, those overcharged characters, which abound in the works you mention?"

"Sir," returned my companion, "the public think nothing about dialect, or humour, or character, for that is none of their business; they only go to be amused, and find themselves happy when they can enjoy a pantomime, under the sanction of Jonson's or Shakspeare's name."

"So then, I suppose," cried I, "that our modern dramatists are rather imitators of Shakspeare than of nature?"

"To say the truth," returned my companion, "I don't know that they imitate anything at all; nor, indeed, does the public require it of them: it is not the composition of the piece, but the number of starts and attitudes that may be introduced into it, that elicits applause. I have known a piece, with not one jest in the whole, shrugged into popularity, and another saved by the poet's throwing in a fit of the gripes. No, sir, the works of Congreve and Farquhar have too much wit in them for the present taste; our modern dialect is much more natural."

By this time the equipage of the strolling company was arrived at the village, which, it seems, had been apprised of our approach, and was come out to gaze at us: for my companion observed, that strollers always have more spectators without doors than within. I did not consider the improbability of my being in such company, till I saw a mob gather about me. I therefore took shelter, as fast as possible, in the first alehouse that offered, and being shown into the common room, was accosted by a very well-dressed gentleman, who demanded whether I was the real chaplain of the company,

or whether it was only to be my masquerade character in the play. Upon my informing him of the truth, and that I did not belong in any sort to the company, he was condescending enough to desire me and the player to partake in a bowl of punch, over which he discussed modern politics with great earnestness and interest. I set him down in my own mind for nothing less than a Parliament-man at least; but was almost confirmed in my conjectures, when, upon asking what there was in the house for supper, he insisted that the player and I should sup with him at his house; with which request, after some entreaties, we were prevailed on to comply.

## CHAPTER XIX.

### THE DESCRIPTION OF A PERSON DISCONTENTED WITH THE PRESENT GOVERNMENT, AND APPREHENSIVE OF THE LOSS OF OUR LIBERTIES.

THE house where we were to be entertained lying at a small distance from the village, our inviter observed, that as the coach was not ready, he would conduct us on foot; and we soon arrived, at one of the most magnificent mansions I had seen in that part of the country. The apartment into which we were shown was perfectly elegant and modern: he went to give orders for supper, while the player, with a wink, observed that we were perfectly in luck. Our entertainer soon returned; an elegant supper was brought in, two or three ladies in easy dishabille were introduced, and the conversation began with some sprightliness. Politics, however, was the subject on which our entertainer chiefly expatiated; for he asserted that liberty was at once his boast and his terror. After the cloth was removed, he asked me if I had seen the last *Monitor*? to which replying in the negative, "What, nor the *Auditor*, I suppose?" cried he.

"Neither, sir," returned I. "That's strange, very strange," replied my entertainer. "Now I read all the politics that come out. The *Daily*, the *Public*, the *Ledger*, the *Chronicle*, the *London Evening*, the *Whitehall Evening*, the seventeen Magazines, and the two Reviews; and though they hate each other, I love them all. Liberty, sir, liberty is the Briton's boast; and, by all my coal-mines in Cornwall, I reverence its guardians."

"Then it is to be hoped," cried I, "you reverence the King?" "Yes," returned my entertainer, "when he does what we would have him; but if he goes on as he has done of late, I'll never trouble myself more with his matters. I say nothing. I think, only, I could have directed some things better. I don't think there has been a sufficient number of advisers: he should advise with every person willing to give him advice, and then we should have things done in another guess manner."

"I wish," cried I, "that such intruding advisers were fixed in the pillory. It should be the duty of honest men to assist the weaker side of our constitution, that sacred power, which has for some years been every day declining, and losing its due share of influence in the state. But these ignorants still continue the same cry of liberty; and if they have any weight, basely throw it into the subsiding scale."

"How," cried one of the ladies, "do I live to see one so base, so sordid, as to be an enemy to liberty, and a defender of tyrants? Liberty, that sacred gift of heaven, that glorious privilege of Britons!"

"Can it be possible," cried our entertainer, "that there should be any found at present advocates for slavery? Any who are for meanly giving up the privileges of Britons? Can any, sir, be so object?"

"No, sir," replied I, "I am for liberty, that attribute of God! Glorious liberty! that theme of modern declamation. I would have all men kings. I would be a king myself. We have all naturally an equal right to the throne: we are all originally equal. This is my opinion, and was once the opinion of a set of honest men who were called Levellers. They tried to erect themselves into a community, where all should be equally free. But, alas! it would never answer; for there were some among them stronger, and some more cunning than others, and these became masters of the rest; for as sure as your groom rides your horse, because he is a cunninger animal than they, so surely will the animal that is cunninger or stronger than he, sit upon his shoulders in turn. Since, then, it is entailed upon humanity to submit, and some are born to command, and others to obey, the question is, as there must be tyrants, whether it is better to have them in the same house with us, or in the same village, or still farther off, in the metropolis. Now, sir, for my own part, as I naturally hate the face of a tyrant, the farther off he is removed from me, the better pleased am I. The generality of mankind also are of my way of thinking, and have unanimously created one king, whose election at once diminishes the number of tyrants, and puts tyranny at the greatest distance from the greatest number of people. Now the great, who were tyrants themselves before the election of one tyrant, are naturally averse to a power raised over them, and whose weight must ever lean heaviest on the subordinate orders. It is the interest of the great, therefore, to diminish kingly power as much as possible; because whatever they take from that, is naturally restored to themselves; and all they have to do in the state, is to undermine the single tyrant, by which they resume their primeval authority. Now the state may be so circumstanced, or its laws may be so disposed, or its men of opulence so minded, as all to conspire in carrying on this business of undermining monarchy. For, in the first place, if the circumstances of our state be such as to favour the accumulation of wealth, and make the opulent still more rich, this will increase their ambition."

To be continued.

## INCREASE OF HEAT IN SUMMER.

SUMMER may be said to be the season of growth, as spring is of reproduction. Those organized existences, which burst into life in the latter season, are either brought to maturity, or, at least, invigorated and expanded, in the former; and, in both seasons, the peculiar character of the weather is most wisely adapted for the intended object. The state of the atmosphere, during the progress of the summer months, presents itself as an appropriate subject of consideration, in entering on the study of this season.

The sun is now approaching the northern tropic, having, in the month of March, passed from the south to the north of the equator. He is rising high in the heavens, and thus pouring his rays more directly on this part of the earth, which, according to a principle already explained, causes his influence to be more powerful; and what much adds to this influence, is the greater length of time in which he remains above the horizon. In the depth of winter, we enjoyed his presence little more than seven hours out of the twenty-four. In the beginning of summer, this period is increased to upwards of fifteen hours; and in the middle of it, he daily lingers with us two hours longer still. There is thus not only a great direct increase, but a great accumulation of heat. The mode in which this effect is produced, may be shortly mentioned. The rays of the sun, or whatever the influence may be which generates the heat, in passing through a perfectly transparent medium, do not increase the temperature of that medium. They seem to require resistance to produce this effect. It is not therefore till they reach the earth, that their power is very sensibly exerted. In striking upon the opaque surface of our globe, they give out their qualities. Light and warmth are produced and reflected. The earth and the atmosphere are thus both subjected to their influence. These become heated, the one by conduction, the other by reflection. Now, it is obvious, that while the intensity must be in proportion to the directness with which the globe is struck by the sun's rays, the accumulation must be in proportion to the length of time during which the influence continues. Hence, there is a double cause for the summer's heat,—the height to which the luminary rises in the heavens, and the length of the day compared with the night. These causes operate in an increasing ratio. Day after day the accumulated heat receives fresh accessions. Every time the sun's influence is repeated, it penetrates deeper below the surface, and is more intensely reflected into the already heated atmosphere. This effect continues even after the direct solar heat has begun to be diminished; and it is not till several weeks after the sun has begun to take a retrograde motion, that the temperature is at its maximum. In June, the sun reaches his greatest height, and begins to decline, but the heat continues to increase till the middle or end of July.

But there are various circumstances besides warmth, which constitute summer weather. The mechanism of the atmosphere is very complicated, and the adjustments which it requires are exceedingly nice, and, considering merely the nature of the powers employed, we may well add, hazardous. Any change in the relative proportion of one of the principles, is calculated to produce a powerful effect on all the rest; and were there not a regulating power of consummate wisdom, it might be expected that the balance would be overset, and that the most disastrous consequences would ensue. Let us look for a moment at the constituents of the atmosphere, and this will become apparent. The air, which forms the chief part of the atmosphere, is composed of two substances, held together merely by mechanical admixture, which are of very different properties, and which require to continue united in the precise proportion they actually bear to each other, in order to be capable of sustaining animal and vegetable life. Were that proportion destroyed even in a slight degree, the air we breathe would be instantly converted into a deadly poison. Now, it is well worthy of remark, that, although in the functions both of animal and vegetable life, and in the process of combustion, a great and apparently unequal consumption of these two substances takes place, the proportion between them is always maintained, and that notwithstanding any difference of temperature. Heat expands, and cold contracts them; but they are not thus disunited, or in any way disturbed in their proportions. On the contrary, it is probably in some degree owing to the alterations of heat and cold, which keep up a constant motion in this wonderful fluid, that the necessary balance is maintained.

Another ingredient in the atmosphere is moisture. This is very sensibly acted on by heat. It is the principle of heat which evaporates the moisture from the earth, and causes it to mix with the air, and to float in it, sometimes as an invisible fluid, sometimes in the form of clouds, and which at other times causes it to be precipitated in the form of rain. Now, the remarkable circumstance is, that although heat is the agent in these operations, the change of temperature does not so affect the process as to cause the operations to cease, or very materially to disturb them. Evaporation goes on both at a low and a high temperature, and in both states clouds are formed and rain falls. This is owing to a very peculiar provision, obviously imposed by consummate wisdom. The air is made capable of containing vapour in a certain proportion to its temperature; and it is not till it be saturated that the evaporation from the surface of water ceases, or that deposition takes place. The temperature of the air in winter does not, indeed, admit of the same quantity being held in solution as in summer: but up to a certain point it is equally capable of sustaining it in the one case as in the other. Evaporation, therefore, takes place in very cold weather, even from ice and snow; and the water thus infused into the air is carried up into the higher regions, till it reaches the point where the temperature is such as to correspond with the quantity of moisture. Precisely the same process takes place in summer,

with this difference, that the evaporation is much more abundant, and the air, owing to its increased temperature, is capable of containing a far greater quantity in solution. Again, the point of deposition is regulated by a similar law, with a similar difference. Deposition does not take place either in winter or summer, till the air is more than saturated; but this effect is produced at very different temperatures, according to the quantity actually held in solution, so that a very slight degree of cold will form clouds and cause rain in summer, compared with what is necessary to occasion the same phenomena in winter. Hence the processes of evaporation and deposition are made, by this very peculiar law, always to bear a relation to the actual temperature of the season; and such a balance is kept up between these processes, as is admirably suited to the wants of vegetable and animal life.

I may add to all this the properties of the atmosphere, by means of which it is made the vehicle of light and sound, and the means of respiration. The changes which the air undergoes by the operation of heat and cold, might easily be supposed, and might even perhaps, reasoning without the aid of experience, be expected to produce a material alteration on such properties. But although these changes are so considerable in different seasons, and in different climates, we do not find that the laws either of vision or of acoustics are in any material degree affected by them,—or that the action of the lungs, either in man or the lower animals, is impeded or deranged.

In attending to the complicated nature of the atmosphere, and the various important functions it has to perform, and in considering the diversified modifications, it must necessarily undergo by the alteration of its temperature, both in the various latitudes of the globe, and in the different seasons of the year, it does seem impossible to doubt that the uniformity of its properties, and of its salutary influences under all these modifications, has been provided for, by what Whewell, considering that subject in a more extended view, justly calls "a most refined, far-seeing, and far-ruling contrivance." So many opposing forces, and the mingling of such subtle and fearfully active elements, appear in the most quiescent state to require amazing prospective skill for their regulation and controul; and when we find them, even under the influence of extensive changes, still harmoniously combining their powers for the general good, we cannot but perceive that all this could not be effected but by the same paternal hand which originally called their powers into action.

—Sacred Philosophy of the Seasons.

## MY MOTHER.

'T was in the autumn's dreary close,

A long, long time ago;  
The berries of the briar-rose  
Hung bright above the snow,  
And night had spread her shadow wild  
About the earth and sky,  
When calling me, her orphan child,  
She said that she must die.

She rests within the quiet tomb,

The narrow and the chill—  
The window of our cabin home  
Looks out upon the hill.  
O, when the world seems wild and wide,  
And friends to love me few,  
I think of how she lived and died,  
And gather strength anew.

THE FARMER'S FIRST LESSON IN CHEMISTRY.—A class has been formed at a place "down East" for the study of agricultural chemistry. The plan of instruction is catechetical. The following lesson is founded on the responses delivered at one of its recent meetings. Mistakes, they say, afford often a valuable lesson; if so, it is hoped that the lesson subjoined will be of great value. Chemistry is keepun' a doctor's shop. An atom is a morsel of summut—a bit o' dust, or zand, like. The weight of an atom is the heft on up. Light is accordin' as it need be—day-light, moon-light, or candle-light. Heat is that are what comes out o' the fire. The effect of heat is, roastin' meat, boilin' taters, burnin' your fingers, if you get so close to it. Lightning is a thunderbolt fallin' out o' the clouds—a thunderbolt is a thing like a clinker. An acid is any sort o' sour stuff like vinegar or vargas. An alkali is a foreign name for summut or other, may be for a pig. Potash is ashes from under a pot. Soda is stuff washerwomen use. Ammonia is one o' them fine names as your gentlefolks gives their darters. If you put sulphuric acid to lime, and make sulphate o' lime, why, of course, if you add it to oats you get sulphate o' oats. A simple body means a simpleton, Silly Billy at the poor-house. The laws of chemical union is like the laws of any other union, pretty strictish. Chemical affinity, attraction, cohesion, composition, decomposition, analysis, synthesis, is a parcel of outlandish gibberish. Justus Liebig is some Frenchman.

CAUSE AND EFFECT.—Infinite are the consequences which follow from a single, and often apparently a very insignificant circumstance. Paley himself narrowly escaped being a baker; here was a decision upon which hung in one scale, perhaps, the immortal interests of thousands; and, in the other, the gratification of the taste of the good people of Giggleswick for hot rolls. Cromwell was near being strangled in his cradle by a monkey; here was this wretched ape wielding in his paw the destinies of nations. Then, again, how different in their kind, as well as in their magnitude, are these consequences from anything that might have been *a priori* expected. Henry VIII. is smitten with the beauty of a girl of eighteen; and are long "The Reformation beams from Bullen's eyes." Charles Wesley refuses to go with his wealthy namesake to Ireland, and the inheritance, which would have been his, goes to build up the fortunes of a Wellesley instead of a Wesley; and to this decision of a schoolboy (as Mr. Southey observes) Methodism may owe its existence, and England its military—and, we trust we may now add, its civil and political—glory.—*Quarterly Review*.

## CAROLINE AND CATHARINA.

(Continued from page 531.)

## CHAPTER XVI.

"For she was full of amiable grace."—SHAKESPEARE.

As Hugh stepped out upon the rock below the house, he found that the sun was already up, though his beams could not reach the spot where he stood for several hours. Directly in front of him rose the high mountain-range, which had been on his left throughout the previous day's ride; and at his feet yawned an almost bottomless chasm, which the rains and melting snows of long ages had washed deep down into the rocky *sierra*. Towards the left, or down the ravine, the chasm opened wider; and far in the distance, spreading almost endlessly, his eye ranged over the sterile plain, across which the morning sun was shining in yellow radiance. To the right, the ravine rose rapidly into the ridge, and seemed to reach almost to the summit; while, far down in its fathomless bed, ran a narrow, thread-like stream, dried up long before it reached the plain. Above the head of the ravine, upon the very crest of the mountain, were long ranges or thin groves of tall pines and cedars, now illumined on their evergreen leaves and branches by the risen sun. The silence was deep and unbroken, save by the trickling sound of the small fountain, which was immediately behind him; and the only visible motion in all that solitude, was this thread-like rill, as it sprang over the ledge, and was dissipated in fine mist, which the light morning air wafted into his face.

As he stood gazing upon this peaceful scene, his attention was attracted by a light footstep, and Catharina stood beside him.

"You admire the view?" said she.

"It is a perfect vision," he replied, "which is, however, only complete when the solitude is broken by you."

"You are as complimentary as a *cavallero*," said she, laughing; "I scarcely expected that from an American."

"And why not?" Hugh asked. "Is it because they are less gallant, or more honest, than the *cavalleros*?"

"O! more honest, I would hope!" she exclaimed. "But surely gallantry is not incompatible with honesty?"

"No," said Hugh, "not precisely; but I believe they are seldom found together."

"It is so in your country, too, then?" said she. "I had hoped it was not so."

"It is indeed so, *senora*," answered Hugh. "But you speak as if you had often thought of my country."

"My father has told me much of it," she replied, "and I have read more. But you have not told me your name."

"Manning," said he; "Hugh Manning. I think you will find it difficult to pronounce."

"O, no!" said she; but the attempt justified the fear of Hugh; for nothing could have been more incorrect than her pronunciation, as nothing could have been more charming to Hugh than her earnest attempt. There is nothing harsh in the accent of a Spaniard when speaking English—nothing even ludicrous, as there generally is in the unsuccessful attempts of foreigners to master our eccentric accent. There seems to be no affinity between the two languages, and yet the Spanish seems only to prepare the tongue to give a lisping softness to the English. A soft voice, and a pretty face, bearing the earnest, naive expression which a Spanish girl always assumes when trying to articulate our rough sounds, are concomitants which add greatly to the interest of such a conversation. Byron says,

"Tis pleasing to be schooled in a stranger's tongue,  
By female lips and eyes;"

and not less pleasing is it to be the teacher. Hugh was not exactly in this position; but he smiled when she made a blunder, which was not seldom, and thought how pleasant it would be to remain here a month or two, and teach those rosy lips a better English. For we have not given the words of Catharina as she spoke them, much less could we interpret on this cold paper the artless earnestness and smiling patience with which she endeavoured to make herself understood. She comprehended the language when spoken by another, as Hugh understood Spanish. Neither was capable of speaking the language of the other; but each persisted in speaking only the foreign tongue, and each thought it very pleasant thus to correct the other's blunders, and smile at ludicrous mistakes.

"They smile so when one's right, and when one's wrong  
They smile still more, and then there intervene  
Pressure of hands, perhaps even a chaste kiss."

But in this instance there were none of the latter as yet, whatever the intimacy which grew so fast might lead to if pursued. They talked of the view before them—of the mountains, and the cedars, and the solitude. They talked of the war—of battles, and sieges, and bloody deeds; and then, by contrast, were suggested scenes of peaceful quiet like this, where not a sound of war had ever come. Catharina told him her history, and explained the reasons why they were living thus far from the haunts of men, in a scene so wild. Her father had been a priest, she said, having been educated in the United States by the Jesuits. But time had opened his eyes to the folly of the vows he had taken, and gradually undermined his faith. He was even thinking of flying from his duties, and betaking himself to solitude, when the Jesuits had been by law expelled from the country. This gave him an excuse for a step which he had been on the point of taking without excuse. He affected to prefer his country to his order, and had accordingly been excommunicated. He had gladly seized that opportunity to rid himself of trau-

mels which galled him; and immediately upon becoming free from his vows, he hastened to the United States, and married a lady whom he had loved in silence while his vows forbade him to speak, and the affection for whom probably had no small weight in forming his conclusion. He brought his bride to Monterey, where he had a large property, which the Law of the Expulsion re-vested in him, and he lived happily for a year. At the end of that time Catharina was born, and her mother died, almost at the moment of her seeing the light.

Of all these events she spoke but briefly, for she really understood but little of them; but into her own personal history she went more at large than we shall do, and far more than was to have been expected after an acquaintance of but a few hours. Her father had lived at Monterey, she continued, from that time to the present, suspected and shunned by the more fanatical, but deeply respected by all who knew him intimately. He seemed to take a pride, too, in keeping in remembrance the reason for which he was suspected, by habitually wearing a costume very nearly like that which he had formerly worn as a priest. This was in part habit, which had made this costume most comfortable to him, and, in part, contempt and scorn of those who carped at him. His proud, shy character, had been heightened by his grief, and seclusion was the natural consequence of his position. His daughter had grown up beautiful and stately as a palm-tree, reproducing before him the soft, northern loveliness of his dead wife; added to the proud bearing of the southern. She was an heiress, moreover; and Mexico is even a stronger example than our own country of the influence of wealth. Had her father practised "the Black Art," which many fit that country do not think exploded, his daughter, or rather his daughter's wealth, would have been sought by many suitors. None of these, she said archly, had touched her heart, because she knew they cared less for her than for her *haciendas*; and she preferred the freedom of a maiden to the license of a wife.

Time had rolled on, and the war with the United States commenced. General Taylor had marched on Monterey, and was about to assault it, when her father was surprised to find his name—Andrew Bonaro—among those who were suspected of being friendly to the advancing Americans. "More in sorrow than in anger," he had at once left the city for one of his *haciendas*. But he was a marked man; and but a few days passed in this retreat, before a detachment of roving soldiers, who were at least half robbers, took possession of the place, and he was forced to leave it. He now bethought him of this solitary place, which he had built during the first year of his widowhood, and where he had once proposed to spend the remainder of his days, and leaving his property and possessions in the hands of the Americans, he had repaired thither resolved not to appear again in the world until the storm of war should have passed.

Catharina told this history, not as we have written it, but in detached portions elicited by repeated questioning from Hugh, during a walk of more than an hour up and down the narrow terrace.

"Then your name is Catharina Bonaro?" said he, as she finished.

"Yes," said she. "But I have kept you too long here—you must need repose, and I must go and make you a cup of coffee."

"Let me help you," said Hugh; "I am not fatigued in the least."

"No, no," said she, laughing; "I know you *must* be fatigued; and, besides, you could not help me if you were not. You would only hinder me; it has been so long since I have seen a young *cavallero*, to talk to, that I should forget the coffee altogether."

"So much the better," said Hugh; "then we could talk all the time."

"You must remember," said she, with mock gravity, "that you are my guest, and as such must obey all my commands; of which my first is, that you lie down while I bring your coffee to you, and then give yourself up to repose for the day. Come, I will show you."

"I wish all who command me were as easy to obey," said Hugh.

She looked wonderingly at him, but did not reply.

"I mean," he continued, "that I will obey you more cheerfully than any superior officer, who has a right to command me."

"Your army is in but a dangerous position," said she, "if your soldiers do not obey their officers more cheerfully than you do me. Come."

She led him back along the terrace, and past the door within which Allen was still sleeping heavily; and pushing open the next, she told him to enter. The room was of the same size as the other, but less elegantly fitted up, though still neatly and even richly furnished, considering the appearance of the walls and the scene outside. A neat white couch, very nearly like that in the other room, stood in the corner, and a divan covered with dark, crimson silk, stood against the wall. Hugh did not wait to see more, for Catharina closed the door, and left him in the dark. He heard her go away singing, in a clear, melodious voice, one of the simple though monotonous airs of the country. He threw himself upon the couch, and disposed himself to sleep. A moment afterwards, however, Catharina entered, and, leaving the door open, brought him a steaming cup of coffee.

"Drink this," said she. "Father says you must sleep before you eat."

He took the cup, and drank the coffee with a relish he had never before known.

"Now," said she, taking the cup, "lie down and sleep till I call you."

## CHAPTER XVII.

"weariness  
Can ensue upon the faint, when restive sloth  
Flies the down pillow hard."—SHAKESPEARE.

How much inclined Hugh was to prefer Catharina's society to the arms of Morpheus, when he once yielded to the influence of the drowsy god, he sleep became deep and dreamless.

Whatever may be said about the hardships of a soldier's life, and the inestimable blessings of a peaceful lot, it may well be doubted, whether the aggregate of his enjoyments be not equal in amount to the blessings of a calmer existence. The watchfulness and violent exertion of his waking hours enhance his enjoyment of repose, when it comes, and, making a soldier lie down upon a naked rock with a keener relish than a man who presses a bed of down. God has created us all, and stands equally in just relation to all; whatever obligations it has been His will to impose upon Himself by the lot of creation, be they great or small, are due to us, at least in this world, in an equal degree. He has, therefore, established a law, which every blessing and every evil shall be so graduated and proportioned in itself and in its consequences, that each will receive an equal amount of worldly enjoyment; and, being both beneficent and omnipresent, He has been able so to form us, that as much happiness to the poor and apparently unfortunate, may be compressed into a day, or even a moment, as with the poorest of apparently more fortunate neighbour is spread over a whole lifetime. He has been able so to make us, too, that the satisfaction, the aspiration, even a thought, shall repay to the unblest, his want of a thousand more physical comforts. Good and evil, enjoyment and affliction, are like the two bullets in a well; as the one goes down the other rises, and the rise of one is always in exact proportion to the fall of the other. If my enjoyments are "few and far between," I appreciate them the more keenly; and my appreciation leads directly to their rareness—the sense of happiness may be so sublimated as to concentrate the feelings of years in one single moment. If, on the contrary, I am blest with many blessings, inasmuch that each day only rises to bring the daily enjoyment, the frequency blunts the keenness of my feelings, and habit dilutes over many days the fruition which, in the other case, occupies but a single moment. Recurrence weakens and dilutes—rarity subtilizes and concentrates.

It is so in the life of the soldier, as in all other things. The battle, in which death and terror and excitement string the nerves and exalt the imagination, renders doubly sweet the peacefulness of the following day; the weary march of mile upon mile and league upon league, makes the heart swell with delight as he throws himself upon his hard pillow and sleeps to dream of home and friends. I know of no pleasure in life equal to that the foot-sore soldier feels when, after a long, hot, monotonous day's march, he first comes in sight of the fluttering *quidons* which mark his encampment for the night; and even the thought that on the following morning he will again set out upon a march equally severe, only admonishes him to enjoy his present repose—makes it far sweeter than any gained beneath a roof. There is no tossing uneasily from side to side, upon that couch—no weary wakefulness, which makes the night an age and the stillness a mockery. No restless longing for morning disturbs the soldier's sleep; and the *réveille* which calls him from his slumber, though it calls him also to renewed exertion, only reminds him that it calls him from an enjoyment which shall come again—which will come again, too, not as a mere habit which chains him to a torturing routine of lying down sleepless and rising up listless, but as a positive pleasure, heightened and enhanced by the labours of which this *réveille* is the herald. And even when his duties require him to watch through the long hours of the night, with a slumbering host about him, he looks forward to the hour of relief; and when it comes, he lies away to his comrades with the bounding consciousness of a duty performed and past. It has been observed—we have ourselves observed—that the soldier who has not closed his eyes during the night before, will perform a long and weary march with as much speed and alacrity, and with as little fatigue as he who has slept the usual number of hours; and this is true of whole regiments, too, observed in succession. The explanation is to be sought, no doubt, partially in habit; but much more credit is due to the moral influence exercised by the bounding feeling of being relieved, and the consciousness that when he reaches his quarters for the night, a term of sweet repose awaits him.

Hugh and Allen had been awake for many hours, during which they had passed through excitement, fatigue, and danger. They were now safe, at least for the present; and Hugh threw himself upon the couch prepared for him, with a keenness of enjoyment only known to the tired sons of toil, or the travel-worn wayfarer. The sleep of his friend was not so deep; but he was not well. The fever of his veins troubled his dreams; but he, too, slept deeply, though somewhat torpidly. Let us fill up the time of their unconsciousness with some brief account of the time during which we lost sight of them.

Hugh had marched with his company to the place of rendezvous, when the companies were formed into regiments and organized by the election of field-officers. There Morris Thorpe had endeavoured to secure a colonelcy; had, indeed, so nearly succeeded, that his opponent (a man of age, experience, and long service), had found it necessary to compromise with him. By this arrangement, Thorpe secured the position which he had originally in view—the lieutenant-colonelcy. He well knew that he was not old enough, or sufficiently well known, to hope for the first office, and the success of his intriguing surprised himself as much as it did others. The second office, moreover, pleased him far more than the first, in itself; and it was only in order to secure it, that he pushed his pretensions forward for the colonelcy. There are just two offices in an army which are desirable—the second office in a regiment, and the second office in a company. They combine, each in its sphere, good rank and absence of responsibility. If any officer in a volunteer corps has an opportunity to ingratiate himself with his men, and thus prepare for a peaceful campaign (the object for which many of them enlist), it is he who fills either of these posts. He can pursue his schemes of popularity; and yet strictly do his duty—a course not very hard to pursue; for there is an officer above him who bears all the odium of discipline, and

whose popular acts are generally referred to the counsels of his second in command. Thorpe knew this; and he arranged his plans accordingly—succeeding, as he generally did.

Hugh had entered the army inexperienced, young, and accustomed only to the routine of civil life. His education was, however, as we have said, far more liberal than that generally received by young men in his station, and his natural powers were very much above mediocrity. He was particularly distinguished for quick observation, and a sound, good sense, which made his applications sound and practical. He was, at first, of course, entirely unused to his new life. But of all animals man most easily adapts himself to new situations; and it was not more than three months from the day of his enlistment, before he had become perfectly at ease in his new harness, and had rubbed off a great part of the external roughness and inexperience accumulated in an obscure position. His mind was far from the change; and what had been only a strong, practical intellect, obscured by routine and want of opportunity, now became a firm, steady, and rapid intelligence, full of observation and expedient. The life of a soldier, whatever may be its tendencies in a moral point of view, doubtless necessarily to evolve all there is in a man's intellect. A camp is a hospital for the mind, as well as vice, is forced into conformity with a rapidly changing and powerful influence of civil life. "In vino veritas" is an old saying, but it is true notwithstanding the fact that when intoxicated men are generally said to be "disguised;" and with a small variation, the truth might be applied to a camp; for there, whatever is in a man will come out. Men who have been supposed, while in civil stations, to be among the best disposed and most estimable, upon a short trial here, have been found to be the most utterly worthless—mere drones, who add nothing to the efficiency of an army, but really detract from its force, by depreciating its moral tone. And the converse is also true. Men taken from the gutters and grog-shops, unpromising materials, one would have said for any purpose—men apparently abandoned to every vice, and too far sunk in laziness and corruption ever to be otherwise reformed, have, under the transforming rod of military discipline, become sober, orderly, well-disposed, and efficient men. I speak not of isolated instances, but of large numbers of both classes—numbers large enough to form a rule, not to be classed among exceptions.

Allen had gone to New Orleans with Major Bryce, as we have already seen. There the latter had received the "further orders," for which he was instructed to wait; and those orders had directed him to repair to the Rio Grande, to be assigned to duty. In due time he arrived there, and was assigned to duty with a column then moving upon Camargo. Allen had accompanied him as his clerk, occupying the greater part of his time, however, in sketching the scenery, and studying the character of the country through which they passed. In Camargo, the Major had been employed among the dilapidated wagons and broken-down horses and mules, which lumbered the town, while Taylor marched towards Monterey. After the city was taken, the Major, with the volunteers, was ordered up. Thence he moved up with the command of General Worth; and when the larger part of Taylor's army was withdrawn by General Scott for his expedition against Vera Cruz, the Major had been ordered off with them. His accounts were, however, to be settled before he left, and he was still in Saltillo at the period of Allen's expedition with the reconnoitering party. The time set for Allen's return came, and the Major was compelled to set off without him. We have seen the reasons of his delay; and now let us return again to Basil's cottage.

The silence of the scene resembled the sacred stillness of a Sabbath morning in the country—a stillness now made audible by the low sighing of a whispering southern breeze, which crept along the plain and stealthily ascended the mountain side. It was light, as the summer breezes of the north, scarcely moving a leaf, and only perceptible by its weird rustling among the branches, and its almost inaudible murmuring far down in the recesses of the deep ravine. There were none of the sounds which in a northern climate come to disturb the enchantment of a still day. Among the few low trees, there were no birds to carol forth their joy—from the thick copse came no cheerful songs to greet the sunlight. Neither the bleating of sheep, nor the lowing of herds, reminded one of country life. Far up the mountain slope could here and there be seen a wandering goat, browsing upon the low bushes, or springing now and then from rock to rock; and farther on, lying like a collection of snow-flakes upon the brown grass, and shining in the sun which had reached them, though it penetrated not the valley and the plain, could be discerned a flock of these animals, walking listlessly about, or standing in groups in the calmness of the morning; but in that wide prospect, no other sign of life was visible. On the plain the morbid stillness was no less deep; the sun had not yet come to obscure the view, and the eye ranged over an almost interminable level, where nothing broke the monotony but an occasional stunted tree or desolate-looking cactus. Towards the east; as towards the west, the ridge of mountains towered many thousand feet, rugged in the granite hues of ages, and crowned by tall pines and ghost-like cedars; and between the dark trunks of these, relieved in sharp, decided outline against the sky, shone the bright sunlight, brushing out in full the crooked branches and waving foliage which it tipped with golden fire. Over all, like an intangible, deep blue, canopy, was arched the glorious sky of that pure atmosphere, penetrated and pervaded by the mingling light, bending towards the opposing ridges in ever-changing hues; now bands of pale orange, springing like the rainbow from ridge to ridge; now banners of fading green, shooting far up into the fathomless firmament; now patches of purple, and white, playing round the craggy summits, and now a lightning flash of all combined, rushing along the rocks, and breaking out in showers of diamonds shivered into dust; and then again, the whole mountain surface of the earth heavenly blue.

"Have you any news to tell me?" inquired Thorpe of the Mexican. The Mexican made the usual gesture of his nation—shaking one finger in front of his face, and replied "nada," or "none."

Bonaro sat upon a rustic bench before the door, within which Allen slept; and his long, silvery locks uncovered, and slightly moved from time to time by the gentle morning air, streamed down about his temples and upon his cheek, presenting the picture of a patriarch, upon whose life no shadow has been cast, except that which every thoughtful spirit wears in view of the sins and miseries of his fellow men. He was reading a large silver-clasped book; but from time to time he laid it down, and entering the house, carefully examined the pulse of his patient. Catharina passed several times in and out of the house, singing softly in unison with the trickling of the fountain at the end of the house, apparently intent upon assisting the old female servant, Marola, in the preparation of the few viands the house afforded. The woman confined herself to the house, not for fear of being seen, although her dress was scanty enough, nor because she wanted nothing from without, for Catharina carried to her the twigs used for fuel and an occasional vessel of water; but apparently from a love of the smoke which filled the room, and which had wrinkled and darkened her already parchment-like skin, until it seemed to be incapable of further change. Her face was, however, redeemed by the invariable small, black, twinkling eye of the race, and by long, straight, raven hair which fell loosely upon her scantily-covered shoulders, without the least confinement. A chemise of white cotton stuff, confined at the waist, and eked out by a red flannel petticoat of no extravagant longitude, and old, dilapidated, slipshod rough shoes, completed a costume which was never changed. Her head, when she went into the sun, was covered by a coarse, brown mantilla, which also served to envelope her bare arms and shoulders. She was, in short, a fair specimen of the class of Mexican *peons* who are not only not superior in condition or character, but are, in many respects, positively inferior to the slaves of the southern States. She seemed to notice nothing that went on around her, except by an occasional furtive glance of her quick, black eye; and even the approach of her friends, and their reception, had called forth no other sign from her pinched and wrinkled features.

An hour passed away thus quietly, when Catharina called her father in to their morning meal. Silence while eating is among the Mexicans, a national trait; and though old Bonaro was sometimes an exception, made so probably by his residence in the States, he was on this morning taciturn as his countrymen usually are. Catharina too, was indisposed to conversation; so that the frugal meal was despatched in silence. Having given directions that his guests were not to be disturbed for two or three hours, he resumed his book and his seat upon the bench. Catharina gave instructions to Marola for the preparation of a substantial meal for the Americans when they should awake. "Having assisted her with more than usual attention, she took a small volume from the recess in the room where Allen was sleeping; and, taking up the field-glass which lay upon the divan, she went out, and climbing the path, down which she had preceded our friends, disappeared over the cliff. Everything became still again—even Marola was so quiet in her preparations as not to disturb the calm—and the old man could hear the heavy breathing

of his guests within, at the bench where he was sitting. The sun came over the Eastern *sierra*, and dashed down into the depths of the ravine, obliquely illumining its opposite wall, and changing the light frost which lay upon the leaves into crystals, and amethysts and diamonds. The wind slightly increased in force, and sighed among the thickets, or moaned within the recesses of the ravine, and whispered among the vines and flowers of the arbour. On the summit of the nearest mountain it seemed to be higher; and as the fitful moaning rose and fell, in the intervals of silence, the old man could hear it roaring among the waving pines like a distant cataract. The risen sun began to make his influence felt; for the goats upon the mountain sought the shade of stunted palms, or wandered slowly down the precipitous rocks and disappeared within the beds of torrents now dry. The cottage was yet within the shade; but the breeze from the plain came breathing the warmth of barren deserts; and relaxing with its delicious softness, seemed to invite repose. The old man closed the book and laid it on the bench; then sinking slowly on it, he stretched himself at length and slept.

Catharina ascended the steep path which led to the level above, and walked a few paces from the edge of the rock. Here she seated herself at the foot of a large tree, and, opening her book, disposed herself as if to read. But the print, large and plain as it was, made no impression on her mind, and the book lay upon her lap unheeded. She might have been absorbed by the vast and various view before her: or she might have been occupied with any one of the "thick-coming fancies," which haunt the brain of youth. Probably it was the former, for at intervals of a few minutes she adjusted the glass and slowly swept the landscape, from the top of the mountain opposite and above her, to the far, fading outskirts of the sea-like plain below. If she was searching for anything, it was apparently not found; for she laid down the glass each time and relapsed into thoughtfulness. Thus employed, if employment it can be called, she continued for several hours—apparently unconscious of the existence of any one on earth, even herself.

In the meantime, at the end of about two hours, the old man's slumber was broken by Marola, who announced that she had at last prepared a breakfast for the strangers—and according to his directions, in case of necessity, a bowl of gruel for the invalid. Upon being called, Hugh sprang to his feet and accompanied Bonaro to Allen's room. The latter was still sleeping, but his face was flushed, and the occasional uneasy motion of his limbs denoted fever. The old man quietly felt his pulse, and laying the arm down shook his head and led Hugh out of the room.

"He has a fever," said he, "and must not be disturbed."

"Is there any danger?" asked Hugh.

"I hope not," said Bonaro, "but I cannot tell yet."

"At all events," said Hugh, seating himself at the table, "I shall not leave him until he is out of danger." The old man retired, and Hugh betook himself to the viands prepared for him—consisting chiefly of young kid's flesh, beans, and thin corn-cakes—to each of which he did ample justice.

Washing it down with a cup of coffee, he took up Allen's rifle and strolled or rather climbed up the path taken by Catharina.

## CHAPTER XVIII.

"Her looks do argue her replete with modesty."—SHAKESPEARE.

"I pray you tarry; pause a day or two before you hazard."—SHAKESPEARE.

"An honest tale speeds best being plainly told."—SHAKESPEARE.

"You seem to be absorbed," said Hugh, as he approached and took the seat Catharina mentioned him to at her side.

"I have just been thinking of my mother," she replied. "She was of your country, and died, as I told you, when I was born. I have never seen the United States; but a feeling, which I cannot explain, has made everything that relates to them an interest associated with her memory."

"Every American, then, ought to be your friend," said Hugh. "I can speak for one at all events."

"You mean yourself," said she, "and yet you have not known me a day. But it does not follow, because I feel an interest in Americans that they should all be my friends. Friendship is not a matter of feeling half so much as of association and habit. If feeling produced feelings, fancy there would be little unhappiness in the world—certainly there would be no suffering of what we call 'unrequited affection.'"

"You might be correct," said Hugh, with a smile, "if no one person ever excited affection in more than one breast. But one so likely to excite love as you are, would reason more correctly if she took into the account the force of her own charms as an 'example.'"

"I like compliments," said she; "when they are neatly turned, especially. But that is not to the purpose; for I believe that no one person ever did excite a pure, true, and lasting affection in more than one breast. It is true more than one may pretend affection for the same object; but it seems to me not only probable but certain, that all but one are either deceiving others or themselves."

"Your theory has one advantage, if no other," said Hugh: "if it is not capable of proof, at least it cannot be disproved."

"That is but a weak commendation of it," she replied; "for the same might be said of the wildest vagaries. But it is not true. My theory is susceptible of the same proof which sustains more than half of the received opinions of the world. Look at the cases in which you think you see its contradiction. Let two men pretend, or even sincerely believe themselves in love with the same woman. In every case you will find that one or the other afterwards finds that he has been entirely mistaken: that the love he mistook for a real passion, was only the scattered drops of a full heart, whose whole plenary tenderness is now poured out on another and entirely different altar—and unfortunately in too many cases this galling consciousness comes to him who has secured the prize, equally as it has come to him who thought himself miserable, but was in reality blest, in his disappointment."

"Do you think this never happens to the other sex?"

"Assuredly, even oftener than to the first," she replied. "Women have more fancy (though not more imagination), than men. Their lives are such, both inwardly and in their station in society, that they become far more liable to self-deceit; their impressibility combines with their impatience, and fancy lends enchantment where too often the real magic has never come. There are more dissatisfied wives in the world, than there are disconsolate husbands."

"I should think the number would be equal," suggested Hugh.

"And so they would be," she rejoined, "if, as you suppose, the one necessarily produced the other; but it is not so. Men's pursuits are so absorbing, and, forgive me if I say, both their perceptions and their feelings are often so blunt, that an unhappy woman, if she have sense enough to know the folly and hopelessness of discovery, can very easily conceal her discontent, and make her husband think her the happiest of women. Men's vanity and complaisance, too, make them easily blinded by affectionate words and actions, even though these have their source no deeper than the lips."

"One would suppose," said Hugh, after a pause, "that instead of being young as you are, you had passed a long life in wedlock?"

"That," said she, "is only because it is generally believed that the only way of acquiring wisdom is by experience; whereas one learns more by observation, and still more by reflection."

"At least you must have thought a great deal about marriage?"

"I have had nothing else to do, the greater part of my time," she replied. "But you are wrong in supposing that I have been led to think about it, by any idea of soon entering the state myself."

"I am glad to hear it," said Hugh; "and yet—"

"And yet, what?" she asked, looking around as he hesitated; "and why are you glad?"

"I do not know," said Hugh, with some hesitation; "but I felt relieved when you said so, because the idea of your thinking of marriage seemed to threaten that ere long I should cease to see you."

"Why," said she, surprised and blushing, "our meeting has been only an accident; and as soon as your friend can be removed you will leave us, and we shall most probably meet no more."

"He is not likely to be able to move for some time," said Hugh.

"You say that as if you rejoiced at his misfortune," she exclaimed half reproachfully, but still smiling as if not ill pleased.

"Goodness forbid!" he exclaimed in his turn. "I rejoice not at his ill fortune, but at my good fortune."

"And you consider it good fortune to be confined here among the mountains for perhaps a month or more?" she pursued.

"If I were confined alone, I would not so consider it," he said with marked emphasis.

"You are determined I shall understand," returned Catharina laughing, "and I do; but you Americans all go so fast, I can scarcely keep up."

"That's a way we have," said Hugh, relapsing at once, at the allusion, into the soldier.

"Well," said she, gravely, "we have travelled quite far enough in this direction, for the present; let us take some other path."

"You think it would be wrong to listen to an enemy?" said he.

"By no means," she replied. "Truth and honour should be respected and beloved in friend and foe. But it is truth and honour only which are entitled to even a respectful hearing."

"You do not think me capable—" he began.

"I think nothing about it," she interrupted, somewhat sharply. "But I have heard that the Mexican ladies are lightly considered in the American camp; and I am determined neither to do, nor permit anything to justify the opinion. You should recollect, Senor, that we are acquaintances of only a few hours; and that the guest should treat his host with as much deference as he receives hospitality."

Hugh was dumb. She had spoken in a voice and manner as unlike her former light gaiety, and as different to even her more grave tone, as night is to day. He did not know how he had offended her; because he could not know the horror with which a pure mind would shrink from anything, which it supposed tended to class it with those so lightly esteemed as were Mexican women by the Americans. In truth, he had not offended her at all; though by no means in love with him, so soon, she was really much pleased with his free, soldierly bearing, and his fine manly form and features. And it was because of this very interest, for which there was also another reason to be adverted to hereafter, which she began to feel gaining upon her, that she felt anxious about his good opinion—but she was unwilling to encourage his warm expressions, in the fear that he might infer unfavourably from her complaisance. Her face was flushed, for she had spoken warmly;—she began to think too warmly,—for Hugh gazed in her face with undisguised admiration, but with an expression of deep concern. She turned her face to him and laid her hand on his arm.

"You must not think me ill-natured, Senor," she said in a voice of winning softness; "for I have been so hurt by the relation of the conduct of your soldiers to the peasants of this country, that I even think a common civility an attempt to bring me down to their level."

"The opinions of the army," said he, "are based upon what they have seen; and I would willingly believe that these are only the lowest."

"They are indeed!" she broke in eagerly; "they are indeed! And yet the Americans ask 'Can any good come out of Nazareth?' just as if they had seen all there is to be seen in the country. But they should remember the words of one of your own rugged writers—whose works my father sometimes reads to me—'Even a Russian steppe has tumult and gold ornaments,'—and should not conclude, that, because only the low and degraded have abided the approach of an invading army, whom they have been taught to believe barbarians, therefore there are none but the low and degraded."

"I, for one," said Hugh, "am very far from believing so: for I have a proof of the error before me."

"I told you before," she replied, "that I liked compliments; but you must not forget what I have said since."

"You said we had travelled far enough in this direction for the present," said Hugh. "I infer that at some future time we may resume the path."

"That depends upon you, not upon me," she rejoined. "Let us deal plainly. I do not know that anything you have said, or anything you were about to say, was intended as more than an amusement, which, Heaven knows, you may need long before you leave us. I rather incline to believe that was the sole motive, and though I do not like it, I can still forgive it. Hear me out—I know what you would say. If you were seriously disposed so suddenly to pronounce words, which ought to be spoken only upon mature reflection, the time may come, when, if anything connected with me shall be of the least importance, you will thank me for not allowing you to proceed. But if that time should not come—" and here her voice trembled, but she recovered its firmness and went on—"if you should upon reflection wish to renew the subject, speak plainly, and I will not interrupt you. In the meantime, remember that I am here, the defenceless daughter of one who treats you kindly—that your arms are in possession of my country—and that it would be an abuse of the hospitality shown you, to press upon me any such subject. Is it agreed?" She extended her small, soft hand with a smile which Hugh could not have resisted if he would. He pressed it in his and was silent.

"It is a bargain, then!" said she, taking up the field glass which lay upon the ground beside her. "And now let me examine that spot yonder, where there seems to be some one moving."

There was something so dignified, and yet so candid, open and womanly in all this, that Hugh could not either doubt its sincerity or question its propriety. He may not have been entirely in love with her, as yet; but he was much nearer to it than when he sat down, and with much better reason than can generally be given for the same state of feeling. He turned his eyes in the direction of the telescope, and after looking a moment, could plainly distinguish something moving among the low trees at the distance of a little more than a mile.

\* Catharina was a little mistaken about the country of this writer—it is Carlyle.

## SUPPLEMENTARY NUMBER TO THE "HOME COMPANION."

PRICE ONE PENNY.

With No. XXXIV. will be published a carefully prepared Sheet (uniform with the "HOME COMPANION"), with Illustrations, of RULES, HINTS, CAUTIONS, and DIRECTIONS, that will assist in preventing, checking, or curing Disease. By A DISTINGUISHED HOSPITAL SURGEON.

### EXTRACT FROM THE EDITOR'S INTRODUCTION:

"My object is to furnish such rules, hints, cautions, and directions, that, if followed, will assist in preventing, checking, or curing disease; alleviating pain; and perhaps preventing death or serious permanent injury, likely to result from accidents, imprudence, or wilfulness. We know that medical aid cannot always be commanded at once, especially in country towns or villages; and for want of proper directions, many a life or limb may be lost, or rendered permanently useless. Therefore, to obviate such disastrous results, I have compiled the following pages, which will furnish ample directions for all the common emergencies, diseases, and accidents, that are likely to come under the notice of an individual during his career in life; and, in order to make the directions more explicit, I have occasionally introduced neat little woodcuts. It should be borne in mind by every one who reads these pages, that I do not attempt to instruct them in the treatment of serious diseases or accidents. Books will not supply this information; it is only to be acquired by practice and thought. My object is; 1st, To enable people generally to distinguish a disease or accident of a serious kind from one that requires only a simple remedy, so that professional aid may be sought immediately; 2nd, To enable all persons to treat simple diseases or accidents; and 3rd, To enable any one to act in emergent cases, until such time as medical aid can be procured."

## THE HOME COMPANION: A WEEKLY MAGAZINE.

### ON WALLS.

Our great dramatist made a certain wall so kind and accommodating in temper as to open a chink for the love-intercourse of Pyramus and Thisbe; and walls in general (except those of prisons and fortifications) are by no means such harsh and obdurate things as might be supposed by those who have never studied their resources. One of the most thoughtful and original of writers on architecture (Mr. Ruskin), has given the world some matter on this subject worth its attention, and traced historically the decline from significant beauty to false and tasteless ornament, and thence into baldness and unmeaning formality,—changes traceable to, and concurrent with, a departure from æsthetic principles in general matters, and, in particular, to a decline in earnestness and spirituality of religious habits and ideas. But it is not our present purpose to attempt any profound dissertation on the scientific part of this subject. We content ourselves with a light and superficial glance at our walls outside and in, and with such didactic observations as are suggested by them on the principle of the association of ideas.

The house-wall is surely a thing with a meaning, which might be, and should be, beautifully expressed; and as its origin dates from the time when humanity in general left off its early nomadic propensities, and developed the instinct of a love of home, one might expect that the history of houses and of house-walls would exhibit a series of changes, in perfect consistency with the changing habits and increasing needs, of those who dwell within them. Man is not of the order mollusca, with his house tied to his body, and therefore, of necessity obliged to change its form and size, to correspond with his growth and development; but we might expect that men would do by free-will something analogous to what the mollusk does by necessity, and that in an age of luxury and refinement in material matters, they would seek to have substantial dwellings as well as costly-furnished ones, and to make changes without, correspondent with changes within.

In our own country, perhaps more than any other, the house-wall has fallen into degeneracy. It is a most wretched, feeble scion from the bold, vigorous stock of its Saxon and Norman forefathers. Once solid and stalwart, with broad foundations, massive breadth, and buttresses that were both a grace and a support, it has now declined into a state so thin, and weak, and rickety, that on windy nights most of our common and middle-class dwellings so rock and swing, as to threaten a catastrophe like to that spoken of in the nursery rhyme:

"When the bough breaks, the cradle shall fall,  
Down comes cradle, baby, and all."

The old maxim, "all the same a hundred years hence," certainly cannot

apply to modern houses. Such flimsy things were never intended for a hundred years, nor half of that period; and long before its close, these ghastly, ailing tenements of bricks and mortar will have passed away, and "leave not a wrack behind." Let us hope, however, that some tasteful builders or architects will spring up in our metropolis, and in all the provinces, to reform our domestic buildings, and make our homes weather-tight and substantial.

Close to the outer wall of buildings, in country or suburban districts, there stands the garden-wall convenient for fruit-trees and climbing flowers, and a pretty-enough object when covered with the ivy, the jessamine, and the rose; but, when bare in the winter time, painfully monotonous and uninteresting in its long unbroken uniformity. And yet it would not be difficult to make even a garden-wall in some degree an object of beauty. Sometimes various-coloured bricks might be used, the panelling of wainscot be imitated by well-proportioned indentations, and tasteful cornices and top-ornaments be made to relieve the monotony of a long unvaried line. Field and garden-walls, however, have been generally left to mere bricklayers,—a class of persons who, though probably "regular bricks" at their trade (to use a slang phrase of compliment), are, notoriously, not very highly cultured in the art of combining grace with utility. But the fault does not lie altogether with the bricklayers, nor even principally. Those who employ them are more to blame in the matter. Walls, with few exceptions, have hitherto been erected from no other than mere utilitarian motives, with no mingling of artistic and picturesque ideas. They are mere barriers to distinguish *meum* from *tuum* in the matter of landed property. They are an application of the rule of "division" to prevent the too frequent use of the opposite rule of "subtraction." Fruit and vegetables are apt to disappear from gardens, "oft in the stillly night;" and when the owner has been at some pains to produce them, it is natural that he should find that, as the schoolboys phrase it, "multiplication is vexation;" particularly when the thing multiplied is stolen from him. Hence the erection of the wall, to mark off the dividends for the rightful divisor. Garden-walls, however, are by no means insurmountable barriers. Many a roguish lad scales them in the autumn evenings, in search of apples and apricots; and adventurous lovers regard them as nothing, when beckoned to by lily hands and shining eyes at a chamber window. To tender conversation and impassioned love-songs they have been regarded as offering but very slight obstacles indeed. Mr. Barney Brallaghan, in his serenade to Judy Callaghan, says, "There's only the wall between us." Only the wall! And what's that, when love warns a man with a voice and a purpose?

Passing from the garden into the house, we will speak for a moment of the interior walls. Here the flimsiness of structure is partly concealed by a coat of plastering, over which is hung, in regular lines, a sort of wrapper or dressing-gown of farthing paper docted with grotesque patches of various colour. In this matter, however, of mural decoration by means of paper, a very considerable improvement has taken place within these few years; and there are now many papers of the cheapest and commonest kinds, which, in regard to design and contrasts of colour, are not without the merit of taste and the effect of beauty. There are, however, some classes of buildings in which we think paper might be advantageously dispensed with altogether, and the walls lined in the inside with encaustic or ornamented glazed tiles. The material is cold, and at first suggestive more of a dairy or a cellar than a parlour. But this prejudice will pass away, when it is remembered that such tiles might be rendered in the highest degree ornamental,—thus producing the effect of beauty; that they are infinitely cleaner than paper,—thus promoting comfort and tidiness; that they would give an air of coolness to the apartment in summer time; and that, even in the winter, heat from the fire would be more equably diffused over the room, owing to the radiating power of glazed and shining surfaces.

In a subsequent article we shall say something recommendatory of adorning our walls with prints and pictures. In the present, we are on less poetic ground; and our purpose now will be realized if we succeed in directing the attention of a few to the flimsy style of modern building, and in exciting a desire for substantiality, cleanliness, neatness, and convenience, coupled with as much grace and variety as can be consistently associated with specific ends of utility. We invite all reformers in these outward domestic matters to continue the battle vigorously against ugliness and flimsiness,—to "hang up their banners on the outward walls," inscribed with better principles of taste, and comfort, and convenience, than are at present acted upon.

### THE MAN

Is a man a bit the better  
For his riches, golden gains,  
For his acres and his palace?  
If his inmost heart is callous,  
Is a man a bit the better?

And if a man's no bit the better  
For his coffers and his mines,  
For his "purple and fine linen,"  
For his vineyard and his vines,  
Why do thousands bow the knee  
And cringe in mean servility,  
If a man's no bit the better?

Is a man a bit the worse  
For a lowly dream of rage?  
Though he owns no lordly rental,  
If his heart is kind and gentle,  
Is a man a bit the worse?

And if a man's no bit the worse  
For a poor and lowly stand,  
For an ever empty pocket,  
And a brawny working hand,  
Why do thousands pass him by  
With a cold and scornful eye,  
If a man's no bit the worse?

WOMAN.—There is nothing, indeed, by which we are through life more profited than by the just observations, the good opinion, and the sincere and gentle encouragement of amiable and sensible women.

## THE LUNGS, AND RESPIRATION.

MAN has a necessity for the atmosphere around him; without it he cannot exist. The power of locomotion is given to enable him to change his atmosphere at will. This power does not belong to man alone; it is the necessity of all animated beings, from the smallest insect to the monsters of creation. Whence this necessity?

It arises out of the process of digestion. To this we shall hereafter recur; but at present we may briefly say, that when food is taken a large amount of an element called carbon is received into the system. There is always contained in food more of this element than is required for the wants of the body, and the surplus has therefore to be gotten rid of, and the process of breathing, or *respiration*, is one important means to attain the desired end.

Respiration is an aëration of the system. By it the external air is introduced into the body, and brought into contact with its extremest parts. And throughout the animal kingdom there are distinct organs for performing this important office.

Among the family of fishes this is accomplished by a thin membrane, prolonged into tufts, or fringes, so arranged as to expose the greatest amount of surface to the water, each filament containing two vessels, one for the ingress and the other for the egress of the water.

It is while the water is passing through this membrane that it is robbed of its pure air, which is received into the blood-vessels spread along these fringes, or *gills*.

Fishes respire externally. Not so with land animals; their breathing is internal, and is carried on by passages and chambers, into which the air is drawn, and on the sides of which the blood is distributed in a minute network of vessels, called *capillaries*, from their size.

In the leech and the earth-worm, aëration is carried on by a series of little air-cells, disposed along each side of the body, one for each segment. In insects, instead of these sacs, there is a system of prolonged tubes ramifying through the body, and carrying air into its minutest portions.

The oyster respire by gills, like the fish, but, unlike it, the gills have no connection with the mouth. In frogs and reptiles the lungs are simple sacs, with little subdivisions into cells, a small amount of aëration sufficing for them.

In birds a large surface is provided for aëration, by subdividing the lung into minute cells, and also by the addition of air-bags, placed in various parts of the body, and even in the centre of the long bones. Thus a large air-surface is given in a little space, and the body rendered proportionably light.

In no class of animals, however, is the minute subdivision into cells, and the mechanism by which a continual supply of air is provided, so perfect as in the mammals, at the head of which Man is placed.

Respiration is carried on by man in the upper parts of the chest, in the cavity of which are placed the lungs—a pair of sponge-like bodies made up of a cluster of minute cells, which have the power of dilating or contracting, and on the sides of which the minute capillary blood-vessels are distributed.

These cells open into a narrow tube, which widens as it passes upward, receiving additional tubes from the same lung. The main tube passing still higher up, unites with the one from the lung on the opposite side, forming a wide air-tube, called the *trachea*, or windpipe, which, passing into the neck, terminates in the mouth.

The cells and tubes are bound together by a thin cellular membrane, and covered on the outside by a smooth, polished, lining membrane (the *pleura*), which, after investing these organs, lines the inside of the ribs, and allows the lungs to move freely in the space allotted to them.

The air-cells are too small to be delineated; they vary in size from one-twentieth to a two-hundredth part of an inch in diameter, and therefore are so numerous in a single lung, thereby exposing so large a surface of membrane to air, that it has been calculated to exceed twenty thousand square inches in an average-sized man.

Breathing consists of two acts: the first, that of drawing in the external air—*inspiration*; the second, that of driving out an equal volume of air—*expiration*. To inspire, the bony chest has to be dilated. This is accomplished by the muscles of the chest and back, with those attached to the shoulder, which co-operate together, and, by contracting, raise and pull out the ribs, thereby enlarging the cavity of the chest. The muscles between the ribs (intercostal) assist in this action very materially.

The lungs, in the healthy state, completely fill the cavities assigned to them; so that when this cavity is enlarged a vacuum is produced, which can only be filled by a corresponding enlargement of the lung; and to accomplish this, the air rushes down the trachea, and passes to the remotest air-cells.

The lung thus obtains a large space for dilatation, by the elevation of the ribs; but it is further increased by the action of the diaphragm, or midriff—a muscle which is spread across, inside, and below the lungs, separating them from the contents of the abdomen. This muscle, when not in action, is arched upward into the chest, diminishing the space there; but when it contracts, it becomes flatter, pressing down into the abdomen, and affording greater space for the lungs. We become unpleasantly conscious of the existence of this muscle whenever it contracts spasmodically, as in hiccups.

When the lungs are thus filled to the utmost with air, those muscles cease to contract any more, their fibres relax, and the bony chest sinks down to its original dimensions; the dilated lungs are pressed upon, and the excess of air is expelled out by the windpipe. This constitutes *expiration*. It is almost a passive act, being little else than the cessation of the muscular action which produced inspiration. In both acts the lungs have been quite passive, they being filled or emptied, not by any act of their own, but solely by the amount of the dilatation and contraction of the walls of the chest.

These motions of the chest are continually going on, and in general it may be stated that from fourteen to eighteen respirations occur in the minute, and every fourth or fifth inspiration is drawn deeper than the others. In young and nervous persons these acts are more quickly performed, as are they also in inflammation of the lung; while in fever, and a few other conditions of the body, its movements become remarkably slow.

Having now described the parts which perform the office of drawing in the air, and the mechanism by which it is performed, it remains to be shown what are the alterations produced in that fluid, and the effects upon the frame dependent on the alteration.

Each inspiration draws in about twenty cubic inches of air; the same bulk is expired immediately after. This is equal to 266½ cubic feet in twenty-four hours; and as a man ought not to breathe the same air twice, it is evident what a large amount of fresh air every one requires to be surrounded with.

The pure air which is inspired is made up, in round numbers, of 79 parts of nitrogen, and 21 of oxygen. The air which is expired has not this composition, but is very nearly 79 parts of nitrogen, and 20 parts carbonic acid; the rest being a little air unaltered.

The change produced in the air in the lungs is the apparent loss of the oxygen, and its being replaced by carbonic acid. But as carbonic acid itself is made of one part of carbon and two parts of oxygen, it is clear that the latter is not wholly lost, but only that portion which is replaced by carbon, or about one-third of the whole quantity of oxygen present in the air. The remainder, however, by being united with carbon, is rendered unfit for further use.

To the lungs, then, oxygen is taken in, and a nearly equal amount of carbonic acid is given off, the latter being the most appropriate form in which carbon could be thrown off the lungs.

Carbonic acid is that air which escapes in fermentation, which flies off from soda-water, and which may be had in abundance when an acid is poured on marble. It puts out a light, and if a man attempt to breathe it in quantity he is suffocated. It may be breathed when diluted, but it then poisons the system, and lowers the general health. In any case it is obnoxious. The death produced by descending vats and closed cellars is caused by this gas.

A healthy man expires daily nearly 18,000 cubic inches of this deadly gas, which for himself or others to breathe again, even in a diluted form, is injurious. From this, with the foregoing calculation, it appears necessary that each individual, for healthy existence, should have the expired air containing this large quantity of carbonic acid completely removed from reach of breathing; and should also be supplied with 266 cubic feet of fresh air in the same time.

We are here led to perceive the high importance of ventilation; for it is not sufficient for health that a room should contain the quantity of air requisite for the support of its inhabitants during a given time. After they have remained in it but a part of that time, the quantity of carbonic acid which its air will contain will be large enough to interfere greatly with the due aëration of their blood, and thus cause oppression of the brain, and other morbid affections that arise from an accumulation of carbonic acid in the circulation.

Another requisite necessary for healthy respiration is a roomy chest, a capacity sufficient to admit the necessary quantity of air into the lungs. The labouring man, and he who exercises the muscles of his chest, possesses this requisite; not so the sedentary citizen, or the woman who, copying a faded ideal of beauty, compresses her chest between the bones of stays. She not only prevents its attaining its healthy size, by pressure, but hinders the muscles from contracting, and thus suffers them to dwindle away; and the result is, she cannot take a full breath, for the ribs cannot be raised except the muscles contract strongly, and this cannot be accomplished by weak atrophical muscular fibres.

**AN OYSTER.**—The life of a shell-fish is not one of unvarying rest. Observe the phases of an individual oyster, from the moment of its earliest embryo life, independent of maternal ties, to the consummation of its destiny, when the knife of fate shall sever its muscular chords, and doom it to entombment in a living sepulchre. How starts it forth into the world of waters? Not, as unenlightened people believe, in the shape of a minute, bivalved, protected, grave, fixed, and steady oysterling. No; it enters upon its career all life and motion; flitting about in the sea as gaily and lightly as a butterfly or a swallow skims through the air. Its first appearance is a microscopic oyster-cherub, with wing-like lobes flanking a mouth and shoulders unencumbered with inferior crural prolongations. It passes through a joyous and vivacious juvenility, skipping up and down, as if in mockery of its heavy and immovable parents. It voyages from oyster-bed to oyster-bed, and, if in luck, so as to escape the watchful voracity of the thousand enemies that lie in wait, or prowl about to prey upon youth and inexperience, at length, having sown its wild oats, settles down into a steady, solid, domestic oyster. It becomes the parent of fresh broods of oyster-cherubs. As such it would live and die, leaving its shell, thickened through old age, to serve as its monument throughout all times—a contribution towards the construction of a fresh geological epoch, and a new layer of the earth's crust—were it not for the gluttony of man, who, rendering this sober citizen of the sea from his native bed, carries him unresisting to busy cities and the hum of crowds. If a handsome, well-shaped, and well-flavoured oyster, he is introduced to the palaces of the rich and noble, like a wit, or a philosopher, or a poet, to give additional relish to their sumptuous feasts. If a sturdy, thick-backed, strong-tasted individual, fate consigns him to the capacious tub of the street-fishmonger, from whence, doled with coarse, black pepper and pungent vinegar, enlarded partly after the fashion of an Egyptian king, he is transferred to the hungry stomach of a costermonger.

## ONWARD!

**IRON STEAM-SHIP BUILDING AT LIVERPOOL.**—An order has been received in this country for the construction of thirty iron steam vessels for the Danube Steam Navigation Company. They are to be of large dimensions, and of substantial materials. The order has been distributed so as to give employment in Liverpool, the Clyde, and Newcastle.

**SWIMMING APPARATUS.**—The *Washington Telegraph* states that Mr. De Bibery has invented one of the most important life-saving and swimming apparatus we have ever seen. Application has been made by Mr. De B. for a patent. It is a kind of frock or doublet, and interlaid with small metallic boxes, inflated. This doublet may be worn as an overall on shipboard, and it is impossible for the wearer to sink below the shoulders, and Mr. De B. asserts that a person may remain in the water any length of time, and the water has no effect whatever on the buoyancy of the dress.

**ELECTRO-TELEGRAPHIC PROGRESS.**—A submarine telegraph between Holland and England is projected. The Dutch Government have granted to Mr. A. Ruysenaers a concession for its establishment. Mr. Ruysenaers is now engaged in forming in London a Company for carrying it out. This line would render our telegraphic communication with the Continent independent of the French and Belgian lines (which war, or other contingencies, may any day close against us). The Dutch and Prussian Governments take a lively interest in its success. The business of the French and English submarine line is said to be so increasing, that it is proposed to have, in all, between this country and the Continent, exclusive of the Holland line, sixteen lines of wire at work. As the lines multiply, might they not be made of a less ponderous and expensive description, even though less durable? The temporary damage of one or two merely out of a considerable number, would be little or no public inconvenience, while, on the contrary, the convenience of the public would be greatly promoted, and capital saved by multiplying cheap lines.

**RAILWAY JOTTINGS.**—In a paper lately read before the Institute of Civil Engineers, Mr. B. Poole proposed various measures for the economisation of our railway system throughout the country. The first of his proposals is that the whole of the railways in Great Britain should be worked in four divisions or amalgamations. The North Western, Great Northern, Great Western, and South Eastern and Western; the apportionments of territory to be arranged by the uninterested Companies. Second. The Companies to reserve in their own hands the maintenance of way, instead of paying contractors. Third. To manufacture their own rails, chairs, and spikes. Fourth. The whole rolling stock in the kingdom to be amalgamated, and made common to all lines, each division contributing to maintenance, according to its traffic. Various other measures are recommended, among which are—Tenth. By the manufacture of gas at the large stations, a saving of from 30 to 40 per cent. might be effected. Eleventh. The application of steam, where practicable, at stations, to supersede horse or manual labour. Thirteenth. All brass-work to be painted over, to save the expense of polishing. Fifteenth. Exclusive use of two or more wires of the telegraph, not only for the transmission of ordinary messages, but to ascertain each morning the exact position of the rolling stock of the country, in order to conduct its distribution with economy and despatch. The paper concluded with a proposal for a general classification of trains, separating each class, and running them at different speeds, whenever practicable.

**THE CALORIC SHIP "ERICSSON."**—It was stated a short time since, that a ship was building in New York, to which a new motive power was to be applied, viz., caloric. A New York letter in the *Transcript* gives some interesting particulars in regard to this new power, and the ship which is to be propelled by it. The correspondent says:—"On Saturday I visited the engine manufactory of Messrs. Hogg and Delamater, of this city, and had the privilege of inspecting Ericsson's caloric engine of sixty horse power, while it was in operation. It consists of two pairs of cylinders, the working pistons of which are 72 inches in diameter. Its great peculiarities consist in its very large cylinders and pistons, working with very low pressure, and in the absence of boilers or heaters—there being no other fires employed than those in small grates under the bottoms of the working cylinders. During the eight months that this test-engine has been in operation, not a cent has been expended for repairs or accidents. It is a beautiful and imposing object, and conveys the idea of power and symmetry much more impressively than the largest steam-engine that I have ever seen. The leading principle of the caloric engine consists in producing motive power by the employment of the expansive force of atmospheric air instead of that of steam, the force being produced by compression of the air in one part of the machine, and by its dilatation by the application of heat in another part. The great advantages claimed for this improvement, are the saving in fuel, and its entire safety. A ship carrying the amount of coal that the Atlantic steamers now take for a single trip could cross and re-cross the Atlantic twice without taking in coal. A slow radiating fire without flame is required, and this can be best supplied by our own anthracite. An explosion cannot happen to the caloric engine—the only result from neglect will be the stoppage of the machinery. If these great desiderata are really found, and can be successfully applied, the world may look for another revolution in ocean navigation equal to that produced by the application of steam. The Ericsson is a beautiful model, 2,200 tons burthen, and will be ready for sea by October. The machinery is described as of the most perfect kind. The cylinders are 108 inches in diameter—72 inches larger than those in the Collins steamers.—*Boston Journal*.

## STATISTICS.

**NEWSPAPERS IN RUSSIA.**—There are in Russia 130 Slavonian journals and periodicals, of which 9 are political, and 53 official papers, published by the various ministerial departments of the empire; 6 periodicals are devoted to military sciences, and there are 3 medical, 5 industrial, and 12 agricultural periodicals. The Polish journals which are published in Russia amount to the number of 22.

**POPULATION OF MONTREAL.**—The census of Montreal has just been published, the total number of inhabitants is 57,715, divided into the following classes:—Canadians of French origin, 28,020; Canadians of other origin, 12,494; Irish, 11,738; Scotch, 5,160; English, 2,858; natives of the United States, 919; French, 133; natives of other countries, 405. Of the whole population, 41,463 are Roman Catholics.

**STATISTICS OF POPULATION IN FRANCE.**—The *Westminster Review*, January, 1851, gives the following conjectural classification of the French population:—Millionaires, 50,000; rich men, 200,000; in easy circumstances, 550,000; in moderate circumstances, 4,200,000; gaining a decent but uncertain subsistence, 6,000,000; gaining a scanty and uncertain subsistence, 16,000,000; living in extreme indigence, 5,000,000; paupers, thieves, and prostitutes, 4,000,000. Total, 38,000,000.

**SPIRITUOUS AND MALT LIQUORS MADE IN THE UNITED STATES.**—A table compiled from the Census returns gives the product of spirituous and malt liquors in the United States, during the year 1850. From this table we learn that the amount of capital employed during that year, exceeded 8,000,000 dollars, and that over 42,000,000 gallons of whisky and "high wines" were produced, besides 6,500,000 gallons of rum, and 1,177,924 barrels of ale. Of this vast river of liquid fire annually poured forth, the States of New York and Ohio produce about one half.

**DURATION OF LIFE AMONG THE CLERGY.**—The following is an extract from the *Medical Times*:—"This paper was the first of a series of communications which Dr. Guy proposed addressing to the Society on the duration of life among the members of the several professions. A preliminary inquiry into the subjects, based on facts extracted from the Obituaries of the *Annual Register*, was brought under the notice of the British Association in September, 1846, and was subsequently published in the ninth volume of the Statistical Society. In that essay it was shown that the clergy are longer lived than the members of other professions, though they do not live so long as the population of England, and not so long by several years as agricultural labourers. The facts contained in the present communication tended to confirm the results established in the former essay, by showing a very favourable duration of life among the clergy; but detailed comparisons of one profession with another were necessarily reserved till the completion of the contemplated series of papers. The essay was illustrated by several tables; among others, by tables comparing the clergy of cities and towns with those of rural places, the married with the single clergy, and the clergy of past times with those of the present day. It resulted from these tables, which were admitted to be based, on some points, on too small a number of facts, that the clergy of rural districts had an advantage of more than two years over those in cities and towns, and the married of more than five years over the single. The duration of life among the clergy in the last three centuries appears to have been remarkably steady, with signs of recent improvement. The last table of the series contrasted the average age, at death, of popes, archbishops, bishops of the Established Church, and Romish saints. The popes, being appointed very late in life, attained the greatest mean age, exceeding that of the archbishops and bishops by about one year, the latter surviving the Romish saints by about two years. This abbreviation of life in the case of the saints of the Romish calendar, may probably be attributed in part to celibacy, in part to the ascetic practices to which some of them were addicted."

**MUSICAL INSTRUMENTS.**—The organ-builders of England may be taken at 400 in number, and putting their gross returns at £500 per annum each, we have £200,000 a year in this branch alone. The materials used by them are pine, mahogany, tin, and lead. The materials employed by the pianoforte maker are oak, deal, pine, mahogany, and beech, besides fancy woods; baize, felt, cloth, and leather, brass, steel, and iron. Of the two leading houses in this branch, the Messrs. Collard sell annually 1,600 instruments, and the Messrs. Broadwood 2,300, which at the very low average of 60 guineas, gives as the annual business of these two firms only, about £250,000. If the whole number of pianoforte makers of London, about 200, is taken into account, the annual return in his trade cannot be less than £1,000,000. Violins, and instruments of that class, are almost entirely imported, the prejudice being in favour of the foreign makers. The annual import duty on them is probably not less than £45,000. The cost of the wind instruments required for a regimental band, exclusive of drums and fifes, was said to be £224, and as there are in all about 400 regiments, the capital represented by these is nearly £100,000. The number of workmen employed by Messrs. Broadwood and Collard respectively, is 575 and 400, these are all more or less skilled workmen, some of them to a very high degree. It is probable that the wages of the artisans employed in this trade do not amount to less than £500,000 per annum. The great power exerted by music is evidenced by the large number of musical and choral societies, both instrumental and vocal, which exist, as well as the large and increasing audiences which are attracted to their public performances. There can be no doubt that that influence is in a right direction, and that by it the social and moral condition of the people is being elevated and improved. In the fifteen years during which the Sacred Harmonic Society has been established, 271 concerts have been given, attended by more than 510,000 persons.

CHARADE.

ON a jaded hack, with a bony back,  
My *first* was wisely laid,  
And were it not for this, the trot  
Would sorely have tired the maid.  
A youth rode by with a laughing eye,  
And ere its cost was reckon'd,  
He caught the maid, who was not dismay'd,  
Although he stole my *second*.  
But an old man saw this breach of law,  
And it sadly vex'd his soul,  
So he straightway went and gave punish-  
ment,  
By confining the maid with my *whole*.

PARLOUR PASTIME.

*Rhyming Cards.*

PROVIDE a hundred slips of thin cardboard, about two inches long, and one inch broad; upon these write in a clear legible hand all sorts of miscellaneous words, provided they are substantives and adjectives. Deal three cards to each person, without knowing what words you give out; and when every one present is supplied, they are each to make two or more lines of doggerel rhyme, in which the three words are to be brought in, however incongruous. Before reading their verse or couplet, the three words must be audibly announced. Suppose the following amongst the set of words:—"Wheelbarrow, gardener, mince-pie, robin, chair, table, thunder, wind, rain, piano, dancing, bridle, horse, cat, &c., and suppose the first three words on the list to fall to one person—he reads, for example (when every one else is prepared), wheelbarrow, gardener, mince-pie:

"Having put my wheelbarrow away,  
I was glad to hear the garden-er say,  
Your mother has on the table set  
A hot mince-pie for her darling pet."

PROBLEM.

Two fav'rite fields near to my dwelling lie,  
Their soil the same in depth and quality:  
The furthest distance, twenty acres measures;  
The nearest, ten, but fraught with latent treasures;  
For, till'd alike, this yields me as much grain  
As does the first, though full as big again.

CHARADES.

My *first* I have said—in a very short word;  
My *next* were wise men, of whom you have heard;  
My *third* is a plural noun, o'er the world spread;  
My *whole* both enlivens and puzzles the head.

When trav'ling my *first*, you pick-up my *second*;  
But my *whole*, the extent of your journey is reckon'd.

TRANSFIGURED PLAYING CARDS.

TEN OF HEARTS—"FAIR-PLAY IN FOWL SPORT."

CONUNDRUMS.

1. What peer resembles a candle almost burnt out?
2. Why is a dancing-master like a tree?
3. Why is death like a man breaking your windows?
4. Why is the human race very good-natured?
5. If you wished to buy a white horse where would you go for it?
6. What club is most like a pair of snuffers?
7. Why is the best inn in England most disagreeable?
8. What liquor is most catching?
9. Why is the Thames a lazy river?
10. Why is a woman who comes into the room in a great bustle like asbestos?
11. When is a compliment like a skylark?
12. Why are many innkeepers' wives like generals?
13. Why are seeds when sown like gate-posts?

TRANSPPOSITIONS.

Complete, I'm a house that's built entirely for a brute;  
Behaved once, I'm an article that well your house does suit;  
Behaved twice, I'm always disability's reverse;  
Now promptly, ye sagacious ones, my easy name rehearse.

Complete I am a miserable hut; behead and transpose me, I am the bane and happiness of mankind; dissect and transpose me, the more you take from me the larger I grow, and I hope you will not fall into me.

ANSWERS TO THE PASTIME OF LAST EVENING.

Page 525.

PICTORIAL CHARADE.—SUN-BEAM.

PROBLEM.—This is the same thing as to find a number, which being divided by 2, 3, 4, 5, and 6, there shall remain 1, but being divided by 7, there shall remain nothing; and the least number, which will answer the conditions of the question, is found to be 301, which was therefore the number of eggs the old woman had in her basket.

TRANSPPOSITIONS.—1. LEFT, FELT, LET. 2. TRIPLE, FLIRT. 3. DRAPEY, PRAYER.

CONUNDRUMS.—1. Because it's not current without the water-mark. 2. When he's shown up in the noose (news). 3. When he has full possession of the stocks. 4. When it's worth less (worthless). 5. Because they kill by contract. 6. Because they are wicked lights. 7. Because he is guided by the directions of strangers. 8. Because they never take anything when they are dry. 9. A cowslip. 10. A garden. 11. The tender part. 12. When they let fall the reins (reins). 13. When it's a snapper. 14. When it's a clothes horse, and has to bear many changes. 15. Because these would always be some members missing. 16. Because it's a running reed. 17. Preserved pease (pease). 18. When it appears weekly. 19. When Her Majesty went to K.-land.

## OUR CORNER CUPBOARD!

A COFFIN (said an Irishman) is the house a man lives in when he is dead.  
The greatest gluttons are those who feed upon slander.  
FAIR dealing is the bond and cement of society.

INTELLECT is not the moral power—conscience is. Honour, not talent, makes the gentleman.

ONE hole neglected in a fence will cost ten times as much as it will do to mend it at once.

## EPIGRAM ON EPIGRAMS.

What is an epigram? a dwarfish whole,  
Its body brevity, and wit its soul.

A DUBLIN meretz, recommending a piece of silk to a lady for a gown, said, "Madam, it will wear for ever, and make a petticoat *afterwards*."

AN Irish gentleman having purchased an alarm clock, an acquaintance asked him what he intended to do with it; "Och," answered he, "sure I've nothing to do but pull the string and wake myself."

"Nay pr'ythe, dear Thomas, ne'er rave thus and curse:  
Remember, you took me, 'for better for worse.'"

"I know it," quoth Thomas, "but then, Madam, look you,  
You prove, upon trial, much worse than I took you."

A CERTAIN bishop declared one day, that the punishment used in schools did not make boys a whit better, or more tractable; it was insisted that whipping was of the utmost service, for every one must allow it made a boy smart.

## PHILANTHROPY.

Hast thou power? the weak defend;  
Light?—give light: thy knowledge lend;  
Rich?—remember Him who gave;  
Free?—be brother to the slave.

CATO, the Censor, only repented of three things during his life—to have gone by sea when he could go by land, to have passed a day inactive, and to have told a secret to his wife.

"MR. JONES, you said that Mr. Rozin was a composer. Does the Court understand from that, that he was a writer of music?" "No, sir-c, he's called a composer because he never talks to a man without putting him to sleep." "Crier, call the next witness."

THE farmer whose pigs were so lean that it took two of them to make a shadow, has been beaten by another, who had several so thin that they would crawl out through the cracks in their pen. He finally stopped their fun by tying knots on their tails.

Law sergeants are a grateful race,  
And all their actions show it;  
Their purple garments come from Tyre,  
Their arguments go to it.

A SCOTCH blacksmith being asked the meaning of metaphysics, explained it as follows:—"When the party who listens disna ken what the party who speaks means; and when the party who speaks disna ken what he means himself—that is metaphysics."

A FELLOW some time since exhibited a scull at a fair near London as the scull of Oliver Cromwell. A gentleman observed that it was too small for Cromwell, who had a large head, and died almost an old man. "I know all that," said the exhibitor, undisturbed, "but you see, sir, that was his scull when he was a boy."

A LADY, who made pretensions to the most refined feelings, went to her butcher, to remonstrate with him on his cruel practices. "How," said she, "can you be so barbarous as to put innocent little lambs to death?" "Why not, madam?" said the butcher; "you wouldn't eat them alive, would you?"

THE Honourable Thomas Erskine was one evening taken suddenly ill at Lady Payne's: on her expressing a hope that his indisposition might not be serious, he answered her in the following impromptu:

'Tis true I am ill, but I need not complain,  
For he never knew pleasure who never knew Payne.

MR. PITT having made a moving speech in the House of Commons on the subject of the French invasion, the minister remarked, in a large dinner-party which happened soon after, that it was very right in the premier to alarm us. "How so?" was universally asked. "Why, our whole safety lies in our being all alarmed."

A GENTLEMAN having occasion to call upon an author, found him at home in his writing-chamber. He remarked the great heat of the apartment, and said, "It was hot as an oven." "So it ought," replied the writer, "for 'tis here I make my bread."

## OUR MEMORANDUM BOOK!

NUMBER OF EYES IN THE BEETLE AND THE HOUSE-FLY.—The eyes of insects are imperishable, and many of them seem put into a multitude of little planes or facets, like the facets of a diamond, and have the appearance of net-work. Each of these facets is supposed to possess the power and properties of an eye; and Leuwenhoeek counted *three thousand one hundred and eighty-one* of them in the corner of a beetle, and *eight thousand* in those of a house-fly!

## SYMPATHY.

THERE is a tear, more sweet and soft,  
Than beauty's smiling lip of love;  
By angel's eyes first wept and oft  
On earth by eyes like those above:  
It flows for virtue in distress,  
It soothes, like hope, our sufferings here;  
'Twas given, and 'tis shed, to bless—  
'Tis sympathy's celestial tear.

FRUITS OF EARLY RISING.—The preface to the last volume of Rev. Dr. Barnes' "Notes," which has lately appeared, mentions a fact which is worthy of being remembered by those who are accustomed to excuse themselves from the performance of any great and useful work for the "want of time." Dr. Barnes has published in all sixteen volumes of biblical "Notes," during the composition of which he has had the charge of a large congregation in Philadelphia; and yet he has not suffered his authorial labours to infringe upon the duties of the pastoral office. These sixteen volumes, he informs us, "have all been written before nine o'clock in the morning, and are the fruits of the habit of rising between four and five o'clock." From the first, he has made it an invariable rule to cease writing precisely at nine o'clock; and now he finds his formidable task accomplished, and has the satisfaction of knowing that he has been permitted to send forth more than 250,000 volumes of commentary on the New Testament, and that probably a greater number has been published abroad. All this has been accomplished in hours which the majority of men waste in bed, in idle listlessness, or in getting ready for the labours of the day.

NUMBER OF DAYS THE DIFFERENT WINDS BLOW IN THE COURSE OF A YEAR.—From an average of ten years, of the register kept by order of the Royal Society, it appears that at London the winds blow in the following order:

| WINDS.               | DAYS.     |
|----------------------|-----------|
| South-west . . . . . | 112       |
| North-east . . . . . | 68        |
| North-west . . . . . | 50        |
| West . . . . .       | 53        |
| South-east . . . . . | 32        |
| East . . . . .       | 26        |
| South . . . . .      | 18        |
| North . . . . .      | 16        |
|                      | <hr/> 365 |

It appears from the same register, that the south-west wind blows, at an average, more frequently than any other wind during every month of the year, and that it blows longest in July and August; that the north-east blows most constantly during January, March, April, May, and June, and most seldom during February, July, September, and December; and that the north-west wind blows oftener from November to March, and more seldom during September and October, than any other months.

## DISSECTION OF THE OLD AND NEW TESTAMENTS.

|                                      |           |                      |         |                 |           |
|--------------------------------------|-----------|----------------------|---------|-----------------|-----------|
| Books in the Old Testament . . . . . | 39        | In the New . . . . . | 27      | Total . . . . . | 66        |
| Chapters . . . . .                   | 929       | . . . . .            | 260     | . . . . .       | 1,189     |
| Verses . . . . .                     | 23,214    | . . . . .            | 7,959   | . . . . .       | 31,173    |
| Words . . . . .                      | 529,489   | . . . . .            | 281,258 | . . . . .       | 810,697   |
| Letters . . . . .                    | 2,728,100 | . . . . .            | 838,380 | . . . . .       | 3,566,480 |

## Apocrypha.

|                    |     |                  |       |                 |         |
|--------------------|-----|------------------|-------|-----------------|---------|
| Chapters . . . . . | 183 | Verses . . . . . | 6,081 | Words . . . . . | 152,185 |
|--------------------|-----|------------------|-------|-----------------|---------|

The middle chapter, and the least in the Bible, is Psalm 117. The middle verse is the eighth of the 118th Psalm. The middle line is the 2nd of Chronicles, 4th chapter, and 16th verse. The word and occurs in the Old Testament 35,543 times. The same in the New Testament, 10,684. The word *Jehovah* occurs 6,855 times.

Old Testament.—The middle book is Proverbs. The middle chapter is Job 29. The middle verse is the 1st of Chronicles, 20th chapter, between the 17th and 18th verses. The least verse is the 1st of Chronicles, 1st chapter and 1st verse.

New Testament.—The middle book is the 2nd of Thessalonians. The middle chapter is between the 13th and 14th of Romans. The middle verse is the 17th chapter of Acts, and 17th verse. The least verse is the 11th chapter of John, verse 36. The 21st verse of the 7th chapter of Ezra, has all the letters of the alphabet in it. The 19th chapter of the 2nd of Kings, and the 87th of Isaiah, are alike.

N.B. Three years are said to have been lost in this serious but idle calculation.

"Haniel's" JUDAS MACCABEUS.

O love-by Peace, with Flon-ty crown'd

**THE FIRST ANNUAL REPORT OF THE  
LONDON SUBURBAN AND HOME COUNTIES'  
PERMANENT BENEFIT BUILDING SOCIETY,**  
16 pages, 32mo.

"A thoroughly well-planned Building Society, and the  
Report decidedly the best treatise ever published."—*Times*.  
"A new era has opened upon us; this deserves and will  
certainly obtain public support."—*Daily News*.

Order of the Secretary, Mr. W. L. HARVEY, 3, Godil-  
man-street, Doctors' Commons.

"Costly thy habit as thy purse can buy,  
But not express'd in fancy—rich, not gaudy;  
For the apparel oft proclaims the man."—*Hamlet*.

**EVERY WELL-DRESSED MAN KNOWS**  
how difficult it is to find a tailor who thoroughly un-  
derstands the peculiarities of each figure, and can suit its  
requirements with a well-cut gentlemanly fitting garment,  
in which ease and taste, being equally regarded, the eye of  
the observer is pleased with its graceful effect, while the  
comfort of the wearer is secured. Hence it is that so few  
feel "at home" during the first day's wear of any new  
garment, and so many are apparently doomed to appear in  
clothes, however costly, that never can become adapted to  
their form. To remedy so manifest a deformity in cos-  
tume, FREDERICK FOX adopts this means of making  
known that he has practically studied both form and  
fashion in their most comprehensive meaning, and in the  
course of an extensive private connexion has clothed every  
conceivable development during the past thirteen years,  
always adapting the garment, whether coat, waistcoat, or  
trousers, to the exigencies of its individual wearer, and the  
purpose it is intended to serve, thus invariably attaining  
elegance of fit with that regard for economy which the  
spirit of the age dictates.—F. FOX, practical tailor, 73,  
Cornhill, same side of the way as the Royal Exchange.

**GLENFIELD PATENT STARCH.—NOW  
USED IN THE ROYAL LAUNDRY.**—The Ladies  
are respectfully requested to make a trial of the GLEN-  
FIELD PATENT DOUBLE-REFINED POWDER  
STARCH, which, for domestic use, now stands un-  
rivalled. Sold by nearly all the Oil and Colourmen  
and Chandlers in London, and throughout the Kingdom.  
Agents wanted: apply to Mr. R. WOTHERSPON, 40, Dunlop-  
street, Glasgow.

London Depot:—Wotherspoon, Mackay, & Co., 40, King  
William-street, City.

**WALKS ABROAD, AND EVENINGS AT HOME.**

AT HOME.**

CONTENTS OF THE FIRST NUMBER.

A Fine Steel Engraving. By Topham, after Lee.  
Summerfeld; or, Life on a Farm. By D. K. Lee.  
Views of the Microscopic World.  
The Rapids. With a Fine Engraving.  
The Adventures of Prince Pretty in the World of In-  
sect Wonders. By the Editor. With Three Fine  
Engravings.  
The Awakening of the Birds. With a Fine Engraving.  
Autographies of Animals. Dictated by Themselves.  
No. 1.—The Chimpanzee, or, Wild Man of the  
Forest. With a Fine Engraving.  
No. 2.—The Crocodile. With a Fine Engraving.  
No. 3.—The Heart: Poll and the Looking-  
Glass; Greyhound and Pointer.  
London: 69, Fleet-street; and all Booksellers.

**A GREAT LUXURY.**  
**PAYNE'S ROYAL OSBORNE SAUCE,**  
prepared by Her Majesty's Cheftain, in the Isle of  
Wight, specially patronised by the Royal Yacht Squadron,  
exhibited and used at the Great Exhibition of 1851, is con-  
sidered the premier sauce for fish, game, hot and cold  
meats, soups, gravies, &c.  
"We have tasted, and relished, many piquant sauces, but  
the Royal Osborne beats them all."—*Sun*, April 24, 1851.  
Sold wholesale by Rumsey, 3 Queen-street-place, London;  
retail, by Fortnum and Mason, and sauce-venders generally.

Now Publishing.

**NEW MEDICAL DICTIONARY FOR THE PEOPLE**  
In Monthly Parts, price 6d. each, to be completed in 12.  
Parts I., II., III., IV., V., are published.

**THE DICTIONARY OF DOMESTIC  
MEDICINE AND HOUSEHOLD SURGERY.**  
By SPENCER THOMSON, M.D., L.R.C.S., Edinburgh.  
Illustrated.

This work is intended to be a concise and ready book of  
reference in cases of emergency, either of severe illness or  
accident, in the absence of immediate medical assistance, and  
a safe guide in the domestic management of slight ail-  
ments, and of the sick-room generally.

Also, a compendium of those sanitary principles on which  
the attainment and preservation of health depend. It is  
the book of the intelligent mechanic, of the inexperienced  
mother, of the clergyman, and of the emigrant.

"It is the most clear and copious; and if continued as  
it has begun, will prove the most valuable periodical of the  
year."—*Tait's Magazine*.

"For families and for the clergy it will be a valuable  
guide."—*Oxford Herald*.

"Intended for all classes, and giving promise of un-  
doubted excellence."—*Newcastle Guardian*.

"We doubt whether any Medical Dictionary contains  
the same amount of correct and practical information. It  
is a work of very great value."—*Glasgow Examiner*.

"It is the best work of the kind yet attempted."—*Dur-  
ham Chronicle*.

"Dr. Thomson proceeds with his labours in the most  
satisfactory manner, and as the work progresses its use-  
fulness becomes more and more apparent."—*Hamphire  
Independent*.

"We cannot name a work in which families may find  
such valuable information at so trifling a price."—*Cornish  
Telegraph*.

"This work, when complete, will be the best of its kind  
extant, and ought to be found in every family library."—*Por-  
smouth Guardian*.

"It is one of the very best works of its class."—*Brad-  
ford Observer*.

"There can be no doubt of the utility and talent of the  
work."—*Bucks Herald*.

"The work may be safely referred to as an invaluable  
guide."— *Ipswich Express*.

"Ought to be in the hands of everybody."—*Kent Obs*.

"We certainly look upon this as an invaluable work,  
and no family should be without it."—*Cambs Independent*.

**PENNY MONTHLY STORY, FOR LITTLE  
CHILDREN.**

The Editors of the "Family Economist" have made  
arrangements for publishing a series of delightful little  
Stories for Young Children, to be called

**BUDS AND BLOSSOMS.** The Tales will  
be of a simple character, printed in legible type, with  
very pretty Engravings. They will be beautiful and at-  
tractive little books, adapted for Children of from four to  
seven years.

Published on the First of every Month.

**STORIES FOR SUMMER DAYS AND  
WINTER NIGHTS.** Second Series. These well-  
written and beautiful Stories for Young People will be  
found equally interesting to readers of older growth. They  
are lively, instructive, and moral; adapted to entertain and  
improve—to inform the mind and educate the heart. Each  
Story is illustrated with well-executed Engravings. They  
are among the best and cheapest books for Young People  
published.

ALREADY PUBLISHED.

The Sea-Kings.  
Madeline Tube and her  
Blind Brother.  
The Young Emigrants.  
The Boy and the Book.  
Oscar; or, A Tale of Norway.  
The Crusaders.  
The Ship and The Island.  
The Fairy Craft of Nature.  
The Widow's Son.

The above may be had in Four Vols., elegantly bound,  
or in elegant cases, price One Shilling each—separately,  
price Threepence each.

ALSO  
**HOME AT THE HAVEN, THE SEEKER AND THE  
FINDER.** Just Published.

LONDON: GROOMBRIDGE & SON.

**NOVELTY IN CROCHET.**—Miss LAM-  
BERT can now forward by return of post to those  
Ladies who would be first in the field her printed book, with  
full instructions and engravings for her new fancy work,  
which gained the Exhibition prize. Price, post-free, 6s. 2d.

9, CLAYTON-STREET, STRAND.

**WEEKLY ISSUE**

**FAMILY FRIEND.**

On SATURDAY, the 2nd of July, will be published No. I.  
of the NEW SERIES of

**THE FAMILY FRIEND;** with which  
Number will be presented a Beautiful French  
Engraving, by C. BOLLE, after a painting by W. COLEMAN,  
R.A., entitled,

"PARTING WITH A LITTLE FAMILY FRIEND!"

This Number will also have a new Title-page, by  
GILBERT. There will be no attention in size, shape, or  
price of "THE FRIEND." The present neat and commodious  
form being much approved.

For the convenience of those who have not taken in or  
completed the OLD SERIES, it is suggested that Orders  
should be given to Booksellers to supply

1st. The Whole Series, bound, price 15s. 6d.  
2nd. A Volume Monthly, price 3s. 6d. 1/2  
3rd. Three Numbers Monthly, price 10s. 6d.

Back Numbers and Volumes, for completing Sets, should  
be ordered immediately,  
London: HOULSTON and STOWMAN, 55, PATERNOSTER-row;  
and all Booksellers.

**THE FIRST SERIES OF THE FAMILY FRIEND.**  
Complete in Six Volumes, price 2s. 6d. each, or 15s. the Set.

**THE FAMILY FRIEND; in Six Volumes,**  
elegantly bound, the Contents being carefully Classi-  
fied and indexed, including 5,000 References to Matters of  
Domestic and Social Economy; comprising Books, Botany,  
Cookery, Cookery, Drinks, Food, Chess (by the celebrated  
Herr HARRWIS), Etiquette, Gardening, History, Leather-  
work, Music, Natural History, Needlework (by Mrs. WAR-  
REN), Pastime, Poetry, Receipts, Sciences, Statistics, Tales,  
Waxen Flowers, and Fruit, and a varied Miscellany.

Every matter of Domestic Necessity seems to be con-  
templated by these volumes, which will be found to supply  
the best modern DOMESTIC ENCYCLOPEDIA.

OPINION OF THE PRESS.

The following is a type of the opinion formed of THE  
FAMILY FRIEND, and expressed by upwards of three  
hundred Newspapers:

"There never was a book which more honestly earned  
its title, or more fully satisfied the expectations which that  
title would lead one to form of its character, than the  
*Family Friend*, the volumes of which, beautifully got out,  
are now before us. Those who have seen a copy of the  
work will bear us out in our statement, that a more useful  
and generally entertaining family library book has never  
been published. It contains a fund of information that it  
would be difficult to find elsewhere in the same compass.  
There are tales for the children; cookery, and other house-  
hold recipes for mamma; chess problems for papa; poetry  
and crochet for the young ladies; enigmas, anagrams, and  
charades for the young gentlemen to exercise their lague-  
nity on; and a large quantity of miscellaneous reading to  
suit all tastes."

The great success of THE FAMILY FRIEND during  
three years, and the constant desire of its Subscribers for a  
more frequent issue, have influenced the Proprietors to  
commence a new SERIES to be ISSUED WEEKLY,  
COMMENCING SATURDAY, the 3rd of JULY, 1852.

Weekly Numbers, price 2d.; Monthly Parts, price 9d.;  
Quarterly Volumes, 2s. 6d.

PUBLIC ANNOUNCEMENT.

**AN ELEGANT AND ENTIRELY NEW  
STOCK OF WATCHES.** For 1852, by EDWARD  
GRAFTON, of 81, Fleet-street, embracing all the improve-  
ments resulting from the Great Exhibition, at prices 20 per  
cent. cheaper than any other house.

Ladies' Gold Watches ..... 6, 8, 10, and 12 guineas.  
Gentlemen's Ditto ..... 7, 9, 12, and 14 guineas.  
Silver Ditto ..... 3 1/2 to 6 guineas.

Each watch skillfully examined, and its performance  
guaranteed. Established Manufactory, 81, Fleet-street.

IMPORTANT TO THE WORKING CLASSES.

**FINSBURY MUTUAL LIFE ASSU-  
RANCE.** Established, 1847. Guarantee Fund,  
£10,000. Life and Endowment Policies granted from £5  
to £100, free of Policy Stamp. Policies indisputable.

Monthly Payments. Payments may be made for the  
whole of Life, or to cease on attaining 65, 65, or 70 years  
of age; the amount insured payable at Death, or on  
attaining either of those ages, thereby forming a Provision  
for Old Age.

Prospectuses, forms, and every information supplied on  
application at the Office, 53, Esmouth-street, Clerkenwell,  
London (post-free for one stamp.) Agents required.

W. H. SEATON.

**THE curative properties of HOLLOWAY'S  
OINTMENT and PILLS** are daily attested. All  
ranks of society and medical men, both at home and abroad,  
speak of these incomparable medicines in the most flatter-  
ing terms, and assert that in the severest cases of chronic  
ulcers, those even which were considered incurable, Holo-  
way's Ointment has been truly efficacious when used; and  
there is no disputing the fact that Holloway's Pills are the  
very best family medicine ever known or tried. These  
valuable remedies will cure bad legs, however inveterate;  
disseminated; likewise rheumatic affections, glandular swell-  
ings, and the most obstinate cases of scurvy, erysipelas, or  
king's evil. Sold by all druggists; and at the Great Hol-  
loway's, 246, Strand.

### Editor's Note-Book.

#### DOMESTIC HINTS, No. 2.—

**ROASTING (continued).—**Ribs of Beef boned and rolled.—When you have kept two or three ribs of beef till quite tender, take out the bones, and skewer it as round as possible (like a fillet of veal); before they roll it, some

cooks egg it, and sprinkle it with salt stuffing. As the meat is more in a solid mass, it will require more time at the fire than in the preceding receipt: a piece of ten or twelve pounds weight will not be well and thoroughly roasted in less than four and a half or five hours. For the first half hour it should not be less than twelve inches from the fire, that it may get gradually warm to the centre: the last half hour before it will be finished, sprinkle a little salt over it, and if you wish to froth it, flour it, &c. **Mutton.**—As beef requires a large round fire, mutton must have a brisk and sharp one: if you wish to have mutton tender, it should be hung as long as it will keep; and then good eight-tooth, i.e. four years old mutton, is as good eating as venison. The leg, haunch, and saddle, will be the better for being hung up in a cool airy place for four or five days at least; in temperate weather, a week; in cold weather, ten days. A leg of eight pounds will take about two hours: let it be well basted. A chine or saddle, i.e. the two loins, of ten or eleven pounds, two hours and a half: it is the business of the butcher to take off the skin and skewer it on again, to defend the meat from extreme heat, and preserve its succulence; if this is neglected, tie a sheet of paper over it; baste the strings you tie it on with directly, or they will burn: about a quarter of an hour before you think it will be done, take off the skin or paper, that it may get a pale brown colour, and then baste it, and flour it lightly to froth it. A shoulder—of seven pounds, an hour and a half; put the spit in close to the shank-bone, and run it along the blade bone. A loin of mutton, from an hour and a half, to an hour and three quarters. The most elegant way of carving this, is to cut it lengthwise, as you do a saddle. A neck about the same time as a loin. It must be carefully jointed, or it is very difficult to carve. The neck and breast are in small families commonly roasted together; the cook will then crack the bones across the middle before they are put down to roast; if this is not done carefully, they are very troublesome to carve. A breast, an hour and a quarter. A haunch, i.e. the leg and part of the loin, of mutton: send up two sauce-boats with it; one of rich drawn mutton gravy, made without spice or herbs, and the other of sweet sauce. It generally weighs about fifteen pounds, and requires about three hours and a half to roast it. **Mutton, Venison fashion.**—Take a neck of, good four or five year old South-down or other mutton cut long in the bones, let it hang, in temperate weather, at least a week: two days before you dress it, take allspice and black pepper ground and pounded fine, a quarter of an ounce each, rub them together, and then rub your mutton well with this mixture twice a day: when you dress it, wash off the spices with warm water, and roast it in paste. **Veal.**—Veal requires particular care to roast it a nice brown. Let the fire be the same as for beef; a sound large fire for a large joint, and a brisker for a smaller: put it at some distance from the fire to soak thoroughly, and then draw it nearer to finish it brown. When first laid down it is to be basted; baste it again occasionally. When the veal is on the dish pour over it half a pint of melted butter: if you have a little brown gravy by you, add that to the butter. With those joints which are not stuffed, send up forcemeat in balls, or rolled into sausages, as garnish to the dish, or fried pork sausages: bacon and greens, are also always expected with veal. **Fillet of Veal** of from twelve or sixteen pounds, will require from four to five hours at a good fire; make some stuffing or forcemeat, and put it under the flap, that there may be some left to eat cold, &c. to season a hash: brown it, and pour good melted butter over it. Garnish with thin slices of lemon, and cakes or balls of stuffing, or duck stuffing, or fried pork sausages, curry sauce, bacon and greens, &c. A loin is the best part of the calf, and will take about three hours roasting. Paper the kidney fat, and the back: some cooks send it up on a toast, which is eaten with the kidney and the fat of this part, which is more delicate than any other. If there is more of it than you think will be eaten with the veal, before you roast it cut it off, it will make an excellent sweet pudding: take care to have your fire long enough to brown the ends.

**CHILTERN HUNDREDS.**—S. B.—The three hundreds of Deoborough, Stoke, and Burnham, in Bucks, are called the "Chiltern Hundreds," and take their name from the Chalk Hills which run through Bucks and the neighbouring counties. The property of these Hundreds remaining in the crown, a steward is appointed at a salary of 20s. and all fees, which nominal office is accepted by any Member of Parliament who wishes to vacate his seat.

**PISCATORIAL AMUSEMENTS.**—A correspondent has favoured us with a long dissertation against angling, which he terms "an idle, foolish, art, unworthy any man of sense, &c.;" opinions from which we altogether dissent. The real, true-hearted contemplative angler is to be envied,—he who can read in the rippling stream and the smiling fields, lessons of wisdom and love, denied to those who are engrossed in the harassing perplexities of business. In all ages and countries this noble pastime has been pursued as a healthful means of enjoyment and profit; let us listen to what a lady can say in its praise. In the "Book of St. Alban's," printed by Wynkyn de Worde in 1490, is a treatise on sporting by Dame Julian Berners, prioress of the nunnery of Sopwell, and in which, speaking of fishing, she observes:—"If his sport fall him, the angler at the least hath his wholesome walk, and is merry at his ease,—a sweet air of the sweet savour of the mead flowers that maketh him hungry,—he heareth the melodious harmony of fowls; he beholdeth the young swans, herons, ducks, coots, and many other fowls with their broods: which me seemeth better than all the noise of hounds, the blast of horns, that hunters, falconers, and fowlers can make. And if the angler take fish, surely then is there no man merrier than he is in his spirit." Nor must we forget the sweet invitation of the old poet who sings:

"Come live with me and be my love,  
And we will some new pleasures prove,  
Of golden sands, and crystal brooks,  
With silken lines, and silver hooks."

Of course there are contingencies that sometimes interrupt the angler's pleasures, but he will take care to secure a spot in which he can indulge in quiet reflections, free from the horns of any dilemma, and which affords all the advantages of

A RURAL RETREAT.

**TRUE FRIENDSHIP.**—G. LAWSON.—A definition of true friendship is not difficult, though unhappily the requisite ingredients are rare. According to Pliny the old Roman friendship was a composition of several ingredients, of which the principal was union of hearts, a fine flower that grew in several parts of the empire; sincerity, frankness, disinterestedness, pity, and tenderness, of each an equal quantity: these were all blended together with two rich oils, which were called perpetual kind wishes and serenity of temper; and the whole was strongly perfumed with the desire of pleasing, which gave it a most grateful smell, and was a sure restorative in all sorts of vapours. This cordial, thus prepared, was of so durable a nature, that no length of time could waste it: and what is very remarkable (says our author), it increased in weight and value the longer you kept it. This fine recipe has been most grossly adulterated by the moderns.

**REAL VALUE OF DREAMS.**—W.—There cannot be a doubt, as our correspondent reasonably supposes, that dreams may be applied to useful purposes. Dreams are affected by the state of our health, by the manner in which we have passed the preceding day, by the general habits of life. We may learn from them, therefore, to correct many improprieties in our conduct; to refrain from meat, or drink, or exercises, which have unfavourable effects on our constitutions; to resist in due time evil habits that are stealing upon us, and to guard against hopes and fears which suit us for the duties of life. Above all, we ought to remember that the dream of health and innocence is sound and refreshing; and the dream of pleasure and delight.

**COMMUNICATIONS RECEIVED.**—N. GREEN (the Calvinist) were called Huguenots from a pretended ghost said to haunt an old castle called Hugo's Tower, and thus became

the popular term with which mothers frightened their children when naughty. **RUSTICITY** (Mrs. Chisholm's address is at the Family Colonization Loan Society, 2, Charlton-terrace, Islington. This Society holds Monday evening meetings for the information of intending emigrants). B. H. (walking on foot is more serviceable to health than either carriage or horse exercise; for both body and mind are enlivened by walking; and even when carried to an extreme, it has often been found of great use in nervous diseases). G. WILSON (the best remedy for weak eyes is bathing them in pure cold water; it both refreshes and strengthens them). **ARTISAN** (a good white varnish may be made for using upon paper, wood, and linen, by mixing gum juniper, one pound, Strasburgh turpentine, six ounces, rectified spirits of wine, two pints). **GUZARRO** (the standard measure of length is a yard, and of liquids a gallon). H. (the committee of Australian colonists recommend that as little baggage and as much money as possible be taken out. No goods on speculative investments. A workman should take his tools, and a family may take linen, plated goods, knives and forks, but no wooden furniture). **INQUIRY** (taking the young and the old together, it is found that twenty-six years is the average age at which people die in London. In England and Wales only, 120,000 persons are always slowly dying of consumption). H. C. S. (the heat makes about seventy-five beats in a minute, during which time it sends nearly ten pounds of blood through the arteries and veins). **DAVIN** (over-exercise of the body is injurious. The great object should be so to blend exercise and repose, as to ensure the highest possible amount of bodily vigour). W. W. (the Royal Academy at Woolwich is an institution similar in character to that at Sandhurst, for the instruction of young men in the sciences in which they must be examined previously to being admitted into the artillery and engineer corps). **CLERK** (about 800 clerks are employed in the Bank of England; the patronage is shared among the directors). **GROUNDS** (papers are declined). **RUGBY** (cricket is usually played by eleven persons on each side, though a less number is sufficient). **CRIER** (Barbican took its name from a watch-tower which was destroyed in the year 1207, by Henry III.). S. (the common strawberry is a natural dentifrice, and its juice, without any preparation, dissolves the tartarous incrustation on the teeth, and makes the breath sweet and agreeable). **HENRY** (to restore the manuscript, take a hair pencil and wash the part which has been effaced with a solution of prussiate of potash in water, and the writing will again appear if it has not been destroyed). **PANCUS** (the best and most economical plan for securing a professional musical education is to obtain admission to the Royal Academy of Music, Tenterden-street, Hanover-square, where a list of the regulations may be had). **JUVENIS** (notwithstanding is a preposition). Q. (the cleanest and most generally useful fuel is charcoal of wood, or coke, neither of which give out any smoke, or impart any flavour). J. MASON ("let well alone" is an excellent saying, and ought to be remembered by our correspondent. To relinquish a positive engagement for an uncertain and supposed benefit would be unwise:

"I never saw an oft-removed tree,  
Nor yet an oft-removed family,  
That thrives so well as those that settled be.")

**CARVE** (the barometer varies less in summer than in winter because the temperature of our island is so nearly equal to that of the torrid zone, that its state is not much disturbed by interchange of currents). C. (as a preventive of corns, the size and figure of the shoes ought to be strictly attended to by making them sufficiently large, and of a shape corresponding to that of the foot). **PAISE** (if a servant hired for a term quit his service before the expiration of it, he loses all his wages). S. (doors shrink in dry weather because the moisture is absorbed from the wood; and, as the particles are brought closer together, the size of the door is lessened, or, in other words, the wood shrinks). **BEWARE** (among other useful works on Australia are "Wilkinson's Working Man's Handbook to South Australia," Haygarth's "Bush Life in Australia," Chambers' "Emigrant's Manual," &c.). **AMMIX** (a mixture of honey with the purest charcoal will prove an excellent cleanser of the teeth). **LOTA** (etching is a method of working on copper, wherein the lines or strokes, instead of being cut with a graver, are eaten with aqua-fortis).

Printed by WILLIAM TILLY, Bolt-court, London; and published for the Proprietor by JOHN BARNARD, 69, Fleet-street, London.

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 35.—Vol. I.

SATURDAY, AUGUST 28, 1852.

[PRICE ONE PENNY.]

## THE VICAR OF WAKEFIELD.

(Continued from page 432).

An accumulation of wealth, however, must necessarily be the consequence when, as at present, more riches flow in from external commerce than arise from internal industry; for external commerce can only be managed to advantage by the rich, and they have also at the same time all the emoluments arising from internal industry; so that the rich, with us, have two sources of wealth, whereas the poor have but one. For this reason, wealth, in all commercial states, is found to accumulate, and all such have hitherto in time become aristocratical. Again the very laws also of this country may contribute to the accumulation of wealth; as when, by their means, the natural ties that bind the rich and poor together are broken, and it is ordained that the rich shall only marry with the rich; or when the learned are held unqualified to serve their country as counsellors, merely from a defect of opulence, and wealth is thus made the object of a wise man's ambition; by these means, I say, and such means as these, riches will accumulate. Now the possessor of accumulated wealth, when furnished with the necessities and pleasures of life, has no other method to employ the superfluity of his fortune but in purchasing power. That is, differently speaking, in making dependents, by purchasing the liberty of the needy or the venal, of men who are willing to bear the mortification of contiguous tyranny for bread. Thus each very opulent man generally gathers round him a circle of the poorest of the

people; and the polity abounding in accumulated wealth may be compared to a Cartesian system, each orb with a vortex of its own. Those, however, who are willing to move in a great man's vortex, are only such as must be slaves, the rabble of mankind, whose souls and whose education are adapted to servitude, and who know nothing of liberty except the name. But there must still be a large number of the people without the sphere of the opulent man's influence, namely, that order of men which subsists between the very rich and the very rabble; those men who are possessed of too large fortunes to submit to the neighbouring man in power, and yet are too poor to set up for tyranny themselves. In this middle order of mankind are generally to be found all the arts, wisdom, and virtues of society. This order alone is known to be the true preserver of freedom, and may be called *the people*. Now it may happen that this middle order of mankind may lose all its influence in a state, and its voice be in a manner drowned in that of the rabble: for if the fortune sufficient for qualifying a person at present to give his voice in state affairs be ten times less than was judged sufficient upon forming the constitution, it is evident that greater numbers of the rabble will thus be introduced into the political system, and they ever moving in the vortex of the great; will follow where greatness shall direct. In such a state, therefore, all that the middle order has left is, to preserve the prerogative and privileges of the one principal governor with the most sacred circumspection; for he divides the power of the rich, and calls off the great from falling with tenfold weight on the middle order placed beneath them. The middle order may be compared to a town, of which the opulent are forming the siege, and which the governor from without is hastening the relief. While the besiegers are to

dread of an enemy over them, it is but natural to offer the townsmen the most specious terms; to flatter them with sounds, and abuse them with privileges; but if they once desert the governor from behind, the walls of the town will be but a small defence to its inhabitants. What they may then expect may be seen by turning our eyes to Holland, Genoa, or Venice, where the laws govern the poor, and the rich govern the law. I am then for, and would die for monarchy, sacred monarchy; for if there be any thing sacred amongst men, it must be the anointed Sovereign of his people; and every diminution of his power in war, or in peace, is an infringement upon the real liberties of the subject. The sounds of liberty, patriotism, and Britons, have already done much; it is to be hoped that the true sons of freedom will prevent their ever doing more. I have known many of those pretended champions for liberty in my time, yet do I not remember one that was not in his heart and in his family a tyrant."

My warmth, I found, had lengthened this harangue beyond the rules of good breeding; but the impatience of my entertainer, who often strove to interrupt it, could be restrained no longer.

"What," cried he, "then I have been all this while entertaining a Jem in parson's clothes! but, by all the coal-mines of Cornwall, out he shall pack, if my name be Wilkinson."

I now found I had gone too far, and asked pardon for the warmth with which I had spoken.

"Pardon!" returned he in a fury: "I think such principles demand ten thousand pardons. What! give up liberty, property, and, as the Gazetteer says, lie down to be saddled with wooden shoes! Sir, I insist upon your marching out of this house immediately, to prevent worse consequences: Sir, I insist upon it."

I was going to repeat my remonstrances; but just then we heard a footman's rap at the door, and the two ladies cried out,

"As sure as death, there is our master and mistress come home!"

It seems my entertainer was all this while only the butler, who, in his master's absence, had a mind to cut a figure, and be for a while the gentleman himself; and, to say the truth, he talked politics as well as most country gentlemen do. But nothing could now exceed my confusion upon seeing the gentleman and his lady enter; nor was their surprise, at finding such company and good cheer, less than ours.

"Gentlemen," cried the real master of the house, to me and my companion, "my wife and I am your most humble servants; but, I protest, this is so unexpected a favour, that we almost sink under the obligation."

However unexpected our company might be to them, theirs, I am sure, was still more so to us, and I was struck dumb with the apprehensions of my own absurdity, when whom should I next see enter the room but my dear Miss Arabella Wilmot, who was formerly designed to be married to my son George, but whose match was broken off as already related. As soon as she saw me, she flew to my arms with the utmost joy.

"My dear sir," cried she, "to what happy accident is it that we owe an unexpected visit? I am sure my uncle and aunt will be in raptures when they find they have the good Dr. Primrose for their guest."

Upon hearing my name, the old gentleman and lady very politely stopped up, and welcomed me with the most cordial hospitality. Not could they forbear smiling, upon being informed of the nature of my present visit; but the unfortunate butler, whom they at first seemed disposed to turn away, was, at my intercession, forgiven.

Mr. Arnold and his lady, to whom the house belonged, now insisted upon having the pleasure of my stay for some days; and as their niece, my charming pupil, whose mind in some measure had been formed under my own instructions, joined in their entreaties, I complied. That night I was shown to a magnificent chamber, and the next morning early Miss Wilmot desired to walk with me in the garden, which was decorated in the modern manner. After some time spent in pointing out the beauties of the place, she inquired, with seeming unconcern, when last I had heard from my son George?

"Alas, madam!" cried I, "he has now been nearly three years absent, without ever writing to his friends or me. Where he is I know not; perhaps I shall never see him or happiness more. No, my dear madam, we shall never more see such pleasing hours as were once spent by our fire-side at Wakefield. My little family are now dispersing very fast, and poverty has brought not only want, but infamy upon us."

The good-natured girl let fall a tear at this account; but as I saw her possessed of too much sensibility, I forbore a more minute detail of our sufferings. It was, however, some consolation to me to find that time had made no alteration in her affections, and that she had rejected several offers that had been made her since our leaving her part of the country. She led me round all the extensive improvements of the place, pointing to the several walks and arbours, and at the same time catching from every object a hint for some new question relative to my son. In this manner we spent the forenoon, till the bell summoned us in to dinner, where we found the manager of the strolling company that I mentioned before, who was come to dispose of tickets for the "Fair Penitent," which was to be acted that evening, the part of Horatio by a young gentleman who had never appeared on any stage. He seemed to be very warm in the praises of the new performer, and avowed that he never saw any who did so fair for excellence. "Acting," he observed, "was not learned in a day; but this gentleman," continued he, "seems born to tread the stage. His voice, his figure, and attitudes, are all admirable. We caught him up accidentally in our journey down." This account, in some measure, excited our curiosity, and, at the entreaty of the ladies, I was prevailed upon to accompany them to the play-house, which was no other than a barn. As the company with which I went was incontestably the chief of the place, we were received with the greatest respect, and placed in the front seat of the theatre, where we sat for some time with no

small impatience to see Horatio make his appearance. The new performer advanced at last; and let parents think of his sensations of their own, when I found it was the unfortunate son. He was going to bow, when, turning his eyes upon the audience, he perceived Miss Wilmot and me, and stood at once speechless and immovable. The actors behind the scene, who ascribed this pause to his natural timidity, attempted to encourage him; but instead of going on, he burst into a flood of tears, and retired off the stage. I do not know what were my feelings on this occasion, for they succeeded with too much rapidity for description; but I was soon awakened from this disagreeable reverie by Miss Wilmot, who, pale, and with a trembling voice, desired me to conduct her back to her uncle's. When got home, Mr. Arnold, who was as yet a stranger to our extraordinary behaviour, being informed that the new performer was my son, sent his coach and an invitation for him; and as he persisted in his refusal to appear again upon the stage, the players put another in his place, and we soon had him with us. Mr. Arnold gave him the kindest reception, and I received him with my usual transport; for I could never counterfeit false resentment. Miss Wilmot's reception was mixed with seeming neglect, and yet I could perceive she acted a studied part. The tumult in her mind seemed not yet abated; she said twenty giddy things that looked like joy, and then laughed loud at her own want of meaning. At intervals she would take a sly peep at the glass, as if happy in the consciousness of irresistible beauty, and often would ask questions without giving any manner of attention to the answers.

## CHAPTER XX.

### THE HISTORY OF A PHILOSOPHIC VAGABOND, PURSUING NOVELTY, BUT LOSING CONTENT.

AFTER we had supped, Mrs. Arnold politely offered to send a couple of her footmen for my son's baggage, which he at first seemed to decline; but upon her pressing the request, he was obliged to inform her that a stick and wallet were all the moveable things upon this earth that he could boast of.

"Why, ay, my son," cried I, "you left me but poor, and poor I find you are come back; and yet I make no doubt you have seen a great deal of the world."

"Yes, sir," replied my son; "but travelling after fortune is not the way to secure her; and, indeed, of late I have desisted from the pursuit."

"I fancy, sir," cried Mrs. Arnold, "that the account of your adventures would be amusing: the first part of them I have often heard from my niece; but could the company prevail for the rest, it would be an additional obligation."

"Madam," replied my son, "I promise you, the pleasure you have in hearing will not be half so great as my vanity in repeating them; yet in the whole narrative I can scarcely promise you one adventure, as my account is rather of what I saw than what I did. The first misfortune of my life, which you all know, was great; but though it distressed, it could not sink me. No person ever had a better knack at hoping than I. The less kind I found fortune at one time, the more I expected from her another; and being now at the bottom of her wheel, every new revolution might lift, but could not depress me. I proceeded, therefore, towards London, in a fine morning, no way uneasy about to-morrow, but cheerful as the birds that carolled by the road; and comforted myself with reflecting that London was the mart where abilities of every kind were sure of meeting distinction and reward."

"Upon my arrival in town, sir, my first care was to deliver your letter of recommendation to our cousin, who was himself in little better circumstances than I. My first scheme, you know, sir, was to be usher at an academy, and I asked his advice on the affair. Our cousin received the proposal with a true Sardonic grin. 'Ay,' cried he, 'this is indeed a pretty career that has been chalked out for you. I have been an usher at a boarding-school myself; and may I die by an anodyne necklace, but I had rather be an under-turkey in Newgate. I was up early and late: I was browbeaten by the master, hated for my ugly face by the mistress, worried by the boys within, and never permitted to stir out to meet civility abroad. But are you sure you are fit for a school? Let me examine you a little. Have you been bred apprentice to the business?' 'No.' 'Then you won't do for a school. Can you dress the boys' hair?' 'No.' 'Then you won't do for a school. Have you had the small-pox?' 'No.' 'Then you won't do for a school. Can you lie three in a bed?' 'No.' 'Then you will never do for a school. Have you got a good stomach?' 'Yes.' 'Then you will by no means do for a school. No, sir, if you are for a genteel easy profession, bind yourself seven years an apprentice to turn a cutler's wheel; but avoid a school by any means. Yet come,' continued he, 'I see you are a lad of spirit and some learning, what do you think of commencing author, like me? You have read in books, no doubt, of men of genius starving at the trade. At present I'll show you forty very dull fellows about town that live by it in opulence; all honest, jog-trot men, who go on smoothly and dully, and write history and politics, and are praised; men, sir, who, had they been bred cobblers, would all their lives have only mended shoes, but never made them.'

"Finding that there was no great degree of gentility affixed to the character of an usher, I resolved to accept his proposals; and having the highest respect for literature, hailed the *antiqua mater* of Grub-street with reverence. I thought it my glory to pursue a track which Dryden and Otway trod before me. I considered the goddess of this region as the parent of excellence; and however an intercourse with the world might give us good sense, the poverty she entailed I supposed to be the nurse of genius! Big with these reflections, I sat down, and finding that the best things remained to be said on the wrong side, I resolved to write a book that should be wholly new. I therefore dressed up three paradoxes with some ingenuity. They were false, indeed, but they were new. The jewels of truth have been so often imitated

by others, that nothing was left for me to import but some splendid things that at a distance looked every bit as well. Witness, ye powers, what fancied importance I put upon my quill while I was writing! The whole learned world, I made no doubt, would rise to oppose my systems; but then I was prepared to oppose the whole learned world. Like the porcupine, I sat, self-collected, with a quill pointed against every opposer."

"Well said, my boy," cried I, "and what subject did you treat upon? I hope you did not pass over the importance of monogamy. But I interrupt; go on, you published your paradoxes: well, and what did the learned world say to your paradoxes?"

"Sir," replied my son, "the learned world said nothing to my paradoxes; nothing at all, sir. Every man of them was employed in praising his friends and himself, or condemning his enemies; and, unfortunately, as I had neither, I suffered the cruellest mortification, neglect."

"As I was meditating one day in a coffee-house, on the fate of my paradoxes, a little man happened to enter the room, placed himself in the box before me, and, after some preliminary discourse, finding me to be a scholar, drew out a bundle of proposals, begging me to subscribe to a new edition he was going to give to the world of Propertius with notes. This demand necessarily produced a reply that I had no money; and that concession led him to inquire into the nature of my expectations. Finding that my expectations were just as great as my purse, 'I see,' cried he, 'you are unacquainted with the town; I'll teach you a part of it. Look at these proposals,—upon these very proposals I have subsisted very comfortably for twelve years. The moment a nobleman returns from his travels, a Creole arrives from Jamaica, or a dowager from her country seat, I strike for a subscription. I first besiege their hearts with flattery, and then pour in my proposals at the breach. If they subscribe readily the first time, I renew my request to beg a dedication fee. If they let me have that, I smite them once more for engraving their coat of arms at the top. Thus,' continued he, 'I live by vanity and laugh at it. But between ourselves, I am now too well known: I should be glad to borrow your face a bit: a nobleman of distinction has just returned from Italy; my face is familiar to his porter; but if you bring this copy of verses, my life for it you succeed, and we divide the spoil.'"

"Bless us, George," cried I, "and is this the employment of poets now? Do men of their exalted talents thus stoop to beggary? Can they so far disgrace their calling, as to make a vile traffic of praise for bread?"

"O no, sir," returned he, "a true poet can never be so base; for wherever there is genius, there is pride. The creatures I now describe are only beggars in rhyme. The real poet, as he braves every hardship for fame, so he is equally a coward to contempt; and none but those who are unworthy protection, condescend to solicit it."

"Having a mind too proud to stoop to such indignities, and yet a fortune too humble to hazard a second attempt for fame, I was now obliged to take a middle course, and write for bread. But I was unqualified for a profession where mere industry alone was to ensure success. I could not suppress my lurking passion for applause; but usually consumed that time in efforts after excellence which takes up but little room, when it should have been more advantageously employed in the diffusive productions of fruitful mediocrity. My little piece would therefore come forth in the midst of periodical publications, unnoticed and unknown. The public were more importantly employed than to observe the easy simplicity of my style, or the harmony of my periods. Sheet after sheet was thrown off to oblivion. My essays were buried among the essays upon liberty, eastern tales, and cures for the bite of a mad dog; while Philantros, Philalethes, Philutheros, and Philanthropos all wrote better, because they wrote faster than I."

"Now, therefore, I began to associate with none but disappointed authors like myself, who praised, deplored, and despised each other. The satisfaction we found in every celebrated writer's attempts was inversely as their merits. I found that no genius in another could please me. My unfortunate paradoxes had entirely dried up that source of comfort. I could neither read nor write with satisfaction; for excellence in another was my aversion, and writing was my trade."

"In the midst of these gloomy reflections as I was one day sitting on a bench in St. James's Park, a young gentleman of distinction, who had been my intimate acquaintance at the University, approached me. We saluted each other with some hesitation; he almost ashamed of being known to one who made so shabby an appearance, and I afraid of a repulse. But my suspicions soon vanished; for Ned Thornhill was at the bottom a very good-natured fellow."

"What did you say, George?" interrupted I. "Thornhill, was not that his name? It can certainly be no other than my landlord."

"Bless me," cried Mrs. Arnold, "is Mr. Thornhill so near a neighbour of yours? He has long been a friend to our family, and we expect a visit from him shortly."

"My friend's first care," continued my son, "was to alter my appearance by a very fine suit of his own clothes, and then I was admitted to his table, upon the footing of half friend, half underling. My business was to attend him at auctions, to put him in spirits when he sat for his picture, to take the left hand in his chariot when not filled by another, and to assist at tattering a kip, as the phrase was, when he had a mind for frolic. Besides this, I had twenty other little employments in the family. I was to do many small things without bidding; to carry the corkerew; to stand godfather to all the butler's children; to sing when I was bid; to be never out of humour; always to be humble, and, if I could, to be very happy."

"In this honourable post, however, I was not without a rival. A captain of marines, who was formed for the place, by nature, opposed me in my patron's affections. His mother had been laundress to a man of quality, and thus he early acquired a taste for plumping and pedigree. As this gentleman

made it the study of his life to be acquainted with lords, though he was dismissed from several for his stupidity, yet he found many of them who were as dull as himself, that permitted his assiduity. As flattery was his trade, he practised it with the easiest address imaginable; but it came awkward and stiff from me; and as every day my patron's desire of flattery increased, so every hour being better acquainted with his defects, I became more unwilling to give it. Thus I was once more fairly going to give up the field to the captain, when my friend found occasion for my assistance. This was nothing less than to fight a duel for him, with a gentleman whose sister it was pretended he had used ill. I readily complied with his request, and though I see you are displeased at my conduct, yet as it was a debt indispensably due to friendship, I could not refuse. I undertook the affair, disarmed my antagonist, and soon after had the pleasure of finding that the lady was only a woman of the town; and the fellow her bully and a sharper. This piece of service was repaid with the warmest professions of gratitude; but as my friend was to leave town in a few days, he knew no other method of serving me, but by recommending me to his uncle, Sir William Thornhill, and another nobleman of great distinction, who enjoyed a post under the government. When he was gone, my first care was to carry his recommendatory letter to his uncle, a man whose character for every virtue was universal yet just. I was received by his servants with the most hospitable smiles; for the looks of the domestic ever transmit their master's benevolence. Being shown into a grand apartment, where Sir William soon came to me, I delivered my message and letter, which he read, and after pausing some minutes, 'Pray, sir,' cried he, 'inform me what you have done for my kinsman to deserve this warm recommendation. But I suppose, sir, I guess your merits; you have fought for him; and so you would expect a reward from me for being the instrument of his vices. I wish, sincerely wish, that my present refusal may be some punishment for your guilt; but still more, that it may be some inducement to your repentance.' The severity of this rebuke I bore patiently, because I knew it was just. My whole expectations now, therefore, lay in my letter to the great man. As the doors of the nobility are almost ever beset with beggars, all ready to thrust in some sly petition, I found it no easy matter to gain admittance. However, after bribing the servants with half my worldly fortune, I was at last shown into a spacious apartment, my letter being previously sent up for his lordship's inspection. During this anxious interval I had full time to look round me. Everything was grand and of happy contrivance: the paintings, the furniture, the gildings, petrified me with awe, and raised my idea of the owner. Ah! thought I to myself, how very great must the possessor of all these things be, who carries in his hand the business of the state, and whose house displays half the wealth of a kingdom: sure his genius must be unfathomable! During these awful reflections, I heard a step come heavily forward. Ah, this is the great man himself! No, it was only a chambermaid. Another foot was heard soon after. This must be he! No, it was only the great man's valet-de-chambre. At last his lordship actually made his appearance. 'Are you,' cried he, 'the bearer of this here letter?' I answered with a bow. 'I learn by this,' continued he, 'as how that—' But just at that instant a servant delivered him a card, and without taking farther notice, he went out of the room, and left me to digest my own happiness at leisure. I saw no more of him, till told by a footman that his lordship was going to his coach at the door. Down I immediately followed, and joined my voice to that of three or four more, who came, like me, to petition for favours. His lordship, however, went too fast for us, and was gaining his chariot door with large strides, when I hallooed out to know if I was to have any reply. He was by this time got in, and muttered an answer half of which only I heard, the other half was lost in the rattling of his chariot wheels. I stood for some time with my neck stretched out, in the posture of one that was listening to catch the glorious sounds, till looking round me, I found myself alone at his lordship's gate."

"My patience," continued my son, "was now quite exhausted; stung with the thousand indignities I had met with, I was willing to cast myself away, and only wanted the gulf to receive me. I regarded myself as one of those vile things that nature designed should be thrown by into her lumber-room, there to perish in obscurity. I had still, however, half a guinea left, and of that I thought fortune herself should not deprive me; but in order to be sure of this, I was resolved to go instantly and spend it while I had it, and then trust to occurrences for the rest. As I was going along with this resolution, it happened that Mr. Crispe's office seemed invitingly open to give me a welcome reception. In this office Mr. Crispe kindly offers all his Majesty's subjects a generous promise of £30 a year, for which promise all they give in return is their liberty for life, and permission to let him transport them to America as slaves. I was happy at finding a place where I could lose my fears in desperation, and entered this cell (for it had the appearance of one) with the devotion of a monastic. Here I found a number of poor creatures, all in circumstances like myself, expecting the arrival of Mr. Crispe, presenting a true epitome of English impatience. Each untractable soul at variance with fortune, wreaked her injuries on their own hearts: but Mr. Crispe at last came down, and all our murmurs were hushed. He deigned to regard me with an air of peculiar approbation; and indeed he was the first man who for a month past had talked to me with smiles. After a few questions, he found I was fit for everything in the world. He paused awhile upon the properest means of providing for me, and slapping his forehead as if he had found it, assured me, that there was at that time an embassy talked of from the synod of Pennsylvania to the Chickasaw Indians, and that he would use his interest to get me made secretary. I knew by my own heart that the fellow lied, and yet his promise gave me pleasure; there was something so magnificent in the sound. I fairly therefore divided my half-guinea, one half of which went to be added to his thirty thousand

pounds, and with the other half I resolved to go to the next tavern, to be there more happy than he."

"As I was going out with that resolution, I was met at the door by the captain of a ship with whom I had formerly some little acquaintance, and he agreed to be my companion over a bowl of punch. As I never choose to make a secret of my circumstances, he assured me that I was upon the very point of ruin, in listening to the office-keeper's promises: for that he only designed to sell me to the plantations. 'But,' continued he, 'I fancy you might, by a much shorter voyage, be very easily put into a genteel way of bread. Take my advice. My ship sails to-morrow for Amsterdam. What if you go in her as a passenger? The moment you land, all you have to do is to teach the Dutchmen English, and I'll warrant you'll get pupils and money enough. I suppose you understand English,' added he, 'by this time, or the deuce is in it,' I confidently assured him of that; but expressed a doubt whether the Dutch would be willing to learn English. He affirmed with an oath that they were fond of it to distraction; and upon that affirmation I agreed with his proposal, and embarked the next day to teach the Dutch English in Holland. The wind was fair, our voyage short, and after having paid my passage with half my movables, I found myself fallen as from the skies, a stranger in one of the principal streets in Amsterdam. In this situation I was unwilling to let any time pass unemployed in teaching. I addressed myself therefore to two or three of those I met, whose appearance seemed most promising; but it was impossible to make ourselves mutually understood. It was not till this very moment I recollected, that in order to teach the Dutchmen English, it was necessary that they should first teach me Dutch. How I came to overlook so obvious an objection is to me amazing; but certain it is I overlooked it.

"This scheme thus blowing up, I had some thoughts of fairly shipping back to England again; but falling into company with an Irish student who was returning from Louvain, our conversation turning upon topics of literature (for by the way it may be observed, that I always forgot the meanness of my circumstances when I could converse upon such subjects), from him I learned that there were not two men in his whole university who understood Greek. This amazed me. I instantly resolved to travel to Louvain, and there live by teaching Greek; and in this design I was heartened by my brother student, who threw out some hints that a fortune might be got by it.

"I set boldly forward the next morning. Every day lessened the burden of my movables, like Æsop and his basket of bread; for I paid them for my lodgings to the Dutch as I travelled on. When I came to Louvain, I was resolved not to go sneaking to the lower professors, but openly tendered my talents to the principal himself. I went, had admittance, and offered him my service as a master of the Greek language, which I had been told was a desideratum in his university. The principal seemed at first to doubt of my abilities; but of these I offered to convince him by turning a part of any Greek author he should fix upon into Latin. Finding me perfectly earnest in my proposal, he addressed me thus: 'You see me, young man; I never learned Greek, and I don't find that I have ever missed it. I have had a doctor's cap and gown without Greek; I have ten thousand florins a year without Greek; I eat heartily without Greek; and, in short,' continued he, 'as I don't know Greek, I do not believe there is any good in it.'

"I was now too far from home to think of returning; so I resolved to go forward. I had some knowledge of music, with a tolerable voice, and now turned what was my amusement into a present means of subsistence. I passed among the harmless peasants of Flanders, and among such of the French as were poor enough to be very merry; for I ever found them sprightly in proportion to their wants. Whenever I approached a peasant's house towards nightfall, I played one of my most merry tunes, and that procured me not only a lodging, but subsistence for the next day. I once or twice attempted to play for people of fashion; but they always thought my performance odious, and never rewarded me even with a trifle. This was to me more extraordinary, as whenever I used in better days to play for company, when playing was my amusement, my music never failed to throw them into raptures, and the ladies especially; but as it was now my only means, it was received with contempt—a proof how ready the world is to underrate those talents by which a man is supported.

"In this manner I proceeded to Paris, with no design but just to look about me, and then to go forward. The people of Paris are much fonder of strangers that have money than those that have wit. As I could not boast much of either, I was no great favourite. After walking about the town four or five days, and seeing the outsides of the best houses, I was preparing to leave this retreat of venal hospitality, when passing through one of the principal streets, whom should I meet but our cousin, to whom you first recommended me. This meeting was very agreeable to me, and I believe not displeasing to him. He inquired into the nature of my journey to Paris, and informed me of his own business there, which was to collect pictures, medals, intaglios, and antiques of all kinds for a gentleman in London, who had just stepped into taste and a large fortune. I was the more surprised at seeing our cousin pitched upon for this office, as he himself had often assured me he knew nothing of the matter. Upon asking how he had been taught the art of a cognoscento so very suddenly, he assured me that nothing was more easy. The whole secret consisted in a strict adherence to two rules: the one, always to observe the picture might have been better if the painter had taken more pains; and the other, to praise the works of Pietro Perugino. 'But,' says he, 'as I once taught you how to be an author in London, I'll now undertake to instruct you in the art of picture-buying at Paris.'

"With this proposal I very readily closed, as it was living, and now all my ambition was to live. I went, therefore, to his lodgings, improved my dress by his assistance, and, after some time, accompanied him to auctions of

pictures, where the English gentry were expected to be purchasers. I was not a little surprised at his intimacy with people of the best of fashion, who referred themselves to his judgment upon every picture or medal, as to an unerring standard of taste. He made very good use of my assistance upon these occasions; for when asked his opinion, he would gravely take me aside and ask mine, shrug, look wise, return, and assure the company that he could give no opinion upon an affair of so much importance. Yet there was sometimes an occasion for a more important assurance. I remember to have seen him, after giving his opinion that the colouring of a picture was not mellow enough, very deliberately take a brush with brown varnish, that was accidentally lying by, and rub it over the piece with great composure before all the company, and then ask if he had not improved the tints.

"When he had finished his commission in Paris, he left me strongly recommended to several men of distinction, as a person very proper for a travelling tutor; and after some time I was employed in that capacity by a gentleman who brought his ward to Paris, in order to set him forward on his tour through Europe. I was to be the young gentleman's governor, but with a proviso that he should always be permitted to govern himself. My pupil, in fact, understood the art of guiding in money concerns much better than I. He was heir to a fortune of about two hundred thousand pounds, left him by an uncle in the West Indies; and his guardians, to qualify him for the management of it, had bound him an apprentice to an attorney. Thus avarice was his prevailing passion: all his questions on the road were, how money might be saved; which was the least expensive course of travel; whether anything could be bought that would turn to account when disposed of again in London? Such curiosities on the way as could be seen for nothing, he was ready enough to look at; but if the sight of them was to be paid for, he usually asserted that he had been told they were not worth seeing. He never paid a bill that he would not observe how amazingly expensive travelling was, and all this though he was not yet twenty-one. When arrived at Leghorn, as we took a walk to look at the port and shipping, he inquired the expense of the passage by sea home to England. This he was informed was but a trifle compared to his returning by land; he was therefore unable to withstand the temptation; so paying me the small part of my salary that was due, he took leave, and embarked, with only one attendant, for London.

"I now, therefore, was left once more upon the world at large; but then it was a thing I was used to. However, my skill in music could avail me nothing in a country where every peasant was a better musician than I; but by this time I had acquired another talent, which answered my purpose as well, and this was a skill in disputation. In all the foreign universities and convents there are, upon certain days, philosophical theses maintained against every adventitious disputant; for which, if the champion opposes with any dexterity, he can claim a gratuity in money, a dinner, and a bed for one night. In this manner, therefore, I fought my way towards England, walked along from city to city, examined mankind more nearly, and, if I may so express it, saw both sides of the picture. My remarks, however, are but few: I found that monarchy was the best government for the poor to live in, and commonwealths for the rich. I found that riches in general were, in every country, another name for freedom; and that no man is so fond of liberty himself, as not to be desirous of subjecting the will of some individuals in society to his own.

"Upon my arrival in England, I resolved to pay my respects first to you, and then to enlist as a volunteer in the first expedition that was going forward; but on my journey down my resolutions were changed, by meeting an old acquaintance, who I found belonged to a company of comedians that were going to make a summer campaign in the country. The company seemed not much to disapprove of me for an associate. They all, however, apprised me of the importance of the task at which I aimed; that the public was a many-headed monster, and that only such as had very good heads could please it; that acting was not to be learned in a day, and that without some traditional shrugs, which had been on the stage, and only on the stage, these hundred years, I could never pretend to please. The next difficulty was in fitting me with parts, as almost every character was in keeping. I was driven for some time from one character to another, till at last Horatio was fixed upon, which the presence of the present company has happily hindered me from acting."

## CHAPTER XXI.

### THE SHORT CONTINUANCE OF FRIENDSHIP AMONGST THE VICIOUS, WHICH IS COEVAL ONLY WITH MUTUAL SATISFACTION.

Mr son's account was too long to be delivered at once; the first part of it was begun that night, and he was concluding the rest after dinner the next day, when the appearance of Mr. Thornhill's equipage at the door seemed to make a pause in the general satisfaction. The butler, who was now become my friend in the family, informed me, with a whisper, that the Squire had already made some overtures to Miss Willmot, and that her aunt and uncle seemed highly to approve the match. Upon Mr. Thornhill's entering, he seemed, at seeing my son and me, to start back; but I readily imputed that to surprise, and not displeasure. However, upon our advancing to salute him, he returned our greeting with the most apparent candour; and after a short time his presence served only to increase the general good humour.

After tea he called me aside to inquire after my daughter; but upon my informing him that my inquiry was unsuccessful, he seemed greatly surprised; adding, that he had been since frequently at my house, in order to comfort the rest of my family, whom he left perfectly well. He then asked if I had communicated her misfortune to Miss Willmot or my son; and upon my replying that I had not told them as yet, he greatly approved my prudence and precaution, desiring me by all means to keep it a secret:

"For at best," cried he, "it is but divulging one's own infamy; and perhaps Miss Livy may not be so guilty as we all imagine."

We were here interrupted by a servant, who came to ask the Squire in, to stand up at country-dances; so that he left me quite pleased with the interest he seemed to take in my concerns. His address, however, to Miss Wilmot, were too obvious to be mistaken; and yet she seemed not perfectly pleased, but bore them rather in compliance to the will of her aunt than real inclination. I had even the satisfaction to see her lavish some kind looks upon my unfortunate son, which the other could neither extort by his fortune nor assiduity. Mr. Thornhill's seeming composure, however, not a little surprised me: we had now continued here a week, at the pressing instances of Mr. Arnold; but each day the more tenderness Miss Wilmot showed my son, Mr. Thornhill's friendship seemed proportionably to increase for him.

He had formerly made us the most kind assurances of using his interest to serve the family; but now his generosity was not confined to promises alone. The morning I designed for my departure, Mr. Thornhill came to me, with looks of real pleasure, to inform me of a piece of service he had done for his friend George. This was nothing less than his having procured him an ensign's commission in one of the regiments that was going to the West Indies, for which he had promised but one hundred pounds, his interest having been sufficient to get an abatement of the other two.

"As for this trifling piece of service," continued the young gentleman, "I desire no other reward but the pleasure of having served my friend; and as for the hundred pounds to be paid, if you are unable to raise it yourselves, I will advance it, and you shall repay me at your leisure."

This was a favour we wanted words to express our sense of: I readily, therefore, gave my bond for the money, and testified as much gratitude as if I never intended to pay.

George was to depart for town the next day to secure his commission, in pursuance of his generous patron's directions, who judged it highly expedient to use dispatch, lest in the meantime another should step in with more advantageous proposals. The next morning, therefore, our young soldier was early prepared for his departure, and seemed the only person among us that was not affected by it. Neither the fatigues and dangers he was going to encounter, nor the friends and mistress—for Miss Wilmot actually loved him—he was leaving behind, any way damped his spirits. After he had taken leave of the rest of the company, I gave him all I had, my blessing.

"And now, my boy," cried I, "thou art going to fight for thy country; remember how thy brave grandfather fought for his sacred king, when loyalty among Britons was a virtue. Go, my boy, and imitate him in all but his misfortunes, if it was a misfortune to die with Lord Falkland. Go, my boy, and if you fall, though distant, exposed, and unwept by those that love you, the most precious tears are those with which Heaven bedews the unburied head of a soldier."

The next morning I took leave of the good family that had been kind enough to entertain me so long, not without several expressions of gratitude to Mr. Thornhill for his late bounty. I left them in the enjoyment of all that happiness which affluence and good-breeding procure, and returned towards home, despairing of ever finding my daughter more, but sending a sigh to Heaven to spare and to forgive her. I was now come within about twenty miles of home, having hired a horse to carry me, as I was yet but weak, and comforted myself with the hopes of soon seeing all I held dearest upon earth. But the night coming on, I put up at a little public-house by the road side, and asked for the landlord's company over a pint of wine. We sat beside his kitchen fire, which was the best room in the house, and chatted on politics and the news of the country. We happened, among other topics, to talk of young Squire Thornhill, who, the host assured me, was hated as much as his uncle, Sir William, who sometimes came down to the country, was loved. He went on to observe, that he made it his whole study to betray the daughters of such as received him to their houses, and after a fortnight or three weeks' possession, turned them out unrewarded and abandoned to the world. As we continued our discourse in this manner, his wife, who had been out to get change, returned, and perceiving that her husband was enjoying a pleasure in which she was not a sharer, she asked him, in an angry tone, what he did there? to which he only replied in an ironical way, by drinking her health.

"Mr. Symmonds," cried she, "you use me very ill, and I'll bear it no longer. Here three parts of the business is left for me to do, and the fourth left unfinished; while you do nothing but soak with the guests all day long: whereas, if a spoonful of liquor were to cure me of a fever, I never touch a drop."

I now found what she would be at, and immediately poured her out a glass, which she received with a courtesy, and drinking towards my good health.

"Sir," resumed she, "it is not so much for the value of the liquor I am angry, but one cannot help it when the house is going out of windows. If the customers or guests are to be dunned, all the burden lies upon my back; he'd as lief eat that glass as pudge after them himself. There, now, above stairs, we have a young woman who has come to take up his lodgings here, and I don't believe she has got any money by her over civility. I am certain she is very slow of payment, and I wish she were put in mind of it."

"What signifies minding her," cried the host, "if she be slow she is sure."

"I don't know that," replied the wife; "but I know that I am sure she has been here a fortnight, and we have not yet seen the cross of her money."

"I suppose, my dear," cried he, "we shall have it all in a lump."

"In a lump!" cried the other, "I hope we may get it in any way; and that I am resolved we will this very night, or out she tramps, bag and baggage."

"Consider, my dear," cried the husband, "she is a gentlewoman, and deserves more respect."

"As for the matter of that," returned the hostess, "gentle or simple, out she shall pack with a sassafras. Gentry may be good things where they take; but for my part, I never saw much good of them at the sign of the Harrow."

Thus saying, she ran up a narrow flight of stairs that went from the kitchen to a room overhead: and I soon perceived, by the loudness of her voice, and the bitterness of her reproaches, that no money was to be had from her lodger. I could hear her remonstrances very distinctly:

"Out, I say; pack out this moment! tramp, thou infamous strumpet, or I'll give thee a mark thou won't be the better for this three months. What! you trumphy, to come and take up an honest house without cross or coin to bless yourself with; come along I say."

"O, dear madam," cried the stranger, "pity me, pity a poor abandoned creature for one night, and death will soon do the rest."

I instantly knew the voice of my poor ruined child Olivia. I flew to her rescue, while the woman was dragging her along by the hair, and I caught the dear forlorn wretch in my arms. (See engraving, page 518.)

"Welcome, any way welcome, my dearest lost one, my treasure, to your poor old father's bosom! Though the vicious forsake thee, there is yet one in the world that will never forsake thee; though thou hadst ten thousand crimes to answer for, he will forget them all."

"O my own dear,"—for minutes she could say no more—"my own dearest good papa! Could angels be kinder! How do I deserve so much! The villain, I hate him and myself; to be a reproach to such goodness. You can't forgive me, I know you cannot."

"Yes, my child, from my heart I do forgive thee! Only repent, and we both shall yet be happy. We shall see many pleasant days yet, my Olivia!"

"Ah, never, sir, never. The rest of my wretched life must be infamy abroad, and shame at home. But alas, papa, you look much paler than you used to do. Could such a thing as I am give you so much uneasiness? Surely you have too much wisdom to take the miseries of my guilt upon yourself."

"Our wisdom, young woman—," replied I.

"Ah, why so cold a name, papa?" cried she. "This is the first time you ever called me by so cold a name."

"I ask pardon, my darling," returned I; "but I was going to observe, that wisdom makes but a slow defence against trouble, though at last a sure one."

The landlady now returned to know if we did not choose a more genteel apartment; to which assenting, we were shown a room where we could converse more freely. After we had talked ourselves into some degree of tranquillity, I could not avoid desiring some account of the gradations that led to her present wretched situation.

"That villain, sir," said she, "from the first day of our meeting, made me honourable though private proposals."

"Villain, indeed!" cried I: "and yet it in some measure surprises me, how a person of Mr. Burchell's good sense and seeming honour could be guilty of such deliberate baseness, and thus step into a family to undo it."

"My dear papa," returned my daughter, "you labour under a strange mistake. Mr. Burchell never attempted to deceive me; instead of that, he took every opportunity of privately admonishing me against the artifices of Mr. Thornhill, who I now find was even worse than he represented him."

"Mr. Thornhill!" interrupted I; "can it be?"

"Yes, sir," returned she; "it was Mr. Thornhill who seduced me; who employed the two ladies, as he called them, but who in fact were abandoned women of the town, without breeding or pity, to decoy us up to London. Their artifices you may remember, would have certainly succeeded, but for Mr. Burchell's letter, who directed those reproaches at them which we all applied to ourselves. How he came to have so much influence as to defeat their intentions still remains a secret to me; but I am convinced he was ever our warmest, sincerest friend."

"You amaze me, my dear," cried I; "but now I find my first suspicions of Mr. Thornhill's baseness were too well grounded: but he can triumph in security; for he is rich, and we are poor. But tell me, my child, sure it was no small temptation that could thus obliterate all the impressions of such an education, and so virtuous a disposition as thine?"

"Indeed, sir," replied she, "he owes all his triumph to the desire I had of making him, and not myself happy. I knew that the ceremony of our marriage, which was privately performed by a popish priest, was no way binding, and that I had nothing to trust to but his honour."

"What!" interrupted I, "and were you indeed married by a priest, and in orders?"

"Indeed, sir, we were," replied she, "though we were both sworn to conceal his name."

"Why, then, my child, come to my arms again; and now you are a thousand times more welcome than before; for you are now his wife to all intents and purposes; nor can all the laws of man, though written upon tables of adamant, lessen the force of that sacred connection."

"Alas, papa," replied she, "you are but little acquainted with his villainies; he has been married already by the same priest to six or eight wives more, whom, like me, he has deceived and abandoned."

"Has he so?" cried I, "then we must hang the priest, and you shall inform against him to-morrow."

"But, sir," returned she, "will that be right, when I am sworn to secrecy?"

(To be continued.)

## CAROLINE AND CATHARINA.

(Continued from page 537.)

"It is Ignacio," said Catharina; "you had better be concealed, for we do not know whether we can trust him."

"Who is Ignacio?"

"He is the man who brings us supplies from Saltillo once a week. I do not know much of him, except that he has a face which is far from expressing honesty or generosity; for I always judge men by their faces, whether justly or not."

"Then the first glance is enough to determine you," said Hugh.

She smiled, and replied—

"We are both thinking of the same thing, I perceive; you think if I judge so rapidly, there is no reason for referring you to another day. But you forget; I do not do so on my own account so much as upon yours. And besides I form my opinions, not my feelings, in this way."

"I submit, of course," said her companion, "but always and I protest that you are wrong in expecting time to effect a change."

"Well, well," she said rapidly, as she rose to her feet, "I must hide you now, and talk to you some other time."

She led him a few steps back upon the path over which they had come, and passed through a short avenue where the chaparral encroached upon and overhung the path. Coming out where the way turned down the cliff towards the house, she turned suddenly to the left, entering a thicket by holding the bushes back with her hands.

"Here," said she stopping at the end of a few paces, and opening the foliage—"here is a fissure of our domain you have not seen."

Hugh advanced to her side, and found himself on the brink of a chasm cut by the waters to the depth of near sixty feet, but so concealed by the bushes on its edges as only to be discovered by parting the tangled branches. It was more than twenty feet wide, too, and seemed to extend a long distance both up and down.

"Did we cross this?" he asked.

"Yes," said she; "the little opening there is over a bridge built so long ago as to be overgrown by the vines, and blended with the ground on each side. If you will stoop a little you can see it."

He did so, and found that two points of rock jutted out from each side of the chasm, and approached each other so nearly as to admit of two large flat stones being extended at an angle of about fifty degrees—one on each side, and resting with their upper ends against each other, thus forming a kind of arch, being two sides of a triangle. On these the earth had been thrown so as to fill up the opening level with the ground on each side; and from this earth had sprung various kinds of shrubs, briars, and vines, so as to answer the purposes of screen and balustrade.

"How far does this ravine extend?" asked Hugh.

"It is a branch of the larger one which the house overlooks," she replied, "and runs into it at both ends, about half a mile above, and the same distance below the house. This is its shallowest point; the waters have washed it out above to within fifty feet of the bed of the main arroyo; but below there is a waterfall, in the wet season, of more than one hundred feet in height."

"Then the house is on an island," said Hugh, "connected with the mainland only by this bridge?"

"Yes," said Catharina; "but there is a path down the bed of this chasm by which we can reach the bottom of the great ravine; it is, however, not accessible from below without assistance from above. The path is reached by a stone door which opens at the back of the recess you saw me enter in the room where your friend lies."

"It is admirably situated for defence," said Hugh.

"And," said she, "its capabilities in that way may soon be tried."

"How do you mean?"

"I saw two men besides Ignacio," said she, "apparently following him—perhaps led by him; and these men may be the same who were pursuing you."

"If they are only two," said Hugh, with a smile, "we shall have no necessity for throwing down the bridge."

"If they are alone—perhaps not," she replied. "But I hear them coming; I must run down and warn father."

"I will go with you," said Hugh; but she stopped him.

"You remain here," she said, "I cannot conceal more than one; but if you hear me call, you may come as soon as you wish. *Adios*, then," and giving him her hand, which he carried to his lips, she smiled at the gesture, and left him.

## CHAPTER XIX.

"My lord, there are certain nobles of the senate  
Come to visit you"—SHAKESPEARE.

"Fast bind, fast find."—TALBOT

"Mute not that I thus suddenly proceed"—IDIB.

By the time Catharina reached the house, and warned her father of the approach of strangers, Hugh could hear footsteps and voices not more than fifty yards from him, on the other side of the ravine. One dark, short Mexican, dressed in the usual costume of his class and country—slashed pants, serapes and sombrero—preceded two others, and led a mule heavily laden with various supplies, such as beans, flower, cornmeal, and fresh pork. The two behind him Hugh could possibly have recognized if he had seen

them—they were the same respectable couple who had followed him and Allen on the day before. They were, however, now afoot, and apparently bent upon a peaceful mission; for the broken conversation which passed between them and Ignacio, denoted that they were attracted by the prospect of finding something to eat.

"I see no rancho near here, *hombre*," said the taller of them, as they came near the bridge. "I think we had better stop and cook some of that meat here."

"It is right here, *senor*," replied Ignacio, with the same tone and gesture he would have used had it been five miles away.

"Humph!" said Hugh to himself; "I wish he were no nearer to the truth than these fellows usually are."

The words were spoken aloud, and reached the Mexican's ear, though indistinctly. He started, and raised his carbine to his face, as if to fire into the bushes. But no further sound followed, and apparently reassured he walked on. Ignacio tied the mule on the inside of the bridge, and relieving her of her load, took part of it in his hands and descended to the house. The two men followed him, and they passed out of Hugh's hearing.

As they reached the little terrace on which the rancho was built, they manifested considerable surprise; but a moment afterwards old Bonaro came out of the door next to them, and invited them within.

"Are you not Andreas Bonaro of Monterrey?" asked the leader.

"I am," said the old man. "And who are you?"

"Miguel Perez, of San Buenaventura; I am hunting cattle among the mountains, and had got out of provisions, when we met your man, Ignacio, and came along with him to throw ourselves on your hospitality."

"Are you not the Perez who has a beef contract with the Americans?"

"The same, *senor*." The man replied as if in justification, "But what could I do? They took my cattle and I could not prevent it—I had better have pay for the cattle, than lose them without, certainly."

"I do not blame you," said Bonaro; "you need not justify yourself to me. Marola," he continued, turning to the female, "prepare something to eat for Ignacio and the *Senors*—they will excuse me for a while." So saying he pointed to rude benches, ranged along the south side of the room, on which the two men seated themselves, and passed out.

He had hardly gone out of hearing when Marola approached close to Perez and in a low voice whispered—

"He is gone to hide *Los Americanos*."

"*Los Americanos*!" said Perez in the same tone. "Are these Americans at the rancho?"

"*Si, senor*," said the woman, gazing at him with her furtive eyes, as if she would have penetrated his soul. "Two of them."

"Two of them?" he repeated, turning to his companion with an inquiring glance. "There may be our men, and this explains their escaping us so completely. When did they come here?"

"This morning early," she said; "one of them had his arm broken and is now in bed in the south room. The other walked out with Catharina several hours ago."

"Is he very sick?" asked the Mexican.

"I do not know," said the woman; "but he is in bed."

"Can we not take them ourselves?" whispered the Mexican to his companion. "If we can secure the one who is well, the other will give us no trouble. Where did you say the other is, *muger*?"

"On the mountain somewhere," she replied; "I saw Catharina come in alone a few minutes ago."

The leader turned again to his companion, and a whispered conference ensued, inaudible to Marola, but not to Catharina. The latter first locked the door of the room in which Allen lay, and then passed into the next room, where Hugh had slept. Soon afterwards, re-appearing, she entered the third room, which was hung with red instead of white, but in other respects corresponded with the second. She approached the north side of the room which adjoined that in which the men were, and drew aside the hangings about midway of the wall. This disclosed an open doorway, into which she stepped, dropping the hangings noiselessly behind her. She was thus separated from the men only by a heavy Spanish blanket which was fastened across the doorway on the side of the kitchen. She reached this place about the time her father left the room, and was therefore an ear-witness and in some degree an eye-witness of the conference in the other room. By bending down she could distinguish the words of the confederates; and soon learned that if they could gain access to Allen's room they would at once secure him, and then await the approach of Hugh. She observed that they spoke of them by name, as if they knew them; and that it was only Hugh whom they wished to kill. "These men do not belong to General Minon, then," she thought, "and they are actuated by treachery, not patriotism." Her resolution was taken in a moment.

Lifting the curtain again, she softly passed back into the third room, and sought her father. A hurried consultation ensued, and she entered the room where the men were still seated.

"Is your name Miguel Perez, *Senor*?" she asked as she entered.

"*Si, Senora*," the other replied as he took off his sombrero.

"Are you the same who has a beef contract with the American commissary?" she pursued.

"*Si, Senora*, the same," he again replied.

"Then you are a friend to the Americans?" she again asked.

"*Si, Senora*," he replied once more; "nothing would please me better than to have an opportunity of showing it."

"You will pardon my caution," she said after a pause; "it is necessary that I make no mistake. There are two Americans here in distress, having been chased by some of General Minon's cavalry; and one of them is very

sick. He recollects your name, however, and says you can be trusted. Who is this you have with you?"

"Antonio Rey, my assistant," the man replied, "he is as worthy of trust as myself. Will you tell me who the American is?"

"I doubt not you are equally trustworthy," she replied calmly. "The name of one of the Americans is Vernon; the other name I cannot pronounce."

"Manning, is it not?" said he. "They left the camp together."

"You know them, then?"

"I have seen them both," said the man.

"Well," said Catharina, "Mr. Vernon wishes to send word to his friends of his situation: will you go with me to his bedside?"

"Willingly," said he; "but Antonio knows him better than I do, and speaks English better. Perhaps he had better go with us."

"Very well," said she, "let us go. You had better leave your carbines here; he is feverish, and they might annoy him."

The men laid down their guns, and Perez glanced stealthily at Marola and then at them. She nodded slightly, and they followed Catharina. She led them out into the arbour, and past the second door. Opening the door of the room in which Hugh had slept, she passed across it and held back the hangings of the opposite side. She thus disclosed a massive stone door, high and narrow, made of one heavy slab, secured on the outside by a strong iron bolt let into the solid rock. This bolt she slipped back and pushed the door open. Within they could see a small room with a high ceiling and three sides. It was dimly lit by a small grated window, about as high as a man's head; and in the obscurity they could just see a bed on which some one seemed to be lying.

"We put him here for greater security," she said, as she stood aside with her hand on the bolt, to allow them to pass. This they did eagerly towards the bed; but before they were half way across the room they heard the door close behind them; and on turning they found themselves prisoners! Catharina had drawn the door close, and slipped the bolt into its socket—thus securing it so safely that the strength of ten men could not have moved it the breadth of an hair. Perez sprang to the place, but found that the slab was so neatly fitted that even the point of his sword could not enter the crevice.

"*Cuajo!*" he exclaimed, fiercely, "what does this mean?"

"It means," said Catharina, from the other side, "that you are prisoners; and that we will not allow you to play the traitor."

He saw at once that his plan was discovered, and that he had been outwitted. After in vain endeavouring to persuade her to open the door, making every conceivable pledge of good behaviour, he at last desisted in despair, when she assured him solemnly that he should not see the outside of the door again, until the Americans were in safety. He turned with a deep curse to the bed; and was not surprised to find it empty. Catharina had, in fact, in anticipation of what afterwards happened, thrown the clothes together in such a manner as to present at first glance the appearance of being occupied. Perez thrust his sword angrily into them, and then threw it down upon the floor. He advanced to the window and looked out; but the view was bounded by the perpendicular side of the ravine, some twenty feet from him; and from the window he could see neither top nor bottom.

"This is a handsome termination of our enterprise," he said bitterly, as he turned and seated himself upon the bed.

The other shrugged his shoulders and approached the door.

"At any rate," said he, slipping a large bolt, corresponding to that on the outside, "if we cannot get out, they cannot get in."

"That is some consolation, truly," said the other still more bitterly.

In the meantime Catharina called her father, and leaving him to guard the door, she ran lightly up the path to Hugh.

"I have them safe," said she, laughing, as she approached him quietly seated on the ground.

"What have you done?" he asked, rising. "And who are they?"

"The men who were following you. I have caged them where they cannot escape. Come, you shall be their jailor."

"Splendidly done!" he exclaimed as she related her stratagem, "and you are a real heroine!" He threw his arm suddenly around her, and in spite of her struggles kissed her cheek.

"I differ from most heroines, however," said she, extricating herself and springing some paces from him; "for I am not fond of kissing, even from heroes like yourself."

There was a flash in her eye which, notwithstanding a faint smile, Hugh saw denoted anger.

"Pardon me," said he softly, "I had forgotten."

"You must not forget again," she said gravely, "and on that condition alone I forgive you now. Another such attack and I open the door to your enemies."

"I would rather fight them than offend you," said he, "and therefore I accept the condition—for the present."

"Why do you say, 'for the present?'"

"I was only repeating your own words," said Hugh, smiling.

"True, true; I had forgotten."

"You must not forget again," said Hugh, "and on that condition alone, I forgive you now."

"I am not likely to forget," said she smiling again, "if you wish me to remember."

"You must not doubt, either," said he.

"Well, well," she said, "let us adjourn the discussion, and go to see our prisoners."

Moving toward him the door, she next took him through Allen's room,

where the latter still slept heavily, and into the recess from which we saw the take the goblets. Here she pushed open a small door, and they stepped out upon a narrow ledge, which overhung the bed of the ravine some forty feet, and ran along the face of the wall about half that distance.

"By that window," said she, "you will have to feed your prisoners."

"Were there not three of them?" he asked.

"Only two," said she. "Ignacio is in the house somewhere, but father will see that he does no harm."

"And Marola?" said he.

"We must watch her." And they returned to the front of the house.

## CHAPTER XX.

"Arcades ambo," *id est*, blackguards both."—BROWN.

"I do it not in evil disposition, But from Lord Angelo, by special charge."—SHAKESPEARE.

"NECESSITY knows no law;" and perhaps the necessity of following the course of a story is the most inexorable of all necessities. How often have we—in the first years of our novel-reading, when the passage through the land of fiction was like a walk on a dewy morning in summer—how many, many times have we been hurried away by this arbitrary necessity, from pleasant passages of love, or exciting tales of wondrous adventure, to follow the fortunes of some prosy, matter-of-fact personage or character, whose bosom never owned the "grand passion," or whose heart had no extra bound for "hairbreadth 'scapes," or wonderful adventure! And this, too—oh! unreasonable and capricious "necessity!"—just when the lover was taking his mistress' hand, or when some murderous villain was stealing round a corner, or through a dark passage, upon his unsuspecting victim! When we did not know, but, on returning to the scene again, we would find the lovely, blue-eyed heroine fainted utterly away, or the unconscious hero weltering in his blood! If Bulwer and James, *et id omne genus*, could hear the one-thousandth part of the censure they have received for this sin, or could they know how many pages of "fine writing" have been skipped, and inconsistently consigned to oblivion, we verily believe they would strive to "mend their ways!" Strive they might, with all their great strength, but ineffectually: for it is unfortunately true, that even in the best-told stories, there is often a "dire necessity" for suddenly and even provokingly shifting the scenes.

To such a point have we come in our turn. We must leave our friends in their precarious situation—a situation rendered more precarious than they knew, by the numerous scouting parties already pushed forward towards the American lines by General Minon—and look into General Taylor's camp at Agua Nueva. General Wool's column, which had been started on an expedition to Chihuahua, but, as every sensible man foresaw, did not get there—had been marching and countermarching between Buena Vista, Encantada, and Agua Nueva, at intervals of two or three days, and was now, with the troops left to Taylor by Scott's requisition, encamped at the place last mentioned.

Agua Nueva is a mere collection of ranchos, standing at the head of the same valley, upon a lower terrace of which Saltillo is built. The two ridges, which bound this valley upon the east and west, approach each other at Buena Vista, so as to leave a space of scarcely two miles between them. Assuming the appearance of a level plain, the valley extends in almost equal width some fifteen miles farther to the south, to Agua Nueva, which is the head of the valley; and directly in the space between the ridges, throwing itself boldly up into the air, and almost filling up the valley, stands a single peak, isolated and pine-covered, bounding the view, and frowning sternly down upon the plain below. Immediately to the south opens the Paso (of Agua Nueva), through which runs the road to San Luis de Potosi; and upon the west, on the northern side of Agua Nueva mountain, opens another pass, through which runs the road to Zacatecas and the northern States.

Between, and at about equal distances from these two openings, directly at the foot of, and almost under the mountain, was pitched the American camp; its right in the direction of the Zacatecas road, and its front to the south. The ground was perfectly level, crossed here and there by small irrigating canals; and along these canals was almost the only shrub or bush upon the plain. There was plenty of ground, and the camp was therefore widely extended. The tents of the different regiments bore, painted in black, the name of the State from which they came; and at the quarters of each colonel fluttered the regimental colors. The tents, flags, and accoutrements generally, like the clothes of most of the soldiers who were visible, denoted rough service in a foreign land; for perhaps an army less completely supplied with clothing was never got together. The arms, however, which were either stacked in the company streets, or stood leaning against racks, glistened in the evening sun, giving evidence of strict discipline and soldierly bearing; while the long chain of sentinels, covering at least a square mile of land, paced slowly upon their posts, and seemed to be guarding the repose of the camp within. The sun, even at that season, was very warm; and, consequently, but few of the men were visible without the tents. Could the eye have penetrated these canvas walls, the soldiers would have been found engaged in all the varieties of amusement which contribute to pass the time, among which dice and cards would have been found to bear no mean rank. Here and there an officer in uniform might be seen standing at the door of a tent, or walking leisurely along the lines; but these were either among those who pride themselves upon their embroidery, or those on duty for the day; for while encamped in that climate but few can be studiously dressed. Little groups sat around the guard-tents, or hastily paraded now and then at the approach of a superior officer; but no other sign of bustle or excitement was visible throughout the encampment. The whole scene wore an air of

listless repose, amounting to inactivity; and there really was an indifference which would have been dispelled could they have known what was passing within a short day's journey of their guard-lines.

The regiment to which the course of our story leads us, was encamped somewhere between the extreme right and extreme left—information quite sufficient for our present purpose, and we hope equally satisfactory to the reader. At the usual distance in the rear of the line of tents occupied by the company officers, were the regimental headquarters. A large and remarkably fine *marquise*, with its curtains raised and festooned, and a small pennon flying in front, was fronted by another smaller tent, and between them were seated three or four officers. We have nothing to do with any of them but Lieut.-colonel Thorpe, and we will therefore pass them with slight ceremony. Our acquaintance was listening with some interest to a conversation in which he took no part, wherein the adjutant was detailing what he had seen in the course of a recent reconnaissance.

"You could hear nothing of Manning and Vernon?" asked the colonel of the regiment.

"Nothing definite," said the adjutant. "But two Americans were seen to pass along the plain beyond the pass of Pinones about two weeks ago; and, from the description, I am inclined to think it must have been them."

"They are probably lost before now, at all events."

"Perhaps they may have fallen in with Major Gaines' party, and thus been taken prisoners with him."

"I scarcely think they could have been so fortunate," said the colonel; "I fear they have been murdered."

"O, they'll turn up some of these times," said Thorpe. "They were neither of them men to get themselves caught easily."

"Well," said the colonel, "I hope so, but I fear they are lost."

He rose as he spoke, and passed into his tent followed by the adjutant. Thorpe raised his fine figure and, adjusting his sword-belt, walked forward towards the front of the camp. As he left the line of tents he made a slight sign to a Mexican, dressed as a *vagabundo*, or cow-herd, who had walked past the colonel's quarters several times during the foregoing conversation. The latter seemed not to notice him, but immediately started off in the direction of the front-guard house, and soon afterwards passed out. The lieutenant-colonel, who was field-officer of the day, approached the guard, had it paraded, and, dismissing it, spoke to the captain in command—

"What Mexican was that I saw pass out?"

"One of the quarter-master's *vagabundos*," replied the captain, "who has a pass signed by General Wool."

"Have him brought back," said the colonel; "or, stay! I will question him myself."

So saying he called twice or thrice to the Mexican, following him towards the mountain. But the Mexican walked on till he entered the thicket which grows luxuriant here, when, looking back to ascertain whether he could be seen from the camp, he turned leisurely round and waited for Thorpe to come up.

"Have you any news to tell me?" inquired Thorpe of the Mexican.

The Mexican made the usual gesture of his nation—shaking one finger in front of his face—and replied "*nada*," or none. (See engraving, page 536).

"Why are you here, then?" asked Thorpe, bending his cold eyes upon him, with an expression which at once determined that he was the master, the Mexican the slave.

"I mean, Senor," said the Mexican hastily, "that I cannot tell you what you wish to hear; but I can tell you where they are to be found."

"They! Who?"

"The two men—the lieutenant and the other."

"Well, go on."

"They escaped us by some means on the plain beyond the pass of Pinones, and for a day or two we could not—"

"I know all that," interrupted the colonel; "you came to camp to see if they had returned; and you went back to find them. Tell me what you have discovered."

"I went back," he continued, "but could not find Perez and Rey, who were searching the mountain on the west."

"Have you found them yet?"

"No, senor," he replied, "and I think they must have been taken by some scouting party of General Miion."

"And where are your comrades?"

"They are all gone back home. Nobody but Perez could keep them together, especially without pay."

"And you only continue to serve me in the hope of reward," said Thorpe abruptly; "I understand that."

"Oh! Senor!" exclaimed the scoundrel, as if injured in the point nearest to his heart—his good name—accompanying the exclamation with extravagant gesticulations, expressive of fidelity, humility, and injured innocence.

"Well, well," said Thorpe impatiently, "never mind your honour, but give me your information. Where are they?"

"In the mountain," replied his agent, at once resuming his air of quiet inferiority. "I searched the mountains for miles upon miles, going from the plain to the peaks—O! numberless times!"

"And at last you found them?" again interrupted Thorpe.

"Si Senor, I at last found a *ranchero* hid in a ravine, where I suspected they were hidden. I watched it several days, and at last discovered the lieutenant walking out with the daughter of the *ranchero*, on the mountain."

"Why did you not shoot him at once?"

"Because, Senor, I could not trust my gun so far! and you know, if I had missed my aim—"

"I understand," said Morris; "if you had missed him, he might not have missed you. But how far off were you?"

"O, a long way! too far to shoot with certainty."

"You might say that if you were within ten paces."

The man shook his finger again, and commenced a very voluble panegyric upon his steady hand and unerring aim; but Thorpe cut him short—

"Come," said he, "no boasting; but tell me what you did."

"I watched him until he went back, trying all the time to get closer, but without success. When they turned their backs, I was afraid to shoot for fear of killing the girl instead of him; and so I waited for another chance."

"Were they so close together, then?" asked Thorpe, smiling.

"Each had an arm around the other," said the Mexican, "so of course I could not fire without danger to her."

"If you could have killed them both at one shot," said Thorpe with a sneer, "I presume her death would not have troubled you much."

"His death might have consoled me for hers," said the villain. "But I was too far off at any rate."

"And why are you here now?"

"Your excellency is so impatient," said the fellow.

"Don't excellency me," said Thorpe, sternly; "but tell your story straightforward and at once: and let it be true, or I will have you hung to the first tree high enough to stretch you."

The fellow cowered humbly and went on.

"I came on this side of the pass to get provisions, and went back to watch again. On the second day, I got close in upon the house and watched it for several hours. I saw no one but an old man and the young girl until nearly sunset; when the lieutenant came out from under the arbour, supporting Senor Vernon, who looked very pale, and walked feebly and with great difficulty."

"What's the matter with him?" asked Thorpe.

"He seems to have been sick," said the fellow, "and he had one arm in a sling. I told you before how his horse had fallen, when we supposed they had both rode the lieutenant's horse. Well, I suppose he must have had his arm broken then."

"This explains Manning's not returning to the camp," said Thorpe.

"After walking several times up and down the rock," continued the fellow, "they returned to the house and I saw them no more."

"And what is the reason you did not shoot him this time?"

"For the same reason as before," said the fellow, "too far off; and, besides, I could not have got them both."

"I care nothing about the other," said Thorpe, abruptly. "If Manning is out of the way, the other cannot trouble me."

"I came away the same night," the Mexican went on, "to get assistance. There is no danger of their going away from there; for Senor Vernon does not look as if he would be able to move for a month."

Thorpe cast his eyes upon the ground and mused for several minutes, the Mexican waiting patiently for him to speak. The deepest thinkers in the world are the greatest villains; and it is only because villainy and success are not coupled in the nature of things, that their combinations are so often broken.

"Well," said he, raising his eyes at last, "I suppose it is useless to expect you to do this business alone. Don't interrupt me—I know all you would say in justification of your cowardice. And you must, therefore, have assistance. Hire four men—men, mind, that you can trust; take them with you, make what bargain you choose, and when you satisfy me that Manning is dead, you shall have five hundred dollars. But, remember, my name is not to be given to these men—no, not even thought of, until you come for your reward. Vernon you need not touch, unless it becomes necessary in order to the death of the other. And now, let me see you no more until it is done."

He turned as he spoke the last words, and without looking round, walked leisurely towards the guard-house. The Mexican stood gazing after him until he disappeared; and then going further into the thicket, brought out a horse, mounted him, and rode rapidly away.

Thorpe's anxiety to dispatch Hugh, though it may surprise the reader, was very easily explained. In a fit of spleen (such as citizen soldiers often indulge in while being brought into the harness of discipline), caused by some arbitrary order of his superior, Hugh had been imprudent enough to say that if Lieutenant-Colonel Thorpe knew all the information that he, Hugh, was possessed of, he would be a little more careful in his tone. This happened to be spoken in the presence of one of those sycophants so common in volunteer corps, and was carried forthwith to the ears of the party interested. The talebearer had been set to pump Hugh; and though all he could get were certain dark insinuations about "closets," and "doors ajar," these were quite sufficient for Thorpe's quick penetrating intellect. He at once recollected hearing Vernon say that Hugh was to remodel the closet in his room; and, at the same instant, he came to the conclusion that Hugh had been a witness of his villainy. With such a man as Thorpe, this was sufficient; he immediately resolved upon Hugh's death; and they were his agents who had pursued them on the plain, as we have seen.

## CHAPTER XXI.

"Love, well thou knowest, no partnership allows."—PRISON.

"All in a moment, through the gloom were seen,  
Ten thousand banners rise into the air,  
With orient colors waving: with them rose  
A forest huge of spears and thronging helms."—PARADISE LOST.

Above Bonaro's cottage (to which we will trouble the reader to return with us), almost directly over it, there grew out of the cleft of the rock a stunted

*"Hugh armed himself carefully, and repaired to the top of the rock to watch the approach of their enemies."*

plantain tree, very little higher than a tall man, but spreading its enormous leaves around its wind-blasted trunk, and forming thus a deep shade. Beneath its foliage the rock sloped towards the south a few feet, and then fell suddenly four fathoms, to the level over which the fountain flowed down upon the terrace below. At the foot of this tree lay a large, loose rock, originally intended for the masonry of the house below; but it had not been used for that purpose, and had now lain for nearly twenty years in the same position. Its surface was covered with moss, running over it in every conceivable shape of entanglement, and hanging in gay little fringes and festoons from the edges and corners. A species of ivy, too, which grows luxuriantly among these mountains, had mingled its dark leaves and bright tendrils among the moss; and more ambitious or more affectionate than the latter, had climbed the trunk of the plantain two or three feet, apparently endeavouring to shelter it from the bleak mountain air. It had, however, seemingly abandoned its loving purpose at that height, and drooped in wreaths and waving masses back upon the ground. The large stone was thus converted into a cushioned seat, large enough for two or three persons; and the foliage of the plantain spread above to protect them from the sun, with its deep green canopy.

Late in the afternoon, about three days after Thorpe's interview with the Mexican, Hugh and Catharina sat upon this stone. They were conversing earnestly, though at intervals, during which they gazed abstractedly towards the plain, of which their position commanded a full view. Beneath, on the terrace in front of the house, sat Allen and old Bonaro—the former pale and emaciated, though evidently convalescent. They were conversing, also, at broken intervals, of the merits of the contest between the two countries at war; but their conversation is not material to our story.

"When do you think of leaving us?" asked Catharina, after a pause of several minutes' duration.

"As soon as Allen is well enough to travel," said Hugh. "I wish I could persuade your father to go to Saltillo."

"If he left this place," said she, "he would not stop this side of Monterey; and we would be farther apart than ever."

"O no!" said Hugh. "If you were there I could see you oftener than I can here; and besides that will be on our road home. You could meet me there and go with me better than from here."

"You forget," she said smiling; "I have not yet consented to go with you at all."

"True," said Hugh; "but you *will* consent. Your excuse of not understanding English well enough, is no longer admissible."

"But you may not want me," said she gravely. "You know I told you I had something to say, before I gave a final consent; and that may change your wishes."

"No fear of that, no fear of that!" said Hugh hastily. "Let me hear it now, and before an hour we will be pledged for life."

"Be not too sanguine," she said calmly; "for if you should change, it will be only the more painful to us both."

"Let me hear it, then," said he, "if I must hear it; and you shall soon see how easily I am changed."

"Very well, Senor," she replied; "then listen, and do not interrupt me until I have told all. I have already related the larger part of my history: indeed all of it, except this one passage. In my language to you since we met, you think,—and justly too, for I will not disguise it now,—that you have assurance of a more than ordinary interest which I feel for you. You assumed the fact, however, before it was so; for I must tell you that the feeling has grown upon me gradually, almost imperceptibly, as I each day detected, or thought I detected, traits and feelings and sentiments which are of interest to me for the reasons I am going to state. You think, no doubt—all lovers do—that this feeling of interest is one entirely new to my heart, that no similar sentiment has ever agitated it, and that you are therefore in possession of the first gushing tenderness of my youth. But this is not precisely true."

"What!" exclaimed Hugh, raising himself from his reclining posture.

"You must not interrupt me," she said, drawing him gently down; "let me finish my story. I have loved, or, at least, I have been deeply interested, before—though purely and briefly. I am among those who believe that one may so love more than once. We are interested in the objects of our affections, by certain qualities which either they possess or we imagine they possess. Sometimes we love for external appearances, forms or features; but it is only because of an instinctive impression we have, that the qualities we love and admire are indicated by those external things. The love we conceive is, therefore, a feeling which exists in, and is part, of ourselves; which may exist, and does exist, long after the personal object is withdrawn. It will be dormant, because the object is not near to call it out; but it will be not the less a feeling; because it is an admiration or affection for certain traits or qualities with which we sympathize, and which we may love independently of their material embodiment. After the withdrawal of the first object, then, let another object be presented, who either possesses, or who we imagine possesses, the qualities we love: our affections will go forth again upon this new object, as warmly and as purely as upon the first. Nay, even more warmly; because, having been once called into activity and then smothered, the feeling will gain force by restraint, as the waters do while pent up; and when the gates are opened again, the flood will come with accelerated speed and increased violence."

"Now this is precisely the case with me."

"I believe I have told you that my mother was from the United States, where my father met her and married her. I do not recollect her, as I have said before; but my mind has been led, by my father's conversations, to dwell with almost exclusive interest upon everything relating to your republic. No stronger claim upon my sympathies could be presented than belonging to the country of my mother—the people of no other nation, if they came as invaders, could induce me to hold the least communication with them. In all my reflections about men and their national character and national histories, the Americans have been excepted from every general rule, to be

thought of alone, as a people for whom there is no parallel. When your army arrived in our country, my father resisted before it, but it was not from hatred or fear, but to avoid an unjust suspicion. Like him, I sometimes think I do not properly resent your invasion; but if it be so, I cannot help it; nay, I do not even regret it.

"If, then, even when you come upon my native soil as enemies, I cannot properly resent it, you can imagine of how much more interest to me an American must have been, when he came only upon a peaceful visit, and came recommended also as a relative of my mother. He was handsome, generous, and noble—combining, too, with his moral excellence a fine and thoroughly-developed intellect. He was brave, even to rashness, free and open in his bearing, delicate and considerate in his feelings. He came to our house in Monterey, stayed with us two or three months, and then accompanied us during the summer months, to my father's hacienda, south of the city. It was here that I first began to feel interested in him. We were constantly together, either riding along the valleys or climbing the mountains, and spending whole days among the cliffs and forests. I had never before been intimate with one of the other sex, and it was but natural that my feelings should become interested in one like him, in the position we occupied. It would be an ungrateful task for you to listen to me relate how much I felt for him, or how happy I was in his society; though, I doubt not, the recollection of that happiness was made more tender, by its tragical termination. I will hurry on.

"We had been two months at Rinconada, during which we had explored every sheltered valley and climbed every mountain peak, within ten miles of us. There was but one place of interest we had not visited. It was a waterfall, where a narrow stream, during the wet season, sprang boldly over the side of a cliff and was dissipated into mist and rain ere it reached the rocks at a great depth below. We had been waiting for a rain to add to the waters, so as to make the cascade worth visiting; and at last one Sunday evening brought a heavy storm. Early on Monday morning we set out, with no attendants except our boy, who carried a picnic dinner for us.

"We reached the flat rock beside the stream about twelve o'clock, where the foaming torrent poured over with its swollen current, and dashed down through mid air full two hundred feet. We sat down upon the sod under the shade of a cedar to view the fall, and to open Diego's basket. Up to this time no explanation had passed between us in regard to our mutual feelings; but I think I am not wrong when I say each under tood the other. We had been seated thus, after our repast, for several minutes in silence; but I thought I saw in his looks, and in his actions, that a declaration was trembling upon his lips. Indeed, he had begun to speak in tones which I could not misunderstand, when a flower attracted his eyes, growing upon the very edge of the cliff, and just within the water. He approached it hastily and stooped to take it, when his foot slipped upon the wet rock, and at one plunge he went headlong over the frightful cliff."

She covered her eyes with her hands, as if in recollection of the scene; but in a moment she recovered and went on.

"He was dashed to pieces upon the rocks below. I ran to the edge of the rock to look over, but was pulled violently back by Diego. I will not dwell upon the details, nor upon my grief, made deeper, as it were, by the circumstances, than perhaps it would have been in others; they are painful to recall, and would not be pleasant for you to hear. He was buried at Rinconada, and since that day I have not visited the place. It is now more than two years since, and I am young, I soon recovered my tranquillity and ultimately my cheerfulness. But since then an affliction deep and warm for the noble traits I found in him, though I cannot say that it was ever matured for him personally, noble as he was, has lain dormant in my heart. Time passed and I met you. In you I found the qualities I admired in him. My heart became interested, though it is only within a few days that I have become certain that I love you. If I did not remember him with regret, you could have no assurance that I will not forget my love for you as soon.

"You now know my whole history. Before I say more, I must know whether that knowledge affects your feelings."

"And yet," said Hugh, placing his arm around her waist, "when you ask, you know perfectly well, it does not."

"I think so," said she; "but I must have the assurance from your own lips."

"Then take it," said he, pressing his lips suddenly to hers. "I love you not only as much, but more than before, for your truth and candour."

"Yet," she said, "that very candour, while it makes you love me more, as I am, may still make it impolitic that you make me other than I am."

"You mean my wife?" said he, inquiringly. "It could not be so. I love you more, if possible, than before, and I am, therefore, more anxious to make you mine."

"And when do you wish me to be so?"

"As soon as you will consent to it," said he; "or at least as soon as my term of service shall be out."

"When is that?"

"On the last day of May next. I shall then return home, and will take you with me."

"That is," said she smiling, "if I will go."

"Oh! I know you will go. Will you not?"

"But you may be killed in the meantime," she pursued.

"In that case," said Hugh laughing, "I shall not go; nor you, either. But there is no fear of that, if you will only say you will go."

"Well, well," said she, as if impatient to be rid of the subject, "I will go."

Hugh clasped her in his arms; and pressed his lips again to hers.

"Come, come," she said, "that is enough for to-day. And now let us

see what that great dust is upon the road yonder. It looks like an army to me.

Hugh took up the glass which lay upon the ground beside him, and directed it where she pointed.

"They are lancers!" he exclaimed. "And yonder follows some infantry, and there is artillery too! A long line of lancers again, and more infantry and artillery! And there are mules, too, pack mules, and droves of cattle, and away in the distance seems another large body of lancers! Why this must be Santa Anna in full force."

He ran the glass several times up and down the long line of dust, which extended from a point nearly opposite to where he sat, full twelve miles away upon the plain. The glittering lance-heads, with their fluttering pennons of variegated hues, the masses of horses and riders just visible in the dust, the long columns of infantry with their muskets shining in the evening sun, the heavy guns tied on the backs of mules, or trundled along on clumsy carriages, the numberless pack mules, the masses of men of all arms in the distance, and the numerous banners and colours of corps, all denoted the march of a strong army. Staff officers and orderlies were seen galloping from corps to corps, or halting on the road for some regiment or brigade to approach; and near the centre of the column rode a group of officers in brilliant uniforms, and shining accoutrements, denoting the general and his staff. It was indeed "Santa Anna in full force," with more than twenty thousand men, marching to crush the handful of volunteers, then lying at Agua Nueva under General Taylor.

"Who are these?" said Catharina suddenly, "here to the left," pointing in the direction named. Hugh turned the glass, and after gazing a moment sprang to his feet.

"They are approaching by the path," he said, "and are led by some one who knows the road! It is time to put our design in force."

So saying, he sprang down the rock, and in less than a minute stood beside the bridge over the chasm. Parting the bushes he stepped in to the brink of the ravine, and lifted a stout wooden bar which lay with one end sharpened, ready for use. Thrusting the sharp end between the rocks which supported the bridge, and using the edge of another rock as a fulcrum, he gave the lever a sudden pull towards him. The flat rock moved and a seam opened across the bridge; another pull, and the rock gradually loosened. Falling over on one side the bridge lost its support, and tumbled, a mass of rocks, bushes and earth, to the bottom of the chasm. By this means the house was perfectly isolated, with only the secret outlets for approach.

"Let them cross that if they can," said Hugh; and he threw the bar down the chasm, and they both hastened out of view.

(To be continued.)

## THE FLOWERS.

There is a legend old as earth,  
But beautiful and true,  
Which tells us how the flowers had birth,  
And whereto came the dew.

When Eve, through Satan's sore deceit,  
Touched the forbidden tree,  
And tempted her "good man" to eat,  
The Lord came angrily.

And straightway banished from Eden's bowers  
These first-born sinners forth,  
Away from all its smiling flowers—  
Upon the barren earth

But plying ere to Heaven he pass'd—  
His angels—brothers true—  
O'er all the earth their footprints cast,  
And hill, and vale, and glen,

Sparkled with flowers—Earth's starry  
spheres—  
And ere they fled from view,  
They strew'd the flowers with pitying tears,  
Which since has pass'd for dew.

And thus, though paradise was lost  
By first of human kind,  
Their children know, though sorely cross'd,  
God's love is left behind.

WORSHIP OF ANIMALS.—One of the most remarkable features of the Egyptian Mythology, was the worship of animals. They imagined that some animal partook of the nature of their celestial deities, and were therefore entitled to divine honours. Thus when the worship of the moon had become established, and her increase and diminution superstitiously considered, it was thought to bear some analogy to the dilating and contracting pupil of the cat's eye, and puss was accordingly deified. In the same manner the asp and the beetle became sacred, because they were supposed to exhibit some faint images of particular deities. The hawk was dedicated to Osiris; the ass, the crocodile, and the hippopotamus to Typho; the serpent, or dragon, to Nephtis. Every element was laid under contribution; and men, women, bulls, cows, rams, goats, dogs, cats, snakes, crocodiles, frogs, beetles, and innumerable others, were all included in the sacred catalogue. Ophelatria, or serpent worship, was very famous; and was celebrated with the most horrid rites. To this animal human victims were immolated. Richardson, in his researches in Egypt, discovered a tomb at Biban al Melook, in which there is a representation of six men sacrificed at one time. The walls of their tombs are frequently covered with representations of this island; as may be seen by consulting the volumes of the "Library of Entertaining Knowledge" devoted to "Egyptian Antiquities," and Dr. Taylor's recently published work on the subject. The bull was sacred to Osiris; and was called Apis. It was to be black, with a square piece of white on the forehead. Many years sometimes elapsed before an animal could be found exactly answering this description. When Cambyse, the son of Cyrus (called in Scripture Ahasuerus), invaded Egypt, he desired the priests to show him their god. They immediately, with much pomp, led Apis before him. Cambyse, enraged at their stupidity, drew his dagger, and thrust it into the animal's thigh, of which wound poor Apis died. The priests were shocked at his profanity, and predicted the most direful calamities in consequence.

SUPPLEMENTARY NUMBER TO 'THE  
"HOME COMPANION."

PRICE ONE PENNY.

With No. XXXIV. was published a carefully prepared Sheet (uniform with the "HOME COMPANION"), with Illustrations, of RULES, HINTS, CAUTIONS, and DIRECTIONS, that will assist in preventing, checking, or curing Disease. By A DISTINGUISHED HOSPITAL SURGEON.

EXTRACT FROM THE EDITOR'S INTRODUCTION:

"My object is to furnish such rules, hints, cautions, and directions, that, if followed, will assist in preventing, checking, or curing disease; alleviating pain; and perhaps preventing death or serious permanent injury, likely to result from accidents, imprudence, or wilfulness. We know that medical aid cannot always be commanded at once, especially in country towns or villages; and for want of proper directions, many a life or limb may be lost, or rendered permanently useless. Therefore, to obviate such disastrous results, I have compiled the following pages, which will furnish ample directions for all the common emergencies, diseases, and accidents, that are likely to come under the notice of an individual during his career in life; and, in order to make the directions more explicit, I have occasionally introduced neat little woodcuts. It should be borne in mind by every one who reads these pages, that I do not attempt to instruct them in the treatment of serious diseases or accidents. Books will not supply this information; it is only to be acquired by practice and thought. My object is; 1st, To enable people generally to distinguish a disease or accident of a serious kind from one that requires only a simple remedy, so that professional aid may be sought inmediately; 2nd, To enable all persons to treat simple diseases or accidents; and 3rd, To enable any one to act in emergency cases, until such time as medical aid can be procured."

THE HOME COMPANION:

A WEEKLY MAGAZINE.

THOUGHTS UPON THE WALL.

THERE are two kinds of beauty connected with natural and artistic objects; the one a beauty inherent and *per se*, the other a beauty of associated ideas and feelings. Some writers, of whom Mr. Alison may be considered the chief, have come to the conclusion that *all* our pleasures of taste, all our impressions of beauty, are grounded upon this principle of association. The entire correctness of this may well be doubted; but there can be no doubt of its being partially true, and that in all philosophical theories of beauty, this principle of association must be taken in as an essential element. A happy thing it is for us,—a merciful susceptibility of our nature, that we are able sometimes to link a beautiful thought or feeling with but an indifferently beautiful object, and to extract, not exactly sunbeams from cucumbers, but sermons from stones, and good from everything. Powerful among this class of suggestive things are pictures in a room. They might do much for the rustic and the labourer; but not only for them, but for that immensely large class, also, who occupy the broad margin between the rich and the poor—the small-salaried clerk and inferior tradesman; a class who have to maintain a worldly appearance with marvellously little of worldly means. Expensive works of art are, of course, quite out of the question in homes like these; but there are such things as cheap prints, and paintings of moderate value, which, without any great merit of execution, exhibit a beautiful scene or incident, and exhale poetic influences to awaken holy associations of ideas.

We remember once, after a day of difficulty and sorrow, drinking tea in the parlour of a small neat dwelling, in the suburbs of the metropolis. The walls were decorated with prints, framed and glazed, the whole value of which was, perhaps, not over £5, but which, owing to a pervading beauty of sentiment, was of more value to the looker on than many of the productions of the magistrates of the artist world. We thought it very delightful, we remember, after a day of disappointment and care spent in London streets, amidst all its excitement and hurly-burly, its noise and confusion and feverish antagonisms, to repose the eye upon a coloured print representing a rural scene. It was on the shore of a lake in Switzerland; the time was evening, and the golden light of the declining sun glittered in a long path of glory over the calm water. Conspicuous on the mountain slopes, on its borders, rose a picturesque building, which seemed to be an old time-hallowed chapel, with ivy round its pointed windows and downy moss clustering on its roof and walls. A little below stood the scattered dwellings of the hamlet; the cattle wended homeward from the pasture, and a rosy maiden in lace bodice, standing on a knoll of the high land, might be imagined as singing the Ranz des Vaches, and beckoning her herd to the homestead. Now all this

was done in a very plain and homely manner, and there was nothing whatever in the execution to throw an artist into ecstasies, or tempt him into comparisons with the masters, ancient or modern; but, for all that, there was a sort of blessedness about the humble picture,—a suggestion of stillness and repose, a heavenly hush for both the struggles of the spirit and the toils of the body, peculiarly needful and appropriate to contemplate in contrast to the din and strife and soul-absorbing competition of the feverish city.

On one side of this picture hung a chalk drawing, very respectably done, a copy from some old head of the Redeemer, conceived as under suffering. Here the agonized, but patient and resigned, features led back the imaginative gazer, through a long vista of centuries, to the time when children clustered round the knees of Him who blessed them; when the high road to Jerusalem resounded with tumultuous "Hosannas,"—when the garden of Gethsemane witnessed His tears of agony, and the Hall of Judgment rung with the scoffs and insults of a brutalized rabble, whilst their wretched victim "answered not a word." The whole sequence of that gracious life passes in review, from the disputations in the Temple to the bleeding on Calvary; and the heart that sinks under the sorrows and trials of the present time revives, and fortifies itself with courage in remembering his sufferings and the gentle heroism with which they were borne.

On the opposite side of the Swiss scene before described, hung a very fair print of Shakspeare. This, again, was richly suggestive. That noble arch of forehead; those deep, full, eloquent eyes, that earnest mouth, all conspire to testify that this was a man,—a myriad-minded man. And when the mind recalls the immense variety of his creations, the versatility of his genius, the wondrous breadth of his observation and sympathy; when the awakened fancy unfolds its panorama of enchanted isles, forests of Arden, Windsor meads enlivened with the gaiety of merry wives; the rolling ocean bearing on its rough waves the cradle of the gentle Puritia; wild and blasted heaths and stormy battle-plains; Mortia's villa, and the moon-lit bank where sounds of music crept into lovers' ears; Venetian banquets, glittering with light and sounding with music and revelry, where Romeo loved and Juliet gave her heart away, the garden where they wed, and the tomb where they died,—When the fancy envelopes itself with these scenes, and innumerable others, suggested by the portrait of Shakspeare, does not the narrow thought swell into magnitude? Do not confined sympathies expand?—and does not a selfish selfishness melt into a generous glow at the joys and sorrows of all humanity?

On an opposite wall of the room hung the representation of a large, Indian, outward bound, struggling in a violent gale of wind. How sublime the terrors of the scene! The vessel on its beam-ends in a trough of boiling surge, the splintered masts, the torn fluttering sails, the dark night all around, with massive storm-clouds hurling from their black bosoms long, forked flashes of lurid fire! With such a picture do there not arise ideas of Him "who holdeth the waters in the hollow of his hand," "who maketh the clouds his chariot, and rideth on the wings of the wind"? What generous sympathies well from the heart towards the "wet sea-boy in an hour so rude," the brave mariner at the helm, the calm captain on the poop, the awe-struck passengers—some thinking of home and the tranquil life of their early days contrasted with their present danger,—some stupefied with terror, and some calmly resigned to death even in the dark gurgling water. 'Tis but fancy's sketch; but of such fancies beautiful emotions may be born.

There were other prints in the room, of more or less interest; but enough of description has been given to illustrate the moral suggestive value of pictures in the room. We mean, of course, pictures with a certain poetry of meaning about them; not flaring portraits of kings and queens and generals; not theatrical monstrosities, representing Mr. Wallack as *Pizarro*, or O. Smith as *Three-fingered Jack*; not disgusting representations of Tom Spring and Dutch Sam; not vulgar drawings of prize heifers and over-fed pigs;—none of these things, but prints, humble in character and inexpensive it may be, but with some pregnancy of subject, some suggestions of love and peace and beauty and goodness, leading the beholder to endeavours to make life fairer in this world and fitter for a world to come.

H Y M N.

I praised the earth, in beauty seen,  
With garlands gay, of various green.  
I praised the sea, whose ample field  
Shone glorious as a silver shield;  
And earth and ocean seemed to say,  
"Our beauties are but for a day."  
I praised the sun, whose chariot roll'd  
On wheels of amber and of gold:  
I praised the moon, whose softer eye

Gleamed sweetly through the summer sky;  
And moon and sun in answer said,  
"Our days of light are numbered."

Oh God, oh good beyond compare!  
If thus thy meagre works are fair!  
If thus thy beauties glid the span  
Of ruffled earth and sinful man!  
How glorious must the mansion be  
Where they redeem'd shall dwell with thee!

CHIEF.—When the game of chess was first invented, the emperor of China sent for the inventor, and desired him to teach it him. The emperor was so delighted with the game, that he told the inventor whatever he should demand should be given him as a remuneration for his discovery. To which he replied, that if his majesty would but give him a grain of corn for the first square of the chess-board, and keep doubling it every check until he arrived at the end, he would be satisfied. At first the emperor was astonished at what he thought the man's modesty, and instantly ordered his request to be granted. The following is the sum total of the number of grains of corn, and the number of times they would reach round the world, which is 360 degrees, each being 69½ miles:—18446743573783086315 grains; or, 3354461821 times round the world.

## ONWARD!

**CITY IMPROVEMENTS.**—It is under consideration to run a new street, sixty feet wide at least, parallel with Old Change, down to the river side, and in a direct line with the east side of St. Paul's Churchyard, and to throw a new bridge across the Thames, to be communicated with by the proposed street. The cleansing of the streets, on the "continuous cleansing system," at an extra expense of £7,000 a year, is also spoken of.

**ELECTRIC TELEGRAPH IN THE BANK OF ENGLAND.**—The electric telegraph operations which have for some time been in progress in this establishment are now completed, and a system of communication is effected between the various offices. The rooms of the Governor and Deputy-governor are by this means placed in direct communication with every important department where business is transacted, and secrecy of communication is obtained by the use of Dering's patent apparatus for this purpose; so that a message intended for one particular office cannot be read at any of the others.

**DEPARTMENT OF PRACTICAL ART.**—Classes for the study of specialties are now being formed at Marlborough House, and the arrangements are already completed for the class of artistic anatomy, to which Mr. Townsend has been appointed professor, he having had the superintendence of the same class at Somerset-house. The means of study are much more commodious than at Somerset-house, there being separate rooms for the drawing, painting, and modelling classes. The classes are now opened, and there were a considerable number of applications by students. Those who have passed through the classes at Somerset-house, and are reported as competent, are privileged to attend at less than half the fees paid by strangers. We understand that the next classes which will be ready for opening, are those for the drawing of practical construction and architecture.

**PROPOSED GRAND MODEL OF EUROPE.**—A grand project has been proposed at Paris by the Abbé Moigno, a scientific writer of some note. It is to establish in the Bois de Boulogne, at the gates of the capital, a model in relief, of Europe, with all its towns, cities, rivers, lakes, railways, mountains, and forests. Each country and each town would occupy space exactly proportioned to their real extent; every mountain would resemble, in geological construction and form, that which it would represent; and every river and railway would be of real water and real iron, and in length so many yards to the mile. This singular model would occupy several acres. The expense of forming it would, it is admitted, be enormous; but that, the Abbé contends, is an unimportant consideration, compared to the instruction it would afford not only to youth, but to people of all ages and professions, and to the striking addition it would prove to the curiosities of the *grande ville*.

**ELECTRO-TELEGRAPHIC PROGRESS.**—The Irish sub-marine line of telegraph, by Portpatrick, is in progress of formation. Betwixt Dumfries and Carlisle the line will run along the turnpike-road.—The Magnetic Telegraph Company, it appears, have completed their communication to Wigan, Bolton, and Manchester, on the Lancashire and Yorkshire Railway. Arrangements are making to connect by it Bury and Preston; and, ere long, London will be reached by it, probably on the Great Northern line.—On the 1st of June the sub-marine electric telegraph between Howth and Holyhead was completed, and messages were transmitted from Dublin to London. The cable consists of a single copper wire, perfectly insulated by gutta-percha, and protected by an outer covering of iron galvanized wires. To secure further safety from the action of the tides and the sharp rocks, the non-coating is double for a considerable distance from each coast.

**NEW VOLTAIC BATTERY.**—A party of scientific gentlemen were recently invited by Mr. Martyn Roberts to witness a voltaic battery of new construction, and professedly of great economy, which he has at present in action in the neighbourhood of Great Portland-street. The battery consisted of fifty plates of tin, about 6 inches by 4,—each plate being adjusted between two plates of platinum of the same size. These were placed in stoneware cells about two feet deep, which were filled with diluted nitric acid. The object of these deep cells was to obtain a marketable product which should be sufficiently valuable to cover the cost of the agents employed to effect the development of electricity. The upper stratum of nitric acid acts on the tin, and forms with that metal an oxide, which falls off from the plate the moment it is formed, and is precipitated as an hydrated oxide of tin to the bottom of the cell. This oxide is combined with soda; and as stannate of soda is extensively employed in dyeing and calico-printing, it is stated that this product will yield a profit of 20 per cent. on the cost of the battery by which it is produced;—but this is a point which we are not at present in a position to determine. The electrical action of the fifty pairs of plates was considerable. The current was employed to exhibit the electrical light,—and the effects produced were certainly very brilliant. It was not possible to compare it with the result obtained from a Grove's battery, but we judge their powers to be nearly equal. An experiment made on the decomposition of water gave about seven cubic inches of the mixed gases, oxygen and hydrogen, per minute. We cannot but regard this very ingenious arrangement as an improvement on the ordinary batteries, as far as economy is concerned, where an electric current is required, since the stannate formed must always be of considerable commercial value. It is curious, too, that the stratum of fluid in the immediate neighbourhood of the voltaic plates is kept uniformly of the same specific gravity, notwithstanding that the acid is rapidly removed. The oxide of tin formed takes down water with it, and at the same time establishes a current by which fresh acid is supplied to the plates. We were informed that the battery continued in most uniform action for sixteen hours.

## POETICAL QUOTATIONS.

## BEAUTY.

I long not for the cherries on the tree,  
So much as those which on a lip I see:  
And more affection bear I to the rose  
That in a cheek, than in a garden grows.—*Randolph.*

No autumn, nor no age ever approach  
This heavenly piece, which Nature having wrought,  
She lost her needle, and did then despair  
Ever to work so lively and so fair.

*Massinger and Ford's Fatal Downy.*

Do not idolatize; beauty's a flow'r  
Which springs and withers almost in an hour.

*William Smith's Hector of Germany.*

Heav'n meant that beauty, Nature's greatest force,  
Having exceeding pow'r, should have remorse;  
And, and it, the world should so enjoy,  
As both might overcome, but not be try'd.—*Lord Orrey's Henry V.*

My beauty, though 'ont mean,  
Needs not the painted flourish of your praise:  
Beauty is bought by judgment of the eye,  
Not utter'd by base sale of chapmen's tongues.

*Shakspeare's Love's Labour's Lost.*

O, she doth teach the torches to burn bright!  
It seem she hangs upon the cheek of night  
Like a rich jewel in an Ethiope's ear:  
Beauty too rich for use, for earth too dear.

*Shakspeare's Romeo and Juliet.*

Beauty is a witch,  
Against whose charms faith melteth into blood.

*Shakspeare's Much Ado about Nothing.*

'Tis beauty truly blent, whose red and white  
Nature's own sweet and cunning hand laid on.

*Shakspeare's Twelfth Night.*

Beauty is but a vain and doubtful good,  
A shining glass that fadeth suddenly,  
A flower that dies when first it 'gins to bud,  
A brittle glass that's broken piecemeal.  
A doubtful good, a glass, a glass, a flower,  
Lost, faded, broken, dead within an hour.—*Shakspeare.*

Give me a look, give me a face,  
That makes simplicity a grace.  
Robes loosely flowing, hair as free!  
Such sweet neglect more taketh me  
Than all the adulteries of art;  
That strike mine eye but not my heart.—*Ben. Jonson.*

Grace was in all her steps, heav'n in her eye,  
In every gesture dignity and love.—*Milton's Paradise Lost.*

Beauty stands  
In the admiration only of weak minds  
Led captive; cease to admire, and all her plumes  
Fall flat and shank into a trivial toy,  
At every sudden slighting quite abash'd.

*Milton's Paradise Regained.*

What is beauty? Not the show  
Of shapely limbs and features. No.  
These are but flowers  
That have their dated hours,  
To breathe their momentary sweets, then go.  
'Tis the stainless soul within  
That outshines the fairest skin.—*Sir A. Hunt.*

Her eyes, her lips, her cheeks, her shapes, her features,  
Seem'd to be drawn by Love's own hand; by Love  
Himself in love.—*Dryden's Love Triumphant.*

Her form was fresher than the morning rose,  
When the dew wets its leaves; unstain'd, and pure,  
As is the lily, or the mountain snow.—*Thomson's Seasons.*

'Tis not a set of features, or complexion;  
The tincture of a skin, that I admire;  
Beauty soon grows familiar to the lover,  
Fades in his eye, and palls upon the sense.—*Addison's Cato.*

O she is all perfections!  
All that the blooming earth can send forth fair;  
All that the gaudy heavens could drop down glorious.

*Lee's Theodosius.*

The bloom of opening flowers' unsullied beauty,  
Softness, and sweetest innocence she wears,  
And looks like Nature in the world's first spring.

*Rowe's Tamerlane.*

## CHARADE.

My first the sturdy reft by the sturdy blow  
Of him who by my second hither came,—  
No more the comforts of his peaceful home  
to know—  
Guilty and exiled, doom'd to lasting  
shame.  
But they who trusted to his faulty soul,  
Far more than he must now endure my  
whole.

## PARLOUR PASTIME.

*The Mock Newspaper.*

THIS game, when there is a large family party assembled in one house for the Christmas holidays, affords a rich fund of amusement. An editor is appointed, who receives and copies on to a large folio sheet of paper all sorts of contributions; this publication, which is produced and read aloud once a week to a laughing audience, being entitled, the *Court Journal*; or, *Saturday Delight*, and containing mock advertisements, daily news, verses, leading articles, sporting intelligence, &c., &c., all of which may relate to the home doings of the contributors, and be playfully sprinkled by their proper names disguised, good-natured jests upon their employments, &c., and giving lively accounts, under different headings, of the particular amusements, occupations, events, &c., which have distinguished each week.

## TRANSPPOSITIONS.

I.  
My whole, industrious, wends his way  
His daily task to meet;  
Behead, transpose, I'm now a sound  
Of music strangely sweet;  
Behead, I take my iron path,  
With swiftness past belief;  
Behead, to drooping nature come,  
From heaven with kind relief.

II.  
In schools I'm met with ev'ry day;  
Transpos'd, you've stories fraught with wonder,  
Again transpos'd, I'm sour, you'll say;  
Again, you'll learn to rob and plunder.

## III.

Read me forwards, I'm the highest point of every thing; read me backwards, scarcely any thing is deeper.

## TRANSFIGURED PLAYING CARDS.

SEVEN OF CLUBS.—"A CLUB DINNER."

## CONUNDRUMS.

1. Whom are soldiers most admired by an infant?
2. What sense places you most in a disagreeable acquaintance?
3. Why is a holeful face like the alternate parts taken by a choir?
4. In what bath ought monkey to bathe?
5. With what tree would a donkey write?
6. What cities in Somersetshire would be most valued in the East?
7. Why is a castigation like a bee gathering honey?
8. What town would be most useful in crossing a river?
9. With what musical instrument would you catch fish?
10. Why have the people in Norfolk no need to build castles in the air?
11. Why is the capital of a pillar like a cannibal?
12. Why is the letter N like that Roman emperor who rejoiced at the burning of his city?
13. What is a leg of mutton like a town in Buckinghamshire?
14. What city in Cambridgeshire was a time of old?
15. Why is a gaunt belonging to an old woman like a wat'ring star?
16. Why is the letter U in a merry mood, like an agreeable sound?
17. When is a rat like a drinking vessel?
18. If little Tom stood on your corn, what musical instrument do you name?
19. Why is the pressing of a love-letter to your lips like a nightmare?
20. Why was the Jewish treasure of six pints like a Greek poet?
21. If you request the letter S to move, what title do you name?
22. Who are the two largest ladies in America?

## ANSWERS TO THE PASTIME OF LAST EVENING.

Page 541.

## PICTORIAL CHARADE.—PARDON.

PROBLEM.—Because corn and trees always grow perpendicular to the horizon, an hemispherical hill of twenty acres surface will bear no more of either than a level field of ten acres surface, being equal to the horizontal and circular basis which the said hill stands upon. And no more pales are required to fence over any hill than would be required to fence over the level basis of the same, were the hill entirely removed, i. e. both pallings being carried over the same horizontal direction.

## CHARADES.—1. IMAGINATION. 2. MILESTONE.

CONUNDRUMS.—1. The Earl of Wicklow. 2. Because he is full of bows (boughs). 3. Because he puts an end to your pains. 4. Because they are man-klad and woman-kind. 5. To the White Horse Cellar (cellar). 6. The Pickwick. 7. Because it's inconvenient. 8. Gin. 9. Because it's to bed all day and all day. 10. Because she's incombustible (in come bustible). 11. When it is high. 12. Because they are rulers of hosts. 13. They are planted in the earth to propagate (prop a gate).

## TRANSPPOSITIONS.—1. SEABLE, TARE, ABLE. 2. HOVEL, LOVE, HOLM.

## OUR CORNER CUPBOARD!

SOMEbody once remarked, that the Englishman is never happy but when he is miserable; the Scotclman is never at home but when he is abroad; and the Irishman is never at peace but when he is fighting.

A PERSON, who lived in constant fear of the *boobies*, having absconded, one of his acquaintances *asked* what was the reason of his absence? to which he replied, "Why, sir, I apprehend he was apprehensive of being apprehended."

JACK BANNISTER, praising the hospitality of the Irish, after his return from one of his trips to the sister kingdom, was asked if he had been in Cork. "No," replied the wit; "but I saw a great many drawings of it."

"SHALL I cut this loin of mutton saddlewise?" said a gentleman carving. "No," said his friend, "cut it bridlewise, for then we may all chance to get a bit in our mouths."

"I WILL forfeit my head if you are not wrong," exclaimed a duist and warm orator, to the president of a banquet, in an argument. "I accept it," replied the philosopher; "my title among friends has a value."

"I HAVE lost my appetite," said a gigantic Irish gentleman, and an eminent performer on the *trachea*, to Mark Supple. "I hope," said Supple, "no poor man has found it, for it would ruin him in a week."

THE following sound advice occurs in an almanack:—"If you wish to have a shoe of durable materials, you *should* make the upper-leather of the mouth of a hard drinker; for that never lets in water."

AN Earl Marshal was found fault with by his sovereign for some minor arrangements at a coronation. "Pardon your majesty," said he, "I hope to do better next time."

"WHAT is your opinion of this gentleman's conduct?" said some one to a whiskered Irish captain of dragoons. "I think it *highly* low," answered he, with a tremendous grin over his stick.

SIR C. MURRAY asked Tom Gannon what he thought of Keon's acting? "I like his dying scenes best," replied Tom; "he acts the dead man to the very life."

A GENTLEMAN threatening to beat a dog, which barked intolerably. "Why," exclaimed an Irishman who was present, "would you beat the poor dumb animal for making a noise?"

AN ENTERPRISING BEGGAR.—*Benevolent Old Lady*.—"Sally, alive, child! what do you want two pails of cold victuals for? you had only one yesterday." *Little Girl*.—"Yes, ma'am; but mother's taken bacchet since."

MR. ARRETHUS was one day descending upon the advantages of a public education for boys, when he concluded by saying, "And what think you of Etou? I think I shall send my son there to learn manners." "It would have been as well, my dear," responded his wife, "had you gone there too."

WISCHILL tells a story of a stranger meeting an Irishman leaning against a post, watching a funeral procession coming out of a brick house at his side, when the following dialogue ensued:—"Is that a funeral?" "Yes, sir, I'm thinking that it is." "Anybody of distinction?" "I reckon it is, sir." "Who is it that died?" "The gentleman in the coffin, sir."

AN old farmer, on paying his rent, told his landlord he wanted some timber to build a house, and would be much obliged to him if he would give him permission to cut down what would answer the purpose. The landlord answered peremptorily, "No." "Why, then, sir, will you give me enough to build a barn?" "No." "To make a gate, then?" "Yes." "That is all I wanted," said the farmer, "and more than I expected."

THE education necessary to qualify an Arkansian editor for the duties of his office, is said to be the following:—Two months' practice with a hair-trigger rifle at a target, one hundred paces distant; six weeks' practice in swinging a two-foot bowie knife; six or seven months' experience in coggie, cabbiting, and rough-and-tumble kicking at the election. These qualifications will enable the possessor of them to write political and sensational articles with impunity.

A SOLDIER, about to be sent on an expedition, said to the officer directing the drafts, "Sir, I cannot go, because I—stutter." "Stutter?" says the officer, "you don't go to talk, but to fight." "Ay, but they'll p-p-put me on p-g-guard, and a man may go ha-ha-half a mile, before I can say, Wh-who goes there?" "Oh, that's no objection, for there will be another sentry placed along with you, and he can challenge, if you can fire." "Well, b-b-but I may be taken, and run through the st-st-stomach, before I can cry, Qu-qu-quer!"

"WELL, I was talking the other day about periodicals, and says I to a few *Family Friends*, whom I'm always glad to see, and who had formed a sort of *Home Circle* around the fire-place, after they had left their *Chambers*,—as my good old Tutor used to remark,—What can be more delightful than *Walks Abroad, and Evenings at Home*? You come in half wearied, and put the *Journals* to bed, because their *Family Pastime* is over; then, taking a cup of tea, you enjoy cheerful *Household Words* about *Familiar Things*, until your face shines like a *Mirror*. When your talk is over, if you still have a *Leisure Hour*, you can employ it profitably by reading the *Pleasant Pages of The Home Companion*."

## OUR MEMORANDUM BOOK!

CHANGES OF THE KALIDOSCOPE.—The following curious calculation has been made of the number of changes this wonderful instrument will admit. Supposing the instrument to contain twenty small pieces of glass, &c., and that you make ten changes in each minute, it will take the inconceivable space of 162,880,899,576 years and 800 days, to go through the immense variety of changes it is capable of producing; amounting (according to our frail idea of the nature of things) to an eternity. Or, if you take only 12 small pieces, and make ten changes in each minute, it will then take 23,264 days, or 91 years and 49 days, to exhaust its variations. However exaggerated this statement may appear to some, it is actually the case.

ART OF SWIMMING.—Men are drowned by raising their arms above water, the buoyant weight of which depresses the head. Other animals have neither notion nor ability to act in a similar manner, and therefore swim naturally. When a man falls into deep water, he will rise to the surface, and will continue there, if he does not elevate his hands. If he moves his hands under the water in any way he pleases, his head will rise so high as to allow him free liberty to breathe; and if he will use his legs as in the act of walking (or rather of walking up stairs), his shoulders will rise above the water, so that he may use the hands even with his hands or apply them to other purposes. These plain directions are recommended to the recollection of those who have not learned to swim in their youth, as they may be found highly advantageous in preserving life.

God of the fair and open sky!

Hus gloriously above us springs

The teated dome of heavenly blue

Suspended on the rainbow's wines!

Each brilliant star that sparkles through,

Each gilded cloud that wanders free

In evening's purple radiance, gives

The beauty of its praise to Thee.

FACTS ABOUT MILK.—Cream cannot rise through a great depth of milk. If milk is therefore desired to retain its cream for a time, it should be put into a deep narrow dish; and if it be desired to free it most completely of cream, it should be poured into a broad, flat dish, not much exceeding one inch in depth. The evolution of cream is facilitated by a rise, and retarded by a depression of temperature. In wet and cold weather the milk is less rich than in dry and warm; and on that account more cheese is obtained in cold than in warm, though not in thundery weather. The reason has its effects: the milk in the spring is supposed to be best for calves, in summer it is best suited for cheese, and in autumn the butter keeping better than that of summer. Cows less frequently milked than others give rich milk and consequently much better. The morning's milk is richer than the evening's. The best drawn milk of each milking, at all times and seasons, is richer than the first drawn, which is the poorest.

CLOVES.—Cloves are the unopened flowers of a small evergreen tree that resembles in appearance the laurel of the bay. It is a native of the Molucca, or Spice Island, but has been carried to all the warmer parts of the world, and is largely cultivated in the tropical regions of America. The flowers are small in size, and grow in large numbers in clusters at the very ends of the branches. The cloves we see are the flowers gathered before they have opened, and whilst they are still green. After being gathered, they are smoked by a wood fire, and then dried in the sun. Each clove consists of two parts, a round head, which is the true petals or leaves of the flowers rolled up, enclosing a number of small stalks or filaments. The other part of the clove is terminated with four points, and is in fact, the flower-cup, and the unripe seed-vessel. All these parts may be distinctly shown if a few leaves be soaked for a short time in hot water, when the leaves of the flowers soften and readily unroll. The smell of cloves is very strong and aromatic, but not unpleasant. Their taste is pungent, acrid, and lasting. Both the taste and smell depend on the quantity of oil they contain. Sometimes the oil is separated from the cloves before they are sold, and the odour and taste in consequence is much weakened by this proceeding.

MORAL BEAUTY.—I have said a great deal about prospect and landscape; I will mention no action or two, which appear to me to convey as distinct a feeling of the beautiful as any landscape whatever. A London merchant, who, I believe, is still alive, while he was staying in the country with a friend, happened to mention that he intended, next year, to buy a ticket in the lottery; his friend desired that he would buy one for him at the same time, which, of course, was very willingly agreed to. The conversation dropped, the ticket never arrived, and the whole affair was entirely forgotten, when the country gentleman received information that the ticket purchased for him by his friend had come up a prize of 20,000*l*. Upon his arrival in London, he inquired of his friend where he had put the ticket, and why he had not informed him that it was purchased. "I bought them both the same day, mine and your ticket, and I flung them both into a drawer of my bureau, and I never thought of them afterwards." "But how do you distinguish one ticket from the other? and why am I the holder of the fortunate ticket more than you?" "Why, at the time I put them into the drawer, I put a little mark in ink upon the ticket which I resolved should be yours; and upon re-opening the drawer, I found that the one so marked was the fortunate ticket." Now this action appears to me perfectly beautiful; it is *le beau ideal* in morals, and gives that calm, yet deep emotion of pleasure, which every one so easily receives from the beauty of the exterior world.—*Sydney Smith*.

"Handel's" *Judas Maccabæus*.

O love-ly Peace, with Plen-ty crown'd

NOVELLO'S MUSICAL PRESENTS.

Octavo Editions of HANDEL'S *Judas Maccabæus*, 6s. 6d.; *Messiah*, 6s. 6d.; *Samson*, 7s. 6d.; *Judas Maccabæus*, 6s. 6d.; *Jephtha*, 6s. 6d.; *Joshua*, 5s. 6d.; *Solomon*, in progress. *HAYDN'S Creation*, 5s. *MERULLI'S St. Paul*, 6s. 6d.; *Lohengrin*, and *the Hart Pants*, 5s. 6d. THE FIRST ANNUAL REPORT OF THE LONDON SUBURBAN AND HOME COUNTIES' PERMANENT BENEFIT BUILDING SOCIETY, 16 pages, 32mo.

"A thoroughly well planned Building Society, and the Report decidedly the best I have ever published." - *Times*. "A work has opened up in this deserves, and will certainly obtain public support." - *Daily News*. Order of the Secretary, Mr. W. L. HARVEY, 3, Goddard-street, Doctors' Commons.

"Costly thy habit as thy purse can buy,  
But not expressed in fancy - rich, no gaudy.  
For the apparel oft proclaims the man." - *Banquet*.

EVERY WELL-DRESSED MAN KNOWS

how difficult it is to find a tailor who thoroughly understands the peculiarities of each figure, and can suit its requirements with a well cut gentlemanly fitting garment, in which ease and taste, being equally guarded, the eye of the observer is pleased with its graceful effect, while the comfort of the wearer is secured. Hence it is that so few feel "at home" during the first day's wear of any new garment, and so many are apparently doomed to appear in clothes, however costly, that never can become adapted to their forms. To remedy so manifest a deficiency in costume, FREDERICK FOX advertises this means of making known that he has practically studied both form and fashion in their most comprehensive meaning, and in the course of an extensive private connection has elicited every conceivable development during the past thirteen years, always adapting the garment, whether coat, waistcoat, or trousers, to the exigencies of its individual wearer, and the purposes it is intended to serve, thus invariably attaining elegance of fit with that regard for economy which the spirit of the age dictates. - F. FOX, practical tailor, 73, Cornhill, same side of the way as the Royal Exchange.

GLENFIELD PATENT STARCH. - NOW

USED IN THE ROYAL LAUNDRY. - The Ladies are respectfully requested to make a trial of the GLENFIELD PATENT DOUBLE REFINED POWDER STARCH, which, for domestic use, now stands unrivalled. Sold by nearly all the Oil and Colourmen and Chandlers in London, and throughout the Kingdom. Agents wanted: apply to Mr. R. WOTHERSPON, 40, Dunlop-street, Glasgow.

LONDON DEPOT: - WOTHERSPON, Mackay, & Co., 40, King William-street, City.

WALKS ABROAD, AND EVENINGS AT HOME.

Now ready, price 2s., a New and Elegant Monthly Periodical, entitled,

WALKS ABROAD, AND EVENINGS AT HOME.

CONTENTS OF THE FIRST NUMBER.

- A Fine Steel Engraving. By Topham, after Lee. *Summerfield; or, Life on a Farm.* By D. K. Lee. Views of the Microscopic World.
- The Rapids. With a Fine Engraving.
- The Adventures of Prince Priddy in the World of Insect Wonders. By the Editor WITH Three Fine Engravings.
- The Awakening of the Birds. With a Fine Engraving. Autobiographies of Animals, Dictated by Themselves. No. 1. - The Chimpanzee; or, Wild Man of the Woods. - *It is a Parrot!*
- Poetry: - The Crocodile; *Hasty Words.*
- Miscellaneous: - The Heart; Foll and the Looking-glass; Greyhound and Pointer.

London: 60, Fleet-street; and all Booksellers.

Now Publishing.

NEW MEDICAL DICTIONARY FOR THE PEOPLE In Monthly Parts, price 6d. each, to be completed in 12. Parts I., II., III., IV., V., are published.

THE DICTIONARY OF DOMESTIC

MEDICINE AND HOUSEHOLD SURGERY. By SPENCER THOMSON, M.D., L.R.C.S., Edinburgh. Illustrated.

This work is intended to be a concise and ready book of reference in cases of emergency, either of severe illness or accident, in the absence of immediate medical assistance, and a safe guide in the domestic management of slight ailments, and of the sick-room generally.

Also, a compendium of those sanitary principles on which the attainment and preservation of health depend. It is the book of the intelligent mechanic, of the inexperienced mother, of the clergyman, and of the emigrant.

"It is the most clear and copious; and it continued as it has begun, will prove the most valuable periodical of the year." - *Tailor's Magazine*.

"For families and for the clergy it will be a valuable guide." - *Oxford Herald*.

"Intended for all classes, and giving promise of undoubted excellence." - *Newcastle Guardian*.

"We doubt whether any Medical Dictionary contains the same amount of correct and practical information. It is a work of very great value." - *Glasgow Examiner*.

"It is the best work of the kind yet attempted." - *Durham Chronicle*.

"Dr. Thomson proceeds with his labours in the most satisfactory manner, and as the work progresses its usefulness becomes more and more apparent." - *Hampshire Independent*.

"We cannot frame a work in which families may find such valuable information at so trifling a price." - *Cornish Telegraph*.

"This work, when complete, will be the best of its kind extant, and ought to be found in every family library." - *Portsmouth Guardian*.

"It is one of the very best works of its class." - *Bradford Observer*.

"There can be no doubt of the utility and talent of the work." - *Bucks Herald*.

"The work may be safely referred to as an invaluable guide." - *Irish Express*.

"Ought to be in the hands of everybody." - *Kent Obs.*

"We certainly look upon this as an invaluable work, and no family should be without it." - *Chamb. Independent*.

PENNY MONTHLY STORY, FOR LITTLE CHILDREN.

The Editors of the "Family Economist" have made arrangements for publishing a series of delightful little Stories for Young Children, to be called

BUDS AND BLOSSOMS. The Tales will

be of a simple character, printed in legible type, with very pretty Engravings. They will be beautiful and attractive little books, adapted for Children of from four to seven years.

Published on the 1st of every Month.

STORIES FOR SUMMER DAYS AND

WINTER NIGHTS. Second Series. These well-written and beautiful Stories for Young People will be found equally interesting to readers of older growth. They are lively, instructive, and moral; adapted to entertain and improve - to inform the mind and educate the heart. Each Story is illustrated with well-executed Engravings. They are among the best and cheapest books for Young People published.

ALREADY PUBLISHED.

- The Sea Kings. The Children and the Sage.
- Madeline Tule and her Halfway Dais.
- King Brother. Louis Duvall; A Story of the
- The Young Emigrants. French Revolution.
- The Boy and the Book. The Founding of the Week.
- Oswen: A Tale of Norway. In School and out of School.
- The Crusader. The Young Artist.
- The Ship and The Island. The Prophet and the Last
- The Lullaby of Nature. City.
- The Widow's Son.

The above may be had in Four Vols., elegantly bound, or in elegant cases, price One Shilling each - separately, price Threepence each.

ALSO

HOMES AT THE HAVEN, THE SEEKER AND THE

FINDER, Just Published.

LONDON: GROOMBRIDGE & SON.

New Edition, price 2s. 6d.

COLLINS' EMIGRATION ATLAS; con-

sisting of 10 Coloured Maps, showing the various Fields of Enterprise; with Instructions as to length and Cost of Passage, Time consumed, and class of Labour required; also full information on all the Gold Regions up to the present time.

H. G. Collins, 22, Paternoster-row.

New Edition, price 1s., in Case for pocket,

COLLINS' EMIGRANT'S MAP OF THE

WORLD. Giving the various Distances, and Time consumed on Voyage, with Cost of Passage; also accurate information on the class of Labour most in regulation at each place; with full information on the Gold Regions.

H. G. Collins, 22, Paternoster-row.

WEEKLY ISSUE

OF THE FAMILY FRIEND.

On SATURDAY, the 3rd of July, will be published No. 1, of the NEW SERIES of

THE FAMILY FRIEND; with which

Number will be presented a Beautiful Street Engraving, by F. ROZAS, after a painting by W. COLLINS, R.A., entitled,

"PARTING WITH A LITTLE FAMILY FRIEND!"

This Number will also have a new Title-page, by GILBERT. There will be no alteration in Size, Shape, or Price of "THE FAMILY FRIEND," its present neat and economical form being much approved.

For the convenience of those who have not taken in or completed the OLD SERIES, it is suggested that Orders should be given to Booksellers to supply

- 1st. The Whole Series, bound, price 15s.; or,
- 2nd. A Volume Monthly, price 2s. 6d.; or,
- 3rd. Three Numbers Monthly, price 2s. each.

Back Numbers and Volumes, for completing Sets, should be ordered immediately.

London: HOUGHTON and STONEMAN, 65, Paternoster-row; and all Booksellers.

THE FIRST SERIES OF THE FAMILY FRIEND.

Complete in Six Volumes, price 2s. 6d. each, or 15s. the Set.

THE FAMILY FRIEND; in Six Volumes,

elegantly bound, the Contents being carefully Classified and indexed, including 5,000 References to Masters of Domestic and Social Economy; comprising Books, Botany, Carving, Cookery, Drinks, Food, Chess (by the celebrated H. H. Marshall), Etiquette, Gardening, History, Leather-work, Music, Natural History, Needlework (by Mrs. Warren), Pastime, Poetry, Receipts, Science, Statistics, Tales, Woven Flowers and Fruit, and a varied Miscellany.

Every matter of Domestic Necessity seems to be contemplated by these volumes, which will be found to supply the best modern DOMESTIC REPERTORY.

OPINION OF THE PRESS.

The following is a type of the opinion formed of THE FAMILY FRIEND, and expressed by upwards of three hundred Newspapers:

"There never was a book which more honestly earned its title, or more fully satisfied the expectations which that title would lead one to form of its character, than the *Family Friend*, the volumes of which, beautifully got out, are now before us. Those who have seen a copy of the work will bear us out in our statement, that a more useful and generally entertaining family library book has never been published. It contains a fund of information that it would be difficult to find elsewhere in the same compass. There are tales for the children; cookery, and other household recipes for mamma; chess problems for papa; poetry and crochet for the young ladies; enigmas, anagrams, and charades for the young gentlemen to exercise their ingenuity on; and a large quantity of miscellaneous reading to suit all tastes."

The great success of THE FAMILY FRIEND during three years, and the constant desire of its Subscribers for a more frequent issue, have influenced the Proprietors to commence a NEW SERIES to be ISSUED WEEKLY, COMMENCING SATURDAY, the 3rd of JULY, 1852.

Weekly Numbers, price 2d.; Monthly Parts, price 9d.; Quarterly Volumes, 2s. 6d.

IMPORTANT TO THE WORKING CLASSES.

PINSBURY MUTUAL LIFE ASSU-

RANCE. Established, 1847. Guarantee Fund, £10,000. Life and Endowment Policies granted, from £5 to £100, free of Policy Stamp. Policies Indisputable. Monthly Payments. Payments may be made for the whole of Life, or in case on attaining 60, 65, or 70 years of age; the amount insured payable at Death, or on attaining either of these ages, thereby forming a Provision for Old Age.

Prospectuses, Terms, and every information supplied on application at the Office, 53, Exmouth street, Clerkenwell, London (post free for one stamp.) Agents required.

W. H. PRATT, Sec.

A GREAT LUXURY.

PAYNE'S ROYAL OSBORNE SAUCE,

prepared by Her Majesty's Chef, in the Isle of Wight, specially patronized by the Royal Yacht Squadron, exhibited and used at the Great Exhibition of 1851, is considered the premier sauce for fish, game, hot and cold meats, soups, gravies, &c.

"We have tasted, and relished, in my judgment, but the Royal Osborne sauce them all." - *Sun*, April 24, 1851.

Sold wholesale by Rumsey, 5 Queen-street-place, London; retail, by Fortnum and Mason, and sauce-vendors generally.

HOLLOWAY'S OINTMENT and PILLS

are FIRST-RATE REMEDIES for the CURE of BAD LEGS. - Mrs. Elizabeth Fields, of No. 11, Naylor-street, Liverpool, was affected for many years with a dreadful bad leg, and which, after trying innumerable remedies, without experiencing the slightest relief, was pronounced to be incurable. Notwithstanding this, however, she determined on giving HOLLOWAY'S OINTMENT and PILLS a trial. These she purchased of Mr. Sheldon, Chemist, 50, Vauxhall road, Liverpool (who can vouch for the accuracy of this statement), and by persevering in their use for a short time, the wounds were completely healed, and her leg perfectly cured. To the astonishment of her neighbours, who had witnessed its deplorable condition. Sold by all druggists; and at PROFFESSOR HOLLOWAY'S, 244, Strand, London.

### Editor's Note-Book.

**DOMESTIC HINTS, No. 10.—**  
**ROASTING (continued).—**A  
shoulder of veal from three  
hours to three hours and a  
half; stuff it with the force-  
ment ordered for the fillet of  
veal, in the underside. Neck,

best end, will take two hours. The same part is best  
made into a pie or broth. Breast, from an hour and  
half to two hours. Let the calf remain till it is almost  
done, then take it off, to brown it; lard, flour, and  
froth it. Veal Sweetbread.—Trim a fine sweetbread,  
it cannot be too fresh, parboil it for five minutes, and throw  
it into a basin of cold water; toast it plain, or beat up  
the yolk of an egg, and prepare some fine bread crumbs.  
When the sweetbread is cold, dry it thoroughly in a  
cloth, run a lark spit or a skewer through it, and tie it  
on the ordinary spit: egg it with a paste brush, powder it  
it well with bread crumbs, and roast it. For sauce filed  
bread crumbs round it, and melted butter with a little  
mushroom catsup and lemon juice, or serve them on  
buttered toast, garnished with egg sauce, or with gravy.  
**Lamb**—is a delicate, and commonly considered tender  
meat, but those who talk of tender lamb, while they are  
thinking of the age of the animal, forget that even a  
chicken must be kept a proper time after it has been  
killed, or it will be tough picking. Useful experience  
has warned us to beware of accepting an invitation to  
dinner on Easter Sunday, and unless commanded by a  
thorough bred gourmand, our incisors, molars, and  
principal viscera, have protested against the imprudence  
of encountering young tough stringy mutton under the  
misnomer of grass lamb. To the usual accompaniments  
of roasted meat, green mint sauce or a salad is com-  
monly added; and some cooks, about five minutes before  
it is done, sprinkle it with a little minced parsley. Grass  
lamb is in season from Easter to Michaelmas. Mince  
lamb from Christmas to Lady-day. When green mint  
cannot be got, mint vinegar is an acceptable substitute  
for it. Hind quarter of eight pounds, will take from an  
hour and three quarters to two hours; hasty and froth  
it. Fore quarter of ten pounds, about two hours. It is  
a pretty general custom, when you take off the shoulder  
from the ribs, to squeeze a Seville orange over them, and  
sprinkle them with a little pepper and salt. Leg of five  
pounds, from an hour to an hour and a half. Shoulder,  
with a quick fire, an hour. Ribs, about an hour to an  
hour and a quarter; joint it nicely; crack the ribs  
across, and bend them up to make it easy to carve.  
Loin, an hour and a quarter. Neck, an hour. Breast,  
three quarters of an hour.

**TO REMOVE THE STAINS OF INK.—**W. JENNINGS.—The  
stains of ink, on cloth, paper, or wood, may be removed  
by all acids; but those acids are to be preferred, which  
are least likely to injure the texture of the stained sub-  
stance. The muriatic acid, diluted with five or six times  
its weight of water, may be applied to the spot, and after  
a minute or two washed off; repeating the application as  
often as may be found necessary. Less risk attends the  
use of vegetable acids. A solution of the oxalic, citric,  
(acid of lemons), or tartarous acids, in water, may be  
applied to the most delicate fabrics without danger of in-  
juring them; and the same solution will discharge  
writing but not printing ink. Hence it may be employed  
in cleaning books, which have been defaced by writing  
on the margin, without impairing the text.

**HEALTH OF THE MILLION.—**"A MECHANIC" complains  
of ill-health engendered by the unwholesome air of a  
factory in which he is engaged; and he desires to know  
what remedies can be adopted to counteract this evil.  
We are glad to have an opportunity of recommending a  
very useful and cheap publication, issued by the Metro-  
politan Working Classes' Association, the "Manual of  
Public Health and Domestic Economy," in which our  
correspondent will find his inquiries answered, and a  
large amount of valuable information besides.

**THE GAMUT.—**J. KELLY.—Guido d'Arezzo, a monk of the  
13th century, in the solitude of his convent, made the  
great discovery of counterpoint, or the science of  
harmony, as distinguished from melody; he also  
invented the present system of notation, and gave  
those names to the sounds of the diatonic scale still  
in use—*ut, re, mi, fa, sol, la, si*, these being the first  
syllables of the first six lines of a hymn to St. John the  
Baptist, written in monastic Latin; and they seem to  
have been adopted without any special reason, from the  
capable of the musician.

**METHOD OF ASCERTAINING THE STATE OF THE LUNGS.—**  
S. W.—Persons desirous of ascertaining the true state of  
their lungs, are directed to draw in as much breath as they  
conveniently can; they are then to count as far as they  
are able, in a slow and audible voice, without drawing in  
more breath. The number of seconds they can continue  
counting must be carefully observed; in a consumption  
the time does not exceed ten, and is frequently less than  
six seconds; in pleurisy and pneumonia, it ranges from  
nine to four seconds. When the lungs are in a sound  
condition, the time will range as high as from twenty to  
thirty-five seconds.

**MESMERISM.—**G. W.—The discoverer of the supposed in-  
fluence of magnetism, Anton Mesmer, was born in 1734,  
at Merzburg in Swabia. He is said to have derived the  
art of curing disease by the use of the magnet, from a  
Jesuit, Father Hehl, who had practiced it with some suc-  
cess. Many theories have been propounded in order to  
embrace the facts of animal magnetism. Mesmer and  
his immediate followers attributed them to the action of  
a subtle fluid in the bodies of animals, which enabled  
them to exercise an influence on each other at a distance,  
just as a magnet affects iron; but some experiments by  
Mr. Braid acquit for the phenomena, by supposing that  
there is "a derangement of the cerebro-spinal centres,  
and of the circulatory and respiratory and muscular sys-  
tems, induced by a fixed state, absolute repose of body;  
fixed attention, and suppressed respiration, concomitant  
with that fixity of attention." However this may be,  
for

"Who shall decide when doctors disagree?"  
we invite the attention of our correspondent and our  
readers generally, to the attractive representation here  
given of a most undoubted instance of

ANIMAL MAGNETISM.

**LIVING WITHIN OUR MEANS.—**G. WILSON.—Emigration,  
persons who cannot contrive to subsist on a respect-  
able income, can only open a wider field for vexation and  
disappointment. Habitual want of prudence will pro-  
duce the same results everywhere. No one can feel in-  
dependent unless his expenditure is within the limits of  
his income, whatever that may be. The comfortable  
feeling of balancing our expenditure so as to save a  
little is to be envied. The homely story of the man who  
kept his accounts so accurately as to balance them to a  
shilling at Christmas, has often been told. On one occa-  
sion, upon a careful calculation, he found that, after  
every allowance, his expenditure had exceeded his in-  
come to the amount of twelve pence sterling! This was to  
him a matter of serious regret. He looked round his fire-  
side, and noticed a recent addition to it on the mother's  
knee, which made him look rather grave; but turning up  
his eyes towards Heaven, he happened fortunately to cast  
them up the chimney, where he espied a stick of bacon  
that had unwittingly been omitted in his inventory of  
stock in hand, a sight which instantly drew a balance in  
his favour, and like the famous Dumpty ditch of old, if  
not the reward, was at least the harbinger of domestic  
peace and content.

**COMPOSITION OF THE AIR.—**J. WELLS.—The air is com-  
posed of oxygen, nitrogen, carbonic acid, and watery  
vapour. Of these, the oxygen and nitrogen form by far  
the greatest part. The existence of carbonic acid is  
proved by exposing a vessel of lime water for some time  
to the air; a white crust is formed on the surface, which  
is carbonate of lime, formed by the carbonic acid in the  
air, uniting with the lime, for which it has a strong af-  
finity. The presence of watery vapour is proved by filling  
a tumbler with water fresh drawn from the well in a  
warm day; the outside of the tumbler will be covered with  
moisture, which is formed by the condensation of the  
watery vapour in the air by the cold surface of the glass.

**COMMUNICATIONS RECEIVED.—**G. JAFFE (the wages of a  
shepherd in Australia vary from £20 per annum to £25,  
with dwelling and rations. They may become more  
or less, however, as contingencies occur). CLER-  
CUS (the appointment of a chaplain in the Royal Navy is

to be obtained, like other appointments, in the same ser-  
vice, through the First Lord of the Admiralty. The pay  
attached to this office is £100 per annum. E. STEAM is  
invisible; but when it comes in contact with the air,  
being condensed into small drops, it instantly becomes  
visible). BIPED (the Victoria Regia was discovered in  
one of the rivers of British Guiana in 1837). H. C. (the  
only difficulty of a transatlantic telegraph between Eu-  
rope and the United States, is to provide the requisite  
funds. The undertaking is practicable). SIBYRS (the  
number of stars seen through the telescope is supposed  
to exceed eighty millions). C. (papers are doctored).  
JOVYNS (Mount Blanc is the highest of the range of the  
Alps, and is 15,000 feet). MATA (to clean brushes, dis-  
solve half an ounce of pearlash in a pint of boiling water;  
pass the brush through it until cleaned, then pour over it  
some boiling water). EMMA (whatever may be the virtues  
of some cosmetics, they can be of little effect where the  
skin is not kept in good order by regulation of diet, due  
attention to health, &c. Any disease of the system  
renders the skin harsh and dry, and cosmetics cannot  
therefore do much good). J. WELLS (the office of the  
Government Emigration is 15, Park-street, Westminster).  
D. LEASE (lowness of spirits is frequently occasioned  
by ill-health. We should strive to overcome melancholy  
by wise reflections and incessant occupation).—

"Care to our coffin adds a nail, no doubt,  
While every smile right merry draws one out."  
M. (leeches should be kept in a very cool place, and the  
water which is put to them should be as nearly as possible  
of the temperature of that which is taken away). J.  
EDWARDS (Batiste, or cambric, derives its name from  
Baptista Chamberlaine, who brought it into vogue in Flan-  
ders, in the 13th century). W. (in the Admiralty, the  
junior clerk commences at a salary of £90 per annum,  
and has no increase for three years, when there is an  
increase of £10 a year till the maximum of the class is  
attained, which is £300). F. WILKES (an anagram is the  
change of one word or phrase into another, by the trans-  
position of its letters). THOMAS (in the army, officers  
salute by dropping the point of the sword, also by lower-  
ing the colours and beating the drum). In the navy,  
salutes are made by discharges of cannon, striking the  
colours or topmasts, or by volleys of small arms. Ships  
always salute with an odd number of gun, and galleys  
with an even number). F. GIBSON (the use of oil freely  
and constantly has a tendency to give the hair a dark ap-  
pearance. Such also is the effect of all pomades. This  
result may, in a great measure, be prevented by using  
alternately with the oil a mixture of borax and camphor). J. H. M. (reading at meals is prejudicial. It  
is a bad habit to call the brain into active exercise while  
the stomach requires an increase of circulation, and an  
unusual quantity of nervous energy). C. (the electro-  
galvanism owes its origin to the discovery of Dr. L.  
Galvani, an eminent Italian philosopher in 1789). D.  
(ants may be relieved by washing the floor, walls, &c.  
with a solution of alum and arsenic). G. F. MASON (the  
eagle on reading desks in churches is symbolical of the  
companions of St. John). J. HENNING (experience is the  
best remedy for nervous complaints).

"The wise for cure on exercise depend,  
God never made his work for man to mend."  
LENO (enclosing the bed with curtains is opposed to  
healthy sleep. The fact that a caged bird will soon die  
if hung up in the interior of a bed enclosed with cur-  
tains, either during the night or shortly after the sleepers  
have risen, is a sufficient proof that the air is so vitiated  
that it is not fit for the support of life, and shows the  
necessity of providing for its escape and constant re-  
newal). W. SPRAY (any invention for a better supply of  
water to London, would of course meet with ready sup-  
port). The quantity of water consumed daily in the  
great metropolis is equal to the contents of a lake fifty  
acres in extent, and of a mean depth of three feet, and  
yet this enormous quantity is by no means proportionate  
to the wants of the popula-  
tion). W. S. (there are four  
hundred miles in the body).  
QUIN (the full annual pay of a  
midshipman in the British  
Navy is £21 5s. 6d., that of a  
mate £26). In the merchant  
service a boy is usually appren-  
ticed for three years). R. W.  
(the population of Sydney and  
Moreton Bays may be computed  
at 180,000. Australia includes  
five colonies).

Printed by WILLIAM TYLEN, Bolt-court, London;  
and published for the Proprietor by JOHN BARNETT,  
69, Fleet-street, London.

# THE HOME COMPANION:

A WEEKLY MAGAZINE OF THE AMUSING AND THE USEFUL.

No. 36.—Vol. I.

SATURDAY, SEPTEMBER 4, 1852.

[PRICE ONE PENNY.]

"Let us cut the cord. Let this car be abandoned in space!"

## A VOYAGE IN A BALLOON.

In the month of September, 1850, I arrived at Frankfort-on-the-Maine. My passage through the principal cities of Germany had been brilliantly marked by aërostatic ascensions; but, up to this day, no inhabitant of the Confederation had accompanied me, and the successful experiments at Paris of Messrs. Green, Godard, and Poitevin, had failed to induce the grave Germans to attempt aerial voyages.

Meanwhile, hardly had the news of my approaching ascension circulated throughout Frankfort, than three persons of note asked the favour of accompanying me. Two days after, we were to ascend from the Place de la Comédie. I immediately occupied myself with the preparations. My balloon, of gigantic proportions, was of silk, coated with gutta-percha, a substance not liable to injury from acids or gas, and of absolute impermeability. Some trifling rents were mended: the inevitable results of perilous descents.

The day of our ascension was that of the great fair of September, which attracts all the world to Frankfort. The apparatus for filling was composed of six hogsheads arranged around a large vat, hermetically sealed. The hydrogen gas, evolved by the contact of water with iron and sulphuric acid, passed from the first reservoir to the second, and thence into the immense globe, which was thus gradually inflated. These preparations occupied all the morning; and about eleven o'clock the balloon was three-quarters full; sufficiently so,—for as we rise, the atmospheric layers diminish in density,

and the gas, confined within the aërostat, acquiring more elasticity, might otherwise burst its envelope. My calculations had furnished me with the exact measurement of gas required to carry my companions and myself to a considerable height.

We were to ascend at noon. It was truly a magnificent spectacle, that of the impatient crowd who thronged around the reserved enclosure, inundated the entire square and adjoining streets, and covered the neighbouring houses from the basements to the slated roofs. The high winds of past days had lulled, and an overpowering heat was radiating from an unclouded sky; not a breath animated the atmosphere. In such weather, one might descend in the very spot he had left.

I carried 300 lbs. of ballast, in bags; the car, perfectly round, four feet in diameter, and three feet in height, was conveniently attached; the cord which sustained it was symmetrically extended from the upper hemisphere of the aërostat; the compass was in its place, the barometer suspended to the iron hoop which surrounded the supporting cords, at a distance of eight feet above the car; the anchor carefully prepared;—all was in readiness for our departure.

Among the persons who crowded around the enclosure, I remarked a young man with pale face and agitated features. I was struck with his appearance. He had been an assiduous spectator of my ascensions in several cities of Germany. His uneasy air and his extraordinary pre-occupation never left him; he eagerly contemplated the curious machine, which rested motionless at a few feet from the ground, and remained silent.

The clock struck twelve! This was the hour. My companions *de courage* had not appeared. I sat in the dwelling of each, and learned that each had started for Hamburg, another for Vienna, and the third, still more fearful, for London. Their hearts had called them at the moment of undertaking one of those excursions, which, since the ingenious experiments of aeronauts, are deprived of all danger. As they made, as it were, a part of the programme of the fête, they had feared being compelled to fulfil their agreements, and had fled at the moment of ascension. Their courage had been in inverse ratio to the square of their swiftness in retreat.

The crowd, thus partly disappointed, were shouting with anger and impatience. I did not hesitate to ascend alone. To re-establish the equilibrium between the specific gravity of the balloon and the weight to be raised, I substituted other bags of sand for my expected companions, and entered the car. The twelve men who were holding the *aérostat* by twelve cords fastened to the equatorial circle, let them slip between their fingers; the car rose a few feet above the ground. There was not a breath of wind, and the atmosphere, heavy as lead, seemed insurmountable.

"All is ready!" exclaimed I; "Attention!"

The men arranged themselves; a last glance informed me that everything was right.

"Attention!"

There was some movement in the crowd, which seemed to be invading the reserved enclosure.

"Let go!"

The balloon slowly ascended; but I experienced a shock, which threw me to the bottom of the car. When I rose, I found myself face to face with an unexpected voyager,—the pale young man.

"Monsieur, I salute you!" said he to me.

"By what right—?"

"Am I here? By the right of your inability to turn me out."

I was confounded. His assurance disconcerted me; and I had nothing to say in reply. I looked at him, but he paid no regard to my astonishment. He continued:

"My weight will disturb your equilibrium, monsieur; will you permit me—"

And without waiting for my assent, he lightened the balloon by two bags of sand, which he emptied into the air.

"Monsieur," said I, taking the only possible course, "you are here,—well! you choose to remain,—well! but to me alone belongs the management of the *aérostat*."

"Monsieur," replied he, "your urbanity is entirely French; it is of the same country with myself! I press to imagination the hand which you refuse me. Take your measures,—not as it may seem good to you; I will wait till you have ended—"

"To—"

"To converse with you."

The barometer had fallen to 29 inches; we had attained a height of about 600 metres,\* and were over the city, which satisfied me of our complete quiescence, for I could not judge by our motionless flag. Nothing betrays the horizontal voyage of a balloon; it is the mass of air surrounding it which moves. A kind of wavering heat bathed the objects extended at our feet, and gave their outlines an indistinctness to be regretted. The needle of the compass indicated a slight tendency to float towards the south.

I looked again at my companion. He was a man of thirty, simply clad; the bold outlines of his features betokened indomitable energy; he appeared very muscular. Absorbed in the emotions of this silent suspension, he remained immovable, seeking to distinguish the objects which passed beneath his view.

"Vexatious mist!" said he, at the expiration of a few moments.

I made no reply.

"What would you? I could not pay for my voyage; I was obliged to take you by surprise."

"No one has asked you to descend!"

"A similar occurrence," he resumed, "happened to the Counts of Laurencin and Dampierre, when they ascended at Lyons, on the 15th of January, 1784. A young merchant, named Fontaine, scaled the railing, at the risk of upsetting the equipage. He accomplished the voyage, and nobody was killed!"

"Once on the earth, we will converse!" said I, piqued at the tone of lightness with which he spoke.

"Bah! do not talk of returning!"

"Do you think, then, that I shall delay my descent?"

"Descend!" said he, with surprise. "Let us ascend!"

And before I could prevent him, two bags of sand were thrown out, without even being emptied.

"Monsieur!" said I, angrily.

"I know your skill," replied he, composedly; "your brilliant ascensions have made some noise in the world. Experience is the sister of practice, but it is also first cousin to theory, and I have long and deeply studied the *aérostat* art. It has affected my brain," added he sadly, falling into a *somnolence*.

The balloon, after having risen, remained stationary; the unknown consulted the barometer, and said:

"Here we are at 800 metres! Men resemble insects! See, I think it is from this height that we should always look at them, to judge correctly of their moral preponderance. The Place de la Concorde is transformed to an immense ant-hill. Look at the crowd piled up on the quays. The Bell-

\* A French inch is equal to 25.35 English inches.

Ministère. We are above the *Parc des Minimes*. The *maison* is not only a white line dividing the city, and this is the *maison*, which looks like a white thread grown between the two banks of the river."

The atmosphere grew cooler.

"There is nothing I will not do for you, my host," said my companion. "If you are cold, I will take off my clothes, and lend them to you."

"Thank!"

"Necessity makes laws. Give me your hand,—I am your countryman. You shall be instructed by my company, and my conversation shall compensate you for the annoyance I have caused you."

I seated myself, without replying, at the opposite extremity of the car. The young man had drawn from his great coat a valise; it was a work on *aérostation*.

"I imagine," said he, "a most curious collection of engravings and caricatures appertaining to our aerial mania. This precious discovery has been at once admitted and ridiculed. Fortunately we have passed the period when the *Mongoliers* sought to make factitious clouds with the vapour of water; and of the gas affecting electric properties, which they produced by the combustion of damp straw with chopped wool."

"Would you detract from the merit of these inventions?" replied I.

"Was it not well done to have proved by experiment the possibility of rising in the air?"

"Who denies the glory of the first aerial navigators? Immense courage was necessary to ascend by means of those fragile envelopes, which contained only warm air. Besides, has not *aérostatic* science made great progress since the ascensions of Blanchard?"

We were advancing towards the south; the magnetic needle pointed in the direction of Frankfurt, which was flying beneath our feet.

"Perhaps we shall have a storm," said the young man.

"We will descend first."

"Indeed! it will be better to ascend; we shall escape more surely," and two bags of sand were thrown overboard.

The balloon rose rapidly, and stopped at 1,200 metres. The cold was now intense, and there was a slight buzzing in my ears. Nevertheless, the rays of the sun fell hotly on the globe, and, dilating the gas it contained, gave it a greater ascensional force. I was stupefied.

"Fear nothing," said the young man to me. "We have three thousand five hundred toises of respirable air. You need not trouble yourself about my proceedings."

I would have risen, but a vigorous hand detained me on my seat.

"Your name?" asked I.

"My name! how does it concern you?"

"I have the honour to ask your name."

"I am called *Erostratus of Empedocles*,—as you please. Are you interested in the progress of *aérostatic* science?"

He spoke with icy coldness, and I asked myself with whom I had to do.

His gestulations, also, were so furious, that the car experienced violent oscillations; I had much difficulty in restraining him. Meanwhile, the balloon had encountered a more rapid current. We were advancing in a southerly direction, at 1,200 metres in height, almost accustomed to this new temperature.

"There is Darmstadt," said my companion. "Do you perceive its magnificent chateau? The storm-cloud below makes the outlines of objects waver; and it requires a practised eye to recognise localities."

"You are certain that it is Darmstadt?"

"Undoubtedly. We are six leagues from Frankfurt."

"Then we must descend."

"Descend! you would not alight upon the steeples!" said the unknown, mockingly.

"No; but in the environs of the city."

"Well, it is too warm; let us remount a little."

As he spoke thus, he seized some bags of ballast. I precipitated myself upon him; but, with one hand, he overthrew me, and the lightened balloon rose to a height of 1,600 metres.

"Sit down," said he, "and do not forget that Brioschi, Biot, and Guy-Lussac, ascended to a height of 7,000 metres, in order to establish some new scientific laws."

"We must descend," resumed I, with an attempt at gentleness. "The storm is gathering beneath our feet and around us; it would not be prudent—"

"We will ascend above it, and shall have nothing to fear from it. What more beautiful than to reign in heaven, and look down upon the clouds which hover upon the earth! Is it not an honour to navigate these aerial waves? The greatest personages have travelled like ourselves. The Marquis and Comtesse de Montalembert, the Comtesse de Podenas, Mlle. La Garde, the Marquis de Montalembert, set out from the Faubourg St. Antoine for these unknown regions. The Duc de Chartres displayed much address and presence of mind in his ascension of the 15th of July, 1784; at Lyons, the Comtes de Laurencin and de Dampierre; at Nantes, M. de Luyne; at Bordeaux, D'Arbelet des Granges; in Italy, the Chevalier Andreati; in our days, the Duke of Brunswick,—have left in the air the track of their glory. In order to equal these great personages, we must ascend into the celestial regions higher than they. To approach the infinite is to comprehend it."

The rarefaction of the air considerably dilated the hydrogen, and I saw the lower part of the *aérostat*, suddenly left open, become by degrees inflated, rendering the opening of the valve indispensable; but my fearful companion seemed determined not to allow me to direct our movements. I resolved to pull secretly the cord attached to the valve, while he was talking

# A VOYAGE IN A BALLOON

with animation. "I feared to pass with whom I had to do. It might have been too horrible. It was about three o'clock of an hour when I had left Frankfort. I was in the middle of the night when I was about to descend." "Have you lost all hope of making your plans succeed?" said I, with great apparent interest.

"All hope is lost," he answered, despairingly. "I wounded my passions, caricatures, those blows with the foot of an ass have dashed me. It is the eternal punishment reserved for innovators. See these caricatures of every ge with which my portfolio is filled."

I had secured the end of the valve, and stooping over his works, concealed my movements from him. It was to be feared, nevertheless, that he would notice the rushing sound, like a waterfall, which the gas produces in escaping.

"How many jets at the expense of the Abbé Miolan! He was about to ascend with Jaumet and Bredin. During the operation, their balloon took fire, and an ignorant populace tore it to pieces. Then the caricature of *The Curious Animals* called them *Miolan, Jean Miati, and Gredin*."

The barometer had begun to rise; it was time! A distant muttering of thunder was heard towards the south.

See this other engraving," continued he, without seeming to suspect my manoeuvres. "It is an immense balloon containing a ship, large castles, houses, &c. The caricaturists little thought that their absurdities would one day become realities. It is a large vessel; at the top is the helm with the pilot a box; at the prow, *maisons de plaisance*, a gigantic organ, and cannon to call the attention of the inhabitants of earth or of the moon, above the stern the observatory and pilot balloon; at the equatorial circle, the barracks of the army; on the left the lantern; then upper galleries for promenades, the sails, the wings, beneath, the cafts and generatore-houses of provisions. Admire this magnificent announcement. 'Invented for the good of the human race, this globe will depart immediately for the sea ports in the event, and on its return will announce its voyages for the two Poles and the extremes of the Occident. Every provision is made, there will be an exact rate of fire for each place of destination; but the prices for distant voyages will be the same 1 000 louis. And it must be confessed that this is moderate sum considering the celerity convenience and pleasure of this mode of travelling above all others. While in this balloon, every one can divert himself as he pleases dancing, playing, or conversing with people of talent. Pleasure will be the soul of the aerial society. All these inventions excite laughter. But before long if my days were not numbered, these projects should become realities."

We were visibly descending; he did not perceive it!

"See this game of balloons; it contains the whole history of the ærostatic art. This game, for the use of educated minds, is played like that of the Jew with dice and counters of any value agreed upon which is to be paid or received, according to the condition in which one arrives."

"But, I resumed, 'you seem to have valuable documents on probation?'"

I am less learned than the gods! That is all! I possess all the knowledge possible in this world. From Phædon, Icarus, and Archimedes, I have searched all comprehended all! Through me, the ærostatic art would render immense services to the world if God should spare my life! But that cannot be."

Why not?"

Because my name is Impeccable or Erostatius!"

I shuddered! Fortunately the balloon was approaching the earth. But the danger is the same at 50 feet as at 5,000 metres! The clouds were advancing.

"Remember the battle of Fleurus, and you will comprehend the utility of ærostatics! Contelle, by order of the government, organized a company of ærostatists. At the siege of Maubeuge, General Jourdan found this new method of observation so serviceable that twice a day, accompanied by the General himself, Contelle ascended into the air. The correspondence between the ærostatist and the ærostatists who held the balloon, was carried on by means of little white, red and yellow flags. Cannons and carbines were often aimed at the balloon at the moment of its ascension, but without effect. When Jourdan was preparing to invest Charleroi, Contelle repaired to the neighbourhood of that place, rose from the plain of Jumet, and remained taking observations seven or eight hours, with general Morelot. The Austrians came to deliver the city, and a battle was fought on the heights of Fleurus. General Jourdan publicly proclaimed the assistance he had received from ærostatic observations. Well! notwithstanding the services rendered on this occasion, and during the campaign with Belgium, the year which witnessed the commencement of the military career of balloons, also saw it terminate. And the school of Meudon, founded by government, was closed by Bonaparte, on his return from Egypt. 'What are we to expect from the child which has just been born?' Franklin had said. But the child was born alive! It need not have been strangled!"

The unknown had his forehead in his hands, reflected for a few moments, then, without raising his head, said to me:

"Notwithstanding my orders, you have opened the upper valve!"

"I let go the cord."

"Fortunately," continued he, "we have still two hundred pounds of ballast."

"What are your plans?" said I, with effort.

"You have never crossed the sea?"

"I have frequently sailed, but never from my veins."

"Is that so?" said he, "that we are being wafted towards the Atlantic! That is only a streamlet. Higher! we shall find other currents!"

And without looking at me, he lightened the balloon by several hundred pounds.

"I allowed you to open the valve, because the Allegiance of the gas threatened to burst the balloon. But do not do it again."

"I was alarmed."

"You know the voyage from Dover to Calais made by Blanchard and Jeffries? It was not an accident. On the 7th of January, 1785, in a north-east wind, their balloon was filled with gas on the Dover side, contrary to their plans, when an error in equilibrium compelled them to throw out their ballast, retaining only thirty pounds. The wind carried them slowly along towards the shores of France. The permeability of the flames gradually consumed the gas to escape, and at the expiration of an hour and a half the voyagers perceived that they were descending."

"What is to be done?" said Jeffries.

"We have passed over only three-fourths of the distance," replied Blanchard, "and at a slight elevation. By ascending we shall escape the contrary winds. Throw out the remainder of the ballast."

"The balloon regained its ascensional force, but soon re-descended. About midway of the voyage, the aeronauts threw out their books and tools. A quarter of an hour afterwards, Blanchard said to Jeffries:

"The barometer."

"It is rising! We are lost, and yet there are the shores of France!"

"A great noise was heard."

"Is the balloon rent?" asked Jeffries.

"No! the escape of the gas has collapsed the lower part of the balloon."

"But we are still descending. We are lost! Everything not indispensable must be thrown overboard!"

"Their provisions, arms and helm were thrown out into the sea. They were now only 100 metres in height."

"We are remounting," said the Doctor.

"No, it is the jerk caused by the diminution of weight. There is not a ship in sight! Not a bark on the horizon! To the sea with our garments!"

"And the unfortunate men stripped, but the balloon continued to descend."

"Blanchard," said Jeffries, "you were to have made this voyage alone; you consented to take me. I will sacrifice myself for you! I will throw myself into the water, and the balloon, relieved, will re-ascend."

"No, no, it is frightful!"

"The balloon collapsed more and more, and its convexity forming a gun-chute, forced the gas against its sides and accelerated its motion."

"Adieu, my friend," said the Doctor. "May God preserve you."

"He was about to take the leap, when Blanchard detained him."

"One resource remains to us! We can cut the cords by which the net is attached and cling to the network; perhaps the balloon will rise. Ready! But the barometer falls! We remount! The wind freshens! We are saved!"

"The voyagers perceived Calais! Their joy became delirium; a few moments later, they descended in the forest of Guines. I doubt not," continued the unknown, "that in similar circumstances you would follow the example of Doctor Jeffries."

The clouds were unrolling beneath our feet in glittering cascades; the balloon cast a deep shadow on this pile of clouds, and was surrounded by them as with an aureole! The thunder growled beneath our feet! All this was frightful!

"Let us descend! exclaimed I."

"Descend, when the sun is waiting as yonder! Down with the bags!"

And he lightened the balloon of more than fifty pounds. At 3,000 metres we remained stationary. The unknown talked incessantly, but I scarcely heard him; I was completely prostrated while he seemed in his element."

"With a good wind, we shall go far, but we must, especially, go high."

"We are lost!"

"In the Antilles there are currents of air which travel a hundred leagues an hour! On the occasion of Napoleon's coronation, Garnerin let off a balloon illuminated with coloured lamps, at eleven o'clock in the evening! The wind blew from the N. E. the next morning at daybreak the inhabitants of Rome salute its passage above the dome of St. Peter's. We will go farther!"

I scarcely heard him; everything was buzzing around me! There was an opening in the clouds!

See that city my host said the unknown "It is Spire. Nothing else!"

I dared not lean over the railing of the car. Nevertheless I perceived a little black spot. This was Spire. The broad Rhine looked like a ribbon, the great roads like threads. Above our heads the sky was of a deep azure; I was benumbed with the cold. The birds had long since forsaken us; in this rarefied air their flight would have been impossible. We were alone in space and I in the presence of a strange man!

"It is useless for you to know whether I am taking you," said he, and he threw the compass into the clouds. "A fall is a fine thing. You know that there have been a few victims from Pilatre des Roitiers down to Lieutenant Galle, and these misfortunes have always been caused by imprudence. Pilatre des Roitiers ascended in company with Rochain, at Boulogne, on the 18th of June, 1785. To his balloon, inflated with gas, he had suspended a mongolfier filled with warm air, undoubtedly to save the trouble of letting off gas or throwing out ballast. It was like putting a chafin-dish beneath a powder-cask. The imprudent men rose to a height of four hundred metres and encountered opposing winds, which drove them over the ocean. In order to descend, Pilatre attempted to open the valve of the Ærostat; but the cord of this valve caught in the balloon, and tore it so that it was emptied in an instant. It fell on the mongolfier, overturned it, and the imprudent men

were dashed to pieces in a few seconds. It is frightful, is it not?" said the unknown, shaking me from my torpor.

"I could reply only by these words:

"In pity, let us descend! The clouds are gathering around us in every direction, and frightful detonations reverberating from the cavity of the aërostat are multiplying around us."

"You make me impatient!" said he. "You shall no longer know whether we are ascending or descending."

And the barometer went after the compass, along with some bags of sand. We must have been at a height of four thousand metres. Some icicles were attached to the sides of the car, and a sort of fine snow penetrated to my knees. Meanwhile a terrific storm was bursting beneath our feet. We were above it.

"Do not fear," said my strange companion; "it is only imprudence that makes victims. Olivari, who perished at Orleans, ascended in a mongolier made of paper; his car suspended below the chafing-dish, and ballasted with combustible materials; became a prey to the flames! Olivari fell, and was killed. Momment ascended at Lille, on a light platform; an oscillation made him lose his equilibrium. Momment fell, and was killed. Bittorf, at Mannheim, saw his paper balloon take fire in the air! Bittorf fell, and was killed. Harris ascended in a balloon badly constructed, the valve of which was too large to be closed again. Harris fell, and was killed. Sadler, deprived of ballast by his long stay in the air, was dragged over the city of Boston, and thrown against the chimneys. Sadler fell, and was killed. Cocking descended with a convex parachute which he pretended to have perfected. Cocking fell, and was killed. Well, I love them, those noble victims of their courage! and I will die like them! Higher! higher!"

All the phantoms of this necrology were passing before my eyes. The rarefaction of the air and the rays of the sun increased the dilatation of the gas; the balloon continued to ascend! I mechanically attempted to open the valve; but the unknown cut the cord a few feet above my head. I was lost!

"Did you see Madame Blanchard fall?" said he to me. "I saw her, I—yes, I! I was at Tirolli on the 6th of July, 1819. Madame Blanchard ascended in a balloon of small size, to save the expense of filling; she was therefore obliged to inflate it entirely, and the gas escaped by the lower orifice, leaving on its route a train of hydrogen. She carried, suspended above her car, by an iron wire, a kind of firework, forming an aureola which she was to kindle. She had often repeated this experiment. On this occasion she carried, besides, a little parachute, ballasted by a firework terminating in a ball with silver rain. She was to launch this apparatus, after having lighted it with a lance, a few, prepared for the purpose. She ascended. The night was dark. At the moment of lighting the firework, she was so imprudent as to let the lance pass beneath the column of hydrogen, which was escaping from the balloon. My eyes were fixed on her. Suddenly an unexpected flash illuminated the darkness. I thought it a surprise of the skilful aëronaut. The flame increased, suddenly disappeared, and reappeared at the top of the aërostat under the form of an immense jet of burning gas. This sinister light projected over the Boulevard, and over the quarter Montmartre. Then I saw the unfortunate woman rise, twice attempt to compress the orifice of the balloon, to extinguish the fire, then seat herself in the car and seek to direct its descent; for she did not fall. The combustion of the gas lasted several minutes. The balloon, diminishing by degrees, continued to descend, but this was not a fall! The wind blew from the northeast and drove her over Paris. There were, at that time, in the neighbourhood of the house, No. 16, Rue de Provence, immense gardens. The aëronaut might have fallen there without danger. But unhappily the balloon and the car alighted on the roof of the house. The shock was slight. 'Help!' cried the unfortunate woman. I arrived in the street at that moment. The car slid along the roof, and encountered an iron hook. At this shock Madame Blanchard was thrown out of the car, and precipitated on the pavement! She was killed!"

These histories of fatal augury froze me with horror. The unknown was standing upright, with bare head, bristling hair, and haggard eyes.

Illusion was no longer possible. I saw at last the horrible truth. I had to deal with a madman!

He threw out half the ballast, and we must have been borne to a height of 7,000 metres! Blood spouted from my nose and mouth.

"What a fine thing it is to be martyrs to science! They are canonized by posterity!"

I heard no more. The unknown looked around him with horror, and knelt at my ear.

"On the 7th of October, 1804, the weather had begun to clear up a little; for several days preceding the wind and rain had been incessant. But the ascension announced by Zambecarri could not be postponed! His idiot enemies already scoffed at him. To save himself and science from public ridicule it became necessary for him to ascend. It was at Bologna. No one aided him in filling his balloon; he rose at midnight, accompanied by Andreoli and Grossetti. The balloon ascended slowly; it had been sent by the wind, and the gas escaped. The three intrepid voyagers could observe the state of the barometer only by the aid of a dark lantern. Zambecarri had not eaten during twenty-four hours; Grossetti was also fasting."

"My friends," said Zambecarri, "I am benumbed with the cold; I am exhausted; I must die;" and he fell senseless in the gallery.

"It was the end," said Grossetti. Andreoli alone remained awake. After long efforts he succeeded in arousing Zambecarri from his stupor.

"What is there now?" "Where are we going? In which direction is the wind? What time is it?"

"It is two o'clock!"

"Where is the compass?"

"It has fallen out!"

"Great God! the lamp is extinguished!"

"It could not burn longer in this rarefied air," said Zambecarri.

"The moon had not risen; the atmosphere was plunged in horrible darkness."

"I am cold, I am cold, Andreoli! What shall we do?"

"The unfortunate men slowly descended through a layer of white clouds."

"Hush!" said Andreoli; "do you hear—"

"What?" replied Zambecarri.

"A singular noise!"

"You are mistaken!"

"No!—Do you see those midnight travellers, listening to that incoherent, prehensible sound? Have they struck against a tower? Are they about to be precipitated on the roofs? Do you hear it? It is like the sound of the ocean!"

"Impossible!"

"It is the roaring of the waves!"

"That is true!—Light! light!"

"After five fruitless attempts, Andreoli obtained it. It was three o'clock. The sound of the waves was heard with violence—they almost touched the surface of the sea."

"We are lost!" exclaimed Zambecarri, seizing a bag of ballast.

"Help!" cried Andreoli.

The car touched the water, and the waves covered them breast high. To the sea with instruments, garments, money! The aëronauts stripped entirely. The lightened balloon rose with frightful rapidity. Zambecarri was seized with violent vomiting. Grossetti bled freely. The unhappy men could not speak; their respiration was short. They were seized with cold, and in a moment covered with a coat of ice. The moon appeared to them red as blood. After having traversed these high regions during half an hour, the machine again fell into the sea. It was four o'clock in the morning; the bodies of the wretched aëronauts were half in the water, and the balloon, acting as a sail, dragged them about during several hours. At daybreak, they found themselves opposite Pesaro, five miles from the shore; they were about to land, when a sudden flaw of wind drove them back to the open sea. They were lost! The affrighted barks fled at their approach. Fortunately a more intelligent navigator halted them, took them on board, and they landed at Ferrara. That was frightful! Zambecarri was a brave man. Scarcely recovered from his sufferings, he recommenced his ascensions. In one of them, he struck against a tree; his lamp, filled with spirits of wine, was spilled over his clothes, and they caught fire; he was covered with flames his machine was beginning to kindle, when he descended, half-burned. The 21st September, 1812, he made another ascension at Bologna; his balloon caught in a tree; his lamp set fire to it. Zambecarri fell, and was killed! And in the presence of these high facts, shall we still hesitate? Not the higher we go the more glorious will be our death!"

The balloon, entirely unballasted, we were borne to incredible heights. The aërostat vibrated in the atmosphere; the slightest sound re-echoed through the celestial vaults; the globe, the only object which struck my sight in impensity, seemed about to be annihilated, and above us the heights of heaven lost themselves in the profound darkness!

I saw the unknown rise before me.

"This is the hour!" said he to me. "We must die! We are rejected by men! They despise us! let us crush them!"

"Mercy!" exclaimed I.

"Let us cut the cords! let this car be abandoned in space! The attractive force will change its direction, and we shall land in the sun!"

Despair gave me strength! I precipitated myself upon the madman, and a frightful struggle took place! But I was thrown down! and while he held me beneath his knee, he cut the cords of the car!

"Ode!" said he.

"Mercy!"

"Two! three!"

One cord more, and the car was sustained only on one side. I made a superhuman effort—rose, and violently repulsed this insensate.

"Four!" said he.

The car was upset. I instinctively clung to the cords which held it, and climbed up the outside. The unknown had disappeared in space!

In a twinkling the balloon ascended to an immeasurable height! A horrible crash was heard. The dilated gas had burst its envelope! I closed my eyes. A few moments afterwards a moist warmth reanimated me; I was in the midst of fiery clouds! The balloon was whirling with fearful rapidity! I felt myself swooning! Driven by the wind, I travelled a hundred leagues an hour in my horizontal course: the lightnings flashed around me!

Meanwhile my fall was not rapid. When I opened my eyes, I perceived the country. I was two miles from the sea, the hurricane urging me on with great force. I was lost!—when a sudden shock made me let go; my hands opened, a cord slipped rapidly between my fingers, and I found myself on the ground. It was the cord of the anchor, which, sweeping the surface of the ground, had caught in a crevice! I faint, and my lightened balloon, resuming its flight, was lost beyond the sea.

When I recovered my senses, I was in the house of a peasant, at Harderdek, a little town of Gualdre, fifteen leagues from Amsterdam, on the banks of the Zuiderzee.

A miracle had saved me. But my voyage had been but a series of imprudences against which I had been unable to defend myself. May this terrible recital, while it instructs those who read it, not discourage the explorers of the routes of air.

## THE VICAR OF WAKEFIELD.

(Continued from page 54b.)

"My dear," I replied, "if you have made such a promise, I cannot, nor will I tempt you to break it. Even though it may benefit the public, you must not return against him. In all human institutions a smaller evil is allowed to procure a greater good; as, in politics, a province may be given away to secure a kingdom; in medicine, a limb may be lopped off to preserve the body; but in religion, the law is written, and inflexible, never to do evil. And this law, my child, is right; for otherwise, if we commit a smaller evil to procure a greater good, certain guilt would be thus incurred, in expectation of contingent advantage. And though the advantage should certainly follow, yet the interval between commission and advantage, which is allowed to be guilty, may be that in which we are called away to answer for the things we have done, and the volume of human actions is closed for ever. But I interrupt you, my dear; go on."

"The very next morning," continued she, "I found what little expectation I was to have from his sincerity. That very morning he introduced me to two unhappy women more, whom, like me, he had deceived, but who lived in contented prostitution. I loved him too tenderly to bear such rivals in his affections, and strove to forget my infancy in a tumult of pleasures. With this view I danced, dressed, and talked; but still was unhappy. The gentlemen who visited there told me every moment of the power of my charms, and this only contributed to increase my melancholy, as I had thrown all their power quite away. Thus each day I grew more pensive, and he more insolent, till at last the monster had the assurance to offer me to a young Baronet of his acquaintance. Need I describe, Sir, how his ingratitude stung me? My answer to this proposal was almost madness. I desired to part. As I was going, he offered me a purse; but I flung it at him with indignation, and burst from him in a rage, that for a while kept me insensible of the miseries of my situation. But I soon looked around me, and saw myself a vile, abject, guilty thing, without one friend in the world to apply to. Just in that interval, a stage-coach happening to pass by, I took a place, it being my aim to be driven at a distance from a wretch I despised and detested. I was set down here, where since my arrival, my own anxiety and this woman's unkindness have been my only companions. The hours of pleasure that I have passed with my mamma and sister now grow painful to me. Their sorrows are much; but mine are greater than theirs, for mine are mixed with guilt and infamy."

"Have patience, my child," cried I, "and I hope things will yet be better. Take some repose to-night, and to-morrow I'll carry you home to your mother and the rest of the family, from whom you will receive a kind reception. Poor woman! this has gone to her heart; but she loves you still, Olivia, and will forget it."

## CHAPTER XXII.

OFFENCES ARE EASILY PARDONED WHERE THERE IS LOVE AT BOTTOM.

THE next morning I took my daughter behind me, and set out on my return home. As we travelled along, I strove by every persuasion to calm her sorrows and fears, and to arm her with resolution to bear the presence of her offended mother. I took every opportunity, from the prospect of a fine country, through which we passed, to observe how much kinder Heaven was to us than we to each other, and that the misfortunes of Nature's making were very few. I assured her, that she should never perceive any change in my affections, and that during my life, which yet might be long, she might depend upon a guardian and an instructor. I armed her against the censures of the world, showed her that books were sweet unrepublishing companions to the miserable, and that if they could not bring us to enjoy life, they would at least teach us to endure it.

The hired horse that we rode was to be put up that night at an inn by the way, within about five miles from my house; and as I was willing to prepare my family for my daughter's reception, I determined to leave her that night at the inn, and to return for her, accompanied by my daughter Sophia, early the next morning. It was night before we reached our appointed stage: however, after seeing her provided with a decent apartment, and having ordered the hostess to prepare proper refreshments, I kissed her, and proceeded towards home. And now my heart caught new sensations of pleasure the nearer I approached that peaceful mansion. As a bird that had been frightened from its nest, my affections out-went my haste, and hovered round my little fire-side with all the rapture of expectation. I called up the many fond things I had to say, and anticipated the welcome I was to receive. I already felt my wife's tender embrace, and smiled at the joy of my little ones. As I walked but slowly, the night waned apace. The labours of the day were all retired to rest; the lights were out in every cottage; no sounds were heard but of the shrilling cock, and the deep-mouthed watch-dog, at hollow distance. I approached my little abode of pleasure, and before I was within a furlong of the place, our honest mastiff came running to welcome me.

It was now near midnight that I came to knock at my door;—all was still and silent;—my heart dilated with unutterable happiness; when, to my amazement, I saw the house burning out in a blaze of fire, and every aperture red with conflagration! I gave a loud convulsive outcry, and fell upon the pavement insensible. This alarmed my son, who had till this been asleep, and he perceiving the flames, instantly waked my wife and daughter; and all rushing out, naked, and wild with apprehension, recalled me to life with their screams. But it was only to objects of new terror; for the flames had by

this time caught the roof of our dwelling, part after part continuing to fall in, with the heaviest and with silent agony; looking on as if they expected to blaze. I gazed upon them and upon it by turns, and then looked round me for my two little ones; but they were not to be seen. "O misery!" I then cried, "where are my little ones?"

"They are burnt to death in the flames," says my wife calmly; "and I will die with them."

That moment I heard the cry of the babes within, who were just awaked by the fire, and nothing could have stopped me. "Where, where are my children!" cried I, rushing through the flames, and bursting the door of the chamber in which they were confined. "Where are my little ones?"

"Here, dear papa, here we are," cried they together, while the flames were just catching the bed where they lay. I caught them both in my arms, and snatched them through the fire as fast as possible, while just as I was got out the roof sunk in.

"Now," cried I, holding up my children, "now let the flames sweep on, and all my possessions perish. Here they are; I have saved my treasures. Here, my dearest, here are our treasures, and we shall yet be happy." I kissed our little darlings a thousand times; they clasped up round the neck, and seemed to share our transports, while their mother laughed and wiped her tears.

I now stood a calm spectator of the flames, and after some time began to perceive that my arm to the shoulder was scorched in a terrible manner. I was therefore out of my power to give my son any assistance, either in attempting to save our goods, or preventing the flames spreading to our room. By this time the neighbours were alarmed, and came running to our assistance; but all they could do was to stand like us, spectators of the calamity. My goods, among which were the notes I had reserved for my daughters' fortunes, were entirely consumed, except a box with some papers, that stood in the kitchen, and two or three things more of little consequence, which my son brought away in the beginning. The neighbours contributed, however, what they could to lighten our distress. They brought us clothes, and furnished one of our outhouses with kitchen utensils; so that by daylight we had another, though a wretched dwelling to retire to. My honest next neighbour and his children were not the least assiduous in providing us with every thing necessary, and offering whatever consolation untutored benevolence could suggest.

When the fears of my family had subsided, curiosity to know the cause of my long stay began to take place: having therefore informed them of the particular, I proceeded to prepare them for the reception of our losses. I thought we had nothing but wretchedness now to impart, I was willing to procure her a welcome to what we had. This task would have been more difficult but for our recent calamity, which had humbled my wife's pride, and blunted it by more poignant afflictions. Being unable to go for my poor child myself, as my arm grew very painful, I sent my son and daughter, who soon returned, supporting the wretched delinquent, who had not the courage to look up at her mother, whom no instructions of mine could persuade to a perfect reconciliation; for women have a much stronger sense of female error than men.

"Ah, madam," cried her mother, "this is but a poor place you are come to after so much finery. My daughter Sophy and I can afford but little entertainment to persons who have kept company only with people of distinction. Yes, Miss Livy, your poor father and I have suffered very much of late; but I hope heaven will forgive you."

During this reception, the unhappy victim stood pale and trembling, unable to weep or to reply; but I could not continue a silent spectator of her distress; wherefore, assuming a degree of severity in my voice and manner, which was ever followed with instant submission,—

"I entreat, woman, that my words may be now marked once for all: I have here brought you back a poor deluded wanderer; her return to duty demand the revival of our tenderness. The real hardships of life are now coming fast upon us; let us not, therefore, increase them by dissension among each other. If we live harmoniously together, we may yet be contented, as there are enough of us to shut out the censuring world, and keep each other in countenance. The kindness of heaven is promised to the penitent, and let ours be directed by the example. Heaven, we are assured, is much more pleased to view a repentant sinner, than ninety-nine persons who have supported a course of undeviating rectitude. And this is right; for that single effort by which we stop short in the downhill path to perdition, is itself a greater exertion of virtue than a hundred acts of justice."

## CHAPTER XXIII.

NONE BUT THE GUILTY CAN BE LONG AND COMPLETELY MISERABLE.

SOME assiduity was now required to make our present abode as convenient as possible, and we were soon again qualified to enjoy our former serenity. Being disabled myself from assisting my son in our usual occupations, I read to my family from the few books that were saved, and particularly from such as, by amusing the imagination, contributed to ease the heart. Our good neighbours, too, came every day with the kindest condolence, and fixed a time in which they were all to assist at repairing my former dwelling. Honest farmer Williams was not last among these visitors; but heartily offered his friendship. He would even have renewed his addresses to my daughter; but she rejected him in such a manner, as totally repressed his future solicitations. Her grief seemed formed for continuing, and she was the only person of our little society that a week did not restore to cheerfulness. She now lost that unblushing innocence which once taught her to respect herself, and to seek pleasure by pleasing. Anxiety now had taken strong possession of her

mind; her beauty began to be impaired with her constitution, and neglect still more contributed to diminish it. Every tender epithet bestowed on her mother, brought a pang to her heart and a tear to her eye; and as one vice, though cured, left plants others where it has been, so her former guilt, though driven out by repentance, left jealousy and envy behind. I strove a thousand ways to lessen her care, and even forgot my own pain in a concern for her's, collecting such amusing passages of history as a strong memory and some reasoning could suggest.

"Our happiness, my dear," I would say, "is in the power of One who can bring it about a thousand unforeseen ways that mock our foresight. If example be necessary to prove this, I'll give you a story, my child, told us by a grave, though sometimes a romancing historian.

"Matilda was married very young to a Neapolitan nobleman of the first quality, and found herself a widow and a mother at the age of fifteen. As she stood one day caressing her infant son in the open window of an apartment which hung over the river Volturno, the child with a sudden spring leaped from her arms into the flood below, and disappeared in a moment. The mother struck with instant surprise, and making an effort to save him, plunged in after; but far from being able to assist the infant, she herself with great difficulty escaped to the opposite shore, just when some French soldiers were plundering the country on that side, who immediately made her their prisoner.

"As the war was then carried on between the French and Italians with the utmost inhumanity, they were going at once to perpetrate those two extremes suggested by appetite and cruelty. This bare resolution, however, was opposed by a young officer, who, though their retreat required the utmost expedition, placed her behind him, and brought her in safety to his native city. Her beauty at first caught his eye, her merit soon after his heart. They were married; he rose to the highest posts; they lived long together and were happy. But the felicity of a soldier can never be called permanent: after an interval of several years, the troops which he commanded having met with a repulse, he was obliged to take shelter in the city where he had lived with his wife. Here they suffered a siege and the city at length was taken. Few histories can produce more various instances of cruelty than those which the French and Italians at that time exercised upon each other. It was resolved by the victors upon this occasion to put all the French prisoners to death; but particularly the husband of the unfortunate Matilda, as he was principally instrumental in protracting the siege. Their determinations were at first general; executed almost as soon as resolved upon. The captive soldier was led forth, and the executioner with his sword stood ready, while the spectators in gloomy silence awaited the fatal blow, which was only suspended till the general, who presided as judge, should give the signal. It was in this interval of anguish and expectation that Matilda came to take her last farewell of her husband and deliverer, deploring her wretched situation, and the cruelty of fate, that had saved her from perishing by a premature death in the river Volturno, to be the spectator of still greater calamities. The general, who was a young man, was struck with surprise at her beauty, and pity at her distress, but with still stronger emotions when he heard her mention her former dangers. He was her son the infant for whom she had encountered so much danger. He acknowledged her at once as his mother, and fell at her feet. The rest may be easily supposed: the captive was set free, and all the happiness that love, friendship, and duty could confer on each, were united."

In this manner I would attempt to amuse my daughter; but she listened with divided attention, for her own misfortunes engrossed all the pity she once had for those of another, and nothing gave her ease. In company she dreaded contempt, and in solitude she only found anxiety. Such was the colour of her wretchedness, when we received certain information that Mr Thornhill was going to be married to Miss Wilmot, for whom I always suspected he had a real passion, though he took every opportunity before me to express his contempt both of her person and fortune. This news only served to increase poor Olivia's affliction: such a flagrant breach of fidelity was more than her courage could support. I was resolved, however, to get more certain information, and to defeat, if possible, the completion of his designs, by sending my son to old Mr Wilmot's with instructions to know the truth of the report, and to deliver Miss Wilmot a letter, intimating Mr Thornhill's conduct in my family. My son went in pursuance of my directions, and in three days returned, assuring us of the truth of the account, but that he had found it impossible to deliver the letter which he was therefore obliged to leave, as Mr Thornhill and Miss Wilmot were visiting round the country. They were to be married, he said, in a few days, having appeared together at church the Sunday before he was there, in great splendour: the bride attended by six young ladies, and he by as many gentlemen. Their approaching nuptials filled the whole country with rejoicing, and they usually rode out together in the grandest equipage that had been seen in the country for many years. All the friends of both families, he said, were there, particularly the Squire's uncle, Sir William Thornhill, who bore so good a character. He added, that nothing but mirth and feasting were going forward; that all the country praised the young bride's beauty, and the bridegroom's fine person, and that they were immensely fond of each other; concluding, that he could not help thinking Mr Thornhill one of the most happy men in the world.

"Why, let him, if he can," returned I, "but, my son, observe this bed of straw, and this shivering roof, those mouldering walls, and humid floor; my wretched body thus disabled by fire, and my children weeping round me for bread; you have gone home, my child to all this, yet here, even here, you see a man that would not for a thousand worlds exchange situation. O, my children, if you could but learn to commun- with your own hearts, and know what noble company you can make them, you would little

regard the elegance and splendour of the worthless. Almost all men have been taught by call life a passage, and themselves the travellers! The similitude still may be improved, when we observe that the good are joyful and serene, like travellers that are going towards home, the wicked, but by intervals happy, like travellers that are going into exile."

My compassion for my poor daughter, overpowered by this new disaster, interrupted what I had farther to observe. I bade her mother support her, and after a short time she recovered. She appeared from that time more calm, and I imagined had gained a new degree of resolution; but appearances deceived me, for her tranquillity was the language of over-wrought resentment. A supply of provisions, charitably sent us by my kind parishioners, seemed to diffuse new cheerfulness among the rest of the family, nor was I displeased at seeing them once more brightly lit at ease. It would have been unjust to damp their satisfactions, merely to console with resolute melancholy or to burden them with a sadness they did not feel. Thus once more the tale went round, and the song was demanded, and cheerfulness condescended to hover round our little habitation.

## CHAPTER XXIV.

## FRESH CALAMITIES

THE next morning the sun arose with peculiar warmth for the season, so that we agreed to breakfast together on the honeysuckle bank; where, while we sat, my youngest daughter, at my request, joined her voice to the concert on the trees about us. It was in this place my poor Olivia first met her seducer, and every object served to recall her sadness. But that melancholy which is excited by objects of pleasure, or inspired by sounds of harmony, soothes the heart, instead of clouding it. Her mother, too, upon this occasion felt a pleasing distress, and wept, and loved her daughter as before. "Do my pretty Olivia," cried she, "let us have that little melancholy air your papa was so fond of; your sister Sophy has already obliged us. Do, child, it will please your old father."

She complied in a manner so exquisitely pathetic as moved me

When lovely woman stoops to folly,  
And finds too late that men betray  
What charm can soothe her melancholy  
What art can wash her guilt away?

The only art her guilt to cover,  
To hide her shame from every eye  
To give repentance to her lover,  
And wring his bosom—is to die!

As she was concluding the last stanza, to which an interruption in her voice from sorrow gave peculiar softness, the appearance of Mr Thornhill's equipage at a distance alarmed us all; but particularly increased the uneasiness of my eldest daughter, who, denouncing and shunning her betrayer, returned to the house with her sister. In a few minutes he was alighted from his chariot, and making up to the place where I was still sitting, inquired after my health with his usual air of familiarity.

"Sir," replied I, "your present assurance only serves to aggravate the baseness of your character; and there was a time when I would have chastised your insolence for presuming thus to appear before me. But now you are safe: so age has cooled my passions, and my calling restrains them."

"I vow, my dear sir," returned he, "I am amazed at all this, nor can I understand what it means! I hope you don't think your daughter's late excursion with me had anything criminal in it?"

"Go," cried I, "thou art a wretch, a poor pitiful wretch, and every way a liar; but your meanness secures you from my anger! Yet, sir, I am descended from a family that would not have borne this!—And so, thou vile thing, to gratify a momentary passion, thou hast made one poor creature wretched for life, and polluted a family that had nothing but honour for their portion!"

"If she or you," returned he, "are resolved to be miserable, I cannot help it. But you may still be happy, and whatever opinion you may have formed of me, you shall ever find me ready to contribute to it. We can marry her to another in a short time, and what is more, she may keep her lover beside for I protest I shall ever continue to have a true regard for her."

I found all my passions alarmed at this new degrading proposal, for though the mind may often be calm under great injuries, little villainy can at any time get within the soul, and sting it into rage.

"Avoid my sight, thou reptile!" cried I, "nor continue to insult me with thy presence—Were my brave son at home, he would not suffer this; but I am old and disabled, and every way undone."

"I find," cried he, "you are bent upon obliging me to talk in a harsher manner than I intended. But as I have shown you what may be hoped from my friendship, it may not be improper to represent what may be the consequence of my resentment. My attorney, to whom your late bond has been transferred, threatens hard, nor do I know how to prevent the course of justice, except by paying the money myself, which, as I have been at some expenses lately, previous to my intended marriage, is not so easy to be done. And then my steward talks of driving for the rent: it is certain he knows his duty, for I never trouble myself with affairs of that nature. Yet still I could wish to serve you, and even to have you and your daughter present at my marriage, which is shortly to be solemnized with Miss Wilmot; it is even the request of my charming Arabella herself, whom I hope you will not refuse."

"Mr Thornhill," replied I, "hear me once for all. As to your marriage with any but my daughter, that I never will consent to; and though your friendship could raise me to a throne, or your resentment sink me to the grave, yet would I despise both. Thou hast once wretchedly, irreparably deceived me. I reposed my heart upon thine honour, and have found its baseness. Never more, therefore, expect friendship from me. O, and what fortune has given thee,—beauty, riches, health, and pleasure. Go, and

leave me to weep, to grieve, and to sorrow. Yes, answered he, I will, shall my heart still vindicate its dignity; and though, then, that my punishment, thou shalt ever have my contempt."

"If so," returned he, "depend upon it you shall feel the effects of this insolence; and we shall shortly see which is the fittest object of scorn, you or me."

Upon which he departed abruptly.

My wife and son, who were present at this interview, seemed terrified with the apprehension. My daughters, also, finding that he was gone, came out to be informed of the result of our conference, which, when known, alarmed them not less than the rest. But as to myself, I disregarded the utmost stretch of his insolence; he had already struck the blow, and now I stood prepared to repel every new effort; like one of those instruments used in the art of war, which, however thrown, still presents a point to repel the enemy.

We soon, however, found that he had not threatened in vain; for the very next morning his steward came to demand my annual rent, which, by the train of accidents already related, I was unable to pay. The consequence of my incapacity was his driving my cattle that evening, and their being appraised and sold the next day for less than half their value. My wife and children now, therefore, entreated me to comply upon any terms, rather than incur certain destruction. They even begged of me to admit his visits once more, and used all their little eloquence to paint the calamities I was going to endure;—the terrors of a prison in so rigorous a season as the present, with the danger that threatened my health from the late accident that happened by the fire. But I continued inflexible.

"Why, my treasures," cried I, "why will you thus attempt to persuade me to the thing that is not right? My duty has taught me to forgive him; but my conscience will not permit me to approve. Would you have me applaud to the world what my heart must internally condemn? Would you have me tamely sit down and flatter our infamous betrayer; and, to avoid a prison, continually suffer the more galling bonds of mental confinement? No, never. If we are to be taken from this abode, only let us hold to the right; and wherever we are thrown, we can still retire to a charming apartment, when we can look round our own hearts with intrepidity and with pleasure!"

In this manner we spent that evening. Early the next morning, as the snow had fallen in great abundance in the night, my son was employed in clearing it away, and opening a passage before the door. He had not been thus engaged long, when he came running in, with looks all pale, to tell us that two strangers, whom he knew to be officers of justice, were making towards the house.

Just as he spoke they came in, and approaching the bed where I lay, after previously informing me of their employment and business, made me their prisoner, bidding me prepare to go with them to the county gaol, which was eleven miles off.

"My friends," said I, "this is severe weather in which you have come to take me to a prison; and it is particularly unfortunate at this time, as one of my arms has lately been burnt in a terrible manner, and it has thrown me into a slight fever, and I want clothes to cover me; and I am now too weak and old to walk far in such deep snow; but if it must be so—"

I then turned to my wife and children, and directed them to get together what few things were left us, and to prepare immediately for leaving this place. I entreated them to be expeditious, and desired my son to assist his eldest sister, who, from a consciousness that she was the cause of all our calamities, was fallen, and had lost anguish in insensibility. I encouraged my wife, who, pale and trembling, clasped our affrighted little ones in her arms, that clung to her bosom in silence, dreading to look round at the strangers. In the meantime my youngest daughter prepared for our departure; and as she received several hints to use dispatch, in about an hour we were ready to depart.

## CHAPTER XXV.

NO SITUATION, HOWEVER WRETCHED IT SEEMS, BUT HAS SOME SORT OF COMFORT ATTENDING IT.

We set forward from this peaceful neighbourhood, and walked on slowly. My eldest daughter being enfeebled by a slow fever, which had begun for some days to undermine her constitution, one of the officers, who had a horse, kindly took her behind him; for even these men cannot entirely divest themselves of humanity. My son led one of the little ones by the hand, and my wife the other, while I leaned upon my youngest girl, whose tears fell, not for her own, but my distresses.

We were now got from my late dwelling about two miles, when we saw a crowd running and shouting behind us, consisting of about fifty of my poorest parishioners. These, with dreadful imprecations, soon seized upon the two officers of justice, and swearing they would never see their minister go to gaol while they had a drop of blood to shed in his defence, were going to use them with great severity. The consequence might have been fatal had I not immediately interposed, and with some difficulty rescued the officers from the hands of the enraged multitude. My children, who looked upon my delivery now as certain, appeared transported with joy, and were incapable of containing their raptures. But they were soon undeceived, upon hearing me address the poor deluded people, who came, as they imagined, to do me service.

"What, my friends!" cried I, "and is this the way you love me? Is this the manner you obey the instructions I have given you from the pulpit? Thus to fly in the face of justice, and bring down ruin on yourselves and me? Which is your ringleader? Show me the man that has thus seduced you."

At first he did not feel my recriminations. Alas! my dear daughter, when you return back to the duty you owe to God, to your country, and to me, I shall yet, perhaps, see day ere you in greater dignity here, and contented in the great life more happy. But let it at least be my comfort, when I see my son so immutably attached to me, that not one here shall be wanting."

They now seemed all repentant, and melting into tears, came one after the other to bid us farewell. I shook each tenderly by the hand, and leaving them my blessing, proceeded forward without meeting any farther interruption. Some hours before night we reached the town, or rather village, for it consisted but of a few mean houses, having lost all its former opulence, and retaining no marks of its ancient superiority but the gaol.

Upon entering, we put up at the inn, where we had such refreshments as could most readily be procured, and I supped with my family with my usual cheerfulness. After seeing them properly accommodated for that night, I next attended the sheriff's officers to the prison, which had formerly been built for the purposes of war, and consisted of one large apartment, strongly grated and paved with stone, common to both felons and debtors at certain hours in the four-and-twenty. Besides this, every prisoner had a separate cell, where he was locked in for the night.

I expected upon my entrance to find nothing but lamentations and various sounds of misery; but it was very different. The prisoners looked all employed in one common design, that of forgetting thought in muttering or clamour. I was apprized of the usual perquisites required upon these occasions, and immediately complied with the demand, though the little money I had was very near being all exhausted. This was immediately sent away for liquor, and the whole prison soon was filled with noisy laughter, and profaneness.

"How," cried I to myself, "shall men so very wicked be cheerful, and shall I be melancholy? I feel only the same confinement with them, and I think I have more reason to be happy."

With such reflections I laboured to become cheerful; but cheerfulness was never yet produced by effort, which is itself painful. As I was sitting, therefore, in a corner of the gaol, in a pensive posture, one of my fellow-prisoners came up, and sitting by me, entered into conversation. It was my constant rule in life never to avoid the conversation of any man who seemed to desire it: for if good, I might profit by his instruction; if bad, he might be assisted by mine. I found this to be a knowing man, of strong understanding, sense, but a thorough knowledge of the world, as it is called, or more properly speaking of human nature on the wrong side. He asked me if I had taken care to provide myself with a bed, which was a circumstance I had never once attended to.

"That's unfortunate," cried he, "as you are allowed here nothing but straw, and your apartment is very large and cold. However, you seem to be something of a gentleman, and as I have been one myself in my time, part of my bedclothes are heartily at your service."

I thanked him, professing my surprise at finding such humanity in a gaol in misfortunes; adding, to let him see that I was a scholar:

"That the sage ancient seemed to understand the value of company in affliction, when he said '*Ton hominem nire, et dos tui estioris*;' and in fact," continued I, "what is the world if it affords only solitude?"

"You talk of the world, sir," returned my fellow prisoner, "*the world is in its dotage; and yet the cosmogony or creation of the world has puzzled the philosophers of every age. What a medley of opinions have they not broached upon the creation of the world! Sanchoniathon, Memoth, Berossus, and Ocellus Lucanus, have all attempted it in vain. The latter has these words, 'Anarchon ara kai atelutalon to pan,' which implies—*"

"I ask pardon, sir," cried I, "for interrupting so much learning; but I think I have heard all this before. Have I not had the pleasure of once seeing you at Welbridge fair, and is not your name Ephraim Jenkinson?"

At this demand he only sighed.

"I suppose you must recollect," resumed I, "one Doctor Primrose, from whom you bought a horse?"

He now at once recollected me; for the gloominess of the place and the approaching night had prevented his distinguishing my features before.

"Yes, sir," returned Mr. Jenkinson, "I remember you perfectly well; I bought a horse, but forgot to pay for him. Your neighbour Flamborough is the only prosecutor I am any way afraid of at the next assizes; for he tends to swear positively against me as a coiner. I am heartily sorry, sir, I ever deceived you, or indeed any man; for you see," continued he, showing his shackles, "what my tricks have brought me to."

"Well, sir," replied I, "your kindness in offering me assistance when you could expect no return, shall be repaid with my endeavours to soften or totally suppress Mr. Flamborough's evidence, and I will send my son to him for that purpose, the first opportunity; nor do I in the least doubt but he will comply with my request; and as to my own evidence, you need be under no uneasiness about that."

"Well, sir," cried he, "all the return I can make shall be yours. You shall have more than half my bedclothes to-night, and I'll take care to stand your friend in the prison, where I think I have some influence."

I thanked him, and could not avoid being surprised at the present youthful change in his aspect; for at the time I had seen him before, he appeared at least sixty.

"Sir," answered he, "you are little acquainted with the world; I had not that time false hair, and have learned the art of counterfeiting every hair from seventeen to seventy. Ah! sir, had I but bestowed half the pains in learning a trade, that I have in learning to be a scoundrel, I might have been a rich man at this day. But rogue as I am, still I may be your friend; and that perhaps when you least expect it."

We were now prevented from further conversation by the arrival of the

gaoler's servants, who came to call over the prisoners names, and lock up for the night. A fellow also with a bundle of straw for my bed attended, who led me along a dark narrow passage, into a room paved like the common prison, and in one corner of this I spread my bed, and the clothes given me by my fellow-prisoner; which done, my conductor, who was civil enough, bade me a good night. After my usual meditations, and having praised my Heavenly Corrector, I laid myself down, and slept with the utmost tranquillity till morning.

## CHAPTER XXVI.

## A REFORMATION IN THE GAOL. TO MAKE LAWS COMPLETE, THEY SHOULD REWARD AS WELL AS PUNISH.

NEXT morning early, I was awakened by my family, whom I found in tears at my bedside. The gloomy sight of everything about us, it seems, had daunted them. I gently rebuked their sorrow, assuring them I had never slept with greater tranquillity, and next inquired after my eldest daughter, who was not among them. They informed me that yesterday's uneasiness and fatigue had increased her fever, and it was judged proper to leave her behind. My next care was to send my son to procure a room or two to lodge the family in, as near the prison as conveniently could be found. He obeyed; but could only find one apartment, which was hired at a small expense for his mother and sisters, the gaoler with humanity consenting to let him and his two little brothers lie in the prison with me. A bed was therefore prepared for them in a corner of the room, which I thought answered very conveniently. I was willing, however, previously to know whether my little children chose to lie in a place which seemed to fright them upon entrance.

"Well," cried I, "my good boys, how do you like your bed? I hope you are not afraid to lie in this room, dark as it appears?"

"No, papa," says Dick, "I am not afraid to lie anywhere where you are."

"And I," says Bili who was yet but four years old, "love every place best that my papa is in."

After this I allotted to each of the family what they were to do. My daughter was particularly directed to watch her declining sister's health; my wife was to attend me; my little boys were to read to me.

"And as for you, my son," continued I, "it is by the labour of your hands we must all hope to be supported. Your wages as a day-labourer will be fully sufficient, with proper frugality, to maintain us all, and comfortably too. Thou art now sixteen years old, and hast strength; and it was given thee, my son, for very useful purposes; for it must save from famine your helpless parents and family. Prepare then this evening to look out for work to-morrow, and bring home every night what money you earn for our support."

Having thus instructed him, and settled the rest, I walked down to the common prison, where I could enjoy more air and room. But I was not long there when the execrations, lewdness, and brutality that invaded me on every side, drove me back to my apartment again. Here I sat for some time, pondering upon the strange infatuation of wretches, who, finding all mankind in open arms against them, were labouring to make themselves a future and tremendous enemy.

Their insensibility excited my highest compassion, and blotted my own uneasiness from my mind. It even appeared a duty incumbent upon me to attempt to reclaim them. I resolved therefore once more to return, and, in spite of their contempt, to give them my advice, and conquer them by my perseverance. Going therefore among them again, I informed Mr. Jenkinson of my design, at which he laughed heartily, but communicated it to the rest. The proposal was received with the greatest good humour, as it promised to afford a new fund of entertainment to persons who had now no other resource for mirth, but what could be derived from ridicule or debauchery.

I therefore read them a portion of the service with a loud unaffected voice and found my audience perfectly merry upon the occasion. Lewd whispers, groans of contrition burlesqued, winking and coughing, alternately excited laughter. However, I continued with my natural solemnity to read on, sensible that what I did might mend some, but could itself receive no contamination from any.

After reading, I entered upon my exhortation, which was rather calculated at first to amuse them than to reprove. I previously observed, that no other motive but their welfare could induce me to this; that I was their fellow prisoner, and now got nothing by preaching. I was sorry, I said, to hear them so very profane; because they got nothing by it, but might lose a great deal.

"For be assured, my friends," cried I, "for you are my friends, however the world may disclaim your friendship, though you swore a thousand oaths in a day, it would not put one penny in your purse. Then what signifies calling every moment upon the devil, and courting his friendship, since you find how scurvily he uses you? He has given you nothing here, you find, but a mouthful of oaths, and an empty belly; and by the best accounts I have of him, he will give you nothing that's good hereafter."

"If I stand ill in our dealings with one man, we naturally go elsewhere. Were it not worth your while, then, just to try how you may like the usage of another Master, who gives you fair promises at least to come to him? Surely, my friends, of all stupidity in the world, his must be the greatest, who, after seeking a house, runs to the thief-takers for protection. And yet how are you more wise? You are all seeking comfort from one that has already betrayed you, applying to a more malicious being than any thief-taker of them all; for they only deceive, and then hang you; but he deceives and hangs, and, what is worse of all, will not let you loose after the hangman is done."

When I had concluded, I received the compliments of my audience, some of whom came and shook me by the hand, swearing that I was a very honest fellow, and that they desired my further acquaintance. I therefore promised to repeat my lecture next day, and actually conceived some hopes of making a reformation here; for I had ever been my opinion, that no man was past the hour of amendment, every heart lying open to the power of reason, if the archer could but take a proper aim. When I had thus satisfied my mind, I went back to my apartment, where my wife prepared a frugal meal, while Mr. Jenkinson begged leave to add his thanks to mine, and partake of the pleasure, as he was kind enough to express it, of my conversation. He had not yet seen my family; for as they came to my apartment, they were in the narrow passage already described, by this means they avoided the common prison. Jenkinson, at the first interview, therefore, was struck with the beauty of my youngest daughter, which her parents did not expect to be heightened; and my little ones did not pass unobserved.

"Alas! Doctor," cried he, "these children are too handsome and too good for such a place as this."

"Why, Mr. Jenkinson," replied I, "thank Heaven, my children are pretty tolerable in morals; and if they be good it matters little for the rest."

"I fancy, sir," returned my fellow prisoner, "that it must give you great comfort to have all this little family about you."

"A comfort, Mr. Jenkinson!" replied I; "yes, it is indeed a comfort, and I would not be without them for all the world; for they can make a dungeon seem a palace. There is but one way in this life of wounding my happiness, and that is by injuring them."

"I am afraid then, sir," cried he, "that I am in some measure culpable; for I think I see here (looking at my son Moses), one that I have injured, and by whom I wish to be forgiven."

My son immediately recollected his voice and features, though he had before seen him in disguise, and taking him by the hand, with a smile, forgave him.

"Yet," continued he, "I can't help wondering at what you could see in my face, to think me a proper mark for deception."

"My dear sir," returned the other, "it was not your voice, but your white stockings, and the black ribband in your hair, that allured me. But no disparagement to your parts, I have deceived wiser men than you in my time; and yet, with all my tricks, the blockheads have been too many for me at last."

"I suppose," cried my son, "that the narrative of such a life as yours, must be extremely instructive and amusing?"

"Not much of either," returned Mr. Jenkinson. "Those relations which describe the tricks and vices only of mankind, by increasing our suspicion in life, retard our success. The traveller that distrusts every person he meets, and turns back upon the appearance of every man that looks like a robber, seldom arrives in time at his journey's end."

"Indeed I think, from my experience, that the knowing one is the silliest fellow under the sun. I was thought cunning from my very childhood; when but seven years old, the ladies would say that I was a perfect little man; at fourteen I knew the world, cocked my hat, and loved the ladies; at twenty, though I was perfectly honest, yet every one thought me so cunning, that not one would trust me. Thus I was at last obliged to turn sharper in my own defence, and have lived ever since, my head throbbing with schemes to deceive, and my heart palpitating with fears of detection. I used often to laugh at your honest simple neighbour Flamborough, and one way or another generally cheated him once a year. Yet still the honest man went forward without suspicion, and grew rich, while I still continued tricky and cunning, and was poor, without the consolation of being honest. However," continued he, "let me know your case, and what has brought you here; perhaps, though I have not skill to avoid a gaol myself, I may extricate my friends."

In compliance with his curiosity, I informed him of the whole train of accidents and follies that had plunged me into my present troubles, and my utter inability to get free.

After hearing my story, and pausing some minutes, he slapped his forehead, as if he had hit upon something material, and took his leave, saying, he would try what could be done.

(To be continued.)

THE VANITY OF THE WORLD.—A hundred years ago Lord Chesterfield was the most admired of England's gay and voluptuous grandees. But whilst others were envying him, his wit, his splendour, and his popularity, the weary libertines was thus pouring forth his chagrin: "I have seen the silly rounds of business and pleasure, and have done with them all. I have enjoyed all the pleasures in the world, and consequently know their futility, and I do not regret their loss. I appraise them at their real value, which is, in truth, very low; whereas they who have experienced always over-rate them. They only see their gay outside, and are dazzled with their glare; but I have been behind the scenes. I have seen all the coarse pulleys and dirty ropes which exhibit and move the gaudy machines; and I have seen and smelt the tallow candles which illuminate the whole decoration, to the astonishment and adoration of the ignorant audience. When I reflect back upon what I have seen, what I have heard, and what I have done, I can hardly persuade myself that all that frivolous hurry and bustle and pleasure of the world had any reality; but I look back upon all that has passed as one of those romantic dreams which opium commonly occasions; and I by no means desire to repeat the nauseous dose for the sake of the fugitive dream. Shall I tell you that I bear this melancholy situation with that meritorious constancy and resignation which most people boast of? No, for I really cannot help whether I will or no."

"The men stood back as Thorpe approached, and he caught sight of the Mexican's face. He wore his arm in a sling, and his face seemed to have been burnt with powder."

## CAROLINE AND CATHARINA

(Continued from page 554)

### CHAPTER XXII

I do suspect you, Madam,  
But you shall do no harm —SHAKESPEARE  
The enemy's in view draw up your powers —IBID  
'Be not dismayed fear nurses up a danger,  
And resolution kills it in the birth' —PHILLIPS

WHEN Catharina and Hugh reached the terrace, they found the old man and Allen sitting calmly in front of the house, and Ignacio preparing larvae at the lower end of the arbour. He had come in two days before and having been detained by Bonaro, he had fortunately taken the precaution to bring his mule round, and leave her in the ravine below the house. Marola was, as usual, within, seeming to have little sympathy with anything external.

Catharina hastily communicated what they had seen and done above, and a council was immediately held to determine upon the measures best to be taken. Allen was growing strong again, so that he was quite able to move if it were decided to take that course. The bridge being broken down, no immediate danger was to be apprehended, unless the attacking party were strong enough to storm the place by the path from below. This was, however, difficult, and, without assistance from above, inaccessible if properly defended. But Bonaro wished, above all things, to avoid strife, and was therefore for flight as soon as it should become known that the men came with hostile intent. Of this there could be but little doubt, for Hugh had managed, in the course of the two or three weeks during which he had fed his two prisoners, to worm out of them the facts—first, that they were induced to make their attempt by some one in the American army; whose name they would not disclose, though he had no difficulty in divining who he was, second, that it was known to them that he and Allen had not escaped to the camp; and third, that they had confederates, whose orders were to search the mountain in every direction.

Added to the stealthy manner in which the men were approaching these facts left little room for doubt that they were the confederates spoken of, and the number of stragglers generally following a force so large as they had seen marching by, convinced Hugh, that if their enemies needed assistance, they would have little difficulty in finding it. The sight of the Mexican army, too, made him extremely anxious to return to his regiment. He was, therefore, for flight also; and this course was at once decided upon.

Two difficulties arose. First, how were they to procure the means of travelling? The mule of Ignacio was the only animal they possessed, and they had to travel by a circuitous route, to avoid the army. It was full forty miles around the mountain to the pass of Palomas, on the east of Saltillo—a

distance too long to be undertaken either by Catharina or by Allen. To attempt to obviate this difficulty, it was agreed that Ignacio should proceed forthwith to the plain, and endeavour to buy horses or mules from the traders in the rear of the army, or to seize whatever animals he might find at large. This was by no means so hopeless a scheme as it would appear; for in Saltillo Anna's haste, and following his line of march, there were quite as many horses as men, besides a large number of mules.

Ignacio immediately set out by the secret path down the bed of the smaller ravine, and the party turned their attention to the second difficulty—how to dispose of their prisoners? It was soon agreed that Marola should be taken with them to the plain, and then sent back to release them. No notice had been taken of her treachery, if so it might be called, from a half-consciousness the old man had, that she had only acted in accordance with her instincts of patriotism—a feeling which he was the less disposed to punish, because he did not possess it himself.

Having decided upon these points, and agreed upon a time for Ignacio's return, Catharina went with him to draw up the rough, raw-hide ladder, used to pass the cliff at the end of the smaller ravine, and Hugh armed himself carefully, and repaired to the top of the rock, to watch the approach of their enemies. (See engraving, page 553.) Climbing the path so often mentioned, he concealed himself in the chaparral, and arranged a place through which to get a view. Seating himself upon a large, round stone, he carefully examined the lock of his rifle, and then betook himself to his duty of watching. An hour passed away, and no sign of the presence of any one but himself met eye or ear. The sun had disappeared behind the mountains, and the short twilight of those latitudes was fast closing the view. There was, however, yet light enough to enable him to see objects at a considerable distance. Sitting hidden in the bushes, even to one whose thoughts were as fully occupied as were his, was no very interesting employment to such a man as Hugh, and the impatience of his temper began now to appear. He rose to his feet, and endeavoured to get a wider view, but the bushes obstructed his sight. He then stepped out upon the rock, and had the rashness even to approach the place where the bridge had stood. A flash and a loud report came suddenly from the thicket, not thirty yards from him; and a musket ball whizzed past his ear, so closely as to make him spring suddenly to one side. Quick as thought, however, he fired his piece into the bush, and an arm thrown suddenly up, and a heavy fall, seemed to indicate that his shot had told. At the same moment a tall Mexican, springing from the bushes and ran forward to the very brink of the chasm, levelling and firing an escapee as near as almost to burn him with the powder. Hugh's cap sprang off his head, almost cut in two, but he was not wounded. As the assassin sprang to regain the thicket, Hugh fired his pistol at him, but the haste with which he saved the latter, as they had just saved the former. Hugh gained the other pistol about the same moment with his antagonist, and immediately loaded his rifle.

"Keep back out of range!" he called out to his friends whom he now

heard rushing up to the brink. "We are safe enough for the present—they cannot cross the ravine."

He waited a few minutes, until the increasing darkness enabled him to go down unperceived, when he hastily returned to the house, and walked straight to the door within which he had confined his prisoners. He drew the door hastily back, and threw the door wide open: seizing a torch, he entered in, and found the room as he had expected—empty.

"The scoundrel who fired the escopet at me," said he, "was that yellow-skinned cattle-thief; I knew him at a glance."

"How could they have escaped?" said Old Bonaro.

"Where is Marola?" asked Allen suddenly.

"Here she is," said Catharina, who had run for her as soon as she saw what had happened.

The woman came forward, led by her young mistress, with that look of astonished ignorance, so easily assumed by the lower classes of her race. To all Bonaro's fierce questions, she returned for answer only a shake of her head and a reiterated denial that she knew aught of the matter. It was, however, plain that she knew more than she pretended; and there was even a kind of triumph in the wrinkle of her small black eye, only repressed by the fear that Hugh would smother his threat to throw her over the precipice in front of the house. This could not be long borne. Bonaro seized her roughly by the arm, and thrusting her into this empty room, drew the door to and bolted it.

"What's to be done now?" said Allen, laughing with Hugh, whom the most pressing danger could never restrain.

"First," said Hugh, "I am for something to eat; and, Catharina, come in, since the work is in limbo, I must look to you. We can consult over our coffee."

Catharina smiled and tripped away. Returning a moment afterwards she announced that their supper was already made, and called them to it.

"Do you remember Rugold Dalgetty?" asked Hugh, as they seated themselves round the table.

"Yes; what of him?" said Allen.

"It was a lesson," said Hugh, answered Hugh, "taught me by the immortal Gustavus Adolphus, the Lion of the North and the Bulwark of the Protestant faith, to be careful always to lay in for a siege." Now, I see no reason why we should not do full justice to Marola's viands, since, if we have to leave this, probably plenty to eat before starting will not impede our journey."

"There seems to be a good deal of the *non sequitur* about the latter part of the remark," said Allen; "for it seems to me we are laying in for a retreat rather than a siege."

"Only a sortie, only a sortie," said Hugh, helping himself to a reasonably large piece of broiled goat's flesh.

"I hope," said Bonaro, "there are not many of the Dalgetty stamp in your army; for, if I remember aright, it was another of his maxims 'always to quarter on the enemy.'"

"I doubt the policy, and even the humanity, of doing anything else," said Hugh bluntly. "War will sooner be brought to a close, and fewer lives will be sacrificed, when there is no puning nonsense allowed to interfere with the plain duties of the soldier. It is the most cruel policy imaginable, to attempt to mingle peace and war. If the 'horrors of war,' so called, do not come home to the people of an invaded country, their government cannot be forced to a peace; for the governors are of course always beyond danger. The march of an invading army through a country, which they religiously spare, is a blessing to that country, of which they are not over anxious to be rid. You must make war distinct from peace, and keep peace separate from war; you must make war a real curse, and an invasion a real evil; else you have no assurance that the same outrages, for which you are now fighting, will not be repeated again and again; even if your mistaken humanity does not so protract the present war, as to destroy more lives than would be destroyed by the most unbridled licence. Half-measures denote half-men; and to proclaim war with one breath, and then preach humanity and lenience with the next, is to mingle things which will not mix; you produce a state of things which is neither peace nor war, but infinitely more cruel than either. The appearance of war mars the beauties of peace, and the affection of peace destroys the rough virtues of war."

"Perhaps you are right," said the old man, with a sigh. "But I hope the time is not distant when peace will be no longer an affectation."

"I will join you in that hope most heartily," said Hugh, resuming his eating, which in his warmth he had superseded, and glancing at Catharina, who was gazing at him in surprise.

"Hugh is disposed to find fault with our government," said Allen, "for not prosecuting the war more vigorously; or for not making it more sensibly felt by the invaded people. And I apprehend that with any other people for an enemy he would be right. The only legitimate object of a war is an honourable peace; and the former is justifiable only when the latter cannot be maintained. In order to secure such a peace, he thinks the people ought to be made to feel the difference between the two states. But he forgets that, in Mexico, there is less sympathy between the people and the rulers, than in any other country on earth—that at least one-third of the people do not even know who is at the head of affairs, and that probably they will scarcely hear of one revolution before another has taken place—like the woe in 'Hamlet,' one convulsion

doth tread upon another's heel,  
And fast they follow."

"That is only another reason for drubbing them into attention to their domestic affairs," said Hugh. "If they would exercise the rights guaranteed to them by the theory of their government, they would have a sound,

steady, and true republic, whereas they now have only a shifting, revolving succession of petty revolutions, which are merely personal to their chiefs, and end in nothing but a change of masters."

"There is much truth in that," said Bonaro, mournfully; "but I fear carrying the theory of war to the doors of men who know little, and care less about their government, will do little to make our country better or our government more stable. We are cursed with a horrid swarm of military chieftains, who, though good at making local conquests, and their rivalries bid fair to make our country unmanageable for many years to come. I hope the many successes of this war may not lead the same curse upon your country. I am told that already a party in the Senate is bringing the name of General Taylor forward for the Presidency; and that of younger generals will be given before the close of the war. These military claims may give your country much trouble and dissension."

"The men who rush the Presidency in the United States," said Allen, "must go through the regular channels; and an attempt to cut them off by violence or undue compulsion of any kind would ruin us as much as being in it."

"That is true, now," said Bonaro; "but you are in the habit of electing men to that post for military services alone, and while it will have the attention of a president, a few years might elapse before we agreed that the man who is the most successful general is entitled to the presidency. From that it is but one step to more; and thirty years may see a victorious army marching home from a foreign expedition, to place their general at the head of the government. So long as your generals remain law-abiding men, there is no danger; but if the time ever should come when they shall cease to be so, it will be found that no country on earth presents an easier road to usurpation."

"I am very unwilling to believe so," said Allen, "and should be still more unwilling to see it tried."

"We had better be making our arrangements to march," said Hugh.

"We ought to be across the road before dawn," said Allen.

"But if Ignacio should not succeed in his search," suggested Allen.

"Then," said Hugh, "you and Catharina must ride his mule alternately; Bonaro and I can walk."

"The senior can ride all the way," said Catharina. "I would much rather walk than ride."

Hugh smiled as if he thought she desired to be with him; and Allen replied—

"I think I shall be strong enough to walk, if the distance be not too long. Where is it proposed to go?"

"We want to reach the pass of Palomas as soon as possible," said Hugh, "and that is full forty miles away."

"Can walk it," said Allen.

"And so can I," said Catharina.

"I hope neither of you will have to do so," said Hugh. "So numerous an army must certainly leave some horses in the chaparral; and, at all events, we must wait for Ignacio."

## CHAPTER XXIII.

"The hills that shake, although unrent,

As if an earthquake passed—

The thousand shapeless things, all driven,

In cloud and flame athwart the heaven,

By that tremendous blast,

Proclaim'd the desperate conflict o'er."—SIEGE OF CORINTH.

Hugh insisted that Catharina and Allen should endeavour to gain some repose, before it became necessary to set out; and accordingly they retired, leaving him and the old man upon watch, the one for their enemies, of whose attack before morning they had, however, but slight apprehension, and the other for the signal of Ignacio. Several hours passed away in perfect silence—Hugh pacing slowly up and down the terrace in front of the house, and the old man sitting upon a point below from which he could see the bottom of the ravine. There was no moon, and though the stars shone clear and bright through the pure atmosphere, the shadows of the mesquite and the overhanging rocks made the night almost palpably dark. In the direction of the head of the ravine Hugh could just discern the forms of the rocks and trees, while everything else lay enveloped in the still darkness of a night among the mountains. The only sound audible to his ears, was the trickling of the fountain behind him, or the occasional lonely cry of some wild animal. Even the pines on the top of the mountain were still, as if no wind had ever roared through their branches; and not a breath of air stirred a leaf or a tendril of the vines which hung above and around him. The air was mild as the evening air of June, its coolness serving only to make it pure, and its stillness giving its balmy time to settle gently upon the spirit. This, he it remembered, was on the Sunday evening before the battle of Buena Vista; and it was not more than twenty miles to the valley in which the American army was then lying, almost blinded by the dust which a heavy wind blew in clouds along the camp, and benumbed by the cold, damp currents from the mountain!

Hugh several times ascended the bank and gazed around the plateau for a fire or some other sign of the presence of his enemies. But nothing of the sort was to be seen. One unbroken shadow lay upon the whole view, and the very Spirit of Silence seemed to be reigning over the scene. Once he thought he heard a footfall upon the dry pebbly soil; but on listening attentively for some minutes he heard no repetition of the sound. Attributing it to imagination, he returned to the terrace and seated himself in front of the ranch.

"It is not at all rare for the two sides of a ridge of mountains to present almost exact opposites in weather."

(To be continued.)

# THE HOME COMPANION IN ACCIDENT, DISEASE, EMERGENCY, HEALTH, AND SICKNESS.

**SUPPLEMENT TO THE HOME COMPANION,  
WITH NUMEROUS ILLUSTRATIONS.  
PRICE ONE PENNY. ALWAYS ON SALE.**

## WEEKLY ISSUE OF THE FAMILY FRIEND.

On SATURDAY, the 3rd of JULY, will be published No. 1. of the NEW SERIES of  
**THE FAMILY FRIEND**; with which Number will be presented  
a Beautiful STEEL ENGRAVING, by G. ROSS, after a Painting by W. COL-  
LINS, R.A., entitled

### "PARTING WITH A LITTLE FAMILY FRIEND."

This number will also have a new Title-page, by FRANKLIN. There will be no  
alteration in the Size, Shape or Price of "THE FRIEND." Its present neat and  
economical form being much approved. For the convenience of those who have not  
taken in or completed the OLD SERIES, it is suggested that Orders should be given to  
Booksellers to supply

1st. THE WHOLE SERIES, bound, Price 15s.; or

2nd. A VOLUME MONTHLY, Price 2s. 6d.; or

3rd. THREE NUMBERS MONTHLY, Price 3d. each.

By this arrangement, Subscribers may become possessed of the OLD SERIES by a  
method adapted to their own convenience. Back Numbers and Volumes, for completing  
Sets, should be ordered immediately.

London: HOULSTON and BROWNMAN, 65, Paternoster-row; and all Booksellers.

## THE HOME COMPANION: A WEEKLY MAGAZINE.

### FABLES.

THE fable is the earliest form of fictitious composition, a species of didactic  
allegory or moral satire, couched under the guise of an apologue. It is an  
illustrative method of teaching duty, by example rather than by precept. It  
reaches the difficult end of impressing principles by a vivid representation  
of sensible images, or the intelligent discourse and action of the brute part  
of the creation. In the society of beasts, we are taught the moral and social  
obligations of men, while in their characters we find the features correspond-  
ing to those of our own species. Qualities are thus strikingly and naturally  
set forth, that affect us more by a characteristic delineation of them than we  
would be affected by long lectures on the vices and virtues, or by the most  
elaborate analysis of the passions and affections. Bacon has declared in favour  
of the natural love for imaginary representations of realities, fair pictures  
of the shows of things, in poetry and the drama, and, indeed, in all the efforts  
of the imagination, from the innate desire of the soul to attain at least glimpses  
of something better, and beyond our ordinary sphere.

The East, the fountain of all wisdom and imagination, the mother country  
of sages and poets, the land of wonders and marvels in nature and art, the  
land of magic and monsters, of countless treasures and luxurious beauty,  
with debasing poverty and equal wretchedness—the East, the glorious and  
degraded East, was, and in a sense still continues to be, the true land of fable,  
whence it originated, and where its greatest masters appeared: in Palestine,  
China, Arabia, Persia, and India.

The oldest fable in existence is Jotham's parable of the trees, which occurs  
in the ninth chapter of Judges: "The trees went forth on a time, to anoint  
a king over them; and they said unto the olive-tree, Reign thou over us.  
But the olive-tree said to them, Should I leave my fatness, wherewith by  
me they honour God and man, and go to be promoted over the trees? And  
the trees said to the fig-tree, Come thou and reign over us. But the fig-  
tree said unto them, Should I forsake my sweetness, and my good fruit, and  
go to be promoted over the trees? Then said the trees unto the vine, Come  
thou and reign over us. And the vine said unto them, Should I leave my  
wine, which cheereth God and man, and go to be promoted over the trees?  
Then said all the trees unto the *bramble*, Come thou and reign over us?  
And the *bramble* said unto the trees, If, in truth, ye anoint me king over you,  
then come and put your trust in my shadow; and, if not, let fire come out of  
the *bramble* and devour the cedars of Lebanon."

A most cutting satire. The absurd conceit and pitiful wrath, amounting  
almost to profanity, of the *bramble* is placed in a vivid light. This political  
fable was too well founded, and too pat, to fail of practical application, and  
the ingenious author of it was forced to secure his safety by flight, from the  
vengeance of folly in power.

The Chinese Bilpai (Pilpay), or the Arabian Lokman, perhaps one and the  
same person, is the acknowledged father of Eastern fable—the source of  
the largest number of the apologues of that land of fable. With the Persian  
Saadi, he, or they, constitute the chief names in this department of Oriental  
genius—a form of composition essentially Oriental. Teaching by fable  
doubtless appears the most natural method to an Oriental, whose imagination  
finds metaphors everywhere, whose love of moral instruction seems instinc-  
tive—(all their writings have an ethical cast)—whose humanity to beasts is  
notorious—in no other part of the world do we hear of asylums for animals  
sick, aged, or maimed—whose style of instruction is popular, in which you  
find united a patriarchal authority to a pastoral simplicity; and whose whole

manner of life, comparatively quiet and thoughtful, begets a tendency to  
morosities on the beauties of nature and on the brute creation, no less than on  
the character of men, and the prospects and probable destiny of the human  
race. It is not surprising, when we remember that it is a task which  
the very best of writers might find it for the time, which should  
represent the animals and the vegetable world, to find that the Oriental  
writers have been so much occupied by these various matters. Teaching by fable  
was the favourite mode of instruction employed by him "who spoke as never  
man spoke," and whose lessons were illustrated by living examples.

The very existence of the fable, the illustration of Pilpay is disputed.  
Some regard his name and that of Lokman as synonymous; while others regard  
the body of fables existing under their names as belonging to a great common  
stock. The French writers are the fullest of this, and treat Oriental subjects  
elaborately and exactly. They give a probable history of Pilpay—a sort of  
quasi biography. The Persian was also a poet, and his life was a romance  
for that. Pilpay, alone, we can read. He is full of wisdom and penetration,  
and a capital moral satirist. Though often referred to, the translation of his  
fables is very scarce.

The next great name, the one universally known, and in popular estimation  
the greatest of all the fabulists, is *Æsop*, of whom the best of critics speak  
thus admiringly: "There is a wit of sense and observation, which consists  
in the acute illustration of good sense and practical wisdom, by means of  
some far-fetched conceit or quaint imagery. The matter is simple, but the  
form is wit." The ancient philosophers also abounded in the same kind of  
wit, in telling home-truths in the most unexpected manner. In this strain,  
*Æsop* was the greatest wit and moralist that ever lived. Ape and slave, he  
looked askance at human nature, and beheld its weaknesses and errors trans-  
ferred to another species. Vice and virtue were to him as plain as any  
objects of sense. He saw in man a talking, absurd, obstinate, proud, angry  
animal, and clothed these abstractions with wings, or a head, or tail, or claws,  
or long ears, as they appeared embodied in these hieroglyphics in the brute  
creation. His moral philosophy is natural history. He makes an ass bray  
wisdom, and a frog croak humanity.

The old German, from the earliest period, and down to Lessing, and later  
still, is rich in fabulous literature. The great Middle Age apologue of  
Reynard the Fox is the gem; a grand comic epopee, a humorous satire,  
worthy of the great German literature. Its author is unknown, or at least very  
doubtful. We do not know that the Italians or Spaniards have any fabulists  
of general reputation. Portugal boasts her Yriarte, of whom we are not  
competent to speak.

In modern times, France and England have produced the classic fabulists,  
Lafontaine and Gay. Labruyère has left the best portrait of Lafontaine,  
whose simplicity of character, absence of mind, and conversational defects  
are well known: "A person who appears dull, sottish, and stupid, and knows  
neither how to speak nor relate what he has seen. If he sets to write, no  
man does it better: he makes animals, stones, and trees talk, and everything  
which cannot talk. His works are full of nothing but elegance, ease, natural  
sense, and delicacy."

The French writer appears to unite the sweetness, the simplicity, and  
naïve elegance of Gay, to the arch wit, *bonhomme* spirit, and delicacy of  
style of Prior. Mere invention neither can lay much claim to. Both  
Prior and Lafontaine borrowed largely their plots and the incidents of their  
tales from earlier writers, French and Italian—Rabelais and Boccaccio—who,  
in turn, derived their materials from still older writers.

"In wit a man, simplicity a child," Gay is intellectually, and was, we  
suspect, personally and socially twin brother to Lafontaine, the idol of his  
friends, as well as one of the glories of the age of Anne—so much under-  
rated just now, because inferior to that of Elizabeth, and because injudicious  
admirers had called it the Augustan age of our literature—and still is at the  
head of English fabulists. Good fables have appeared from other hands,  
Good old Dr. Cotton; and wise Johnson, with his oriental fancy and power of  
expression, so telling in an Eastern apologue; keen, penetrating Franklin;  
and Laetitia Swift, have, at different times, written morality, worldly wisdom,  
prudential maxims, or severe irony, in the form of fables. Among the poets,  
from Chaucer to Cowper, and down to the latest versifier, old fables have  
been reproduced and translated into rhyme; but though some of these  
writers are much superior to Gay in other respects, none of well and truly as  
he have hit the mark. His fables are often original in plan and matter, as in  
execution. The "Beggars' Opera" and the "Pastorals" placed Gay much  
above the Frenchman; but these works do not come fairly into the question.  
Pope's correspondence shows Gay the darling of that most choice and picked  
society. He is spoken of, even by the saturnine Dean, with warmth and  
affection; and from all we can learn of him, he fully deserves the admirable  
epitaph of Pope—a noble piece of eulogium, truly to deserve which marks  
the English Lafontaine as the possessor of one of the noblest hearts, as well  
as one of the finest heads of that brilliant era:—

"Of manners gentle, of address mild,  
In wit a man, simplicity a child;  
With native humour tempering virtuous rage,  
Form'd to delight at once and lash the age;  
Above temptation, in a low estate,  
And uncorrupted ev'n among the great;  
A safe companion and an easy friend,  
Unblamed through life, lamented in thy end:  
These are thy honours! not that here thy heart  
Is mix'd with heroes, or with kings thy dart;  
But that the worthy and the good shall say,  
Striking their pensive bosoms—Here lies GAY!"

With these fine verses, we conclude a brief and imperfect sketch.

An excellent edition of this popular work, with clever illustrations, may be had from  
Messrs. HOULSTON and BROWNMAN, Paternoster-row, price 2s.

## ONWARD!

**PROPOSED CLOCK TOWER IN SOUTHWARK.**—Mr. Bennett, of Blackheath, having liberally offered to place the large clock contributed by him to the Great Exhibition in 1861, at the disposal of the Commissioner for Lighting the West Division of Southwark, they have determined on erecting a tower in which to place it, at the spot where the lamp-pedestal now stands, at the foot of London-bridge, at the corner of Duke-street, and the entrance to the railway station. The design is by Mr. Christopher Edmonds, the surveyor to the Board. It will be quadrangular, nearly 60 feet high, and will be constructed of cast iron. The four dials, each 6 feet in diameter, will be of white glass, strongly illuminated at night, and the windows will be filled with purple flashed glass. The cost is calculated at £700, half of which is to be paid out of the rates, and the other half is to be raised by subscription.

**THE IRISH GRAND INDUSTRIAL EXHIBITION.**—The Irish Industrial Exhibition is for Cork and for the south of Ireland an event of much importance. Exaggerated notions are no doubt entertained by some; the over- sanguine expect from it the most varied and irreconcilable benefits, and even sober people look to it for the industrial regeneration of this country. It is in the order of nature that this eagerness of expectation should suffer some rebuke from the literal facts; but from what has already transpired in reference to the collection of industrial products now housed in Cork, it is certain that an impetus will be given to native manufactures,—and it is probable that of the thousands of strangers who will be drawn to Ireland by the attractions of the Crystal Palace, some few may be induced by the combined attractions of natural beauty, good living, and cheap estates, to settle in the neighbourhood. The phrase of our native prelate—

“Westward the tide of empire seems to flow.”

is now on every tongue; and the almost simultaneous opening of the Submarine Telegraph between Howth and Holyhead—which brings Dublin within a few seconds of London—and of the Irish Industrial Exhibition at Cork, is regarded less in the national aspect of an evidence of steady Imperial progress than as a cabalistic sign of accomplished emancipation.—*Athenæum*.

**EMIGRATION.**—The discoveries of gold in Australia are at length beginning to tell sensibly upon the stream of Emigration from the United Kingdom. At this moment nearly all the disengaged tonnage, not only at London and at Liverpool, but at most of the other ports, is being taken up for the conveyance of emigrants of various classes to the Antipodes. In truth, the Australian emigration is perhaps the particular topic of the hour which engages the most attention. The effect of a little self-interest is truly wonderful. The probable failure of the sheep-shearing in New South Wales, by the sudden conversion of shepherds into diggers, has set in motion the manufacturers of the West Riding, and already one or two deputations from Leeds and the neighbourhood have waited upon the Government. The desertion of seamen in the Australian ports has aroused the shipping interest, and more troops and more men of war are already on their way to the scene of action to maintain the law, and protect Jack from the consequences of sudden fits of avarice. The general want of manual labour in the Colonies has led the Local Legislatures themselves to adopt active measures, and agents have arrived in this country with power and funds which will enable them to dispatch a considerable number of persons. In few words—there is great and earnest activity in every quarter, where sensations either of fear or of hope have been excited by the violent change which has taken place in the industrial economy of our Southern dependencies. We are by no means sure, in the midst of so much excitement, that many errors will not be committed, and that much mischief will not be done. Men will ruin themselves by inordinate speculations; and it is possible that for a time the instances will not be few in which those who are now capitalists will exchange places with those who are now labourers. But the result will be in the end, and on the whole, good. The mind is quite bewildered when it attempts to measure the practical consequences, already apparently at hand, of the Australian discoveries. We have to consider what will be the results of a rapid rise of the English societies in Australia and New Zealand into populous and wealthy states,—what will be the results of creating in those regions new and extensive markets for our manufactures—new homes for our population, especially for our surplus female population—new fields of employment for the largest class of our mercantile marine—new and cheaper means of bringing home from India the produce of India—new and more perfect means of carrying European civilization amongst the islands and nations of the remote seas of Asia. Emigration at home has already assumed a form so systematic, that it may be properly called Colonisation; and it is becoming of so vast a volume, that it will presently produce a decided impression on the numerical progress of the population of the United Kingdom. What will be the results of such a change? Are we justified in apprehending that the best portions of our working men and women will leave us, condemning those who remain to contend with a servile population reduced in numbers, but composed mainly of persons of tainted lives or characters. This is a contingency not to be overlooked; and it is a subject for congratulation that it has already attracted so much attention, as to lead the Parish of St. Martin-in-the-Fields, on the motion of its Vicar, to agree to the imposition of an assessment for the express purpose of relieving the poor-rates by assisting paupers to emigrate. It must be added, that Sir John Pakington has done wisely in surrendering the Royalty rights of the Crown over the gold discoveries to the Local Legislatures of the Colonies, to be by them employed as a source of Colonial revenue.—*Ibid.*

## POETICAL QUOTATIONS.

## BEAUTY.

O how I grudge the grave this beauty's form;  
Thy beauties will inspire the meanest youth,  
And turn the pale and timid into love.—*Shakespeare, Legat Brother.*

What tender force, what dignity, what  
What virtue consecrating every feature,  
Around that neck what dross are gold and pearls.—*Shakespeare's Desdemona.*

What's female beauty, but an air diffused  
Through which the mind's all gentle graces shine;  
They, like the sun, irradiate all between;  
The body charms, because the soul is seen.  
Hence men are often captives of a face,  
They know not why, of no peculiar grace.  
Some forms, though bright, no mortal heart can move;  
Some, none resist, though not exceedingly fair.—*Shakespeare's Romeo.*

But then her face,  
So lovely, yet so arch, so full of mirth,  
The overflowings of an innocent heart.—*Rogers's Italy.*

The rose, with faint and feeble streak,  
So lightly tinged the maiden's cheek,  
That you had said her hue was pale;  
But if she faced the summer gale,  
Or spoke, or sung, or quicker moved,  
Or heard the praise of those she loved,  
Or when of interest was express'd  
Aught that waked feeling in her breast,  
The mantling blood in ready play  
Rivall'd the blush of rising day.—*Scott's Rokeby.*

## BEGGAR.

Art thou a man? And sham'st thou not to beg?  
To practise such a servile kind of life?  
Why, were thy education ne'er so mean,  
Having thy limbs, a thousand fairer courses  
Offer themselves to thy election.—*Jenson's Every Man in his Humour.*  
When beggars grow thus bold,  
No marvel then though charity grow cold.—*Drayton.*

Base worldlings, that despise all such as need;  
Who to the needy beggar still are dumb,  
Not knowing unto what themselves may come.

*Heywood's Royal King.*

He makes a beggar first that first relieves him;  
Not us'ers make more beggars where they live,  
Than charitable men that use to give.—*Ibid.*

His house was known to all the vagrant train,  
He chid their wand'rings but relieved their pain;  
The long-remember'd beggar was his guest,  
Whose beard descending swept his aged breast.

*Goldsmith's Deserted Village.*

## BENEFITS.

A benefit upbraided, forfeits thanks.  
And 'tis not sure so full a benefit,  
Freely to give, as freely to require.  
A bounteous act hath glory following it,  
They cause the glory, that the act desire.—*Lady Carew's Marian.*

He that neglects a blessing, though he want  
A present knowledge how to use it,  
Neglects himself.—*Beaumont and Fletcher's Elder Brother.*

To brag of benefits one hath bestown,  
Doth make the best seem less, and most seem none;  
So oftentimes the greatest courtesy  
Is by the doer made an injury.—*Brome's Novella.*

## BIGOTRY.

Sure 'tis an orthodox opinion,  
That grace is founded in dominion.—*Butler's Hudibras.*

Nor does it follow, 'cause a herald  
Can make a gentleman scarce a year old,  
To be descended of a race  
Of ancient kings in a small space,  
That we should all opinions hold  
Authentic that we can make old.—*Ibid.*

Soon their crude notions with each other fought;  
The adverse sect denied what this had taught;  
And he at length the simplest triumph gain'd,  
Who contradicted what the last maintain'd.—*Prior's Solomon.*

For modes of faith let graceless sects fight;  
His can't be wrong, whose life is in the right.—*Pope's Essay on Man.*

### CHARADE.

My first Polonius oft employed,  
And the young Hamlet sore annoyed.  
And in the ear of listening youth,  
The aged often whispers truth  
By its proverbial aid.  
My second by the horses' tread  
Is raised; or where the coffin'd dead  
Beneath the earth are laid.  
My whole the cleanly housewife strews,  
Lest you her well swept floor abuse.

### PARLOUR PASTIME.

#### Zoological Recreation.

THE names of all the party are to be written on separate slips of paper, and placed in a hat; each person is then to choose a beast or bird, and write its name on a slip of paper, its size and colours on another, and its habits on a third. The names, the sizes, and the habits, are to be placed by themselves in three hats. This being arranged, one of the party draws out a name from the first hat, and reads it aloud, and then draws and reads out a slip from each of the other hats, and much merriment will be caused by the odd associations; as when Mr. Smith, for instance, is described as ten inches long, with a green head and brilliant eyes, and prettily marked yellow and purple, with, perchance, a tail of beautiful blue feathers, and lives on slugs and snails. The hat containing the names of the animals should be placed aside until the conclusion of the game, when some knowledge may be gained by the attempt to arrange the descriptions under their proper heads.

#### ENIGMAS.

PRAY ladies, who in seeming wit delight,  
Say what's invisible, yet never out of sight.

A word of three syllables, seek 'till you find,  
That has in it the twenty-four letters combin'd.

The beginning of eternity,  
The end of time and space,  
The beginning of every end,  
And the end of every place.

Yonder lives a shoemaker, who works without leather,  
And, strange to say, by all the four elements together  
Of fire he makes use; of water, earth, and air,  
And for every customer makes a double pair.

### TRANSFIGURED PLAYING CARDS.

THE THREE OF DIAMONDS.—A SPIRITED SCENE.

### CONUNDRUMS.

1. Why is the letter B like a man sitting at the extremity of a branch of a tree?
2. Why need not a man starve in a desert?
3. Why are sheep supposed to be great gamblers?
4. Why is a handsome woman plunging head-foremost in the water like a valuable machine?
5. Why is a Jew in a fever like a diamond ring?
6. What river in Bavaria answers "Who is there?"
7. What metal is it whose name indicates flight?
8. Why is Waterloo-bridge, like a celebrated one at Venice?
9. What is the difference between the Emperor of Russia and a beggar?
10. At what time of life may a man be said to belong to the vegetable kingdom?
11. Why is a cabbage stalk like a lover?
12. Why is a man that has pulled on a pair of close fitting boots like Jupiter?

#### PROBLEM.

IN the midst of a meadow well stored with grass,  
I took just an acre to tether an ass:  
How long must the cord be, that, grazing all round,  
Jack may graze less nor more than his acre of ground?

#### TRANSPOSITION.

COMPLETE I train the tender minds of youth  
In the bright paths of learning and of truth;  
Transpose me, ladies, and, to suit your wish,  
I'm metamorphos'd to a dainty fish;  
Curtail'd, a midnight meeting I become;  
Again curtail'd, I'm never found at home.

### ANSWERS TO THE PASTIME OF LAST EVENING.

Page 557.

#### PICTORIAL CHARADE.—HARK-SHIP.

TRANSPPOSITIONS.—1. ARTISAN, STRAIN, TRAIN, RAIN. 2. SEATS, TALE, ASH, STRAL, & TUP, FRY.

CONUNDRUMS.—1. When they are stretched. 2. Absence. 3. Because it's not a fish (unhappy). 4. Again (see-ill). 5. Argon (see pen). 6. Bath and Wells. 7. Because it is a neighbouring (see labelling). 8. Bridge-town. 9. Castles (see). 10. Because they have a Castle Ring. 11. Because it is a chapter (see). 12. Because it's near O (New). 13. When it's eaten (New). 14. My (see). 15. Because it's not a fish (unhappy). 16. Because it's a U (unhappy). 17. See on (happy). 18. Because it's a U (unhappy). 19. Because it's a U (unhappy). 20. Because it was a Hammer. 21. March on 5 (marched on). 22. Mrs. Stupp (Missouri and Mississippi).

### Editor's Note-Book.

#### DOMESTIC HINTS, No. 11.—

*Preparation of Vegetables.*—There is nothing in which the difference between an elegant and an ordinary table is more seen, than in the dressing of vegetables, more es-

pecially of greens; they may be equally as fine at first, as at another; but their look and taste are afterwards very different, entirely from the careless way in which they have been cooked. They are in greatest perfection when in greatest plenty, i.e. when in full season. By season, we do not mean those early days, that luxury in the buyers, and avarice in the sellers, about London force the various vegetables; but that time of the year in which by nature and common culture, and the mere operation of the sun and climate, they are in most plenty and perfection. Potatoes and peas are seldom worth eating before Midsummer. Unripe vegetables are as insipid and unwholesome as unripe fruits. As to the quality of vegetables, the middle size are preferred to the largest, or the smallest; they are more tender, juicy, and full of flavour, just before they are quite full grown; freshness is their chief value and excellence, and I should as soon think of roasting an animal alive, as of boiling a vegetable after it is dead. The eye easily discovers if they have been kept too long; they soon lose their beauty in all respects. Roots, greens, salads, &c., and the various productions of the garden, when first gathered, are plump and firm, and have a fragrant freshness no art can give them again, when they have lost it by long keeping;—though it will refresh them a little to put them into cold spring water for some time before they are dressed. To boil them in soft water will preserve the colour best of such as are green; if you have only hard water, put to it a tea-spoonful of carbonate of potash. Take care to wash and cleanse them thoroughly from dust, dirt, and insects: this requires great attention; pick off all the outside leaves, trim them nicely, and if they are not quite fresh gathered and have become flaccid, it is absolutely necessary to restore their crispness before cooking them, or they will be tough and unpleasant; lay them in a pan of clean water, with a handful of salt in it, for an hour before you dress them. Most vegetables being more or less succulent, their full proportion of fluids is necessary for their retaining that state of crispness and plumpness which they have when growing. On being cut or gathered, the exhalation from their surface continues, while from the open vessels of the cut surface there is often great exudation or evaporation, and thus their natural moisture is diminished, the tender leaves become flaccid, and the thicker masses or roots lose their plumpness. This is not only less pleasant to the eye, but is a real injury to the nutritious powers of the vegetable; for in this flaccid and shrivelled state its fibres are less easily divided in chewing, and the water which exists in vegetable substances, in the form of their respective natural juices, is directly nutritious. The first care in the preservation of succulent vegetables, therefore, is to prevent them from losing their natural moisture. They should always be boiled in a saucepan by themselves, and have plenty of water: if meat is boiled with them in the same pot, they will spoil the look and taste of each other. If you wish to have vegetables delicately clean, put on your pot, make it boil, put a little salt in and skim it perfectly clean before you put in the greens, &c., which should not be put in till the water boils briskly; the quicker they boil, the greener they will be. When the vegetables sink, they are generally done enough, if the water has been kept constantly boiling. Take them up immediately, or they will lose their colour and goodness. Drain the water from them thoroughly before you send them to table. This branch of cookery requires the most vigilant attention. If vegetables are a minute or two too long over the fire, they lose all their beauty and flavour. If not thoroughly boiled tender, they are tremendously indigestible, and much more troublesome during their residence in the stomach than under any other mode. To preserve or give colour in cookery many good dishes are spoiled; but the rational epicure who makes nourishment the main end of eating, will be content to sacrifice the shadow to enjoy the substance. Once for all, take care your vegetables are fresh; for as the farmhouse often suffers for the size of the cook, so the cook often gets undeservedly blamed instead of the green-grocer.

**BATHING.**—G. W.—Too much fatigue in the water weakens the strength and presence of mind necessary to avoid accidents. A person who is tired, and remains there without motion, soon becomes weak and chilly. As soon as he feels fatigued, chill, or numb, he should quit the water, and dry and dress himself as quickly as possible. Friction, previous to dressing, restores the blood over every part of the body, creates an agreeable glow, and strengthens the joints and muscles.

**EAST INDIA COMPANY'S SERVICE.**—S. R. C.—The regulations for admission to the College at Addiscombe are to be found in detail in *The East Indian Register*. The age of the candidate must be fourteen, and under eighteen. The payment is £50 per term, and there are two terms in the year. It is indispensable that a young man should have been educated at this college to be eligible to the corps of Engineers and Artillery; but young men may be appointed to other departments of the service without having been at the college.

**SAVINGS BANKS.**—G. S. W.—These admirable institutions, established to encourage habits of prudence in the poorer classes, afford ample securities for a provision hereafter against want and infirmity. We strongly recommend all who would avail themselves of such advantages, to lose no time. "How can I save?" is the general answer to such appeals, and from persons who by proper management could easily secure the means. It is related of Socrates, that in passing through a fair, he exclaimed, on viewing the splendid objects around him, "How many things are here, of which I have no want!" Every man should have the same feeling with regard to wanton expense. Get honestly, and give cautiously should be the motto of all who wish to rise in life. Pecuniary obligations of any kind should be carefully avoided; every debt, however trifling, ought to be promptly settled. To pay one's debts, Shenstone used to say, removes all uneasiness which a true spirit feels from dependence. It affords pleasure to the creditor, and therefore gratifies our social affection. It leaves a consciousness of our own virtue, and it is a measure we know to be right both in point of justice and of sound economy. One of the worst ills that can befall us in our race through life, is, without a doubt

RUNNING IN DEBT.

**PROPER MANAGEMENT OF CHILDREN.**—W. I. B.—No one can doubt that children are born with various dispositions, or the germs of such dispositions; and it is equally true, that by proper and timely management, these dispositions may be so changed and meliorated by the attention of a parent, or those to whom they are entrusted, that not only their little blunders may be smoothed away, but even those things which more offensively distinguish the child, may, by proper discipline, become the characteristic ornaments of the man. "In respect to the desires of children," observes Dr. Parr, "it is hardly possible to lay down any general rule. But the best method of inuring them to disappointments, is perhaps rather to call off their thoughts to some new gratification, than to drive them forcibly from any favourite pursuit. Their inclinations are keen, but fickle, and therefore he gives no mean proof of his skill in the management of the human mind, who makes one weakness the instrument of counteracting another."

**COMMUNICATIONS RECEIVED.**—G. MASON (the Committee of Australian colonists expressly declare that gentlemen of education, without capital, clerks, and persons of that class, should not emigrate unless they are prepared to become shepherds, dig for gold, or accept any employment that might offer). **ISORAMUS** (camel's hair is the hair of the camel imported into this country, chiefly for the manufacture of fine pencils for drawing and painting. It is divided into three sorts, the black, the red, and the grey. The black is the dearest, and the grey is only worth half the red). **MARIA** (porcelain is derived from the Portuguese *porcelita*, a cup. The Portuguese were the first importers of this article). **RURICUS** (a valuable horse requires personal attention, unless the farmer can be depended upon: otherwise the owner may meet with the same fate as the Irish gentleman, whose farrier sent him in a bill:—"To curing your honour's horse till he

died, &c. &c.") **B.** (some juice of aloe added to paste is an infallible preventative against the ravages of the worm). **EMERSON** (the Home Companion medical supplement will be found extremely useful in the Colonies, and our correspondent cannot do better than recommend it to all his friends. Any bookseller will prepare it at the publishing cost, one penny). **A. LARSON** (house plants require being sent to a watering-place as well as invalids. Set them out under genial showers). **MARROW** (true economy does not so much consist in saving, as in adapting everything to its specific use, by which means much is enjoyed at a small expense). **S. H. M.** (real jeweller's gold is always stamped). **W. ROBERTSON** (good water has neither taste nor odour; and the best water always containing the greatest quantity of carbonic acid gas, in addition to its proportion of atmospheric air, it will always give out the greatest number of air bubbles when poured alternately into different vessels). **CIVIS** (we believe that shopkeepers can be compelled to fix their signs against the walls without projection; this applies at least to the city. Formerly hundreds of signs were swinging about on rusty hinges, and penthouses and spouts poured cascades upon the luckless passenger beneath. In 1718, the sign and front of a house in Fleet-street, opposite Bride-lane, fell down, and killed two young ladies, the King's Jeweller, and a cobbler. Upon this circumstance a law was passed forbidding swinging signs). **JUVANIS** (the person who uses beer with intemperance becomes fat, and is even, for a time, under a delusion that he enjoys good health, but the result is apoplexy or dropsy, arising from diseased liver, most frequently the former). **MEXICANIC** (an excellent cement for resisting moisture is made by incorporating thoroughly eight parts of melted glue, of the consistency used by carpenters, with four parts of linseed oil, boiled into varnish with litharge). **M.** (cold water bathing, as well from its tonic power as from its gravity, is an excellent preservative of health). **B. VERNON** (our correspondent must apply to a medical practitioner. We do not profess to be one of those, who

"Whatever sceptic could inquire for,

"For every why they have a wherefore.")

**J. WELBY** (cultivate music by all means. Remember what Shakespeare says:

"The man that hath no music in himself,  
Nor is not moved with concord of sweet sounds,  
Is fit for treasons, stratagems, and spoils;  
The motions of his spirit are dull as night,  
And his affections dark as Erebus:  
Let no such man be trusted."

**D.** (Pliny states that swallows have been made use of for carrying messages, like pigeons. Their rate of flight has been estimated at a mile in a minute, for ten hours, or 600 miles per day). **EMERSON** (the trade winds are so called from the advantage which their certainty affords to trading vessels. They are generally stated to blow from east to west over the equator, and are occasioned by the rarefaction of the air by the sun's heat, and the motion of the earth from east to west). **JUVANIS** (coin is derived from a Greek word, signifying common or current). **E.** (riffling guns are those whose barrels, instead of being smooth on the inside, like our common pieces, are formed with a number of spiral channels, resembling screws; except only that the threads or ridges, are less deflected, making only one turn, or a little more, in the whole length of the piece). **CYNOS** (the term education is derived from the Latin words *e* and *duco*, to lead or draw out of). **A. YOUNG** (the blood is formed from the food taken into the stomach, and thus affected by the nature of the food, it is taken into the heart, and thence thrown into the lungs, where it is exposed to the action of air, thence carried back to the heart, which, like a central engine, throws it through the blood vessels, into every part of the body). **JAMES** (the power of expression may be much improved by proper self-discipline. There are three points particularly requiring attention, utterance, pronunciation, and command of language, or fluency). **G. LEMON** (the best possible ventilator is an open fire-place).

**J. WILCOX** (a river is always one third deeper than it appears to be, thus if a river seems to be four feet deep, it is, in reality, six feet deep, and so on). **HUTCHINSON** (the tradesmen that are likely to get on in Australia, are—carpenters, blacksmiths, bricklayers, stone-masons, sawyers, well-sinkers, miners, wheelwrights, tailors, bootmakers, tanners, and others.)

[PRICE ONE PENNY.]

"God bless you!" said the old man, solemnly: and Catharina sank upon a stone, and covered her face with her hands."

## CAROLINE AND CATHARINA.

(Continued from page 570.)

There was something in this stillness which oppressed him. He could not understand the want of all signs of the presence of those whose proximity he knew. There was something suspicious in it, something exciting, and all his senses were wound up to a point of painful acuteness. He bent his eyes upon the darkness as if he would have pierced the rock, and he listened as if he could hear the voices of the spirits around him. In the midst of this excitement, for which he was not able to account, he thought he suddenly heard a repetition of the same sound he had heard above—a stealthy foot placed upon the loose pebbles, which grated beneath its weight. It was in the same direction, too, but seemed now lower down, as if the person who made it had gained the island upon which the house stood. He bent his ear nearer to the ground, but could hear no more. He fixed his eyes upon the point from which the sound came, and lo! a bush seemed to be moving, though at a considerable distance from him! He gazed at it, but it stopped, became stationary, and assumed the shape of a man! "This must be imagination," he thought, "and yet it cannot be either." At the same moment another bush moved! But it too became stationary, and assumed the shape of a man!

"They have found means to cross the ravine," said he to himself, "and are coming over one by one."

He rose stealthily and entered the house.

"Catharina," said he, "go to your father and bring him immediately in; do it without noise. Where is Allen?"

"He is in his room. What has happened?"

"The scoundrels have crossed the ravine. Be in haste, and above all do not make a noise."

Catharina tripped quietly away, and in a minute returned with her father.

"We must retire within the house," said Hugh; "I see our friends are about to attack us. Can you fasten the door of Allen's room securely inside?"

"Yes," replied the old man in a whisper, "there is a strong bar inside, and the door itself is very heavy and strong."

"Gather up whatever you want to take with you, then," said Hugh; "for we must retire to that room and retreat from there. I see there are six of the scoundrels across, and probably they have as many more."

Having once determined the locality, he could more easily distinguish the forms, which, he had now no doubt, were the forms of his enemies. While Catharina and her father hastily but silently collected the articles they desired, Hugh advanced some twenty paces toward the point of danger. He did not wait here long, before, stooping to the ground, he saw four more forms join the group one by one; and from their waiting he doubted not, were behind. The event justified his conjecture; for very soon another and another joined; and then three or four emerged from the darknesses together, and the

group enlarged until there were at least twenty of them. He thought he could see muskets in their hands, too, and he at once conjectured aright, that the original number had been increased by stragglers from the army.

He waited to see no more, but returned at once to the door of the room in which Allen had been. He found Catharina standing without, and Allen and her father arrived at the door for defence.

"*Godin cara mia,*" said Hugh, gently leading her with up "Give you the bar ready?" he continued "Try it if you have, and see if you can place it in the staples hastily."

"You come in," said Catharina, as they were about to shut the door upon him. "they may run upon you."

"No fear of that," said Hugh; and the door was closed, and the bar found to fit.

"Now stand ready to put it in without delay." Hugh continued as they re-opened the door. "And I will see why these fellows are breaking the Mexican rule, to go upon warlike expeditions only by daylight."

So saying he stepped slowly to his face and fired. A single yell of agony rose from the group, and a sudden rush towards the house. Hugh stepped quietly within, and the bar was shot into the Mexican staples across the door. A moment afterwards several men were seen entering the dining room, and four or five beat firmly upon it, and with the butt of the muskets.

"Knock away, *senores ladrones!*" Hugh called out. "I'll be glad to receive you when you can come in. And now a little rest, and then we must be off as fast as possible. The door will resist the beating time. Let us see what we can do before they can get it down."

"What will become of Maria?" asked Catharina, "we cannot leave her behind."

"What claim has she upon our kindness?" asked her father, "truly she has taken the punishment of her treachery."

"Father," said Catharina, "you resent it, but I do not forget Maria has done wrong, it is true; but she acted from her instincts as we act upon our reason. She has, besides, the claim of love upon us. We have protected her for years, and this obliges us to do so. Her friends, I, for one, will not abandon her while there is a chance to assist her."

"She is right," said Allen, "we must relieve her, if we can."

"Come, come," said Hugh, bluntly, "kindness is a very good thing, but when it cannot be exercised it is folly to stand idly about it, with an enemy thundering at the door. Maria will be safe if she be not already free! The scoundrel who fired the cannon knows of her presence. Come, let us go."

As he spoke he led Catharina towards the door. He was followed by Allen and Bonito. On passing out they found themselves upon a narrow ledge, or rather projecting rock again, which took a slight ledge left there by Catharina when she returned from account. They came to the cliff.

"Let me go first," said Catharina, as she stepped half a foot upon the upper round, and ran lightly down, followed by the whole party. At the foot of the ladder they found themselves upon a ledge like the first from which they descended upon another, and then upon a third. It was a risk the small party they carried being carefully guarded by Hugh, and only illumined a few feet of the opposite rock, and within the light the night was doubly cold. They could hear the cannonous shoutings above, and an occasional loud crash as if some heavy body were thrown against the door, but they knew from the sound, that it still held out against their attacks. At each renewal of the sounds grew more indistinct, until, when they stood upon the third and last ledge, the noise only reverberated occasionally from the rocks and seemed to be made immediately above their heads—so units he said to the bottom of a well.

"We are getting down to the level of the cliff," said Hugh, "and I came down last and the danger is cleared up on this side of the chasm."

"We have cleared the level of the cliff," said Hugh, "and I came down last and the danger is cleared up on this side of the chasm."

"Let me go first," said Catharina, as she stepped half a foot upon the upper round, and ran lightly down, followed by the whole party. At the foot of the ladder they found themselves upon a ledge like the first from which they descended upon another, and then upon a third. It was a risk the small party they carried being carefully guarded by Hugh, and only illumined a few feet of the opposite rock, and within the light the night was doubly cold. They could hear the cannonous shoutings above, and an occasional loud crash as if some heavy body were thrown against the door, but they knew from the sound, that it still held out against their attacks. At each renewal of the sounds grew more indistinct, until, when they stood upon the third and last ledge, the noise only reverberated occasionally from the rocks and seemed to be made immediately above their heads—so units he said to the bottom of a well.

"So much the greater risk," said Hugh, "I precede you," said she, regarding the ladder and the light, "truly we do not wait, and I can give you peace."

"You are a brave girl," said Hugh, "let us go, then, with us."

"Then I suspect you will find it very hard to climb up."

"I hope so," said Hugh, "it is a hard climb, but I can do it."

The old man was half way up the ladder, but he caught the round as he reached the ground in which he was to rest, and he stepped down.

"My daughter, are you still used to it?" asked Hugh.

"Why to a rock father?"

"It is too late," he exclaimed, "But I was selfish—I must peak to you alone very soon."

Allen's coming broke off the brief conversation and soon afterwards Hugh stood among them holding the lantern, and examining the ground around them.

They were in the bottom of the ravine, and on each side rose a wall, almost perpendicular for sixty feet. Towards the south it deepened gradually, having been washed by the heavy rains, and the chasm took the form of a deep notch in the rocks. On looking up, Hugh found that the overhanging bushes and vines concealed the sky, with the exception of a very narrow line, along which twinkled a few clear though distant stars—appearing and disappearing, as the leaves and branches of the vines swung slowly in the rising wind. As he gazed upward he thought the leaves began to glister and grow more distinct, as if the dawn were coming on them, but

it was scarcely more than midnight yet, and the light on the leaves was red and fast increasing. The noises above had entirely ceased, as if the assailants had given up the attack.

"What does that light mean?" Hugh asked. "They must have set fire to the house," said Bonito, "so we are safe, but they will only destroy themselves."

"How so?" asked Allen.

"There are two hundred pounds of gunpowder in the room we have just left," said the old man. "It was left there in the chest you saw, by General Sanchez, a year ago, and his never been removed."

"Then let us get out of this neighbourhood as soon as possible," said Hugh. "lest we be involved in the ruin. An explosion of that quantity of gunpowder will sweep the whole terrace clean!"

"How bright the light is becoming!" said Allen, looking up, "we must hasten away."

"(I will not notify them of their danger," suggested Catharina.

But Hugh seized her hand and hurried her away down the fissure, as fast as he could walk, followed by Allen and Bonito. The chasm turned gradually to the right, but the fire above increased so fast that the light followed them and made the lantern no longer of use. The way was rough, and often descended precipitously several feet where, in the wet season, little cascades were formed. In these places Hugh sprang hastily, lifting Catharina in his arms and landing her safely below. So eager was his haste, that he outstripped the other men, and in the wind of the chasm lost sight of them. He had run thus some four or five hundred yards, when he was suddenly brought to a stand on the brink of a precipice at least one hundred feet high. Directly beneath and in front lay the great ravine now strongly illumined by the burning of the light thatch of the house, and at the distance of nearly a mile down its bed were visible three small fires burning pale and dim in the stronger light.

The ladder is below," Catharina exclaimed, "it was left there by Ignacio!"

"Ladder!" said Hugh. "No ladder is long enough for this cliff!"

"There are ladders like those above," said she.

"Then I must go back for the other ladder," said Hugh; but as he turned back Catharina approached the brink, and exclaimed—

"Ignacio is coming up! See!—here below us! And there is his signal!—the three fires; he has found horses!"

Hugh looked where she pointed, and saw a man apparently climbing the very face of the rock. As he reached one ledge he stopped, drew up the ladder, and placing it against the next shelf thus gradually ascended. At last he appeared like a mere speck; but as he approached he became distinctly visible. He had performed this operation six or seven times, and had come within two or three feet of the top, when Catharina suddenly whispered—

"It is not Ignacio!"

At the same moment her blood ran cold, as her eye caught the form of seven men huddled to either within a space beyond a point of the rock, and laying upon them like a net of steel. Hugh saw them at the same moment, and discharged his rifle among them, hitting one upon the spot. The remaining six fired a whole volley hastily and fortunately for Hugh and Catharina, for the three men who had fired the volley had entered the fleshy part of Hugh's shoulder, but did not prevent him drawing his sword with one hand, and a revolver with the other. He had need of all his arms for the while six rushed at him with bayonets at a charge.

Run! he exclaimed to Catharina. "Run out of the way!" and he parried the thrusts of the bayonets with his sword, firing his six shots rapidly in succession with his left hand. Only one of them fell, however owing to his mistake and the uncertainty of his hand. But another was shot in the hand dropping to the ground, and the same moment Allen and the old man rushed to the top of the cliff, and the latter said to Hugh—

You have done well, but the latter as no one fell from the rocks, striking at the same time a large heavy fellow, who was pressing him to the cliff.

It was a hard fight—three swords against five bayonets, which the man who had been climbing the cliff sprang suddenly upon the rock, and the six muskets of the old men fell, and the three began slowly to the ground fighting each by side, and contesting every inch of the ground.

The rocks were growing wider, and where they were fighting there was a broad flat rock, swept by the waters, and jutting square against the perpendicular rocks on each side. Our friends began retreating it, and the side next the house where their enemies had been concealed, and in less than a minute they were beyond the point of the rock which had concealed them, with their backs almost against the wall. Catharina was behind them, alternately advancing and retreating, wringing her hands in the greatest distress. She stumbled over the musket to be by the man first shot, she raised it suddenly, and with vengeance in her look discharged it at her enemies. But her hand was too unsteady, and the harmless report only reverberated across the great ravine.

"God help us now indeed!" exclaimed Hugh. "We have nothing to do but fight to the last!"

The prayer was answered! As he spoke a flash of intense glaring light blinded them all, and a roar, like the springing of a mine, shook the earth for miles around. A hissing, rushing sound through the air came next, and then a perfect flood of rocks and beams and earth and trees, came bounding and roaring down the bed of the ravine, like an avalanche! Enormous rocks came rolling and crashing down, springing far over the cliff into the abyss beyond, while dust and leaves and straw and earth made the air thick

with ruin. Darkness intense succeeded the flash, and the eyes of our friends involuntarily closed. When they opened them again, the glimmering light showed them the narrow ravine gorged with rubbish; but the flat, open rock upon which they had been fighting was almost as bare as before. Not an enemy was visible, except the dead man, whom Hugh had shot at the beginning of the affray. The projecting rock which had served the assassins as a curtain, had turned aside the storm; but the tornado of rock had swept all who were beyond its point sheer over the precipice! One yell of agony and terror had heralded their death. They were now lying at the foot of the cliff, torn, and mangled, and crushed.

"God has helped us, indeed!" said Bonaro, and a deep breath testified their deliverance.

"The house must be blown to atoms!" said Hugh. And so, indeed, it was. The gunpowder had been carefully covered in "the south room," and was not reached until the roof fell in. Then one tremendous explosion swept the island of every assailant, throwing some of them almost across the barranca, and forcing the mass of rock at the back of the house into the small ravine. Here the slope and its immense weight carried part of it down the narrow channel like a tempest; and though not one tenth of it had reached the mouth of the chasm, enough had gone far enough to have swept three regiments of men into eternity had they stood before it. Our friends had been driven to the only point where their lives could have been saved, where the projecting rock diverted the torrent another way; and hence their deliverance.

## CHAPTER XXIV.

"Who dares not stir by day, must walk by night."—SHAKESPEARE.  
 "Haste is needful in a desperate case."—LORD.  
 "And last we fled, away I away!"—BYRON.  
 "Tis certain he hath passed the river Roubidoux."—SHAKESPEARE.  
 "Tis not host and host but narrow space was left."—MILTON.  
 "Ay! now the sound of battle is abroad."—HOMER.

Not a word was spoken by either of the party, for more than a minute—so sudden and awful had been their escape. The cliff upon which they stood rocked for several moments, as if moved by an earthquake. The intense flash which had lit up the heavens, went out as suddenly as lightning. The echoes among the hills bore away the sound, in ever-retreating waves. A silence settled upon the land, deep as the darkness, and the mantle of night lifted for a moment, fell back to the earth.

By degrees, the burning fragments, which had been scattered and almost extinguished by the explosion, were rekindled by the rising wind; and the flickering light from a burning pine-beam, which had fallen near them, showed them the bare rock, upon which, not two minutes before, their enemies had huddled round them. Far down the ravine, and in plain view, the three signal-fires of Ignacio were still burning, clear but distant.

"The scoundrel has betrayed us," said Hugh, breaking the silence.

"If he has," said Bonaro, "he has probably suffered for his treachery. But I do not believe it."

"How else could these men have got here?" asked Hugh.

"Appearances are against him, certainly," said the old man, "but I am loath to believe it of one who has served me so faithfully."

"He must have met with these men, and been compelled to show them the way," said Catharina.

"I am sorry to destroy so pleasing a faith," said Allen, who had been examining the features of the man first killed by Hugh; "but here lies the very man—killed by the first shot fired in our defence against his treason."

All immediately turned to the corpse, and all, at once identified the small, pinched features of Ignacio. Hugh's bullet had passed directly through his head; but it was not difficult to recognize his open eyes, and hard-closed mouth.

"He has met his punishment in the very moment of crime," said Bonaro. "let us leave him to God. It is now too late for our interference."

Catharina had turned away from the spectacle and walked towards the ledge.

"Come," she now called, "let us go down; the ladder is here."

It was indeed so. The upper end of the ladder had not projected over the main ledge; and the momentum of the rocks had fortunately been so great, as to clear it in their descent. Leaving the corpse of the traitor untouched, they all proceeded with as much rapidity as possible, to the bottom of the cliff. The path was well known to both Bonaro and his daughter; and in the course of twenty minutes they all stood in the bed of the great ravine. Here their eyes were met by several bodies, crushed, mangled, and beyond recognition. All of them were quite dead; for they had fallen a distance of more than one hundred feet, among rocks and trees and rubbish. They turned with horror from the sight, and took their way slowly down the ravine.

"We should approach these fires cautiously," said Hugh. "There may be more of these fellows there."

Accordingly, when they had walked a little more than a mile, the party halted, and Hugh approached the fires to reconnoitre. He passed entirely round them, gradually drawing near; but not a human being presented himself. The fires were burning low, but they still cast their light some distance into the winding recesses of the thickets. At last he drew near the first fire, and called his friends to him.

"There is no one here," said he; "we can go on in safety."

Numerous footprints were visible in the soft ground, where there was any moisture; but they all seemed to tend towards the upper end of the ravine; and the inference was, that the whole force had gone upon the attack.

"They have either all perished, or those left behind have been frightened

away by the explosion," said Hugh; and the party resumed the way down the rapidly-descending chasm.

Half an hour's walk brought them to a point at which they could gain the level, and here they halted to consult about their future course.

"I see no reason for altering our plans," said Hugh; "but, as usual, he decided, self-reliant tone prevented opposition. 'We can go on towards the pass of Palomas, trusting to Providence for horses or mules. If we can only get one, Catharina can ride, and we three can walk.'"

"What sound is that?" said Allen, suddenly interrupting him.

"My voice, I suppose," said Hugh; "I heard no other."

"But I heard some other," rejoined Allen. "There! there it is again!"

They both threw themselves upon the ground and listened attentively, while Catharina stood trembling beside her father.

"It is the stamping of numerous horses," said Hugh. "Can it be a piquet guard?"

"This is the wrong direction for that," replied Allen. "Still, you may be right. Let us advance cautiously and examine."

"You stay here," said Hugh; "I can do better alone." And he again advanced, guided by the sounds which grew gradually louder as he came nearer. A few minutes brought him close to a number of horses, standing piquetted to the ground, and impatiently stamping upon the hard, gravelly soil. Between him and them were the remains of a fire, and three or four saddles; but the fire gave little light, and seemed to have been long neglected. Beside several of the saddles were thrown serapes or blankets, apparently arranged for sleeping; but they were now tossed in disorder, as if suddenly left by the sleepers. As at the other fires, not a human being was to be seen, and not a sound which indicated their presence was heard. Hugh stood for several minutes, gazing intently upon the scene; and then made a circuit round the group of horses. Several of them were saddled, their riders either expecting to use them soon, or lying too careless to remove them. Again he went round; there was something singular, and so suspicious, about these riderless horses, that it was not for several minutes that he ventured among them.

When at last he did so, he was received by one of those low nickering sounds, that horses always give, to welcome any one who approaches them, after they have been long left alone. They thrust out their noses and stopped towards him, as if to become better acquainted. But their sagacity told them at once he was a stranger, and a loud snort from almost all of them testified their alarm. The Americans were so much in the habit of using Mexican horse-furniture, that Hugh was at first unable to ascertain whether he had not fallen upon the horses of friends. But the snort satisfied him at once.

"Mexican horses, that's clear," he muttered. "But they will soon have American owners, that's equally clear."

He proceeded to select four of the best among them—even taking the pains to saddle two of them,—a pair of fine, powerful racers, which immediately struck his fancy, and which had been unharnessed by their masters. Putting them gently upon the neck and talking to them in a kind, conciliating tone, he led them one by one some distance from their companions and re-piquetted them. After remaining a few minutes to put them completely at their ease, he set out in search of his companions. He found them again without difficulty, and in a very few minutes they were all mounted.

"Can you ride on that saddle, Catharina?" asked Hugh, pointing to a light mustang, whose clean limbs and knotted muscles denoted speed and power.

"If you will help me into it," she replied; and lifting her in his powerful arms, Hugh set her at once in the saddle. Bonaro and Allen were already mounted.

"Now, wait a moment," said Manning, giving the rein of his horse to Vernon. He brought the remaining horses, numbering about twenty, together in a close group, and one by one cut their lariats with his knife, thus freeing them all.

"What is he doing that for?" asked Bonaro.

"To provide against pursuit, I suppose," Allen replied; but, as he spoke, Hugh came hastily to where they were, and sprang to the saddle.

"Ride on, now," said he, "quietly as possible, for there are men approaching us. I'll soon drown all noises."

As the party moved slowly towards the east, Hugh struck his spurs into his horse's flanks, causing him to bound suddenly among the startled horses. As he did so, he fired a pistol in the air and gave a loud shout. At the same moment, a volley of three or four muskets was fired at him from the thicket; and the whole startled throng set off at a thundering, crashing pace through the chaparral. The riders had been drawn up the mountain by the explosion, and returned just in time to see themselves robbed of all their horses. Several more shots were fired at Hugh as he galloped away, but without effect; and in a few moments he was with his friends, going at a quick though easy pace towards the road.

"Are you hurt?" asked Catharina anxiously.

"Not in the least," said he gaily. "As long as Mexicans will shoot at me I am safe; it is only random shots that tell. To be safe from pursuit was worth the risk of a thousand muskets—especially muskets that fire and blow as those did."

"What time had you to observe that?" she asked gaily.

"O, I'm used to the sound," said he. "One of those Tower muskets always goes off by degrees: first you hear the click of the lock, then the hissing in the pan, and lastly the report at the muzzle. And besides, they generally hurt the man shooting more than the man shot at."

Bonaro winked a little at this depreciating tone, but did not think proper to make any reply. His silence may have been in part a consequence of his

knowledge that Hugh's criticism was not groundless. The writer of this has had a little experience of both ends of Mexican muskets—has been struck by balls from the muzzle and from the "kick" by their rebound—and he can add his testimony to that of Lieutenant Manning, that the actual pain was greater in the latter, than in the former, case. Had either the lieutenant or his historian been struck in a vital point, possibly this testimony might never have been given.

The fugitives soon crossed the road near the place where our friends had left it nearly four weeks before, and struck directly into the plain. They travelled on a line parallel to the eastern *sierra*, which extended a few miles towards the south, and then suddenly receded—thus forming a kind of sheltered valley connected with the plain, but constituting no part of it. At the eastern point of this triangular plateau, the mountain on both sides sloped gradually down, until there was nothing but a low ridge to pass, towards which the plain regularly ascended. This ridge passed, the traveller found himself in another valley of similar shape and equal dimensions, across which the view was bounded by a high spur of the *sierra*, jutting far into the plain, and terminating suddenly like the "curtain" of a fortification. Along this plain, and almost under the point of this spur, wound a slightly-travelled road, leading to the pass of Palomas, four miles east of Saltillo. "It was the object of our friends to find this road."

The morning was just beginning to dawn as they crossed the road; and the broken outline of the mountains was tinged with a faint white. A little longer and the trees became visible, and then long lines of sunlight, and finally the stars faded out in the west, and the view was entirely opened. Numerous diverging lines of dust were visible in different parts of the plain, where the fugitive horses were still pursuing their flight; but as they rounded the point of the mountain they disappeared, leaving the sterile plain to the south alone in sight. They were now, they thought, safe from pursuit; and the nature of the ground was such as to induce a slower pace.

Bonaro and Vernon rode along side by side in front, and Hugh and Catharina brought up the rear. The latter rode gracefully and easily, though the saddle she used had probably never received a female burden before. It is, however, no uncommon thing in Mexico, to see a woman riding upon a man's saddle; and not a few of them ride in the same posture—though, in this respect, Catharina was an exception. She kept her seat more securely than many of the fair horsewomen of our own country would have been able to do, with all the appliances of art; and the grace of her bearing was in due proportion. The spirited and active horse she rode—one of that singular breed which seems to be endowed with unlimited endurance and incredible speed—stepped lightly and surely over the large round rocks that now began to cumber the plain, or sprang actively, though carefully, over the narrow channels washed in the ground by the rains of winter.

"You would make a good dragoon," said Hugh, laughing, as her horse leaped a channel of more than ordinary width.

"Or lancer," she replied. "Seriously, though, if it were not for the fighting, I would make a good soldier of any description."

"I think you might fight a little, too," said Hugh.

"Never," she said, earnestly, "except in self-defence."

"Of course not," said Hugh. "Strife is justifiable only in self-defence."

"Rather a strange sentiment for an American soldier," she replied, with a smile.

"Not at all," he said, warmly; and went at once into a full review of the circumstances under which the war began. We need not weary the reader with a recapitulation of the arguments for and against the course of our government: the question has been made capital for political parties, and this alone is a sufficient reason for its exclusion from a work of this character. Let it suffice that Hugh placed the war upon a very narrow basis—the capture of Thornton's party in 1846, the first act of open hostility between the parties.

"I dare say you are right to defend the cause for which you fight," said Catharina, when Hugh had gone over all the ground covered by his limited view; "and I must own that I do not feel the horror of your aggression, expressed by some of my countrymen. But it seems to me but a poor defence for an aggressor, to say, that the first actual assault was committed by the other party, when that assault was provoked and sought by the aggressor. It may be right to punish him who breaks the peace; but it seems wrong to allow him who provoked the breach, to go entirely scatheless. I do not understand these things, Manning, and we may thus differ because I am ignorant; so I think we had better talk about something more interesting."

"With all my heart," said Hugh; and they turned at once to the subject uppermost in the mind of each. What that was let us not inquire; he who cannot divine it had better close the book.

They rode on for several hours, gradually approaching the ridge before spoken of, and hardly pushing their horses beyond a walk. Occasionally, indeed, they came to a stretch of level ground, over which they galloped; but they were not, when the sun was two hours high, more than twelve miles from the point at which they left the San Luis road. Here the way led them sharply round the point of a spur, and in five minutes they found themselves climbing the sides of the ridge. Their horses were, however, accustomed to such exertion, and moved rapidly and surely, where a northern horse could not have kept his feet at all. The depression in the mountain was so great as to enable them to reach the summit of the ridge in little more than half an hour after they commenced the steep ascent. They had in fact been gradually ascending for more than an hour; but, like all the mountains in that country, the activity only deserved the name, after more than half the height had been overcome. When on the top, they found a space of table-land of some extent in extent, from which they could see the plains in both directions.

"Perhaps we had better wait here for a while," suggested Bonaro. "Be-

yond this point I know nothing of the road except the general direction," I depended upon Ignacio for guidance."

"We cannot go far wrong," said Hugh, as he dismounted and lifted Catharina to the ground. "We must follow this ridge to the left, until we think ourselves opposite Saltillo, and then cross the mountain."

"I have some hope of being able to find Palomas," said Bonaro. "Let us see what we have to eat."

"Here is a small stream," said Vernon, who had been examining the rock upon which they stood, "and it is of cold water. Let us lead the horses to it."

A spring gushed out of the mountain side some hundred yards above them, and came bounding down the rocks close by them; and so this they led their thirsty horses, while Catharina examined their scanty provisions. Scanty as they were, however, they were quite sufficient—consisting of dried beef and goat's flesh, with *tortillas* and "parched" corn. A draught from a gourd filled at the fountain completed a breakfast, which was relished quite as thoroughly as ever was "tea and toast;" and in less than ten minutes Hugh and Allen were examining the plain ahead of them, with the glass which the latter had carried. They could discover nothing like a road, upon a plain which was equally dusty and void of vegetation in every part; and, concluding that their only course was to skirt the mountain, they returned to Bonaro and his daughter, who were seated where they had first dismounted. Their horses were led over the brow of the plateau, and there picketed upon the short wiry grass which covered the east side of the slope; and the whole party gave themselves up to repose, which all needed alike. Blankets and saddles were put in requisition, and for two hours their slumber was profound.

At the end of that time, Allen rose and walked to the brow of the hill which they had ascended, and swept the plain with his glass. A cloud of dust, apparently raised by a group of fifteen or twenty horses, attracted his attention, at the distance of three or four miles upon the plain. Upon examining them closely, he discovered that the horses bore riders, and that the riders were lancers, making directly for the pass within which they were reposing. He walked hastily back and waked his companions.

"We must be up and away," he said; "a company of lancers are making directly for this pass."

"They must be lost," said Hugh; "but we must go, as you say."

Subsequent events explained their presence there, without any such supposition. They were really a detachment of Minon's cavalry brigade, which was at that moment entering the Pass of Palomas—the very point they were endeavouring to reach!

In half an hour the little party was again upon the plain, riding at a swift, even gallop along the spurs of the mountain, endeavouring to get beyond view, before the lancers should reach the table which they had just left. Two hours of this pace brought them under the shelter of the mountain which here bends in towards Saltillo, and they drew their reins and dismounted, to give their horses a little rest. This, however, the hardy steeds needed but little; and in a few minutes they were again in the saddle. Hugh was anxious to reach the army, which he expected to find at Saltillo, before the battle which he knew was about to take place; and though Allen's increasing weakness precluded the idea of his joining in the strife, he was equally anxious to reach a place of rest.

They continued to skirt the plain, riding along under the broken points of the plateau, for four or five hours; when Bonaro began to gaze with more interest upon the mountain through which he expected soon to find a pass. They had travelled more than forty miles, and were, in fact, within about five miles of the pass they were seeking. Riding quietly along, the hoofs of their horses produced no sound in the dust; they could hear even the wind sighing along the plain, and whispering among the cactus leaves. The anxiety to cross the ridge, and search for the passage, made them silent and thoughtful.

"What was that?" exclaimed Hugh, suddenly pulling up, and listening to a rumbling sound, which rolled down the mountain side and reverberated in the gorges.

"The battle has begun," said Allen; "that was a heavy gun."

"Let us hasten on, then!" exclaimed Hugh, striking his spurs into his horse. "At least we know where we are; Saltillo lies directly across the mountain, and Palomas is close by."

"Look this way, *Senor*," said Bonaro, pointing to the plain. "Is not that a squadron of lancers?"

"It is, by Jove!" exclaimed Hugh, "coming right upon us too! And here is another cloud of dust!"

"And behind us is another," said Catharina quietly.

"Here is still another detachment," said Allen, pointing to the south. "They are all around us; we must take to the mountain."

"Yes," said Hugh, "and quickly, too; for that gun has put these fellows behind us into a gallop."

As he spoke, he turned his horse sharply round a projecting point and galloped in between it and another—the two forming a kind of ravine whose level bed was covered with bright yellow sand. Up this they galloped, until it became too narrow for them to ride abreast; then Hugh led the party in single file for nearly a mile, ascending rapidly, and soon compelled to slacken his speed, by the stones that encumbered the ground. A few hundred yards more, and they were suddenly brought to a stand by an almost perpendicular bank which rose directly before and on each side of them.

"Curses on such a country as this!" exclaimed Hugh impatiently; "a man cannot ride a mile over it, without being stopped by a stone wall or a bottomless ravine."

(To be continued.)

# THE HOLY SEPULCHRE OF JERUSALEM.

## THE HOLY SEPULCHRE OF JERUSALEM.

Lord! Thou didst love Jerusalem—  
Once she was all thine own;  
Her love thy dearest heritage,  
Her power thy glory's throne.  
Thine eye came and blighted  
Thy long-loved olive-tree;  
And Salem's shrines were lighted  
For other gods than Thee. — Moore.

No city ever endured such terrible catastrophes. The first capture of Jerusalem we read of in that by Joshua, about the year of the world 2484: the second, that by the people of Jehu, after the death of Joshua: the third, that by David: the fourth, that by Lescar, King of Egypt, who sacked the city in the reign of Rehoboam, 8264 A.M.: the fifth, that by Josiah, King of Israel, 3210 A.M.: the sixth, that by the Assyrians, in the time of Manasseh, about 3261 A.M.: the seventh, that by Nabuchodonosor of Babylon, in 3136 A.M.: the eighth, that again by Nabuchodonosor, in 3138 A.M., when the walls were demolished, the temple, palace, and principal edifices committed to the flames: the ninth, that by Antiochus Epiphanes, 3586 A.M., when the restored city, under Zorobabel and Esdras, was again sacked: the tenth, that by Judas Maccabeus, shortly after the former: the eleventh catastrophe, when Pompey let loose his army on its inhabitants, in the year of Rome 690: the twelfth similar calamity, when Herod of Ascalon took possession of it, but subsequently restored much of its former magnificence: the thirteenth, that by Titus, when the Divine vengeance made the Romans the ministers of its consuming wrath, in the year of our Lord 70; and all the scourges of war, carnage, and captivity, preceded by famine and pestilence, fell on the devoted city: the fourteenth signal calamity, that which fell on the remnant of the Jewish people abiding in the ruins of Jerusalem, when revolting against the Romans under Barchochebas, the Jews were put to the sword by the Emperor Adrian, in the year 132, when all of their nation were interdicted the entry into the city of *Ælia*, which Adrian had commenced rebuilding on the site of the ancient Jerusalem: the fifteenth capture was that by Chosroes the Second, King of Persia, in 614 A.D.: the sixteenth, that by the Saracens, under the Caliph Omar, 647 A.D.: the eighteenth, that by the Greek Emperor, Zimisces, some years prior to 970: the nineteenth, that by the Fatimite Khalifes of Egypt, in 976: the twentieth, that by the Soldjouk Turks, in 1071: the twenty-first, that by the Fatimites, under Khalif al Moustali, in 1096: the twenty-second capture, by the Crusaders, in 1099 A.D., when Godfrey of Boulogne was elected king of Jerusalem: the twenty-third, that by the Saracens in 1187 A.D.: the twenty-fourth by the Turks, 1244: the twenty-fifth that by the Egyptians in our own time.

The talented author of the "Eastern Rambles," now in course of publication in the *Family Tutor*, observes:

"From the earliest ages, all Christian pilgrims have turned their thoughts towards the sepulchre of our Saviour, and happy the man who was enabled to visit the 'Holy Shrine,' and worship at other sacred spots. In the present day, thousands flock to bow down in the Sepulchre of our Lord, and many perish in the attempt."

"It does not come within the province of the writer of these pages to comment upon the 'mishy' and 'mishy' things related to him, or descant upon the reality of the spots pointed out; therefore it is proposed only to take a cursory glance of the places as they were visited."

"Passing through the motley groups in the crowd, our party went under the painted Saracenic archway of the edifice, and entered its precincts; in doing

so, we could not help observing the beautiful frieze in low relief, representing the triumphant entry of our Saviour into Jerusalem, which was placed over the doorway."

"We had scarcely entered the building by the gateway (1) and passed the stone seat (2) on which the Turkish tell-gatherers seat themselves, and away the dreary hours they remain there, than we saw before us, the 'stone unction,' (3) on which, it is said, the body of our Lord was washed and anointed for the sepulchre. (John xix. 39.) Around this precious relic is a low rail, and at either end are three large candlesticks and tapers, the gifts of Christian princes. Here the pilgrims kneel, prostrate themselves on their faces, kiss the 'stone of anointing,' and offer up their prayers. Space compels us to abridge the description of the interior of the Holy Sepulchre at Jerusalem; but the particulars we have given may be relied upon for their accuracy, being derived from personal knowledge."

"No sooner does the weary pilgrim enter Jerusalem, than, regardless of everything else, he hastens to behold the spot where the Saviour of

Man kind was laid. It is a natural feeling, but is not conscious. To behold the sepulchre to advantage, the pilgrim should visit the environs and each sacred spot first—the hills, the ruinous walls, the convents, and the various historical sites—reserving his visit to the Holy Sepulchre last—

"The twilight star from Harpash's peak,  
Comes mildly o'er the glistening earth  
And weary hitherlings joy to seek  
Their dear domestic hearth."

Then the feelings so long pent  
Up will find vent; the soothing  
Power of religion will subdue the  
Passions that have racked the  
Now repentant pilgrims; and  
When he leaves the precincts of  
That edifice, the remembrance of  
His visit will be more indelible.  
But, as Sir Walter Raleigh said:

"Give me my scallop-shell of gale,  
My staff of faith to walk upon;  
My scrip of joy, immortal diet;  
My bottle of salvation;  
My gown of glory (hope's true gear);  
And then I'll take my pilgrimage."

"The interior of the sepulchre is nearly square. It is six feet, wanting an inch, in length, and six feet, wanting two inches, in breadth, and from the floor to the roof, eight feet one inch. There is a solid block of the same stone, which was left in excavating the other part: this is two feet four inches and a half high, and occupies half of the sepulchre, for it is six feet, wanting one inch, in length, and two feet and five-sixths wide. On this table the body of our Lord was laid, with the head towards the west, and the feet to the east; but, on account of the superstitious devotion of the Orientals, who imagine that, if they leave their hair upon this stone, God will never forsake them, and also, because the pilgrims broke off pieces, it has received a covering of white marble, on which many are now celebrated. Forty-four lamps,

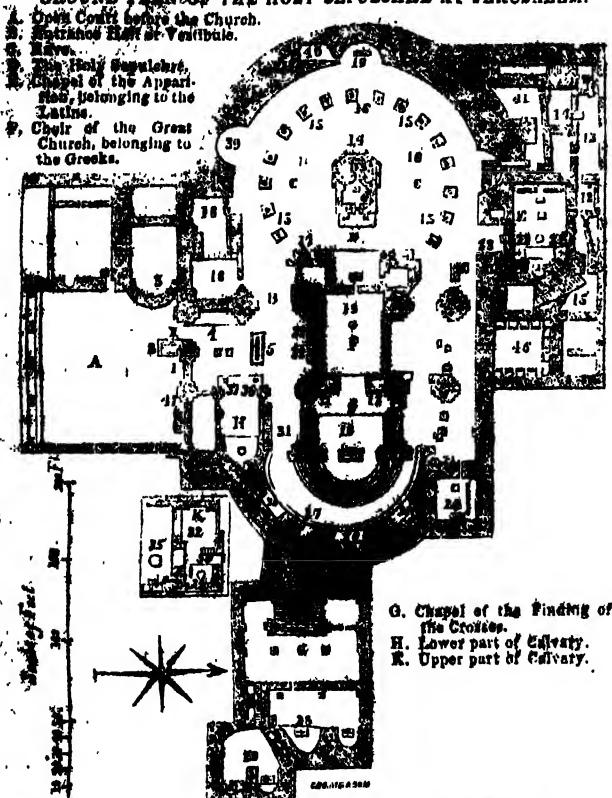

principally of silver, and richly chased, are constantly burning in this sacred place, and three holes have been made in the roof for the emission of the smoke. The exterior of the sepulchre is also faced with slabs of marble, and adorned with several columns, having a dome above. A tripod supports the stone on which the Angel is believed to have reclined; its surface is only one span and a half long, and one broad. The sepulchre is lined with marble, and covered with light blue silk, powdered with white flowers. Just over the part where the body was deposited, is a small painting, tolerably well executed; it is the production of a Spanish artist, and represents our Saviour's triumph over death and the grave."

"The origin of the church of the Holy Sepulchre is of high antiquity. The author of the "Epitome of the Holy Wars" asserts, that forty years after the destruction of Jerusalem by Vespasian and Titus, the Christians obtained permission of Adrian to build, or rather to rebuild, a church over the tomb of their God, and to enclose, in the new city, the other places of interest to the Christians. This church, he adds, was enlarged and repaired by Constantine, the mother of Constantine."

"To remove this sepulchre from infidel hands; was, it will be remembered, the paramount object sought by the Crusaders. It is presumed to contain not only the sepulchre, but the scene of the Crucifixion. The irregular form shows how the building has been extended in places, in order to embrace various spots connected with Christ's death and burial."

#### GROUND PLAN OF THE HOLY SEPULCHRE AT JERUSALEM.

1. Gateway.
2. Second Yard.
3. A ruined Tower, the ancient Bakery.
4. Divan of the Turkish Toll-keepers.
5. Signs of Unction.
6. Aisle-Chapel.
7. Sepulchral Chamber.
8. Tomb of our Saviour.
9. Tomb of Joseph.
10. Sepulchral Chamber.
11. Chamber of the Greek Patriarch of Jerusalem.
12. Chamber of the Greek Patriarch.
13. Centre of the World.
14. Chamber of the Copts.
15. Chamber.
16. Pilasters.
17. Altar of the Armenians.
18. Altar of the Armenians.
19. Altar of the Syrians, Georgians, and Nestorians.
20. Altar of the Holy Sacrament.
21. Altar of the Holy Cross.
22. Altar of the Flagellation.
23. Sacristy.
24. Altar of the Prison of Christ.
25. Altar of the Inscription over the Cross.

26. Altar of the Finding of the Crosses.
27. Steps leading to the Chapel of the Finding of the Crosses, below.
28. Altar of St. John.
29. Cavity where the Crosses were found.
30. Chapel of St. John.
31. Steps leading up to Calvary.
32. Chapel of the Crucifixion.
33. Place of the Three Crosses.
34. Rent in the Rock.
35. Chapel of the Nailing to the Cross.
36. Tomb of Godfrey of Bouillon.
37. Tomb of Baldwin, his brother.
38. Tomb of the Kings of Jerusalem.
39. Spot where the disciples contemplated the Crucifixion.
40. Sepulchre of Joseph of Arimathea.
41. Chamber.
42. Entrance to the Apartments of the Disciples.
43. Stairs leading to upper Galleries.
44. Stairs leading to upper Rooms.
45. Former entrance to the Church, enclosed.
46. Entrance to the Chapel of our Lady.

**CALLING OF THE QUEEN BEES.**—I have never been able to see what was going on at the time this calling took place but once. As our bees are not very many the house, it is my practice, in evening time (when I have any reason to expect a swarm), to walk to the apiary about ten o'clock, to ascertain if any hives are very busy, in which case I place some one to work near the spot. Going one morning to a hive I expected to send forth a swarm, I was amused at the sound of "peep, peep." Feeling interested in what might be the result, I continued my observations till the swarm came out; but I thought it is probable it had been going on for a considerable time before. This sound of "peep, peep," came from an old queen, whom I could plainly see going down one part of the hive to the other; running in a hurried manner, as though anxious to escape, and uttering the call in a hoarse kind of way every time she stopped. During the time this was going on, there was another sound of "peep, peep," of a shriller kind, from a fixed point; but it was in the interior of the hive, and consequently, out of the reach of my observation. This continued about an hour, when the swarm issued forth; but whether the queen who ought to have accompanied it was destroyed in the hive, or lost after she came out, I cannot say; but almost as soon as the bees were out, they returned to the parent stock, but never after made an attempt to swarm, neither was there any more confusion in the hive, nor sound of "peep" from either old or young queens, but all went on as peacefully as though nothing had happened.—*Gardeners' Magazine.*

## THE VICAR OF WAKEFIELD.

(Continued from page 501.)

### CHAPTER XXVII.

#### THE SAME SUBJECT CONTINUED.

THE next morning, I communicated to my wife and children the scheme I had planned of reforming the prisoners, which they received with universal disapprobation, alleging the impossibility and impropriety of it; adding, that my endeavours would no way contribute to their amendment, but might probably disgrace my calling.

"Excuse me," returned I; "these people, however fallen, are still men, and that is a very good title to my affections. Good counsel rejected, returns to enrich the giver's bosom; and though the instruction I communicate may not mend them, yet it will assuredly mend myself. If these wretches, my children, were princes, there would be thousands ready to offer their majesty; but, in my opinion, the heart that is buried in a dungeon, is as precious as that seated upon a throne. Yes, my treasures, if I can mend them, I will; perhaps they will not all despise me. Perhaps I may catch up even one from the gulf, and that will be great gain; for is there upon earth a gem so precious as the human soul?"

Thus saying, I left them, and descended to the common prison, where I found the prisoners very merry, expecting my arrival; and each prepared with some good trick to play upon the doctor. Thus, as I was going to begin, one turned my wig awry, as if by accident, and then asked my pardon. A second, who stood at some distance, had a knack of spitting through his teeth, which fell in showers upon my back. A third would cry "Amen" in such an affected tone, as gave the rest great delight. A fourth had slyly picked my pocket of my spectacles. But there was one whose trick gave more universal pleasure than all the rest; for observing the manner in which I had disposed my books on the table before me, he very dexterously displaced one of them, and put an obscene jest-book of his own in the place. However, I took no notice of all that this mischievous group of little beings could do, but went on, perfectly sensible that what was ridiculous in my attempt would excite mirth only the first or second time, while what was serious would be permanent. My design succeeded, and in less than six days some were penitent; and all attentive.

It was now that I applauded my perseverance and address, at thus giving sensibility to wretches divested of every moral feeling; and now began to think of doing them temporal services also, by rendering their situation somewhat more comfortable. Their time had hitherto been divided between famine and excess, tumultuous riot and bitter repining. Their only employment was quarrelling among each other, playing at cribbage, and cutting tobacco-stoppers. From this last trade of idle industry I took the hint of setting such as chose to work at cutting pipes for tobaccoists and shoemakers, the proper wood being bought by a general subscription, and when manufactured, sold by my appointment; so that each earned something every day—a trifle indeed, but sufficient to maintain him.

I did not stop here, but instituted fines for the punishment of immorality, and rewards for peculiar industry. Thus, in less than a fortnight I had formed them into something social and humane, and had the pleasure of regarding myself as a legislator, who had brought men from their native ferocity into friendship and obedience.

And it were highly to be wished that legislative power would thus direct the law rather to reformation than severity; that it would seem convinced that the work of eradicating crimes is not by making punishments familiar, but formidable. Then, instead of our present prisons, which find or make men guilty, which incarcerate wretches for the commission of one crime, and return them, if returned alive, fitted for the perpetration of thousands, we should see, as in other parts of Europe, places of penitence and solitude, where the accused might be attended by such as could give them repentance if guilty, or new motives to virtue if innocent. And this, but not the increasing punishment, is the way to mend a state. Nor can I avoid even questioning the validity of that right over social combinations have assumed, of punishing offenders in a summary manner. In cases of murder, their right is obvious, as it is the duty of us all, from the law of self-defence, to cut off that man who has shown a disregard for the life of another. Against such, all nature rises in arms; but it is not so against him who steals my property. Natural law gives me no right to take away his life, as, by that, the horse he steals is as much his property as mine. If, then, I have any right, it must be from a compact made between us, that he who deprives the other of his horse shall die. But this is a false compact, because no man has a right to barter his life any more than to take it away, as it is not his own. And, beside, the compact is inadequate, and would be set aside even in a court of modern equity, as there is a great penalty for a very trifling convenience, since it is far better that two men should live than that one man should ride. But a compact that is false between two men, is equally so between a hundred, or a hundred thousand; for as ten millions of circles can never make a square, so the united voice of myriads cannot lend the smallest foundation to falsehood. It is thus that reason speaks, and untutored nature says the same thing. Savages that are directed by natural law alone, are very tender of the lives of each other; they seldom shed blood but to retaliate, or avenge cruelty.

Our Saxon ancestors, fierce as they were in war, had but few executions in times of peace, and in all commanding governments that bore the print of nature still strong upon them, scarcely any crime is held capital.

It is among the citizens of a refined community that penal laws, which are

in the hands of the rich, and laid upon the poor. Government, while it grows older, seems to acquire the momentum of age; and as if our property was become dearer in proportion as it increased; as if the more enormous our wealth the more extensive our fears; all our possessions are paled up with new edicts every day, and hung round with gibbets to scare every invader.

I cannot tell whether it is from the number of our penal laws, or the licentiousness of our people, that this country should show more convicts in a year than half the dominions of Europe united. Perhaps it is owing to both; for they mutually produce each other. When, by indiscriminate penal laws, a nation beholds the same punishment affixed to dissimilar degrees of guilt, from perceiving no distinction in the penalty, the people are led to lose all sense of distinction in the crime, and this distinction is the bulwark of all morality. Thus the multitude of the laws produce new vices, and new vices call for fresh restraints.

It were to be wished, then, that power, instead of contriving new laws to punish vice, instead of drawing hard the cords of society till a convulsion came to burst them; instead of cutting away wretches as useless before we have tried their utility; instead of converting correction into vengeance;—it were to be wished that we tried the restrictive arts of government, and made law the protector, but not the tyrant of the people. We should then find that creatures, whose souls are held as dross, only wanted the hand of a resistor. We should then find that creatures, now stuck up for long tortures, lest luxury should feel a momentary pang, might, if properly treated, serve to sinew the state in times of danger; that, as their faces are like ours, their hearts are so too; that few minds are so base as that perseverance cannot amend; that a man may see his last crime without dying for it; and that very little blood will serve to cement our security.

## CHAPTER XXVIII.

HAPPINESS AND MISERY RATHER THE RESULT OF PRUDENCE THAN VIRTUE, IN THIS LIFE; TEMPORAL EVILS OR FELICITIES BEING REGARDED BY HEAVEN AS THINGS MERELY IN THEMSELVES TRIFLING, AND UNWORTHY ITS CARE IN THE DISTRIBUTION.

I HAD now been confined more than a fortnight, but had not since my arrival been visited by my dear Olivia, and I greatly longed to see her. Having communicated my wishes to my wife, the next morning the poor girl entered my apartment, leaning on her sister's arm. The change which I saw in her countenance struck me. The numberless graces that once resided there were now fled, and the hand of death seemed to have moulded every feature to alarm me. Her temples were sunk, her forehead was tense, and a fatal paleness sat upon her cheek.

"I am glad to see thee, my dear," cried I; "but why this dejection, Livy? I hope, my love, you have too great a regard for me to permit disappointment thus to undermine a life which I prize as my own. Be cheerful, child, and we may yet see happier days."

"You have ever, sir," replied she, "been kind to me, and it adds to my pain that I shall never have an opportunity of sharing that happiness you promise. Happiness, I fear, is no longer reserved for me here; and I long to be rid of a place where I have only found distress. Indeed, sir, I wish you would make a proper submission to Mr. Thornhill; it may in some measure induce him to pity you, and it will give me relief in dying."

"Never! child," replied I; "never will I be brought to acknowledge my daughter a prostitute; for though the world may look upon your offence with scorn, let it be mine to regard it as a mark of credulity, not of guilt. My dear, I am no way miserable in this place, however dismal it may seem; and be assured, that while you continue to bless me by living, he shall never have my consent to make you more wretched by marrying another."

After the departure of my daughter, my fellow-prisoner, who was by at this interview, sensibly enough expostulated on my obstinacy in refusing a submission which promised to give me freedom. He observed, that the rest of my family was not to be sacrificed to the peace of one child alone, and she the only one who had offended me.

"Besides," added he, "I don't know if it be just thus to obstruct the union of man and wife, which you do at present, by refusing to consent to a match you cannot hinder, but may render unhappy."

"Sir," replied I, "you are unacquainted with the man that oppresses us. I am very sensible that no submission I can make could procure me liberty even for an hour. I am told that even, in this very room a debtor of his, no later than last year, died for want. But though my submission and approbation could transfer me from hence to the most beautiful apartment he is possessed of; yet I would grant neither, as something whispers me that it would be giving a sanction to adultery. While my daughter lives, no other marriage of his shall ever be legal in my eye. Were she removed, indeed, I should be the basest of men, from any resentment of my own, to attempt putting asunder those who wish for an union. No, villain as he is, I should then wish him married, to prevent the consequences of his future debaucheries. But now, should I not be the most cruel of all fathers to sign an instrument which must send my child to the grave, merely to avoid a prison myself; and thus, to escape one pang, break my child's heart with a thousand?"

He acquiesced in the justice of this answer, but could not avoid observing, that he feared my daughter's life was already too much wasted to keep me long a prisoner.

"However," continued he, "though you refuse to submit to the nephew, I hope you have no objections to laying your case before the uncle, who has the best character in the kingdom for everything that is just and good. I would advise you to send him a letter by the next opportunity all his power, his wealth, and my life for it, that in three days you shall have an answer."

I thanked him for the hint, and instantly set about composing a submission; but, unfortunately, all our money had been laid out in provisions; however, he supplied me.

For the three ensuing days I was in a state of anxiety to know what reception my letter might meet with; but in the meantime, my wife, who was solicited by my wife to submit to any conditions rather than see me confined, and every hour received repeated accounts of the declining state of my health. The third day and the fourth arrived, but I received no answer to my letter: the complaints of a stranger, against a fortune, however, so likely to succeed, so that these hopes soon vanished like illusive smoke. My mind, however, still supported itself, though confinement and pain began to make a visible alteration in my health, and perhaps that had suffered in the fire grew worse. My children, however, set by me, and while I was stretched on my straw, read to me by turns, or listened attentively to my instructions. But my daughter's health declined faster than mine; every message from her contributed to increase my apprehensions. The fifth morning after I had written the letter which was sent to Mr. Thornhill, I was alarmed with an account that she was exceedingly ill. It was that confinement was truly painful to me; my soul was burning to see its prison to be near the pillow of my child, to comfort, to strengthen her, to receive her last wishes, and teach her, soul the way to Heaven. Another account came: She was expiring, and yet I was departed the small comfort of weeping by her. My fellow-prisoner, some time after, came with that account. He bade me be patient: She was dead!—The next morning he returned, and found me with my two little ones, new in my only companions, who were using all their innocent efforts to comfort me. They entreated to read to me, and bade me not to cry, for I was now too old to weep.

"And is not my sister an angel now, papa?" cried the eldest; "and why, then, are you sorry for her? I wish I were an angel; out of this frightful place, if my papa were with me."

"Yes," added my youngest darling, "Heaven, where my sister fell, is a finer place than this, and there are none but good people there; and the people here are very bad."

Mr. Jenkinson interrupted their harmless prattle, by observing that now my daughter was no more, I should seriously think of the rest of my family, and attempt to save my own life, which was every day declining for want of necessities and wholesome air. He added, that it was now incumbent on me to sacrifice any pride or resentment of my own to the welfare of those who depended on me for support; and that I was now, both by reason and duty, obliged to try to reconcile my landlord.

"Heaven be praised," replied I, "there is no pride left me now; I should detest my own heart if I saw either pride or resentment lurking there. On the contrary, as my oppressor has been once my parishioner, I hope one day to present him up an unpolluted soul at the eternal tribunal. No, sir, I have no resentment now; and though he has taken from me what I hold dearer than all his treasures; though he has wrong my heart,—for I am almost to fainting, very sick, my fellow-prisoner,—yet that shall never inspire me with vengeance. I am now willing to approve his marriage, and if this submission can do him any pleasure, let him know that if I have done him any injury, I am sorry for it."

Mr. Jenkinson took pen and ink, and wrote down my submission nearly as I have expressed it, to which I signed my name. My son was employed to carry the letter to Mr. Thornhill, who was then at his seat in the country. He went, and in about six hours returned with a verbal answer. He had some difficulty, he said, to get a sight of his landlord, as the servants were insolent and suspicious; but he accidentally saw him as he was going out upon business, preparing for his marriage, which was to be in three days. He continued to inform us, that he stepped up in the humblest manner, and delivered the letter, which, when Mr. Thornhill had read, he said that my submission was now too late and unnecessary; that he had already applied to his uncle, which met with the contempt it deserved; and for the rest, that all future applications should be directed to his uncle, not to him. He observed, however, that as he had a very good opinion of the discretion of the two young ladies, they might have been the most agreeable intercessors.

"Well, sir," said I to my fellow-prisoner, "you now discover the temper of the man that oppresses me. He can at once be facetious and cruel; but let him use me as he will, I shall soon be free, in spite of all his bolts to restrain me. I am now drawing towards an abode that looks brighter, I approach it: this expectation cheers my afflictions; and though I leave the helpless family of orphans behind me, yet they will not be utterly forsaken, some friend, perhaps, will be found to assist them for the sake of their poor father, and some may charitably relieve them for the sake of their dear Father."

Just as I spoke, my wife, whom I had not seen that day before, appeared with looks of terror, and making efforts, but unable to speak.

"Why, my love," cried I, "why will you thus increase my afflictions by your own? What though no submissions can turn out severe matter, though he has doomed me to die in this place of wretchedness, and though we have lost a darling child, yet still you will find comfort in your other children when I shall be no more."

"We have indeed lost," returned she, "a darling child. My Sophia, my dearest is gone; snatched from us, carried off by ruffians—"

"How, madam," cried my fellow-prisoner, "Miss Sophia carried off by villains!—sure it cannot be!"

She could only answer with a fixed look and a flood of tears. But one of the prisoners, a woman who was present, and came in with her, told us the sad account; she informed us, that as my wife, my daughter, and myself, were taking a walk together on the great road, a little way out of the

village, a postchaise and pair drove up to them, and instantly stopped. Upon which a well-dressed man, but not Mr. Thornhill, stepping out, clasped my daughter round the waist, and forcing her in, bade the postillion drive on, so that they were out of sight in a moment.

"Now," cried I, "the sum of my miseries is made up, nor is it in the power of anything on earth to give me another pang. What! not one left! not to leave me one!—The monster!—The child that was next my heart! she had the beauty of an angel, and almost the wisdom of an angel. But support that woman, nor let her fall.—Not to leave me one!"

"Alas, my husband!" said my wife, "you seem to want comfort even more than I. Our distresses are great; but I could bear this and more, if I saw you but easy. They may take away my children, and all the world, if they leave me but you."

My son, who was present, endeavoured to moderate her grief; he bade us take comfort, for he hoped that we might still have reason to be thankful.

"My child," cried I, "look round the world, and see if there be any happiness left me now. Is not every ray of comfort shut out, while all our bright prospects only lie beyond the grave?"

"My dear father," returned he, "I hope there is still something that will give you an interval of satisfaction; for I have a letter from my brother George."

"What of him, child?" interrupted I: "does he know our misery? I hope my boy is exempt from any part of what his wretched family suffers."

"Yes, sir," returned he, "he is perfectly gay, cheerful, and happy. His letter brings nothing but good news; he is the favourite of his colonel, who promises to procure him the very next lieutenantcy that becomes vacant."

"And are you sure of all this?" cried my wife: "Are you sure that nothing ill has befallen my boy?"

"Nothing, indeed, madam," returned my son: "you shall see the letter, which will give you the highest pleasure; and if anything can procure you comfort, I am sure that will."

"But are you sure," still repeated she, "that the letter is from himself, and that he is really so happy?"

"Yes, madam," replied he, "it is certainly his, and he will one day be the credit and support of our family."

"Then I thank Providence," cried she, "that my last letter to him has miscarried.—Yes, my dear," continued she, turning to me. "I will now confess, that though the hand of Heaven is sore upon us in other instances, it has been favourable here. By the last letter I wrote my son, which was in the bitterness of anger, I desired him, upon his mother's blessing, and if he had the heart of a man, to see justice done his father and sister, and avenge our cause. But thanks be to Him that directs all things, it has miscarried, and I am at rest."

"Woman!" cried I, "thou hast done very ill, and at another time my reproaches might have been more severe. Oh! what a tremendous gulf hast thou escaped, that would have buried thee and him in endless ruin. Providence, indeed, has here been kinder to us than we to ourselves. It has reserved that son to be the father and protector of my children when I shall be away. How unjustly did I complain of being stripped of every comfort, when still I hear that he is happy, and insensible of our afflictions; still kept in reserve to support his widowed mother, and to protect his brothers and sisters. But what sisters has he left? he has no sisters now; they are all gone, robbed from me, and I am undone."

"Father," interrupted my son, "I beg you will give me leave to read this letter; I know it will please you."

Upon which, with my permission, he read as follows:

"HONOURED SIR,

"I HAVE called off my imagination a few moments from the pleasures that surround me, to fix it upon objects that are still more pleasing, the dear little fire-side at home. My fancy draws that harmless group as listening to every Rao of this with great composure. I view those faces with delight which never felt the deforming hand of ambition or distress! But whatever your happiness may be at home, I am sure it will be some addition to it to hear that I am perfectly pleased with my situation, and every way happy here.

"Our regiment is countermanded, and is not to leave the kingdom. The colonel, who professes himself my friend, takes me with him to all companies where he is acquainted, and after my first visit I generally find myself received with increased respect upon repeating it. I danced last night with Lady G——, and could I forget you know whom, I might be, perhaps, successful. But it is my fate still to remember others, while I am myself forgotten by most of my absent friends; and in this number, I fear, sir, that I must consider you; for I have long expected the pleasure of a letter from home, to no purpose. Olivia and Sophia too promised to write, but seem to have forgotten me. Tell them they are two arrant little baggages, and that I am at this moment in a most violent passion with them: yet still, I know not how, though I want to bluster a little, my heart is respondent only to softer emotions. Then tell them, sir, that after all I love them affectionately, and be assured of my ever remaining

"Your dutiful Son."

"In all our miseries," cried I, "what thanks have we not to return, that one at least of our family is exempted from what we suffer. Heaven be his guard, and keep my boy thus happy, to be the supporter of his widowed mother, and the father of these two babes, which is all the patrimony I can now bequeath him. May he keep their innocence from the temptations of want, and be their conductor in the paths of honour!"

I had scarcely said these words, when a noise like that of a tumult seemed to proceed from the prison-yard; it died away soon after, and a clanking of arms was heard along the passages that led to my apartment. The keeper

of the prison, entered, holding a man all bloody, wounded, and fettered with the heaviest irons. I looked with compassion on the wretch as he approached me, but with horror when I found it was my own son.

"My George! my George! and do I behold thee thus? Wounded!—fettered! Is this thy happiness? Is this the manner you return to me? O that this sight could break my heart at once, and let me die!"

"Where, sir, is your fortitude?" returned my son, with an intrepid voice. "I must suffer; my life is forfeited, and let them take it."

I tried to restrain my passions for a few minutes in silence, but I thought I should have died with the effort.

"O my boy, my heart weeps to behold thee thus, and I cannot, cannot help it. In the moment when I thought thee blest, and prayed for thy safety, to behold thee thus again! Chained!—wounded! And yet the death of the youthful is happy. But I am old, a very old man, and have lived to see this day! To see my children all untimely falling about me, while I continue a wretched survivor in the midst of ruin! May all the curses that ever sunk a soul fall heavy upon the murderer of my children! May he live, like me, to see—"

"Hold, sir," replied my son, "or I shall blush for thee. How, sir, forgetful of your age, your holy calling, thus to arrogate the justice of Heaven, and fling those curses upward that must soon descend to crush thy own grey head with destruction! No, sir, let it be your care now to fit me for that vile death I must shortly suffer; to arm me with hope and resolution; to give me courage to drink of that bitterness which must shortly be my portion."

"My child, you must not die: I am sure no offence of thine can deserve so vile a punishment. My George could never be guilty of any crime to make his ancestors ashamed of him."

"Mine, sir," returned my son, "is, I fear, an unpardonable one. When I received my mother's letter from home, I immediately came down, determined to punish the betrayer of our honour, and sent him an order to meet me, which he answered, not in person, but by dispatching four of his domestics to seize me. I wounded one who first assaulted me, and I fear desperately; but the rest made me their prisoner. The coward is determined to put the law in execution against me; the proofs are undeniable; I have sent a challenge, and as I am the first transgressor upon the statute, I see no hopes of pardon. But you have often charmed me with your lessons of fortitude; let me now, sir, find them in your example."

"And, my son, you shall find them. I am now raised above this world, and all the pleasures it can produce. From this moment I break from my heart all the ties that held it down to earth, and will prepare to fit us both for eternity. Yes, my son, I will point out the way, and my soul shall guide yours in the ascent, for we will take our flight together. I now see and am convinced you can expect no pardon here; and I can only exhort you to seek it at that greatest tribunal where we both shall shortly answer. But let us not be niggarly in our exhortation, but let all our fellow-prisoners have a share.—Good gaoler, let them be permitted to stand here while I attempt to improve them."

Thus saying, I made an effort to rise from my straw, but wanted strength, and was able only to recline against the wall. The prisoners assembled themselves according to my directions, for they loved to hear my counsel: my son and his mother supported me on either side; I looked, and saw that none were wanting, and then addressed them with the following exhortation.

## CHAPTER XXIX.

THE EQUAL DEALINGS OF PROVIDENCE DEMONSTRATED WITH REGARD TO THE HAPPY AND THE MISERABLE HERE BELOW. THAT FROM THE NATURE OF PLEASURE AND PAIN THE WRETCHED MUST BE REPAID THE BALANCE OF THEIR SUFFERINGS IN THE LIFE HEREAFTER.

"My friends, my children, and fellow-sufferers, when I reflect on the distribution of good and evil here below, I find that much has been given man to enjoy, yet still more to suffer. Though we should examine the whole world, we shall not find one man so happy as to have nothing left to wish for; but we daily see thousands, who, by suicide, show us they have nothing left to hope. In this life, then, it appears that we cannot be entirely blest, but yet we may be completely miserable.

"Why man should thus feel pain; why our wretchedness should be requisite in the formation of universal felicity; why, when all other systems are made perfect by the perfection of their subordinate parts, the great system should require for its perfection parts that are not only subordinate to others, but imperfect in themselves;—these are questions that never can be explained, and might be useless, if known. On this subject, Providence has thought fit to elude our curiosity, satisfied with granting us motives to consolation.

"In this situation man has called in the friendly assistance of philosophy, and Heaven, seeing the incapacity of that to console him, has given him the aid of religion. The consolations of philosophy are very amusing, but often fallacious. It tells us that life is filled with comforts, if we will but enjoy them; and on the other hand, that though we unavoidably have miseries here, life is short, and they will soon be over. Thus do these consolations destroy each other; for, if life is a place of comfort, its shortness must be misery, and if it be long, our griefs are protracted. Thus philosophy is weak; but religion comforts in an higher strain. Man is here, it tells us, setting up his mind, and preparing it for another abode. When the good man leaves the body, and is in a glorious mind, he will find he has been making himself a heaven of happiness here; while the wretch that has been maimed and contaminated by his vices, shrinks from his body with terror.

## THE VICAR OF WAKEFIELD.

and find that he has anticipated the vengeance of heaven. "To religion, then, we must hold in every circumstance of life for our truest comfort; for if already we are happy, it is a pleasure to think that we can make that happiness unending; and if we are miserable, it is very consoling to think that there is a place of rest. Thus, to the fortunate, religion holds out a continuance of bliss; to the wretched, a change from pain."

"But though religion is very kind to all men, it has promised peculiar rewards to the unhappy: the sick, the naked, the houseless, the heavy laden, and the prisoner, have ever most frequent promises in our sacred law. The author of our religion everywhere professes himself the wretch's friend, and, unlike the false ones of this world, bestows all his caresses upon the forlorn. The unthinking have censured this as partiality, as a preference without merit to deserve it. But they never reflect, that it is not in the power even of Heaven itself to make the offer of unceasing felicity as great a gift to the happy as to the miserable. To the first eternity is but a single blessing, since at most it but increases what they already possess. To the latter, it is a double advantage; for it diminishes their pain here, and rewards them with heavenly bliss hereafter."

"But Providence is in another respect kinder to the poor than the rich; for as it thus makes the life after death more desirable, so it smooths the passage there. The wretched have had a long familiarity with every face of terror. The man of sorrows lays himself quietly down, without possessions to regret, and but few ties to stop his departure: he feels only nature's pang in the final separation, and this is no way greater than he has often faintly under before; for after a certain degree of pain, every new breach that death opens in the constitution, nature kindly covers with insensibility."

"Thus Providence has given the wretched two advantages over the happy in this life—greater felicity in dying, and in heaven all that superiority of pleasure which arises from contrasted enjoyment. And this superiority, my friends, is no infall advantage, and seems to be one of the pleasures of the poor man in the parable; for though he was already in heaven, and felt all the raptures it could give, yet it was mentioned as an addition to his happiness, that he had once been wretched, and now was comforted; that he had known what it was to be miserable, and now felt what it was to be happy."

"Thus, my friends, you see religion does what philosophy could never do: it shows the equal dealings of Heaven to the happy and the unhappy, and levels all human enjoyments to nearly the same standard. It gives to both rich and poor the same happiness hereafter, and equal hopes to aspire after it; but if the rich have the advantage of enjoying pleasure here, the poor have the endless satisfaction of knowing what it was once to be miserable when crowned with endless felicity hereafter; and even though this should be called a small advantage, yet being an eternal one, it must make up by duration what the temporal happiness of the great may have exceeded by intensity."

"These are, therefore, the consolations which the wretched have peculiar to themselves, and in which they are above the rest of mankind; in other respects, they are below them. They who would know the miseries of the poor, must see life and endure it. To declaim on the temporal advantages they enjoy, is only repeating what none either believe or practise. The men who have the necessities of living are not poor, and they who want them must be miserable. Yes, my friends, we must be miserable. No vain efforts of a refined imagination can sooth the wants of nature, can give elastic sweetness to the dark vapour of a dungeon, or ease to the throbbings of a broken heart. Let the philosopher from his couch of softness tell us that we can resist all these. Alas! the effort by which we resist them is still the greatest pain. Death is slight, and any man may sustain it; but torments are dreadful, and these no man can endure."

"To us, then, my friends, the promises of happiness in heaven should be peculiarly dear; for if our reward be in this life alone, we are then indeed of all men the most miserable. When I look round these gloomy walls, made to terrify as well as to confine us; this light, that only serves to show the horrors of the place; those shackles, that tyranny has imposed, or crime made necessary; when I survey these emaciated looks, and hear those groans, O, my friends! what a glorious exchange would heaven be for these. To fly through regions unconfined as air, to bask in the sunshine of eternal bliss, to carol over endless hymns of praise, to have no master to threaten or insult us, but the form of Goodness himself for ever in our eyes! when I think of these things, death becomes the messenger of very glad tidings; when I think of these things, his sharpest arrow becomes the staff of my support; when I think of these things what is there in life worth having? when I think of these things, what is there that should not be spurned away? Kings in their palaces should groan for such advantages; but we, humbled as we are, should yearn for them."

"And shall these things be ours? Ours they will certainly be if we but try for them; and what is a comfort, we are shut out from many temptations that would retard our pursuit. Only let us try for them, and they will certainly be ours; and what is still a comfort, shortly too: for if we look back on a past life, it appears but a very short span, and whatever we may think of the rest of life, it will yet be found of less duration: as we grow older, the days seem to grow shorter, and our intimacy with time ever lessens the perception of his stay. Then let us take comfort now, for we shall soon be at our journey's end; we shall soon lay down the heavy burden laid by Heaven upon us; and though death, the only friend of the wretched, for a little while mocks the weary traveller with the view, and like his horizon still rises before him; yet the time will certainly and shortly come, when we shall shake free from our toil; when the luxurious great ones of the world shall no more tread as to the earth; when we shall think with pleasure of our sufferings below; when we shall be surrounded with all our friends, or such

as deserved our friendship; when our bliss shall be unutterable, and all crowns all, unending."

### CHAPTER XXX.

HAPPIER PROSPECTS BEGIN TO APPEAR. LET US BE INTERESTED, AND FORTUNE WILL AT LAST CHANGE IN OUR FAVOUR.

WHEN I had thus finished, and my audience was retired, the gaoler, who was one of the most humane of his profession, hoped I would not be displeased, as what he did was but his duty, observing, that he must be obliged to remove my son into a stronger cell, but that he should be permitted to revisit me every morning. I thanked him for his clemency, and grasping my boy's hand, bade him farewell, and be mindful of the great duty that was before him.

I again therefore laid me down, and one of my little ones sat by my bedside reading, when Mr. Jenkinson entering, informed me that there was news of my daughter; for that she was seen by a person about two hours before in a strange gentleman's company, and that they had stopped at a neighbouring village for refreshment, and seemed as if returning to town. I had scarcely delivered this news, when the gaoler came with looks of pain and pleasure, to inform me that my daughter was found. Messes came running in a moment after, crying out that his sister Sophy was below, and coming up with our old friend, Mr. Burchell.

Just as he delivered this news, my dearest girl entered, and with looks almost wild with pleasure, ran to kiss me in a transport of affection. Her mother's tears and silence also showed her pleasure.

"Here, papa," cried the charming girl, "here is the brave man to whom I owe my delivery; to this gentleman's intrepidity I am indebted for my happiness and safety."

A kiss from Mr. Burchell, whose pleasure seemed even greater than her own, interrupted what she was going to add.

"Ah, Mr. Burchell," cried I, "this is but a wretched habitation you now find us in; and we are now very different from what you last saw us. You were ever our friend: we have long discovered our errors with regard to you, and repented of our ingratitude. After the vile usage you then received at my hands, I am almost ashamed to behold your face; yet I hope you will forgive me, as I was deceived by a base ungenerous wretch, who under the mask of friendship has undone me."

"It is impossible," cried Mr. Burchell, "that I should forgive you, as you never deserved my resentment. I partly saw your delusion then, and as it was out of my power to restrain, I could only pity it."

"It was ever my conjecture," cried I, "that your mind was noble, but now I find it so. But tell me, my dear child, how thou hast been relieved, or who the ruffians were who carried thee away."

"Indeed, sir," cried she, "as to the villain who carried me off, I am ignorant. For, as my mamma and I were walking out, he came behind me and almost before I could call for help, forced me into the post-chaise, and in an instant the horses drove away. I met several on the road to whom I cried out for assistance, but they disregarded my intreaties. In the meantime the ruffian himself used every art to hinder me from crying out: he flattered and threatened by turns, and swore that if I continued but silent he intended no harm. In the meantime I had broken the canvass that he had drawn up, and whom should I perceive at some distance but your old friend Mr. Burchell, walking along with his usual swiftness, with the great stick for which we used so much to ridicule him. As soon as we came within hearing, I called out to him by name, and entreated his help. I repeated my exclamations several times, upon which with a very loud voice he bid the postilion stop; the boy took no notice, but drove on with still greater speed. I now thought he could never overtake us, when, in less than a minute, I saw Mr. Burchell come running up by the side of the horses, and with one blow knock the postilion to the ground. The horses when he was fallen soon stopped of themselves, and the ruffian stepping out, with oaths and menaces drew his sword, and ordered him at his peril to retire; but Mr. Burchell, running up, shivered his sword to pieces, and then pursued him for near a quarter of a mile; but he made his escape. I was at this time come out myself, willing to assist my deliverer; but he soon returned to me in triumph. The postilion, who was recovered, was going to make his escape too; but Mr. Burchell ordered him at his peril to mount again, and drive back to town. Finding it impossible to resist, he reluctantly complied, though the wound he had received seemed to me at least to be dangerous. He continued to complain of the pain as we drove along, so that he at last excited Mr. Burchell's compassion, who, at my request, exchanged him for another, at an inn where we called on our return."

"Welcome, then," cried I, "my child! and thou her gallant deliverer, a thousand welcomes! Though our cheer is but wretched, yet our hearts are ready to receive you. And now, Mr. Burchell, as you have delivered my girl, if you think her a recompense, she is yours: if you can stoop to an alliance with a family so poor as mine, take her, obtain her consent, as I know you have her heart, and you have mine. And let me tell you, sir, that I give you no small treasure; she has been celebrated for beauty, it is true, but that is not my meaning, I give you up a treasure in her mind."

"But I suppose, sir," cried Mr. Burchell, "that you are apprized of my circumstances, and of my incapacity to support her as she deserves."

"If your present objection," replied I, "be meant as an evasion of my offer, I desist; but I know no man so worthy to deserve her as you; and if I could give her thousands, and thousands sought her from me, yet my honest brave Burchell should be my dearest choice."

To all this his silence alone seemed to give a mortifying refusal, and without the least reply to my offer, he demanded if he could not be furnished with

retirements from the next inn; to which being answered in the affirmative, he ordered them to send in the best dinner that could be provided upon such short notice. He bespoke also a dozen of their best wine, and some cordials for me; adding, with a smile, that he would stretch a little for once, and, though in a prison, asserted he was never better disposed to be merry. The waiter soon made his appearance with preparations for dinner: a table was lent us by the gaoler, who seemed remarkably assiduous; the wine was disposed in order, and two very well-dressed dishes were brought in.

My daughter had not yet heard of her poor brother's melancholy situation, and she all seemed unwilling to damp her cheerfulness by the relation. But it was in vain that I attempted to appear cheerful; the circumstances of my unfortunate son broke through all efforts to dissemble; so that I was at last obliged to damp our mirth by relating his misfortunes, and wishing that he might be permitted to share with us in this little interval of satisfaction. After my guests were recovered from the consternation my account had produced, I requested also that Mr. Jenkinson, a fellow-prisoner, might be admitted, and the gaoler granted my request with an air of unusual submission. The clanking of my son's irons was no sooner heard along the passage, than his sister ran impatiently to meet him; while Mr. Burchell, in the meantime asked me if my son's name was George; to which replying in the affirmative, he still continued silent. As soon as my boy entered the room, I could perceive he regarded Mr. Burchell with a look of astonishment and reverence.

"Conio on," cried I, "my son; though we are fallen very low, yet Providence has been pleased to grant us some small relaxation from pain. Thy sister is restored to us, and there is her deliverer: to that brave man it is due I am indebted for yet having a daughter; give him, my boy, the hand of friendship; he deserves our warmest gratitude."

My son seemed all this while regardless of what I said, and still continued fixed at a respectful distance.

"My dear brother," cried his sister, "why don't you thank my good deliverer? the brave should ever love each other."

He still continued his silence and astonishment, till our guest at last perceived himself to be known, and, assuming all his native dignity, desired my son to come forward. Never before had I seen anything so truly majestic as the air he assumed upon this occasion. The greatest object in the universe, says a certain philosopher, is a good man struggling with adversity; yet there is still a greater, which is the good man that comes to relieve it. After he had regarded my son for some time with a superior air:

"I again find," said he, "unthinking boy, that the same crime—"

But here he was interrupted by one of the gaoler's servants, who came to inform us that a person of distinction, who had driven into town with a chariot and several attendants, sent his respects to the gentleman that was with us, and begged to know when he should think proper to be waited upon.

"Did the fellow wilt," cried our guest, "till I shall have leisure to receive him;" and then turning to my son, "I again find, sir," proceeded he, "that you are guilty of the same offence for which you once had my reproach, and for which the law is now preparing its justest punishments. You imagine, perhaps, that a contempt for your own life gives you a right to take that of another; but where, sir, is the difference between a duellist who hazards a life of no value, and the murderer who acts with greater security? Is it any diminution of the gamester's fraud, when he alleges that he has staked a counter?"

"Alas, sir," cried I, "whoever you are, pity the poor misguided creature; for what he has done was in obedience to a deluded mother, who, in the bitterness of her resentment, required him, upon her blessings, to avenge her quarrel. Here, sir, is the letter, which will serve to convince you of her imprudence, and diminish his guilt."

He took the letter, and hastily read it over.

"This," says he, "though not a perfect excuse, is such a palliation of his fault as induces me to forgive him. And now, sir," continued he, kindly taking my son by the hand, "I see you are surprised at finding me here; but I have often visited prisons upon occasions less interesting. I am now come to see justice done a worthy man, for whom I have the most sincere esteem. I have long been a disguised spectator of thy father's benevolence. I live, at his little dwelling, enjoyed respect uncontaminated by flattery; and have received that happiness that courts could not give, from the amusing simplicity round his fire-side. My nephew has been apprised of my intentions of coming here, and I find is arrived. It would be wronging him and you to condemn him without examination: if there be injury, there shall be redress; and thus I may say without boasting, that none have ever taxed the injustice of Sir William Thornhill."

We now found the personage whom we had so long entertained as an harmless amusing companion, was no other than the celebrated Sir William Thornhill, to whose virtues and singularities scarcely any were strangers. The poor Mr. Burchell was in reality a man of large fortune and great interest, to whom senators listened with applause, and whom party heard with conviction; who, as the friend of his country, but loyal to his king. My poor wife, recollecting her former familiarity, seemed to shrink with apprehension; but Sophia, who a few moments before thought him her own, now perceiving the immense distance to which he was removed by fortune, was unable to conceal her fears.

"Ah, sir," cried my wife, with a piteous aspect, "how is it possible that I can ever have your acquaintance? The slight you received from me the last time I had the honour of seeing you fit our house, and the jokes which I and my daughter threw out—oh, sir, I fear, can never be forgiven."

"My best good lady," returned he, with a smile, "if you had your joke, I had my answer: I'll leave it to all the company if mine were not as

good as yours. To say the truth, I know nobody whom I am disposed to be angry with at present, but the fellow who so frightened my girl here. I had not even time to examine the rascal's person so as to describe him in an advertisement. Can you tell me, Sophia, my dear, whether you should know him again?"

"Indeed, sir," replied she, "I can't be positive; yet now I recollect he had a large mark over one of his eyebrows."

"I ask pardon, madam," interrupted Jenkinson, who was by, "but be so good as to inform me if the fellow wore his own red hair?"

"Yes, I think so," cried Sophia.

"And did your honour," continued he, turning to Sir William, "observe the length of his legs?"

"I can't be sure of their length," cried the Baronet, "but I am convinced of their swiftness; for he outran me, which is what I thought few men in the kingdom could have done."

"Please your honour," cried Jenkinson, "I know the man; it is certainly the same; the best runner in England; he has beaten Pinfre of Newcastle; Timothy Baxter is his name. I know him perfectly, and the very place of his retreat this moment. If your honour will bid Mr. Gaoler let two of his men go with me, I'll engage to produce him to you in an hour at farthest."

Upon this the gaoler was called, who instantly appearing, Sir William demanded if he knew him.

"Yes, please your honour," replied the gaoler, "I know Sir William Thornhill well, and everybody that knows anything of him will desire to know more of him."

"Well then," said the Baronet, "my request is, that you will permit this man and two of your servants to go upon a message by my authority; and as I am in the commission of the peace, I undertake to secure you."

"Your promise is sufficient," replied the other, "and you may, at a moment's warning, send them over England whenever your honour thinks fit."

In pursuance of the gaoler's compliance, Jenkinson was dispatched in search of Timothy Baxter, while we were amused with the assiduity of our youngest boy Bill, who had just come in and climbed up Sir William's neck, in order to kiss him. His mother was immediately going to chastise his familiarity, but the worthy man prevented her; and taking the child, all ragged as he was, upon his knee,

"What, Bill, you chubby rogue," cried he, "do you remember your old friend Burchell? and Dick too, my honest veteran, are you here? you shall find I have not forgot you."

So saying, he gave each a large piece of gingerbread, which the poor fellows eat very heartily, as they had got that morning but a very scanty breakfast.

We now sat down to dinner, which was almost cold; but previously, my arm still continuing painful, Sir William wrote a prescription, for he had made the study of physic his amusement, and was more than moderately skilled in the profession: this being sent to an apothecary who lived in the place, my arm was dressed, and I found almost instantaneous relief. We were waited upon at dinner by the gaoler himself, who was willing to do our guest all the honour in his power. But before we had well dined, another message was brought from his nephew, desiring permission to appear, in order to vindicate his innocence and honour; with which request the Baronet complied, and desired Mr. Thornhill to be introduced.

(To be continued.)

## LET THE HEART BE BEAUTIFUL.

So the heart, the heart be beautiful,

I care not for the face;  
I ask not what the form may lack  
Of dignity or grace.

If the mind be fill'd with glowing thoughts,  
And the soul with sympathy,  
What matter though the cheek be pale,  
Or the eye lack brilliancy.

Though the cheek, the cheek be beautiful,  
It soon may lose its bloom,  
And the lustre of the eye be quenched  
In the darkness of the tomb;

But the glory of the mind will live  
Though the bloom of life depart;  
And oh! the charm can never die  
Of a true and noble heart.

The lips that utter kindly thoughts  
Have a beauty all their own—  
For gentle words are sweeter far  
Than music's softest tones;  
And though the voice be harsh or shrill  
That bids the oppress'd go free;  
And soother the woes of the sorrowing one,  
That voice is sweet to me.

HOW THEY CATCH BIG CONSTRUCTORS.—A large Python has recently been received in Baltimore from Liberia, and the following extract from a letter from a Liberian colonist gives a graphic description of the manner in which they were caught:—"Now, sir, let me tell you how I caught a big snake—a real boa constrictor. I was out hunting with my hounds; they were running a deer; I caught sight of him, and jumped on a Bug-a-Bug-hill to get a fair shot at him. The top of the hill broke in, and something blowed like a steamboat. I just looked and got sight of the varmint, a big boa and lots of little ones. I snatched off my overcoat and stopped up the hole, piling dirt on top; I then found two more holes, and stopped them up too. I then broke home, called all my boys, and made a long box of plank. Took it back, drove up some forks at one of the holes, and jammed the open end of the box in. I then built a big fire in the other hole, and soon roasted the old one out, shutting down the trap-door I had made in the box as soon as she was fairly in. We then gave three cheers. I counted forty-four young ones, and some ran into the box with her."

# THE HOME COMPANION IN ACCIDENT, DISEASE, EMERGENCY, HEALTH, AND SICKNESS;

BEING  
A SUPPLEMENT TO THE HOME COMPANION,  
WITH NUMEROUS ILLUSTRATIONS.

PRICE ONE PENNY. ALWAYS ON SALE.

## WEEKLY ISSUE OF THE FAMILY FRIEND.

On SATURDAY, the 3rd of JULY, will be published No. 1. of the NEW SERIES of THE FAMILY FRIEND; with which Number will be presented a Beautiful STEEL ENGRAVING, by C. ROLLS, after a Painting by W. COLLINS, R.A., entitled

"PARTING WITH A LITTLE FAMILY FRIEND."

This number will also have a new Title-page, by FRANKLIN. There will be no alteration in the Size, Shape or Price of "THE FAMILY FRIEND," its present neat and economical form being much approved. For the convenience of those who have not taken in or completed the OLD SERIES, it is suggested that Orders should be given to Booksellers to supply

1st. THE WHOLE SERIES, BOUND, PRICE 15s.; OR  
2nd. A VOLUME MONTHLY, PRICE 2s. 6d.; OR  
3rd. THREE NUMBERS MONTHLY, PRICE 2s. EACH.

By this arrangement, Subscribers may become possessed of the OLD SERIES by a method adapted to their own convenience. Back Numbers and Volumes, for completing Sets, should be ordered immediately.  
London: HOULSTON and BROWNE, 65, PATERNOSTER ROW; and all Booksellers.

# THE HOME COMPANION: A WEEKLY MAGAZINE.

## DEATH.

As the word Life is employed in a double sense to denote the actions or phenomena by which it is developed, and the cause of these phenomena, so the old English word Death is used familiarly to express two or more meanings. The first of these is the transition from the living to the lifeless or inanimate state—the act, that is, of dying; the second, the condition of an organized body which has ceased to live, while organization yet remains, and symmetry still displays itself, and the admirable structure of its parts is not yet destroyed by decomposition, or resolved into the original and primary elements from which it was moulded,

"Before Decay's effacing fingers  
Have swept the lines where beauty lingers."

We occasionally speak of "dead matter" in the sense of inorganic; but this is merely a rhetorical or metaphorical phrase. That which has never lived cannot properly be said to be dead.

In the following essay, I shall use the word chiefly in the first of the senses above indicated. It will often be convenient to employ it in the second also; but in doing so, I will be careful so to designate its bearing as to avoid any confusion. The context will always prevent any misunderstanding on this point.

Death may be considered physiologically, pathologically, and psychologically. We are obliged to regard it and speak of it as the uniform correlative, and, indeed, the necessary consequence, or final result of life; the act of dying as the rounding off, or termination of the act of living. But it ought to be remarked, that this conclusion is derived, not from any understanding or comprehension of the relevancy of the asserted connection, nor from a *posteriori* reasoning applicable to the inquiry, but merely *a posteriori* as the result of universal experience. All that has lived has died; and, therefore, all that lives must die.

The solid rock on which we tread, and with which we rear our palaces and temples, what is it often when microscopically examined, but a congeries of the fossil remains of innumerable animal tribes! The soil from which, by tillage, we derive our vegetable food, is scarcely anything more than a mere mixture of the decayed and decaying fragments of former organic being; the shells and exuvie, the skeletons and fibres and exsiccated juices of extinct life.

The earth itself, in its whole habitable surface, is little else than the mighty sepulchre of the past; and

"All that tread  
The globe are but a handful to the tribes.  
That slumber in its bosom. Take the wings  
Of morning, and the Purban desert places,  
Or lose thyself in the continuous woods  
Where rolls the Oregon, and hears no sound  
Save his own dashings—yet, the dead are there;  
And millions in those solitudes, since first  
The flight of years began, have laid them down  
To their last sleep: the dead reign there alone."

Four millions of Egyptians cultivate the valley of the great river on whose banks, amidst the fertilizing dust of myriads of their progenitors, there are calculated still to exist, in a state of preservation, not less than four hundred to five hundred millions of mummies. The "City of the Tombs" is far more populous than the neighbouring streets even of crowded Constantinople; and the cemeteries of London and the catacombs of Paris are filled to overflowing. The trees which gave shade to our predecessors of a few generations back lie prostrate; and the dug and horse, the playmate and the

servant of our childhood, are but dust. Death surrounds and sustains us. We derive our nourishment from the destruction of living organisms, and from this source alone.

And who is there among us that has reached the middle term of existence, that may not, in the touching passage of Carlyle, "measure the saddest epoch of his life-journey by the white tombs of his beloved ones, rising in the distance like pale, mournfully recurring instances?"

When Wilkie was in the Escorial," says Southey, "looking at Titian's famous picture of the Last Supper in the refectory there, an old Jesuit monk said to him, 'I have sat daily in sight of that picture for now nearly threescore years; during that time my companions have dropped off one after another—all who were my seniors, all who were my contemporaries, and many or most of those who were younger than myself; more than one generation has passed away, and there the figures in the picture have remained unchanged. I look at them, till I sometimes think that they are the real persons and we but shadows.'"

I have stated that there is no reason known to us why Death should always "found the sum of life." Up to a certain point of their duration, various in each separate set of instances, and in the comparison of extremes, various prodigiously, the vegetable and animal organisms not only sustain themselves, but expand and develop themselves, grow and increase, enjoying a better and better life, advancing and progressive. Wherefore is it that at this period all progress is completely arrested; that thereafter they waste, deteriorate, and fail? Why should they thus decline and decay with unerring uniformity upon their attaining their highest perfection, their most intense activity? This ultimate law is equally mysterious and inexorable. It is true the Sacred Writings tell us of Enoch, "whom God took, and he was not;" and of Elijah, who was transported through the upper air in a chariot of fire; and of Melchisedek, the most extraordinary personage whose name is recorded, "without father, without mother, without descent: having neither beginning of days, nor end of life." We read the history without conceiving the faintest hope from these exceptions to the universal rule. Yet our fancy has always exulted in visionary evasions of it, by furling for ourselves creations of immortal maturity, youth, and beauty, residing in Elysian fields of unending spring, amidst the fruition of perpetual vigour. We would drink, in imagination, of the sparkling fountain of rejuvenescence; nay, boldly dare the terror of Medea's cauldron. We echo, in every despairing heart, the ejaculation of the expiring Wolcott, "Bring back my youth!"

Reflection, however, cannot fail to reconcile us to our ruthless destiny. There is another law of our being, not less unrelenting, whose yoke is even harsher and more intolerable, from whose pressure Death alone can relieve us, and in comparison with which the absolute certainty of dying becomes a glorious blessing. Of whatever else we may remain ignorant, each of us, for himself, comes to feel, realize, and know unequivocally that all his capacities, both of action and enjoyment, are transient, and tend to pass away; and when our thirst is satisfied, we turn disgusted from the bitter lees of the cup fragrant and sparkling cup. I am aware of Parnell's offered analogy—

"The tree of deepest root is found  
Unwilling most to leave the ground."

and of Rush's notion, who imputes to the aged such an augmenting love of life that he is at a loss to account for it, and suggests, quaintly enough, that it may depend upon custom, the great moulder of our desires and propensities; and that the infirm and decrepit "love to live on, because they have acquired a habit of living." His assumption is wrong in point of fact. He loses sight of the important principle that old age is a relative term; and that one man may be more superannuated, farther advanced in natural decay, at sixty, than another at one hundred years. Parr might well rejoice at being alive, and exult in the prospect of continuing to live, at one hundred and thirty, being capable, as is affirmed, even of the enjoyment of sexual life at that age; but he who has had his "three sufficient warnings," who is deaf, lame, and blind; who, like the monk of the Escorial, has lost all his extemporaries, and is condemned to hopeless solitude, and oppressed with the consciousness of dependence and imbecility, must look on Death not as a curse, but a refuge. Of one hundred and thirty-three suicides occurring in Geneva from 1825 to 1834, more than half were above fifty years of age; thirty-four, from fifty to sixty; nineteen, from sixty to seventy; nine, from seventy to eighty; three, from eighty to ninety; in all, sixty-five. The mean term of life in that city being about thirty-five to forty, this bears an immense proportion to the actual population above fifty, and exhibits forcibly an opposite condition of feeling to that alleged by Rush, a weariness of living, a desire to die, rather than an anxiety, or even willingness to live.

I once knew an old man, of about one hundred and four, who, retained many of his faculties. He could read ordinary print without glasses, walked firmly, rode well, and could even leap with some agility. When I last parted with him, I wished him twenty years more; upon which he grasped my hand closely, and declared he would not let me go until I had retraced or reversed the prayer.
